In addition, there is unquestionably a desire among the people to hear more of and more directly from the President. They are not worried about his playing golf nor about his frequent absences from the White House. They know he is not neglecting his job, but they want to hear him say so. The press conferences are too short and not too well reported—except in a few newspapers. There are too many unimportant questions asked in which they are not interested. That is why this idea of 4 short television addresses instead of just 1 long one is a sound one. They will not—and should not—take the place of the press conferences, but they will supplement them, and they will quiet a lot of rumors and reports that emanate from Democratic publications and propagandists. One of these reports which seems well founded is that the President is soon to lose by resignation the two strongest members of his Cabinet—Secretary of the Treasury Humphrey and Secretary of Defense Wilson. Both of these have served the President and the country well. In particular, Secretary Wilson has sustained a lot of undeserved criticism and abuse. From this he has emerged with the general liking and respect even of his critics. The people generally are entitled to know why and when these two fine officials are retiring and whom, if anyone, the President has in view to succeed them.

Aid to Higher Education

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Cry in Darkness," which was published in the April 18, 1957, issue of the Beachcomber, the school paper of the Palm Beach Junior College at Lake Park, Fla.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CRY IN DARKNESS

Night has crept upon half of the earth and in particular, the part which in this country happens to be situated. A dying, weakened cry is heard coming from a weakened, dying mind. This mind and many millions like it are decaying because the horizon on which they were born faded into twilight and into dark without a chance for development in stark, bright sunlight where it should have blossomed. The next step in the downfall of thought is complete chaos and a state of oblivion.

Why did this unfortunate conflict begin? Because our Government failed to meet the demands, the questions, and the educational possibilities of its students.

The students, too many in number, were literally starved. Their morsels consists of tiny bits of learning, but the morsels are meager high-school facilities and overcrowded conditions often denied at the threshold of the college campus.

To curb this situation a United States Senator, CLIFFORD CASE, of New Jersey, is proposing a bill to Congress right now to aid higher education, the type of education we are engaging in today—at the junior college level.

Urging that the Federal Government set up a grants-in-aid to States policy the Senator proposes funds up to one-third of the cost of building and equipping campus structures to States that wish to participate in this education expansion of junior colleges.

As we at PBJC are aware, 2 big advantages are found in the 2-year curriculum. First, 2 years of college credit are given for the final 2 years, and a terminal education is acquired for general education and vocational activity. A junior college is a cultural and community institution.

It is frightening to realize that many of our talented young people will be denied equal opportunity to study in universities. They will miss out on the kind of life they must have. The President's Commission on Higher Education in 1947 reported that "at least 49 percent of our population has the mental ability to complete 14 years of schooling with a curriculum of general and vocational studies that should lead either to gainful employment or to further study at a more advanced level."

The rounding out of our educational system is inevitable. Of the system President Eisenhower has expressed it this way, "I firmly believe that more education than that obtained in high school must be brought to every community and locality in such a way that every young person regardless of his means or lack of means can go to school for a minimum of 2 additional years."

There are 26 States that have laws to provide for community junior colleges and 16 States are aided for this purpose. The Federal Government, if possible, will help the States meet future demands.

The darkness prevails. Light can come; it must come. It is the only way to solve this fierce, educational problem. The junior college is the prevalent means of piercing the deep. Until the leaders act, space is black. The voice cries now in a lessened tone; it is barely audible.

A Bill To Assist the Cotton Textile Industry

EXTENSION OF REMARKS

OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. COFFIN. Mr. Speaker, today I am introducing a bill designed to assist the hard-pressed cotton textile industry in its present crisis. This bill, originally introduced by the senior Senator from Maine, seeks to make cotton available to the textile industry at prices which would allow it to regain the level of cotton exports maintained from 1947 to 1952. The provisions of the bill apply to cotton textiles for export only.

For some time, it has been apparent that the textile industry, not only in Maine and New England, but, indeed, along the entire Eastern seaboard, was in the throes of a downward economic spiral brought on not merely by the ordinary forces of competition, but by the fact that our mills were losing their market at home and abroad to exports from other countries who had the double advantage of unbelievably low labor

rates and a much more favorable price for raw cotton.

I have made strenuous efforts to urge sensible administrative solutions to both the immediate crisis and the long-range problem through the executive branch. On April 15, I wrote to the White House as follows:

President DWIGHT D. EISENHOWER,
White House,
Washington, D. C.

DEAR MR. PRESIDENT: In recent weeks Maine has achieved the dubious distinction of becoming one of the foremost centers of industrial crisis in the country.

There are probably other areas where more people are unemployed and where more firms have closed shop. But there is none where the shutdowns will have a greater effect on the economy of the region. The closing of the Androscoggin division in Lewiston, the York division in Saco, the rumors concerning closing of the Hill division in Lewiston and the Edwards division in Augusta, all of the Bates Manufacturing Co., the temporary shutdown of the Sample Shipyard in Boothbay Harbor, and the unnoticed closing of many small grocery stores and other small businesses add up to the paradox of crisis in a time of record high spending, high cost of living, and general prosperity.

This is the first time in our history where the economy of an entire area is thrown into jeopardy by continued positive governmental stimulation of competing countries through making cotton available to those countries at lower prices than prices at which our manufacturers can buy. Hence there is a governmental responsibility to take remedial action. But the great question of specific remedy has not been solved. Until it is solved, Maine officials in Augusta and Washington, the Federal Government, and the Congress lack any clear idea as to what we should do.

Until a solution is agreed upon, there will be no chance of timely remedial action. Everyone will be marching off in different directions. It is my suggestion that manufacturers, labor leaders, congressional delegations from textile areas, and specialists from the Departments of State, Commerce, and Agriculture meet to discuss the following questions:

1. What is the best "crash program" that can be devised to prevent the human suffering resulting from unemployment now and in the immediate future?

(a) Can and should import quotas be imposed?

(b) Can defense and other governmental contracts be routed to textile firms which are in trouble?

(c) Can and should the Government stockpile standard items to keep the industry alive until a more permanent solution is achieved?

(d) Can and should the escape-clause provision be used to increase tariffs?

(e) Is there any possibility of using Public Law 480, relating to disposal of surplus commodities, to help?

(f) Is there any possibility of a short-range subsidy program for manufacturers?

2. What is the soundest long range program to remove unreasonable competitive disadvantages from the textile industry?

(a) Should the domestic manufacturers be be enabled to buy cotton at the world market price and thus be placed, as far as cost of materials is concerned, on the same basis as their foreign competitors? If so, what kind of program would be the most workable?

(b) Should such treatment be confined to cotton bought by domestic manufacturers for export purposes only?

(c) Should intensive efforts be made to develop markets for textile products in countries which have not hitherto been able or inclined to become large users?

(d) Should our foreign economic aid program place more stress on clothing and fabrics than it has heretofore?

To my knowledge there has not been a concerted effort on the part of the industry, labor, committees of Congress, and the Executive department to find answers to these problems. In such thinking lies the solution to both the immediate emergency and the long range problems. Such action should be taken immediately.

I realize the heavy burdens of your office. However, this is a problem of such immediate and grave concern to thousands of families that I hope you will provide the necessary leadership by initiating such a conference.

Respectfully,

FRANK M. COFFIN,
Member of Congress.

The reply I received from Jack Z. Anderson, Administrative Assistant to the President, indicated that although the administration was aware of the textile problem, it felt that the self-imposed limitation on imports by Japan, together with certain other routine efforts to assist local organizations and agencies, were all that could be accomplished at the present time. He concluded by saying:

In view of these efforts, there seems little to be gained at this time by a meeting such as you suggest. I can assure you, however, that your proposal will be kept in mind should such a meeting be desirable at a future date.

Subsequently, I was advised by Mr. Anderson to confer with the Secretary of Commerce regarding this critical problem. This I intend to do.

The sands of time to avoid great hardship posed by the immediate crisis are running out. I am, therefore, introducing this bill with the profound hope that it, together with all other similar proposals, will be studied by the appropriate committee with the utmost seriousness and that it will serve as a catalyst for focussing congressional attention on this problem which began as a sectional problem and can now truly be said to be a national problem. This is a field in which we need to do a great deal of creative thinking and reexamine some of our past approaches. It is my hope that Members of this House may pool their thoughts in this matter and enable us to pursue a course of action that will put an end to the increasing number of mills which are closing, as well as place the entire industry on a more stable and firm long range basis.

Crisis in the Post Office

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "One More Crisis in the Post Office," published in the Philadelphia Inquirer of May 11, 1957. The editorial concerns the so-called crisis in the Post Office Department, and I desire all Senators to have the benefit of the interesting information which it contains.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE MORE CRISIS IN THE POST OFFICE

The United States Post Office seems to leap from crisis to crisis.

Postmaster General Summerfield now tells Congress he must have not only the $3,250,000,000 budgeted for his Department, but an additional $70 million to $90 million.

Summerfield says this extra money is needed because of unexpected increases in the volume of mail. Unfortunately, he also couples his request with more threats—to slash postal services on July 1, unless Congress quickly gives him his way.

Pass over that highhanded attitude. Let us, instead, ask why the Post Office Department used to get along under previous Postmasters General without crises, threats, and shutdowns? Why, particularly, is the Post Office worse off than ever financially?

President Eisenhower put his finger on part of the answer when he told Congress in January 1955: "The financial problems of the postal service result in a large measure from lack of a positive program leading toward a well-defined fiscal goal."

That is, much of the Post Office's money trouble stems from failure to recognize frankly that it is an organization dedicated to service for the public, and not primarily a moneymaking institution set up to pay its way. As the President also said:

"Certain services which are performed by the Post Office are general welfare services. The cost of such services should not be borne by the users of the mails."

Yet we now find the House Post Office Committee boosting rates on first-class mail—which shows a profit—by more than $300 million a year, while it boosts rates on third-class mail (much of it "junk mail") by only $128 million a year though third-class mail shows a deficit of nearly $200 million.

Many believe that if the cost of subsidizing rural routes, congressional mail, and other services were deducted—the Post Office would not run a deficit today.

Thus the big question is not whether Summerfield should have the extra money he asks. Maybe he should. The big question is whether Congress will finally settle the question whether the Post Office is primarily a service or a business—and decide which services should be paid for by mail users, and which out of general taxation.

Not until that decision is made will there be an end to the recurrent financial crisis in the Post Office.

Award to Youth Wants To Know Television Program

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. MAGNUSON. Mr. President, on April 16, 1957, the Peabody Advisory Board of the Henry W. Grady School of Journalism at the University of Georgia announced the conferral of its annual

award upon the outstanding television and radio programs.

I was pleased to learn, as I know the Senators who have had the occasion to appear on the program will be, that one of the awards was given to Youth Wants To Know. The program was founded and is produced by Theodore Granik.

Recognition is particularly due this program because it has long advocated the importance of the exposure of young people to the major issues confronting us today. The program has long and consistently presented eminent authorities in the fields of government, politics, finance, foreign affairs, the arts, the sciences. Although I leave the sciences to the last, I do so only for the purposes of emphasis, because Youth Wants To Know has done a great service in bringing to the forefront the critical shortage of scientific personnel in industry and research, and no program series has done more in actually showcasing scientific personalities in order to stimulate young people into entering scientific study and pursuits.

Indicating the ever-increasing stature of Youth Wants To Know, it is now produced in cooperation with the National Education Association.

I therefore ask unanimous consent that the Peabody citation be printed in the Appendix of the RECORD.

There being no objection, the award was ordered to be printed in the RECORD, as follows:

Be it known that the George Foster Peabody television award is hereby presented to Youth Wants to Know (National Broadcasting Co.), as the outstanding youth and children's program for 1956 (a commendable television response to its obligations to the citizen of tomorrow—questions and questioners—reveal an intelligence and a development by today's young people which are indeed heartening—effectively combines news, education, and entertainment) upon recommendation of the Henry W. Grady School of Journalism, University of Georgia, and the Peabody advisory board, by authority of the regents of the university system of Georgia.

JOHN E. DREWRY,
Dean of School of Journalism.
RHEE CERF,
Chairman of Peabody Board.
APRIL 16, 1957.

Poland's Economic Problems

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the follwing editorial from the Washington Post on the subject of Poland's economic problems:

It is fortunate that the State Department and the Polish delegation in Washington seem to be coming closer together on terms of the sale and loan to Poland. The Warsaw government needs to obtain enough surplus wheat from the United States—along with cotton, fats, and a limited amount of mining machinery—to stabilize the economy and end forced deliveries of grain. The United States has a great stake in helping make more freedom in Poland possible.

Canada's complaint that the arrangement for selling wheat to Poland on credit would upset her wheat export market is understandable but nevertheless parochial. It may well be a now-or-never situation with respect to redemption of American promises of help to liberated countries—which, in Poland's case, means buttressing the economy so as to lessen dependence upon the Soviet Union and so as to encourage political freedoms. Although Canada can help Poland, she could hardly furnish Poland all the wheat she needs on terms the Poles could meet. Perhaps it will be possibe to work out plans, in the process of keeping Canada informed of the negotiations, whereby Poland will buy more heavily from Canada in the future. Meanwhile, the urgency justifies extraordinary efforts by the administration.

It would be unfortunate to allow the recent visit to Peking by Polish Prime Minister Cyrankiewicz to divert attention from this urgency. Not too surprisingly, the Poles take a different view of the role of Communist China from that of many Americans. It is scarcely remarkable that the Poles, hemmed in on both sides by Soviet troops, believe that they must maintain a front of solidarity with Russia and China in foreign affairs.

But it is the domestic affairs that count. Here the Chinese reportedly have been of great help to the Gomulka regime in counseling Poland to follow its own course and confirm its independence in action. This squares with China's own independence of Russia. The Chinese profess adherence to the same god, Marx, and there are many common interests between Peking and Moscow. But the Chinese also consider themselves the equals of the Russians, and they do not hesitate to diverge when it suits their purposes.

Every bit of independence from the Kremlin helps to reduce the dimensions of the Communist monolith, even when, as in the case of China, it does not eliminate frictions with the United States. If Poland can be encouraged to find its own "road to socialism"—to strengthen political freedoms, end forced grain deliveries, and establish a free agricultural market—that road may well lead to new directions. The substance of what is done is the significant consideration; Americans ought to be sophisticated enough not to care what the system is called.

The Positive Side of Race Relations

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. CLARK. Mr. President, all of us are only too well aware that the Soviet propaganda mills make ready grist of each and every reported incident of race relations differences in our country. We are aware, too, that here at home, in race relations as well as in other matters, it is the negative which tends to make the news.

For these reasons, I think it is important to bring to the attention of my colleagues and, through the medium of the CONGRESSIONAL RECORD, to the attention of my fellow Americans, an interesting accomplishment on the positive side of race relations taking place in Concord Park, Bucks County, Pa.

Time alone will tell whether the events now taking place at Concord Park may not prove to be even more historic than the battle waged at another Concord in 1775.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the New York Times of Sunday, March 10, 1957, entitled "Suburb Breaks Racial Barrier." The article is a detailed account of a positive contribution made in the environs of Philadelphia to the establishment of better racial relations through the successful functioning on a commercial basis of a housing project which is completely integrated.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUBURB BREAKS RACIAL BARRIER—NEW PRIVATE HOUSING PROJECT AT PHILADELPHIA INTEGRATES NEGROES AND WHITES—NO INCIDENTS OCCUR—NOT A FAMILY HAS MOVED FROM COLONY THAT IDEALS AND TENACITY BUILT

(By Thomas W. Ennis)

Segregation in private housing is being successfully challenged in a suburb of Philadelphia.

That Negro and white families can be good neighbors is being proved in an interracial colony of ranch homes nearing completion at Trevose in Bucks County.

The project, Concord Park, is attracting nationwide attention as the first privately built residential development in which open occupancy has become a reality.

Its sponsors say that Concord Park is disproving certain shibboleths regarding racially mixed housing. Opponents of interracial housing usually make these points:

Negroes and whites do not mix.

Negroes and other minorities will spoil a neighborhood and lower the social status of white families.

Realty values decline whenever Negroes move into a white neighborhood.

Concord Park has broken the pattern of segregation in new private housing in the Philadelphia area. There, as in other metropolitan centers, the postwar housing boom has been mostly all white.

ONE HUNDRED AND FORTY THOUSAND HOMES BUILT

Out of about 140,000 new homes built in the area between 1946 and 1953 only 1,044, or less than 1 percent of the total, were sold to Negroes, who make up 20 percent of Philadelphia's population of almost 2,500,000.

And none of the thousands of homes recently built in Levittown and in Fairless Hills in Bucks County was sold to a Negro.

Concord Park did not spring up overnight. It is the result of years of preparation carried on in spite of difficulties.

It is largely the creation of one man, Morris Milgram. He joined his father-in-law's Philadelphia building concern in 1947, when he was 30 years old, on the condition that when he learned enough about building he would be permitted to build housing without racial restrictions.

Philadelphia was ready for such housing. An article on Concord Park in a recent issue of the Interracial Review, published by the Catholic Interracial Council, noted that the traditions of liberty and opportunity that were a part of Philadelphia were mocked by racial barriers.

In 1952 when Mr. Milgram announced his plans for an interracial community he was confronted with cynicism, disbelief and antagonism. Contractors, bankers, real estate men and even those who had been urging open-occupancy housing predicted disaster. Financial loss, professional ruin

and public stigma were forcefully mentioned, and violence and community strife were foreseen.

FIFTY ACRES CHOSEN

But Mr. Milgram, as tenacious as he is idealistic, went ahead. He was joined in the summer of 1953 by George E. Otto, a home builder in Philadelphia and a leader in the Society of Friends. In 9 months they raised $150,000 working capital from 65 stockholders, including a group of Quakers.

Fifty acres of farmland just beyond the northeast city limits in Trevose were acquired. The site was carefully chosen to minimize community resistance.

After a long search for mortgage financing—some 40 lending institutions turned the builder down—financing for the first section of about 30 homes was obtained from the Bowery Savings Bank of New York. Additional funds were later provided by the People's National Bank & Trust Co., of Langhorne, Pa.

When the development opened in August 1954, people flocked to see the model house—a 3-bedroom ranch home priced at $11,990. Within 6 weeks, Mr. Milgram says, he could have sold 5 homes to Negroes for every 1 sold to a white. He faced the prospect of turning the development into an all-Negro community.

When it was made clear to white buyers that they could not count on a white-only community, many lost interest. The Milgram organization worked hard to find white buyers. They mailed letters to groups that were associated with humanitarian causes; the project was advertised steadily; friends of Concord Park, not necessarily buyers, were asked to sell the idea, and expert salesmen experienced in interracial housing were hired to boost sales to white families.

These efforts brought enough white purchasers to integrate the first 30 of the 139 homes on a 50–50 basis, but it still did not produce a steady flow of white home seekers.

FAMILIES GET ALONG

To secure enough white buyers Mr. Milgram reluctantly set a quota of 55 percent white families to 45 percent Negroes. It was later found that white buyers would not buy without assurance that Negroes would be in a minority. Mr. Milgram does not like the occupancy quota—which is a form of discrimination—but he says that the alternative would have been a nearly all-Negro community. This has been the fate of other open-occupancy projects.

All except 5 of the 139 homes in Concord Park have been sold. The remaining houses are to be sold to white families under the quota system. The 3-bedroom basic house now is priced at $12,690. A 4-bedroom house with an extra lavatory and a playroom is selling at $14,350.

No family has moved out of Concord Park. There has been no vandalism and no incidents. The children play together. The parents join in community enterprises, such as building a playground and setting up a baby-sitting pool, and do not differ in the degree of friendliness from families in other residential communities.

The success of Concord Park may result in racially integrated housing sooner than many experts have predicted, according to a study of the community made by the Institute for Urban Studies of the University of Pennsylvania.

The study found that white buyers in Concord Park vary in occupation from truckdrivers to college instructors. They were classified in these categories: 37.5 percent professional, 25 percent skilled workers, and 21 percent semiskilled workers. The average family income is $5,998. About one-third of the white wives work.

The Negro families have an average yearly income of $6,361, and 50 percent of the wives are employed. Of the Negro men, 26 percent are semiskilled workers, 18.5 percent are in the professions, another 18.5 percent are clerical workers.

The report noted that among white buyers "there is no excess at all of idealists or crusaders." About 70 percent belong only to church groups, unions, or professional societies.

The Milgram organization is building a development of contemporary homes called Greenbelt Knoll, within the limits of Philadelphia, at Holme Avenue, about a mile east of Route 1. The houses are priced at $18,850 to $23,950. About two-thirds of the 19 are being sold to white families. Dr. Nathaniel Duff, a well-known Negro physician in Philadelphia, is one of the Negro buyers.

Mr. Otto is president of Concord Park Homes, Inc., the building organization, and Mr. Milgram is vice president. Dr. Duff is a director, as is the Reverend William A. Gray, of Bright Hope Baptist Church in Philadelphia.

Wheat for Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Chalmers M. Roberts of the Washington Post on the subject of American wheat for Poland:

POLICY SWITCH: POLISH WHEAT DEAL HERE MAY END FORCED DELIVERIES FROM PEASANTS

(By Chalmers M. Roberts)

After more than 7 weeks of negotiations here between State Department and Polish authorities, American officials now believe they can supply enough wheat to enable the Gomulka regime to scrap the Communist practice of forced grain deliveries from the peasants.

The latest plan is to offer the Poles $35 million worth of surplus wheat, about half of what the Poles say they need for a stockpile that would make the farm policy switch possible this summer.

The Poles would like to get from the United States 1 million metric tons of wheat, which they figure would cost about $70 million at world prices. However, American officials believe deliveries already promised Poland by the Soviet Union and agreed purchases from Canada will adequately supply the difference.

Under the latest American plan, the Poles would get, in addition to the wheat, about $35 million in cotton to keep their textile plants going and $10 million in fats and oils for human consumption. A $15-million Export-Import Bank loan, financed by money from President Eisenhower's emergency fund, would cover shipping costs and purchase of some coal-mining machinery.

The total of this program comes to about $95 million, figured at world prices, or close to $120 million at domestic prices, which are higher for farm products because of the farm price support program. The $95-million figure is about $20 million more than the United States recently offered the Poles.

Another idea under discussion has been a triangular deal that would send American wheat to West Germany for resale to the Poles. The Poles, however, say they want to avoid a deal with the Germans, with whom they have no diplomatic relations, although they say they might accept a deal via the French. American officials now say the triangular proposal is both "difficult and troublesome."

The Poles say they want an American agreement on wheat by May so the end of forced deliveries can be assured by the July-August harvest period. If the switch works out, the Polish farmers will be permitted to sell all their grains on the free market for the first time since communism came to Poland.

Such a change in Polish agriculture would strengthen farm support for the National Communist regime of Wladislaw Gomulka, the Poles feel.

American officials, however, believe that while it would stablize the Gomulka regime, it also would be likely to hasten other fundamental changes in the Polish brand of communism. They do not think the Soviet Union would intervene in Poland to prevent such a switch as long as Gomulka keeps Poland within the Warsaw military pact and professes loyalty to world communism.

One difficult aspect of the wheat deal is the possible effect it might have on Polish purchases from Canada. The Canadians already aroused over what they consider the dumping of American surplus wheat in their traditional markets have been selling wheat to Poland for 3 years on credit, but repayable in hard currency.

The Canadians have been kept informed of the Polish-American negotiations, but so far there has been no proposal for a joint Canadian-American project to supply the wheat.

Latest estimates are that the Polish-American talks may take another couple of weeks.

Supreme Court Writes Another New Law

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. CRAMER. Mr. Speaker, there appeared in the St. Petersburg Independent, Wednesday, May 8, and the Tampa Tribune on May 7, an interesting and enlightening editorial on the Stephen Girard case which points out graphically the broad implications of this ruling if it is carried to its illogical extreme.

The editorials follow:

[From the St. Petersburg Independent of May 8, 1957]

COURT WRITES A NEW LAW

The latest edict of the United States Supreme Court which broke the will of Stephen Girard to further the cause of racial integration will reverberate in areas not limited to the South.

Privately endowed colleges as well as religious groups which operate educational institutions may well be required to revise their administrative organizations to avoid the implications of the Court's latest decision.

The Florida Legislature has already taken note of the Court's ruling and has killed two bills which were designed to lift the standards of private colleges and secondary schools in Florida. The State board of control had asked that such institutions be chartered and regulated by the State to protect the public against fraud. However, the lawmakers quickly decided that this arrangement might open private schools to racial integration. As a result the bills have been laid to rest.

The Court's decision involves Stephen Girard who left his estate to provide a school

for poor male white orphans. He designated the city of Philadelphia as the trustees of the college fund. Girard College was started with the $7 million fund which has now grown to $98 million. Not one dime of tax money has ever been used for the institution during the 125 years of its existence.

Three years ago two Negro students applied for admittance to the college. The case went up through the courts which upheld Girard's right to dispose of his money as he saw fit. That is, until the issue reached the United States Supreme Court whose inclinations to rewrite the laws of the land according to the sociological and psychological bent of its members is well known.

Although neither Pennsylvania nor the city of Philadelphia contributes tax funds to the college, the High Court ruled since the board of directors of the institution are an agency of the State of Pennsylvania the barrier against Negro students was unconstitutional under the 14th amendment.

Obviously, the ruling will affect any private college administered by a board of trustees having anything to do with the State. And it will affect those private schools which restrict admission on other grounds such as religious faith, if these, too, have State-appointed trustees.

It follows then that any private educational institution working on any public grant or public moneys will come under the racial dictates of the United States Supreme Court.

In its zeal to integrate everything in sight, the Court has all but destroyed basic property rights and a man's right to dispose of his own money as he sees fit. It is a question now of just how far the members of the Court are ready to go in recreating American society, its institutions, its economy, and its government in its own image.

Apparently there is no end.

[From the Tampa Morning Tribune of May 7, 1957]

STAY IN THE CLOISTER

In the widening wake of the United States Supreme Court's decision in the Girard College case, it becomes clearer daily that repercussions from the ruling will echo through the South for years to come and may, indeed, reverse a trend among private schools of higher learning.

Some private colleges, in their understandable zeal for improvement, have been going to the statehouse for help; some of them have been getting it. The lure of State dollars has become increasingly powerful, and in time our private schools have seemed destined to become hybrids, operating partly from their own funds and partly in the public domain.

The Girard decision, however, should remind private colleges indirectly but surely that the search for public subsidy threatens their privacy, their individuality, which after all is their best stock in trade in a time of assembly-line education.

The meaning of the Girard case is plain to see (unless the Court should reverse itself on rehearing, which seems unlikely). It was underscored by the unanimous decision. The Court held that a State agency (Pennsylvania, in this instance) cannot racially restrict entrance to a school under its regulation, even though such restrictions were demanded in the will of the school's founder and sole benefactor.

This ruling, which, in effect, cracked the will of Stephen Girard more than a century after it was written, was made even though the State of Pennsylvania hadn't put a dime into Girard College.

The Court simply held that a State cannot racially segregate in any schools under its control, public or private. If this was the opinion where State funds weren't at issue, how much more surely may we anticipate the Court's view on schools which have a line into the public purse.

The significance reaches beyond the racial question in education. If a private school wants to stay clear of the threat of government intervention, it must shy clear of State agencies. To keep its virginity, it must stay off the public streets. Private colleges had best stay in the cloister.

The Florida Legislature is already reacting predictably to the Girard decision.

Two bills were before a house committee to charter and regulate nearly all private secondary schools and colleges. The purpose, outlined by the State board of control, was to prevent fraud and raise standards.

Both were killed by the committee after Representative Emory Cross, of Alachua, said he didn't want the Court "encroaching on both the public and private schools."

Consideration was postponed on a second measure to regulate private schools from grades 1 to 12.

The legislative casualty list is not yet complete as we see it. In the senate appropriations committee is a bill by Miami's Senator Joe Eaton to provide a State subsidy of $400 per Florida student for accredited, degree-granting private institutions in the State.

Such a subsidy we cannot support, especially in the light of the Girard decision. Florida has already made some grants to private education, but the time has come to draw the line. In the next generation it may be particularly important to offer a choice between public universities, subject to the intervention and perhaps the caprice of the Federal Government, and private schools, whose policies will we trust and pray remain nobody's business but their own.

We are by no means arguing the merits of public versus private education, one way or the other. We are simply contending that each system should go its own way and maintain its particular traditions and advantages. There is a need for both, and the cause of education would suffer if public and private education became so intermixed as to become unrecognizable.

First Negro Presidential Assistant

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. CASE of New Jersey. Mr. President, E. Frederic Morrow, the first Negro to serve as a member of the executive staff of a President of the United States, is the subject of an illustrated article published in Ebony magazine for May 1957. We are proud of the fine record which he has made in public life and particularly of the way in which he assisted Vice President NIXON on his recent visit to Africa. Mr. Morrow was born and raised in Hackensack, N. J., and attended Hackensack schools and Bowdoin College. He is an alumnus of the Rutgers University School of Law.

Mr. Morrow joined the staff of Hon. Sinclair Weeks, Secretary of Commerce, serving in a liaison capacity with other agencies. He became a member of President Eisenhower's staff in July 1955. In 1952 he met the President, and served as a special consultant on his campaign train.

I ask unanimous consent to have printed in the Appendix of the RECORD the article concerning this distinguished American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITE HOUSE ADMINISTRATOR—E. FREDERIC MORROW IS FIRST NEGRO TO SERVE ON EXECUTIVE STAFF OF AN AMERICAN PRESIDENT

The first Negro to serve on the executive staff of a President of the United States, E. Frederic Morrow is one of the ablest members of the hand-picked Eisenhower team. As administrative officer of the Special Projects Group, the 48-year-old lawyer has earned a series of glowing commendations from President Eisenhower for his work as a White House aide and an effective spokesman for the administration.

Morrow's main job on the Presidential staff is to take care of the administrative and budgetary problems of the Special Projects Group, which consists of the Council of Economic Foreign Policy and the officers of two special assistants to the President and the special Presidential consultant on public-works planning.

The brilliant bachelor also allocates office space in the huge Executive Office Building, which is located across the street from the White House. He is responsible for the 46,000 square feet of office space in the building, which houses 1,200 persons on 5 floors.

Occasionally, Morrow finds it necessary to correct a widespread belief that he is the Presidential adviser on racial relations. The Rutgers-trained lawyer, emphatically opposed to Negro experts or race specialists in government, says: "I made it clear when I accepted this job that I would not be a special adviser on racial problems."

President Eisenhower has backed him up. In a personal letter, the President wrote: "I am again deeply touched by your sincerity and high sense of dedication to the service of all the people of our country. We are proud of you—and I assure you that never for one minute did any one of us consider you a guinea pig. From the beginning you have merited and won our respect and admiration."

PAGED BY WHITE HOUSE, AID CAUSES UPROAR IN GOLF CLUB

Suave, easy-going and knowledgeable, E. Frederic Morrow operates from a large, high-ceilinged office in the Executive Office Building. He likes his job and finds it immensely exciting. "I have a lot of fun," he says.

When the President sets up a new commission, Morrow swings into action immediately to find office space for the personnel. If no space is available in his building, he improvises. Confronted with the problem of housing the Hungarian Relief Committee, Morrow leased two floors in a brand-new office building. The committee staff, under Morrow's supervision, occupied the floors over a weekend.

Occasionally, Morrow has a hard time convincing people that he is really a member of the President's executive staff. While playing golf on a course near Chicago last October, he received a long-distance call from Presidential Assistant Sherman Adams and was paged. When he answered the page, officials of the club thought he was joking or crazy. At first, they refused to allow him to accept the call. Morrow, who assumed the call was important, shouted: "Let me take the call and you can call the FBI later if you think I'm a phony." Adams ordered him to take the next plane to Washington. "What's up?" Morrow asked. "The President wants to take you to the World Series," Adams answered.

Mrs. Fred A. Kueppers, of St. Paul, Minn., National Catholic Mother of the Year

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mom of Year Grandma Again," published in the St. Paul Dispatch of May 10, 1957, and also an article entitled "Top Catholic Mother is St. Paulite," published in the Minneapolis Star of May 10, 1957.

The articles relate to the naming of Mrs. Fred A. Kueppers, of St. Paul, Minn., as the National Catholic Mother of the Year. We are all proud that Mrs. Kueppers was selected as the outstanding Catholic Mother for 1957.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch of May 10, 1957]

SEVENTH TIME—MOM OF YEAR GRANDMA AGAIN

St. Paul's national Catholic mother of the year, Mrs. Fred A. Kueppers of 833 Portland, became a grandmother for the seventh time early today—only hours after announcement of her national honor.

The energetic, gray-haired little mother of 10 children bustled between housekeeping chores and telephone calls from well-wishers in her large 10-room house today.

"In a word, I'm almost bushed," Mrs. Kueppers said.

She said she was awakened shortly after 4 a. m. today by a telephone call from St. Joseph's Hospital where her son, Charles II, and his wife, the former Patricia Door of Minneapolis, had their first child.

"The baby weighs 5 pounds, 8 ounces and both she and her mother are doing fine," Mrs. Kueppers reported. "They are naming the baby Margaret Ann—after the daughter we lost in a plane crash in 1947."

Mrs. Kuepper's selection as Catholic mother of the year was announced officially late Thursday.

However, she confided that she was told of her selection April 26 by Archbishop William O. Brady of the St. Paul diocese.

"I had let the children know," the 53-year-old Mrs. Kueppers said, "and they've been fairly bursting trying to keep the secret this long—but they all did."

She and her attorney husband attended church at St. Luke's, as they do daily, shortly before 7 a. m.

"Fred took off for the office fast today," Mrs. Kueppers laughed. "I'm trying to do my usual work."

[From the Minneapolis Star of May 10, 1957]

TOP CATHOLIC MOTHER IS ST. PAULITE

A St. Paul woman today was named national Catholic mother of the year.

Mrs. Fred A. Kueppers, mother of eight living children, was selected by a committee for National Catholic Family Life Conference, Washington.

The announcement stated "Mrs. Kueppers won the unanimous vote of the committee by an amazing combination of talent.

"Cheerful and loyal, generous and sympathetic, courageous and selfless, quiet and humble, self-disciplined and detached, these virtues and more, but the basis for the decision to select Mrs. Kueppers for this national honor was her ability to devote so much time to her church and community and still be an extraordinary success as a Christian mother and wife."

Mrs. Kueppers is the wife of a St. Paul attorney who is a past president of Ramsey County Bar Association.

The Kueppers children are: Mrs. Richard Wheeler, Bloomington; Frank, St. Paul, accountant; Fred A., Jr., law student; Sister Laurence (Susan), Order of St. Joseph of Carondolet; Barbara, student at College of St. Catherine; Theodore and Robert, students at Cretin High School; William, pupil at St. Luke's grade school. Two children died.

Mrs. Kueppers helped inaugurate May Day Family Rosary procession, annual event in St. Paul since 1949. She was executive secretary of Cana Retreat movement for 11 years. With her husband, Mrs. Kueppers was co-chairman of National Catholic Family Life convention in St. Paul in 1955.

Mrs. Kueppers has just completed a 3-year term as president of St. Paul Deanery's Council of Catholic Women.

Active over the years in 13 other Catholic groups, Mrs. Kueppers also has been a member of the board of the family nursing service of Community Chest Health Council, active in Red Cross and Heart Fund drives and in St. Paul Civic Opera Guild.

Currently, she is first vice president and family life chairman of Archdiocesan Council of Catholic Women.

A native of St. Paul, she is a daughter of the late Theodore Michel, president and chairman of the board of Union Brass & Metal Manufacturing Co. She attended St. Joseph's Academy and College of St. Catherine.

The Spry One

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Chester, S. C., Reporter of May 1, 1957:

THE SPRY ONE

When Dick Richards left Washington in mid-March to carry the Eisenhower doctrine to the Middle East as the President's Special Ambassador, many people felt he had been given an impossible assignment. Tension and ill-feeling were running so high that no plan of action for his mission could be worked out in advance. His job was to play by ear, improvising the tune as he went along.

In an important sense, this was reversion to old-fashioned diplomacy in which a nation's future rode on the personal integrity and ability of an Ambassador. In an age of rapid communication, quick consultation and air transportation, representatives of nations are rarely isolated from their governments long enough to make it necessary for them to shoulder the burden of decision.

But the Middle East mission was recognized from the beginning as one in which decisions had to be made on the spot, quietly and quickly, by a man who could be trusted to say and do the right thing. When Dick Richards was picked for this job, President Eisenhower paid unusual tribute to his unique qualifications.

In a message urging him to accept the assignment, the President said: "Personally, I do not believe there is any other person in the United States as well qualified as yourself to carry out the particularly sensitive and vitally important missions he (Secretary Dulles) has in mind."

The general feeling in Washington now is that Dick Richards has pulled the fat out of the fire for the United States and its allies and that the explosive Middle East is finding strong reassurance in the Eisenhower doctrine. The real story of how this has been done may be a long time in the telling. Time magazine reports this week that President Eisenhower and the State Department have been both surprised and pleased with Dick Richards' success.

The article notes that Ambassador Richards has lost 10 pounds in his 6 weeks of negotiation and appeared tired. But his energy and enthusiasm seem not to have flagged. In Addis Ababa the Ethiopians call him "the spry one," a characterization which his friends here can appreciate and his former political opponents respect.

The Changing Concept of Soviet Imperialism

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. HRUSKA. Mr. President, on May 6, 1957, the Czechoslovak National Council held a conference in the city of Washington. Its sessions were presided over by my good and valued friend, Col. Joseph Triner, of Chicago, who is president of the organization.

In response to an invitation from him, I addressed the luncheon meeting of the conference.

I ask unanimous consent that the remarks I made on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGING CONCEPT OF SOVIET IMPERIALISM

(Address by Senator ROMAN L. HRUSKA, of Nebraska)

In speaking about Soviet imperialism one should always be mindful of the old French proverb, roughly translated, which means: "The more it changes, the more it remains the same." Soviet imperialism for the last few years has been trying to assume the mask of a sheep, but you don't have to look far to see its fangs, its talons, and its pointed tongue.

Let me review with you some of the things that have taken place in the last 10 years. By means of imperialism, the Soviet Empire has expanded from what it was at the end of World War II, a relatively small country, smaller than the Russia of the Czars; with 160 million people, to what it is today—a formidable dominion reaching from the Adriatic Sea, across the heartland of Europe to the China Sea and imprisoning therein 900 million human beings. The growth of this imperialistic colossus has been gradual, unremitting, and incessant. It continued despite its profession for peaceful coexistence during 1955 and 1956. Let me read to you from the significant address of Nikita Khrushchev, addressing the 20th congress

of the Communist Party of the Soviet Union on February 17, 1956:

"There is no doubt that in a number of capitalist countries the violent overthrow of the dictatorship of the bourgeoisie and the sharp aggravation of class struggle connected with this are inevitable. But the forms of social revolution vary. It is not true that we regard violence and civil war as the only way to remake society."

And then again he said: "Leninism teaches us that the ruling classes will not surrender their power voluntarily. And the greater or lesser degree of intensity which the struggle may assume, the use or the nonuse of violence in the transition to socialism, depends on the resistance of the exploiters, on whether the exploiting class itself resorts to violence, rather than on the proletariat."

It is obvious that when Khrushchev says this he means that if we submit weakly we won't be destroyed but that if we resist Sovietization, violence awaits us. Let me quote further from Mr. Krushchev:

"The historical situation has undergone radical changes which make possible a new approach to the question. The forces of socialism and democracy (his term for the Soviet Union) have grown immeasurably throughout the world, and capitalism has become much weaker. The mighty camp of socialism, with its population of over 900 million, is growing and gaining in strength."

Does this sound like the language of a man who is foregoing further conquests? In fact, he took the mask off completely later on when he said that communism will conquer the world and it will complete its conquest before the 20th century has run its course.

This is sort of a Mein Kampf. All the future plans of the Soviet Union are constantly laid before us. They are all there if we will but look at them. But the distressing thing is that either we don't look at them or if we do we see something that just isn't there. I am a member of the Senate Internal Security Subcommittee of the Senate Judiciary Committee. During the 6 years of its existence it has uncovered an abundance of evidence that indicates that there are people in the United States—people who look and act in every way like Americans but who are at heart dedicated Soviet agents. It is their job to keep us from recognizing the hard, cold facts about the Soviet Union and its imperialism about which we talk here.

There are many people who would have us believe that peaceful coexistence is possible; that we should accept the formal and diplomatic utterances of Soviet representatives at their face value. There are people who will tell us that Red China should be admitted to the United Nations and gain recognition by the United States Government because if we do that it will then behave and that it will be possible for us to effect what they call a general overall Far East settlement. Don't they realize that if we recognize Red China and allow it into the United Nations that whatever resistance there is to Soviet imperialism on the mainland of China, on the island of Formosa, on the other offshore islands and throughout Southeast Asia will crumble and Red China will be able to move on to new and further conquests? Here in the United States, the Chinese Delegation to the United Nations the Chinese Embassy and its various consulates throughout the country will be staffed not by friendly Chinese, as they are now, but by hundreds of Chinese Communists disseminating their propaganda and doing everything possible to undermine the existence of our wonderful country. And yet there are people who would have us overlook these things, who would blatantly tell us that if we recognize Red China, then in some kind of a mysterious way we can then be able to achieve what they call an overall peace in Asia. These are pious wishes without foundation and in fact voiced by people who do not know the significance of what they are saying. At the same time Mr. Khrushchev, in addressing the Communist delegation assembled in Moscow, proclaims that the Communist goal is the dictatorship of the proletariat and the establishment of a worldwide Communist society. He goes on to say that this will be effectuated by means which can be adopted to the degree of assistance encountered in the free world and that these means include violence when that is necessary.

Let us be mindful of this when we engage in our discussions about the changing concept of Soviet imperialism. The changes are changes in tactics alone. The goal remains the same, and never let us fool ourselves on this elemental fact.

Philippines Have Unique Political Value to the United States

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. JUDD. Mr. Speaker, recently there has come to my attention an article written by the veteran commentator on international affairs, Mr. Edgar Ansel Mowrer, right after the tragic death of President Magsaysay, of the Philippines, which points up better than I have seen elsewhere the completely unique position the Filipino people hold in Asia because of the fact that they belong to both the West and the East. Also the extraordinary opportunity which the United States and the Philippines, working together, have to convince the peoples of Asia not that they should join the West, but that it would be to their great advantage to adopt and steadfastly adhere to the fundamental principles on which the best things in Western civilization were founded and which are universal and have proved so beneficial in the Philippines.

The article underlines the view of a study mission from the Committee on Foreign Affairs which visited the Philippines and other Asian countries 18 months ago. It reported as follows:

The Philippines is the single best evidence of United States accomplishments in helping with the progressive evolution of free and democratic governments in the Far East.

The study mission believes that both Americans and Filipinos could tell more dramatically and effectively in Asia the story of the progressive development of their relations—from overlordship to trusteeship, to full independence, to voluntary partnership. It is the story not of extravagant promises but of solid performance—precisely the kind of evolution that millions of other Asians need and want for themselves in their relations with the West.

It is devoutly to be hoped that the successor to President Magsaysay to be chosen this fall will have the same deep understanding of this crucial role the Philippines have to play, and will have the qualities of strength and attractive leadership to enable him to play the role well.

The article by Mr. Mowrer follows:

PHILIPPINES HAVE UNIQUE POLITICAL VALUE TO UNITED STATES

(By Edgar Ansel Mowrer)

The death of the Filipino President, the magnificent Ramon Magsaysay, has caused not only sorrow in Washington, but a certain dismay. It is not that the Philippine Republic has not other capable men. Among strong candidates, Americans rate the new President Garcia first.

But there are Jose Laurel, puppet President under the Japanese; the perennial Claro M. Recto, whose basic anti-Americanism wits here ascribe to the fact of his having two American sons-in-law; Manila's Mayor Arsenio Lacson; Senators Gil Puyat and Emanuel Pelaes; among liberals, Jose Yulo, Eugenio Perez, and Cornelio Villareal are given chances.

Certain is one thing: Washington recognizes fully that the choice of a new President this fall is one for Filipinos alone.

Nonetheless, the coming presidential election among our close allies is recognized as of great importance. For the Philippine Republic occupies a special place not only in American policy but in the world.

Filipinos immediately point to the American bases upon Philippine territory as making the islands almost indispensable to United States defense against communism. Here they seem—in Washington eyes—to be both right and wrong.

Certainly, those bases are an essential part of the defense not only of the United States but of the entire free world including the Philippines, at the present time. That is why President Eisenhower had been looking forward to settling the base disputes at the time of President Magsaysay's visit to Washington this coming June.

With nothing but the question of American courts left to decide, Mr. Eisenhower had no doubt that he and the distinguished visitor would reach speedy agreement.

VALUE DIMINISHING

But, strange as it may sound to Philippine ears, the military bases are no longer the central fact in American-Philippine relations. Modern technique seems to be making closeup military, air, and naval bases anywhere, less and less important. This holds for bases in Europe and Africa just as much as for those in Asia.

American planners are already pointing to the extreme vulnerability of such advanced positions and suggesting that at some future time they may be too exposed to possible attack to be desirable.

Certainly, if and when the intercontinental guided missile of enormous range becomes common, the military value of the Philippine Islands to the United States will shrink enormously, even though the United States Armed Forces may still wish to maintain small advanced posts there.

Today, the chief importance of the Philippines is no longer military but political. Here is the explanation:

The nations, according to this view, are gradually crystallizing not into Wendell Willkie's one world, but into three.

On one side are the imperialist Communists, shaken by the Hungarian revolt, surely, but still monolithic in policy.

On the other side is the Western World, an expression that is more spiritual than geographic since it includes peoples everywhere that subscribe to a specific western outlook on life.

Between the two, and existing independently thanks only to their rivalry, is a third, new, emergent Asian-African world of recently liberated peoples inclined to neutralism, eager to achieve western power and wealth, but chary of, sometimes hostile to,

the western way of life. This world emerged clearly during the famous Bandung Conference.

CATALYST NATION

Now the Eisenhower administration has been struggling to prevent this triple crystallization from becoming too definite, since it hopes for a single world order within the United Nations which can attenuate national rivalries and make peace secure. Therefore, it gives particular value to what might be called catalyst peoples.

Of these the Filipinos, Asian in origin, western by history and education, are outstanding. Washington appreciates enormously the role of the Filipinos in preventing the Bandung Conference from becoming completely antiwestern and neutralist. It considers that President Magsaysay did a service not only to his own country and to the United States but to the entire world in keeping one foot in the western, the other in the Asian-African world.

Therefore American interest in the coming Filipino election centers principally on one issue: Will the new Filipino president continue to be the bridge, like Magsaysay, or will he slump back into some neutralist Asia for the Asians attitude, the result of which will be an increase of international tensions and of the danger of major war?

It Couldn't Be Worse

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Chester (S. C.) News of May 2, 1957:

IT COULDN'T BE WORSE

There are all manner of programs for major revision of the Federal tax system—a system which almost literally grew like Topsy, and which almost everyone finds unfair or unsatisfactory in some particular or other. One of the most thoroughly reasoned and documented of these programs was made public about 2 years ago by the National Association of Manufacturers. The arguments and evidence are gathered in a booklet entitled "Facing the Issue of Income Tax Discrimination," of which an expanded and revised edition was published last December.

The primary goal of the program is to reduce the tax rates which impede economic growth and thus act as a barrier to the creation of new opportunities and new jobs. Over a 5-year period, if this program was followed, both individual and corporate income tax rates would be gradually reduced, until a top rate of 35 percent was achieved. In the view of the NAM economists, the "rates lie at the root of nearly all our tax difficulties." Those rates now reach 50 percent at $16,000 of taxable individual income, and go on to 91 percent. The maximum corporate rate is 52 percent.

The booklet observes: "For many years, the question of fairness in income taxation has been avoided by a sort of socialistic smokescreen—the relation of taxpaying capacity with what people have, instead of what they produce." This has obscured "the fact that high discriminatory rates of income tax harass, penalize and block the efforts of those whose work and investments are the source of the nation's economic strength." The weight of the tax can vividly be illustrated by the popular TV program The $64,000 Question. If a single person was to actually net $64,000 after Federal taxes, his gross prize would have to be about $450,000.

The booklet disputes the illusion that the present progressive income tax rates are necessary from the revenue standpoint. The progressive rates (which begin after the basic rate of 20 percent) produce only about 17 percent of total revenue from the individual income tax. All the rest, or 83 percent, is derived from the basic rate—which is paid by all income taxpayers, including those in the very lowest taxable bracket. The booklet also summons statistics to show that the present income tax system is proportionately most discriminatory, and most unfair, to people in the middle income brackets, and to the smaller businesses which need venture capital to grow.

It is obvious that, if people and enterprize could keep more money after paying their taxes, more money would flow through the whole economy, and Government's tax revenues would increase as a result of that. The booklet presents a computation of what its authors believe would happen in the fifth calendar year if the five-year gradual reduction plan were followed. According to this, gains in Federal tax revenue, brought about largely by increased industrial activity of all kinds, would amount to $13,867,000,000. Losses, due to reduced rates, would amount to $12,897,000,000. The excess of gains over losses—or the net gain to the Government—would thus be $970,000,000.

The booklet is a detailed and comprehensive work. Only a few highlights can be covered in a brief summary. But the plan it presents is clearly a bold and challenging one, deserving of thorough consideration by Congress.

Colorado Farmers' Home Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HILL. Mr. Speaker, during the past few years the farmers of Colorado have been faced with a serious drought situation that has created many difficulties in their operation. One of the best sources of assistance to these farmers has been the Farmers' Home Administration, which has handled thousands of loans to farmers in Colorado during fiscal years 1955, 1956, and 1957.

Recently at a meeting held at Lamar, Colo., the opponents of this administration have attempted to create a false impression that the Farmers' Home Administration in Colorado was not carrying out its responsibilities properly.

When Farmers' Home Administration loans are made, repayments are scheduled in accordance with the borrower's estimated repayment ability, and most borrowers are able to make their payments on or ahead of schedule. However, when borrowers are unable to make scheduled payments because of conditions beyond their control, such as drought, it is the policy of Farmers' Home Administration to continue the loan even through the borrower may be delinquent, if he is making reasonable progress and there are prospects of eventual success. Each case is considered on its merit and Colorado field officials have been instructed to provide all possible assistance to borrower families in an effort to solve their difficulties and avoid liquidation. In a few instances, due to price-cost relationships, some farm units are not of sufficient size to permit a financially sound operation. In cases cases the opportunities for the family to acquire additional land resources are completely explored.

In no case have untimely collections forced a farmer out of business and in a few cases where liquidation has been necessary, it was the result of the borrower failing to properly account for security property or the proceeds from the sale thereof.

As a result of the unfair and unwarranted criticism of the Farmers' Home Administration in Colorado there has come to my desk many spontaneous commendations from farmer organizations and interested individuals who are closely acquainted with the operation of the Farmers' Home Administration in Colorado.

On April 17, 1957, the board of control of the Colorado Cattlemen's Association adopted the following resolution:

The board of control of the Colorado Cattlemen's Association, since 1955, has followed the administration policies of the Farmers' Home Administration very closely, and after a review of the Colorado's financial report of the administration since 1955, feels that the Farmers' Home Administration officials should be highly complimented for an excellent job done in fulfilling objectives as set forth by law. We are also of the unanimous opinion that all Farmers' Home Administration borrowers have been given every opportunity to fulfill their loan obligations and that all qualified applicants have been approved that in any way warranted approval.

On May 6, 1957, I received the following letter from the president of the Colorado Farm Bureau:

The Honorable WILLIAM S. HILL,
United States Representative,
House Office Building,
Washington, D. C.

DEAR BILL: With all the publicity in the press recently regarding FHA, I thought a little private investigation might be in order, and these are the results.

First, the county offices I visited are well caught up with their processing of loans, and there seems to be general satisfaction, but as always there are a few dissidents—very few, however.

I visited the State office, and their work is well in hand, plenty of money for emergency loans, but short on real estate and development money—in fact out—also out of private money for insured loans. I also talked with several borrowers, and they are generally very well pleased.

From my vantage point, the Administrator and his staff seem to be doing an exceptionally good job, in spite of criticism in the press. There seems to be very, very little basis for that or any other criticism.

I could not refrain from dropping this note because of the adverse criticism we have seen lately.

Sincerely yours,

ARTHUR L. ANDERSEN,
President, Colorado Farm Bureau.

Mr. Speaker, under unanimous consent I include as part of my remarks

2 newspaper articles from the Record Stockman dated April 25 and May 9, 1957, 1 article from the Denver Post dated April 25, 1957, and 1 from the Loveland Reporter-Herald dated April 23, 1957, together with a list of the loans handled by the Colorado Farmers' Home Administration since July 1, 1954:

[From the Denver Record Stockman of April 25, 1957]

SHARP DISAGREEMENT ERUPTS OVER FHA EFFICIENCY

Sharp disagreement over efficiency of the Farmers' Home Administration's loan program in Colorado erupted this week when Gov. Steve McNichols charged "fear of reprisals" and Government redtape have curtailed Federal credit relief for blizzard and drought stricken farmers in eastern Colorado.

In refuting the Governor's charges, Leavitt Booth, State FHA director, said Tuesday no State official has contacted his office for information, the FHA has had no chance to explain its extensive program, and that the Governor is misinformed.

Much-needed relief in eastern and southeastern Colorado has been held up by delays in negotiation of loans, the Governor declared.

Sparking the criticism was a conference held in Lamar Friday, attended by State and Federal farm officials, bankers, and landowners from 13 Colorado counties, Oklahoma, New Mexico, and Kansas.

In a Monday press conference, Governor McNichols said, "It is apparent to me that we have at last convinced officials of the United States Department of Agriculture that loan agencies are not working effectively."

The Governor quoted Kenneth Scott, head of the USDA's credit services, as saying that some type of investigation into dissatisfaction between applicants and agencies is needed.

"County committees stated at the meeting that their recommendations have been ignored in many instances and reviewed so many times that the crop-growing season is gone and there is no reason to make loan applications."

Charges made by farmers at the Lamar meeting that the FHA has denied loans, delayed applications, and applied tough collection policies in southeastern Colorado, were denied emphatically Tuesday by Booth.

Booth pointed out that 1,573 emergency loans have been made in eastern Colorado since July 1 for $5,437,386, adding that 2,714 emergency loans were made from July 1, 1955, through December 31, 1956, for $9,067,382 in 22 eastern Colorado counties.

"Aside from handling the largest loan program in FHA history in Colorado, county office personnel in eastern Colorado processed 24,444 feed applications for a total of 286,330 tons of roughage, and 261,622,842 pounds of grain in that period," Booth declared.

"Every farmer and rancher showing a sincere desire to stay on his land has been given that opportunity by the FHA," Booth said. "Charges brought against FHA personnel were uttered without fact," he added.

"Since the blizzard, we have had only one application from eastern Colorado for services and it has been processed. Liquidations have been extremely few and most often they occur when the farmer wants to quit farming.

"All FHA personnel in Colorado, numbering 297, have tried hard to serve people affected by the March blizzard and they have turned in a magnificant performance. They should be commended for their work rather than questioned on honesty and integrity," Booth added.

After hearing complaints at Lamar, Governor McNichols said there is enough legislation and laws are broad enough to cover the credit needs. "If the Government can't or won't do it, let's find out. Whatever it takes, we'll do it.

"It doesn't take a mental giant to see what's going on. County men should have authority to make decisions and solve these problems. I've been unhappy at reluctance of the people to state their problems. If there are any reprisals, I'd like to know about them. If they don't know what real trouble is, they'll find out," the Governor declared.

"It would seem advisable before making statements critical of a program to find out what the program is doing," Booth stated. He added that it is regular procedure for the USDA to review operations of various programs.

Suggestions made by the crowd at the Lamar meeting included a long-term loan program—which Booth says the FHA has in effect—and complete payment for cattle lost in the blizzard.

James Morrow, of Raton, N. Mex., said a group of cattlemen in the Raton area has proposed that the Government pay the full price to owners for cattle lost in the blizzard.

After the Lamar meeting, the Colorado Cattlemen's Association informed Ezra Benson, Secretary of Agriculture, and the Colorado congressional delegation that its board of control feels FHA officials should be complimented for an excellent job in fulfilling objectives of the program as set forth by law.

"We are of the unanimous opinion that all FHA borrowers have been given every opportunity to fulfill loan obligations and that all qualified applicants have been approved when warranting approval," the CCA statement added.

[From the Denver Record Stockman of May 9, 1957]

MISINTERPRETATION CHARGED IN FHA TESTIMONY AT LAMAR

A county Farmers Home Administration committeeman charged this week that his remarks at the recent meeting in Lamar on FHA loan policies were misinterpreted by some daily newspapers in the State. Joel Fletcher of Agate, an Elbert County FHA committee member, said he tried to give the impression at the meeting that the FHA is doing a good job, but some of the daily papers said committeemen were critical of FHA policies.

"My statement was that officials of the FHA are well-qualified men who are trying their best to administer and carry out the loan program to the best of their ability, and that they are giving honest consideration to each loan and applicant who applies," Fletcher told the Record Stockman.

"I did say that if Mr. Scott (Kenneth Scott, director of Agricultural Credit Services for the United States Department of Agriculture in Washington) and Mr. Booth (Leavitt Booth, State FHA director) had confidence in county committeemen, they should not take the opportunity to review their work too much and should accept their recommendations without review after review," Fletcher continued.

"These remaraks were meant to be helpful and constructive. However, some newspapers said I thought committees were being bypassed, and that I had no confidence in the State committee, or Booth," he added.

"This is not true," Fletcher explained. "We work harmoniously together."

Fletcher said he was the only active committeeman who spoke at the Lamar meeting, although another speaker, Francis Guthrie of Calhan, had served as an FHA committeeman 8 or 9 years ago.

As a result of dissatisfaction expressed with FHA loan policies in Colorado at the Lamar meeting, two studies have been launched by Federal and State officials.

Robert Hall of Scott's office and Floyd Moon, chief of FHA program operations, continued their study this week and are expected to issue a report shortly. A committee named by Gov. Steve McNichols held an organizational meeting in Denver Tuesday to map plans for its investigation.

UNITED STATES FARM LOAN INQUIRY SLATED FOR COLORADO

(By Barnet Nover)

WASHINGTON, April 25.—An Agriculture Department troubleshooter will be sent to eastern Colorado next week to investigate operations of the Farmers' Home Administration (FHA).

The decision to send an investigator was announced Thursday by Kenneth L. Scott, Director of Agriculture Credit Services of the United States Agriculture Department.

Chosen for the assignment is Robert Hall, a retired Department of Agriculture employee whom Scott described as having a lifetime of experience in the farm credit field.

Scott attended a meeting in Lamar, Colo., last week at which Governor McNichols, other State officials and farmers and ranchers criticized the FHA.

FHA operations were bound up in redtape, the critics said, with farmers being driven to the wall through a rigid application of the credit program and because of ill-timed foreclosures.

At the same time, the point was made that some farmers hesitated to speak their mind for the fear of reprisals by FHA officials.

Scott denied reports he told the Lamar meeting that the FHA program was not working well in Colorado. What he had said at Lamar, Scott said, was that this appeared to be the feeling of some of the farmers and ranchers at the meeting.

Scott said he has the greatest confidence in the sincerity of Leavitt A. Booth, FHA director for Colorado.

He said he is convinced that the FHA is doing the best it can in the face of a complicated overlay of laws involving farm credit and the multiplication of procedural regulations.

ALLOTT BILL FAVORED

He said the Department favored a proposal by Senator Allott of Colorado, embodied in a bill recently introduced in the Senate to overhaul and simplify farm credit legislation.

The Farmers' Home Administration is the Federal Government's principal loan agency for farmers and stockmen.

Its principal function is to grant loans to eligible persons after they have exhausted possibilities of getting credit from private agencies. Each county has its own FHA committee, with their work administered from the State offices in Denver.

[From the Loveland (Colo.) Reporter-Herald of April 23, 1957]

FHA HEAD DISPUTES GOVERNOR'S CLAIM RED TAPE SNARLS AID

DENVER.—Colorado Governor McNichols declared—and quickly was disputed—Monday that Federal red tape and fears of reprisal for any complaint have hampered relief for drouth and storm-plagued great plains farmers.

Levitt Booth, Colorado director of the Farmers' Home Administration, retorted sharply that the Governor was not informed and cited statistics on FHA operations in the State.

McNichols referred to a 13-county farm credit meeting held at his request last Friday at Lamar in southeastern Colorado.

The conference was attended by farmers and ranchers, bankers, and officials of State and Federal agencies, including some from neighboring States.

One of those present was Kenneth Scott, chief farm credit executive for the United States Agriculture Department.

"I was delighted to have Mr. Scott say he is going to send some of his top investigators out here to go into the matter of why there is so much dissatisfaction between applicants and agencies," McNichols said at a news conference Monday.

"It appears a lot of these people have been discouraged by official red tape from even attempting to get aid. They've been very timid about making their feelings known for fear of reprisals by administrators."

Booth, replying in an interview, said the FHA since last July 1 has made 1,573 emergency loans totaling $5,437,386 to farmers and ranchers in 22 drought-stricken counties of eastern Colorado. He added that local FHA committees involved 286,330 tons of hay and more than 261,600,000 pounds of grain.

"These people are in desperate trouble," Both declared, "and yet they are being used as pawns on a political chessboard. Programs to help distressed people should always be above politics."

Booth said he invited McNichols at the Lamar meeting to review FHA operations in Colorado "and no one from his office has contacted me since." He said a check at the county level indicated no State official had sought information on how the FHA program was working.

"It would seem advisable that before making statements critical of a program, one would find out what the program is doing," Booth said.

The FHA staff in Colorado is responsible for "keeping the farmer and rancher on the land more than anyone else during this drouth," he claimed. "It has saved thousands by keeping them in business."

Military-Civilian Cooperation in Times of Crisis

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, the floods in northwest Louisiana are now largely on their way to the Gulf. The waters in the Red River are beginning to recede and lands under water are now re-emerging as dry lands. Hundreds of thousands of acres of fertile land has been inundated by the terrible floods which arose in Texas, Oklahoma, Colorado, and Arkansas and which had to be channeled through Louisiana to reach the sea.

The damage in our State has been heavy. It will run up into millions of dollars. Fortunately, loss of life was prevented and, of course, our people are happy over this fact. Damage to homes, farms and to cattle, however, was very heavy and the results will be compiled in the days that lie ahead.

During the course of the flood the military organizations in northwest Louisiana came to the rescue of those in distress. They furnished personnel and leadership to fight the floods, to retain the waters within the confines of the levees of Red River, and to aid in reducing damage to property and in preventing loss of life. Our people are most grateful to these organizations.

The Barksdale Air Force Base at Bossier City, La., leads the list in furnishing manpower to battle these angry, swirling waters. It furnished 1,200 men to fight around the clock, sandbagging levees, patrolling, working tirelessly to prevent more serious damage to our people.

The enginers and other forces from Fort Polk sent men into the troubled area. Some of these men worked until they were almost ready to drop from exhaustion. Northwest Louisiana ROTC units and the 199th Infantry Regiment of the National Guard were also in the midst of this fight against these dirty, ugly floodwaters.

These agencies supplemented the efforts of our local people. Of course our local people were fighting for their own survival and the help which came from these military units was friendly hands reaching out to local people in distress. The Shreveport Journal, of Shreveport, La., in its may 9, 1957, issue has a very nicely written editorial entitled "New Bonds of Military-Civilian Friendship" and I present this editorial for insertion herewith:

NEW BONDS OF MILITARY-CIVILIAN FRIENDSHIP

Members of military units have distinguished themselves in battling the floodwaters of Red River in northwest and central Louisiana during the past week.

Troops who fought side-by-side with civilians to curb the river's rampage included hundreds of airmen from Barksdale Air Force Base, soldiers from Fort Polk, National Guardsmen from Louisiana's 199th Infantry Regiment, and cadets from the Reserve Officers Training Corps unit at Northwestern State College.

To Barksdale Air Force Base goes a special measure of commendation, for it was this huge military installation which furnished three shifts totaling several hundred airmen for an around-the-clock battle against torrents of angry, swirling waters.

Without the combined efforts of all the military personnel there is little doubt that thousands of acres of farmlands now safe and dry would have been inundated and their crops destroyed. Citizens of the little towns of East Point, Powhatan, and Clarence have firsthand knowledge of the troops' courage and fighting spirit, for it was these communities which came closest to devastation.

North Louisianians have always been proud of Barksdale Air Force Base and its officers and men. This latest demonstration of community allegiance on the part of Barksdale's personnel can only strengthen the bonds of friendship linking the civilian and military elements of our citizenship. Similarly, the soldiers of Fort Polk, the troops of the 199th Infantry Regiment of the National Guard, and the cadets of Northwestern's ROTC unit have won new esteem in the eyes of their communities.

On behalf of all citizens of northwest and central Louisiana, the Journal proudly expresses appreciation to the officers and men of the military who have participated in the fight against the floodwaters. Shreveport and the other towns and cities along Red River will not forget their valiant service.

Poland's Constitution of 1791

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of May 2,

1957, commemorating the Polish Constitution of 1791:

For the first time since the Communists seized control of Poland, the Third of May (the equivalent of America's Fourth of July) will not go unnoted in Poland, according to reports from Warsaw.

The historical anniversary, commemorating the signing of the Constitution of 1791, is due to be reinstated in the Polish calendar. Whether the observance will be along traditional lines or the occasion will be celebrated as one of the so-called May education day remains to be seen tomorrow.

In any event, the fact that any observance is permitted is a significant step, for no mention was made of the Third of May for more than a decade, except by Poles in exile or in the privacy of home in the enslaved country itself.

The change emphasizes the progress that has been made since the uprising at Poznan which gave the country a taste of freedom. The regime in Warsaw is still communistic, but it has weakened its ties with Moscow and relieved the pressure on the home front.

The Third of May celebration, if it materializes as anticipated, will be additional evidence that Poland may be on the road back to freedom. Progress necessarily has been slow, but anything that happens raises hopes that the land of Pulaski and Kosciuszko may one day cast off the yoke entirely and take its place in the family of free nations

We may be certain any observance of the Third of May will be a hard dose for the gang in the Kremlin to swallow. Moscow has left no stone unturned to destroy the idealism of the Polish Constitution, a document which blazed the way for freedom on the continent of Europe.

The situation in Poland today is far from clear, but even an occasional shaft of light is an improvement over the darkness that has prevailed so long.

The New School of Aviation Medicine, Brooks Air Force Base, San Antonio, Tex.

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. KILDAY. Mr. Speaker, formal ground breaking ceremonies at the new School of Aviation Medicine, Brooks Air Force Base, San Antonio, Tex., were held on May 10, 1957.

A distinguished group of specialists in aviation medicine was present, as well as high-ranking officers of the Air Force.

This was a most significant occasion for aviation medicine and for the Air Force. Provision of adequate physical facilities for research and instruction in the effects of flight upon the human who operates aircraft, is recognition that, even in this modern time, men are of primary importance.

Under leave to extend my remarks, I include an address made by me on that occasion:

The breaking of ground for the new facilities of the School of Aviation Medicine is a significant occasion. It is an occasion long delayed; and, in my opinion, unnecessarily delayed.

Since the Congress authorized these new facilities there have been a number of projects for research and development involving much larger sums of money which have been authorized, begun, and completed, and the facility placed in operation long ago.

Practically everyone concerned with national defense is conscious of the fact that there has been a tendency, in the past, complacently to accept a national-defense policy based upon the concepts of the last preceding war.

But since the close of World War II there has been a sincere desire to create a national-defense policy and maintain our armed services not subjected to that very serious deficiency. Therefore, emphasis has been placed upon research and development. The Congress has been most generous in providing authorization and appropriations for research and development. However, emphasis has been placed upon the development and production of machines. But all activity, including military activity, must be based upon the fact that even in these modern times things are done by men as well as by machines.

Perhaps it is not unusual that the emphasis has gone to machines rather than to men.

In our time, we are witnessing the second industrial revolution. The first industrial revolution occurred in the latter half of the 18th century in England. A series of important inventions turned England into a modern manufacturing nation. Some of those inventions were brought to our country at the close of the 18th century. The War of 1812 cut off the importation of manufactured products from abroad and stimulated manufacturing in this country.

However, another war in our own country was required before the full effect of the industrial revolution reached the United States. Our own Civil War created a demand by the Army for machines, clothing, blankets, and the munitions of war. The agrarian America of 1860 found it necessary to industrialize in order to meet the demand for those commodities now regarded as relatively simple. Before 1860, there were no great American cities; by 1900, 33 percent of our people were living in cities of 8,000 or more.

It is significant that the impact of the first industrial revolution was felt in the United States as a result of the Civil War, the most destructive war known to history until that time.

The second industrial revolution has come about because of the Second World War, the most destructive in the history of modern civilization. That war demanded the production not only of the basic commodities common to the Civil War, but required them in much larger quantities and of a far more complicated nature. The necessities of the situation produced the invention of tools and machines for the more rapid production of everything needed for the prosecution of war. Except in the field of medicine little attention, in retrospect, was devoted to the most important element of a war machine—the man behind the weapon.

It is not strange therefore that we now find industry and the minds of men intrigued by machines and gadgets. Technology, electroncis, and automation absorb the thoughts and the efforts of all.

The first industrial revolution was based upon the invention of machines which permitted production through the use of fewer men. No doubt, fear existed then that men would not be required for production and unemployment would ensue. At the beginning of the new second industrial revolution stark fear of mass unemployment was again expressed because of the development and use of modern machines and automation. It is now apparent that automation will not result in the elimination of men any more than did the invention of machines at an earlier time.

The American people, by wishful thinking, have in the past, and undoubtedly will continue in the future to look forward to a push-button war. Their thoughts are consumed with the ideas of guided and unmanned missiles, electronic brains, univacs, automatic computers, and mechanical fox-hole diggers. They understandably would like to live in a fool's paradise of a war which will be bloodless for ourselves but most destructive to the enemy.

Should that day ever come, war would be abandoned as a means of settling disputes or acquiring advantage since the nation with that power would automatically exercise world domination. It would be nice to think that that day might come and come quickly, so long as we held that position. But profiting by the lessons of history, we cannot be so sanguine as to believe that the time has arrived when men of ill will will permit the abolition of war.

In order to eliminate certain tasks heretofore performed by men, these new inventions in the field of war have enhanced rather than eliminated the need for men—but men of great technical skill. These weapons and inventions have brought with them new problems which demand solution. Man's capacity to cope with supersonic speeds of aircraft, greater altitudes, flight in the stratosphere, to name but a few, present new problems for solution. The effect of these speeds and altitudes upon the human body will be studied here in this School of Aviation Medicine. These new buildings, providing more space and greater facilities, will permit the men of science who labor here to keep abreast of the human factor in all of these new problems and complications.

No doubt in the not too distant future, aircraft will be propelled by nuclear energy, bringing even additional problems of the effect upon the human who operates them. All of these matters will be studied here. Not only will they be studied here, but the knowledge acquired will be passed on to the student body which assembles here.

Hundreds of millions of dollars have been spent since World War II in providing laboratories, wind tunnels, and all of the most modern facilities for testing the machines of flight. During that time, the School of Aviation Medicine has been restricted to physical properties built for it in 1928, crowded into quarters totally inadequate for its needs, and preventing any thought of expansion.

Notwithstanding these physical handicaps, the staff, faculty, and student body of the School of Aviation Medicine have carried on, and in a remarkable manner, kept abreast in this most important field. All of us here today congratulate them upon their outstanding achievements under such inadequate conditions.

Here we see the beginning of new physical properties for the School of Aviation Medicine which will eliminate those handicaps. Here we see the beginning of a new era in the development of the second industrial revolution—the importance of man and the effects of environment upon man.

The man in the air will have the confidence and knowledge that his welfare, his safety, and his ability to perform his assigned mission, will have received the most thorough study and research that modern science is capable of providing.

This is a happy occasion for Gen. Dan C. Ogle, Surgeon General of the Air Force; Gen. Harry G. Armstrong, his predecessor; Gen. Otis O. Benson, commander, School of Aviation Medicine; and all of those who have worked with them through the years in

seeking quarters which will be adequate for their most important assignments. I congratulate them and all others who have had a part in making this occasion possible.

And may I say to the Air Force, as the Member of Congress from this district, that we rejoice with you on this happy occasion—we bid you welcome, we pledge to you our support and assistance at all times, and in all things which may be helpful to you.

Problems of Law in Civil Aviation

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Mr. James R. Durfee, Chairman of the Civil Aeronautics Board, at the annual law banquet, Marquette University, Milwaukee, Wis., May 8, 1957. I recommend it to all law schools and lawyers in the country.

I am informed by the Public Printer that the article is estimated to make 3½ pages of the RECORD, at a cost of $269.50.

I also ask unanimous consent that the accompanying letter from the Civil Aeronautics Board, signed by the Chief of the Office of Congressional Liaison and Public Information, be printed in the RECORD.

There being no objection, the address and letter were ordered to be printed in the RECORD, as follows:

PROBLEMS OF LAW IN CIVIL AVIATION

(An address by James R. Durfee, Chairman, Civil Aeronautics Board, to the annual law banquet, Marquette University Law School, May 8, 1957, Wisconsin Club, Milwaukee, Wis.)

I appreciate the opportunity your invitation has given me to come back to my home State today for a short visit among old friends.

The invitation came at a particularly opportune moment, almost exactly 1 year after I took up my new duties as Chairman of the Civil Aeronautics Board, when I was taking stock of my own reactions to the many and varied new experiences my work has brought me.

One of the things I should like to do tonight is to discuss with you the differences between the Civil Aeronautics Board and the Civil Aeronautics Administration, and I assure you that there are major differences despite the similarity of their names. One of the constant sources of confusion in Washington, and I am sure elsewhere in the country, is the extent to which these agencies are identified in the public mind.

A curious feature of this confusion, and perhaps an explanation for it, is that originally the board and the administration were one and the same organization. In 1938 when Congress passed the Civil Aeronautics Act it established a Civil Aeronautics Authority which performed most of the work now divided between the board and the Administration. This authority—which, incidentally, had the same initials as the administration now has—CAA—was an almost exact counterpart to the ICC which has a similar plenary authority over rail transportation.

The present setup of agencies regulating air transportation was substantially established in reorganization plans submitted to Congress by President Roosevelt in 1940. In general this plan made the administrator responsible for all functions relating to the enforcement and policing of the safety provisions of the act and of the safety rules and regulations established by the Civil Aeronautics Board. The board was assigned the tasks of economic and safety regulation.

To make this distinction a little clearer, let me give you some examples. It is the Board's responsibility to establish standards by which the "airworthiness" of aircraft is determined; and it is the Administrator's responsibility to certify aircraft as airworthy under those standards. It is the Board's responsibility to fix standards for licensing pilots; it is the Administrator's responsibility to examine and test pilots to decide whether they measure up to the standards in much the same way as drivers are tested for licenses—but with far more stringent standards. It is the Board's responsibility to set up the traffic rules for flying planes; it is the Administrator's job to supply the traffic cops and to keep the traffic moving. It is the Board's job to decide, from an economic standpoint, which airlines should fly where; it is the Administrator's responsibility to check regularly to assure that those airlines operate over their routes safely.

This difference in jobs, of course, requires an entirely different type of organization for each. The CAA is a vast operating organization—of about 18,000 employees at present—with professional people of all types engaged in inspecting, testing, planning, research, design, and control—with a network of offices and employees spread throughout the country working on airports, controlling air traffic, examining pilots, mechanics, and schools, and doing research on the problems related to its different jobs.

The Board (the CAB) is a small organization of about 600, just about one thirtieth of the size of CAA, centered largely in Washington with a staff of specialists of a different sort—economists and accountants, engineers, hearing examiners, and lawyers—devoted to helping the Board formulate rules and regulations and arrive at decisions, by gathering information, holding hearings, and advising the Board.

The authority of the Administration is vested in one office—that of the Administrator who exercises a normal executive control. The authority of the Board is vested in a 5-man body—and I should add, a bipartisan 5-man body—acting by majority vote. The Administration is part of the Department of Commerce, directly responsible to the Secretary of Commerce and through the Secretary, to the President. It is an executive agency. The Board is responsible to the Congress and is independent of direct executive control in all except the initial appointment of the members.

Now I have reviewed these distinctions between the Board and the administration partly just to straighten out the differences between them in your minds, to give you some idea of the kind of agency I work for in Washington. I also had another purpose in mind, however, namely, to put some flesh on the bones of the main topic I want to talk to you about tonight—the difference between purely administrative executive agencies of the Government and the independent regulatory agencies, the so-called "quasi-legislative, quasi-judicial" commissions.

These two agencies—the CAA and the CAB—epitomize a distinction, a distribution of Government functions, that runs through our whole system of government today on both the Federal and State levels. It is not, I hasten to add, a hard and fast distinction, for the business of government isn't parceled out among agencies according to some theoretical master plan.

The Board, for example, as one of its important duties, has the job of advising the President on the aviation-economic implications of route awards in the international field. Obviously this job, which regularly entails participation with the State Department by the Board in negotiations with foreign governments over the exchange of air routes, is not of the sort that we normally think of a regulatory commission engaging in. By and large, however, the Board fits the classic notion of a regulatory commission with delegated legislative powers and the CAA, the notion of an executive agency with ministerial administrative powers.

The distinction between the independent regulatory agencies and executive agencies is not a new one to the lawyer—in fact, the underlying concepts already have a "hornbook" quality about them even though much of the doctrine of administrative law has evolved in our own lifetimes. The concept of the independent regulatory agency has been with us in Wisconsin since 1874 with the creation of the original Railroad Commission, predecessor to the present Public Service Commission of Wisconsin. In the Federal Government the creation of the Interstate Commerce Commission in 1887 marked the first real Federal independent regulatory agency.

I have noticed in my reading of late, and in speeches I have heard, an increasing tendency to ignore the distinction between independent regulatory agencies and executive agencies—a tendency to ignore the vital differences in the character of their work that require an entirely different approach to their tasks. The point I want to bring home tonight is that these differences are being subjected to a subtle and unfortunate erosion, partly at the hands of members of the bar itself and partly at the hands of other professional interest groups.

I am not talking here of the constant—and I might say, welcome—constructive criticism and constructive legislation that helps the administrative agency do its job and serve the Nation more efficiently and fairly. The administrative process and the regulatory agencies need a constant airing of their methods and objectives if they are not to stagnate and become ineffectual, or to grow beyond our concepts of constitutional government.

We are all familiar with the long and often bitter battle to make the courts take over this function of regulation—a battle which has, by and large, been decided in favor of administrative independence, subject to court review of action or conduct which, as some have put it, is ultra vires.

But this battle was hardly over, with the passage of a Federal Administrative Procedure Act, which did not materially expand the function of judicial review, when efforts broke out on new fronts to stifle regulatory independence. Efforts are made to have Congress withdraw the limited quasi-legislative powers delegated to the regulatory agencies. Other efforts are made to concentrate control of regulatory functions in the executive branch of the Government.

What makes these counterthrusts against the regulatory process seem so anomalous is that despite the difference in objective, both schools of thought express their aims in virtually identical terminology. Both groups speak broadly of attaining a more efficient service of the public interest that will be more responsive to the popular will.

In detail, however, the expressions of these two groups reflect a considerable divergence in objective. The exponents of greater executive concentration say there is excessive emphasis by regulatory agencies on formal, judicial-like procedures. The exponents of greater congressional control

speak of the inadequate protection of procedural rights that the present administrative process provides. Those favoring congressional control emphasize the oppressive exercise of unfettered administrative power; while those favoring executive concentration speak of the inability of multiheaded, independent agencies to act effectively or obtain popular support for their programs.

In reciting these criticisms of the administrative process, I do not mean to suggest that the exponents of either of these approaches to Government intend to destroy the regulatory process. On the contrary, I think their criticism flows from an honest and well-intentioned desire to improve the Government—to make it more responsive to the needs and desires of the Nation, to assure greater protection of individual rights, to do the Government's work more efficiently—all laudable objectives. The problem lies, I think, in the overemphasis in each case of a different one of these sometimes conflicting objectives.

But before I elaborate on this problem I want to tell you something more about the relations of the Civil Aeronautics Board with the Congress and with the Chief Executive—relationships that are by and large typical of those of all the independent Federal agencies. When you realize the nature of these relationships and when you realize how extensive they are, I am sure you will all agree with me that the independent regulatory agencies are far from being a "headless 'fourth branch' of the Government" and, more important, are far from being unaccountable repositories of unfettered power.

The record shows that while the Civil Aeronautics Board is independent in voting and in exercising the broad discretionary powers vested in it, it renders a strict and regular accounting of its stewardship—a strict accounting for its program, its expenditures, and the results of its work.

In these days when the newspapers are so full of controversy about the size of the Federal budget and so full of reports demanding that the President of the Congress should trim the budget, it should be obvious that the purse string is a potent instrument of control in the hands of the President and the Congress over the activities of every Federal agency and department.

In addition, each year there are numerous appearances by the Board members or its staff before the Commerce Committees of both Houses, again in review of past actions and in consideration of the dozens of bills introduced each year contemplating the modification of the statutory scheme under which the Board operates.

Each year special problems arise which are the subject of searching scrutiny by Congress. For example, a Senate Investigating Subcommittee of the Government Operations Committee, headed by Senator JACKSON, of Washington, is now conducting public hearings on an unfortunate premature "leak" of information about a Board decision last summer in order to check on the adequacy of the Board's information security measures and to determine whether stronger legislation is needed to prevent unauthorized disclosure of Board proceedings in process.

Last year a House subcommittee under Representative CELLER, of New York, held extensive hearings on antitrust aspects of the Board's record while other committees of both Houses considered proposals for a pervasive change in the basic statute under which the CAB operates. The Commerce Committee of the House conducted extensive investigation of the Board's safety regulations following the Grand Canyon accident last year and again this year after the recent tragic air accidents in New York and California. As Chairman of the Board I have testified 11 times within the past year before congressional committees on board matters.

In hundreds of instances each year Members of Congress appear formally before hearings of the Board to urge the interests of their constituents in cases pending before the Board. And in literally thousands of instances the Board is queried by congressional letters or phone calls to explain or justify its decisions its policies and programs. This evidences a proper and careful concern by the Congress in the conduct of the powers delegated by it to regulatory agencies.

With this constant review of the Board's work by Congress and by the President I must admit that I am somewhat amused when I read about the unfettered discretionary power that the Board, as an independent agency, supposedly exercises. And with the constant congressional attention that is focused on the Board's functioning, I have a similar reaction to suggestions that "The technique of direct legislative supervision has largely been neglected." (Prof. Schwartz, Legislative Oversight: Control of Administrative Agencies, 43 A. B. A. J. 19, 20 (1957)).

From the Boards' experience with congressional and Executive supervision, as I have summarized it here, but by no means exhaustively, I think it is simply incorrect to think of the independent regulatory agencies as being in any sense "unaccountable." The Board, and all the other independent regulatory agencies, are held strictly accountable to Congress from whom we derive our powers.

Does all this review impair the independence of the agencies? In a sense it obviously does. We on the regulatory agencies always know that if we were to embark on some foolish course, Congress is ready to pin our ears back. We always know that the President, with the prestige of his office, can criticize our programs or our decisions with a very powerful impact.

But in a very real sense these limitations on regulatory independence are nothing more than the limitations of responsibility in handling a public trust which, in the last analysis, we are nevertheless free to carry out and defend independently.

Now you may well ask at this point, after I have outlined the large extent of supervision of the Board, why I am concerned with proposals for greatly extended executive supervision or constant legislative intervention. The answer is simple. Both of these notions go far beyond what I have outlined as the existing measure of control.

Both ideas contemplate the direct intervention of legislative or executive control in the decision-making process, either by a general curtailment of the discretion of the independent regulatory agencies (called canalization of delegated power) or by vesting final authority outside the agencies for the dictation of specific results in individual cases.

Perhaps we can bring these problems into somewhat better focus if we consider for a moment exactly what the regulatory agency does in acting under its enabling statute. Other students of the process have said it far better than I, so let me refer to the words of Justice Jackson in *Federal Trade Commission* v. *Ruberoid*, decided in 1952, where in a dissenting opinion he gave what I consider to be one of the clearest and most realistic descriptions of the process I have ever seen:

"It may help clarify the proper administrative function * * * to think of the legislation as unfinished law which the administrative body must complete before it is ready for application. In a very real sense the legislation does not bring to a close the making of the law. The Congress is not able or willing to finish the task of prescribing a positive and precise legal right or duty by eliminating all further choice between policies, expediences or conflicting guides; and so leaves the rounding out of its command to another smaller and specialized agency. It is characteristic of such legislation that it does not undertake to declare an end result in particular cases but rather undertakes to control the processes in the administrator's mind by which he shall reach results. * * * It attempts no more than to indicate generally the outside limits of the ultimate result and to set out matters about which the administrator must think when he is determining what within those confines the compulsion in a particular case ought to be" (343 U. S. 470, 485–86).

Professor Davis, in the introduction to his treatise on administrative law, outlined some of the reasons for the trend to this broad type of lawmaking that vests regulatory agencies with this peculiar status and authority:

"The fundamental reason for resort to the administrative process is the undertaking by the Government of tasks which from a strictly practical standpoint can best be performed through that process.

"The legislative process and the judicial process, which are the principal alternatives to the administrative process, frequently fall short of providing what is needed. A legislative body is at its best in determining the direction of major policy. It is ill-suited for handling masses of detail, or for applying to shifting and continuing problems the ideas supplied by scientists or other professional advisers."

From my experience with the Civil Aeronautics Board I would say that the rationale of these quotations is especially apropos to the functions of the Board. I think it is true that none of the regulatory agencies have had to concern themselves more exclusively than has the Board with purely legislative type work, the issuance of route certificates or franchises to airlines, ratemaking, the granting of subsidies, the regulation of competition and the encouragement of new aviation businesses, work which is policymaking of the highest order having an almost determinative bearing on the development of an industry.

I think, at the same time, that the Board's experience demonstrates the wisdom of the original broad legislative grant of power to the Board and suggests the possible danger of extensive "canalization" of delegations of power. Let me again try with some examples.

The Congress gave the Board plenary authority over new route authorizations in 1938, after granting "grandfather rights" to existing operators. Aside from the customary public convenience and necessity standards adapted from older laws, the Congress gave the Board no guide to the resolution of elementary problems such as the extent of competition to be allowed except in the Statement of Policy in the Act which provided that the Board should consider to be in the public interest—and I quote: "Competition to the extent necessary to assure the sound development of an air transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense."

These general mandates the Board had to fashion into a workable policy. And it has had to apply this policy—or perhaps I should say policies, since there have been changes—to widely varying conditions that have prevailed in the airline business since 1938.

Naturally while the industry was heavily subsidized with Government funds, the Board was especially cautious in authorizing competition that would have been nothing more than a drain on the Federal Treasury. But with the tremendous expansion in the air travel market since the beginning of the Korean War, an entirely different approach was called for. An approach that

emphasized the need for improvement in the quality and quantity of service, which, seemingly, only competition could bring. And an approach which recognized the concurrent need to strengthen and balance the overall air transportation system, a result that could only be accomplished by authorizing some of the smaller and weaker carriers, which were in some instances still subsidized, to participate in the major air travel markets.

The wisest of legislators would have been hard put to develop specific directions to the Board—for authorizing competition under the changing circumstances that the Board has faced since 1938. One of the major purposes for the creation of the administrative body exercising legislative powers under Congressional supervision was to bring flexibility to legislation to meet just the type of problem I describe.

It would be a tremendous task and burden for Congress to legislate a specific and workable program for such a situation; and it seems clear that the national interest precludes Congress from attempting to do the job when it has so many even graver responsibilities to which its attention must be devoted.

This short example I have given you of the creative demands on the regulatory agency only begins to suggest the legislative problems the Civil Aeronautics Board has met in the 19 years of its existence. Since its inception new aeronautical enterprises undreamed of in 1938 have sprung up and taken their place with the pioneers.

To name some of the major ones that have arisen in commercial transportation, there are the all-cargo carriers such as Flying Tiger which serves Milwaukee on an east-west route going to both coasts. There are the irregular or supplemental carriers, which are still before the Board in the last stages of a definitive investigation into their role. There are the air freight forwarders. There are the local service carriers, such as North Central and Ozark which provide service to and from Milwaukee for numerous smaller communities in the Midwest. And, there are our international carriers, which today carry most of the global commerce of the world.

The challenge which, for example, the local service carriers present, a challenge which is the subject of intense study by the Board at this very time, is perhaps as great or greater than that of the trunkline carriers in 1938. The Board faces this challenge of adequate local air service and has faced it since the Second World War, with no specific direction from Congress and no change in the original statute except for the grant of permanent certification by Congress in 1954.

These problems are not subject to an a priori congressional fiat. The needs of each of these carriers including their need for subsidy, the needs of each city they serve, and numerous other elements must be weighed in the balance if we are to achieve a healthy local service system bringing air transportation to the maximum number of communities in the United States with a minimum subsidy cost to the taxpayer.

Awaiting us just over the horizon are problems of still greater magnitude with the advent of what has come to be called the "jet age"—problems that will require us to reexamine the fundamental predicates of the economic and safety structure of air transportation in the United States and throughout the world.

Again, these problems cannot be met with a priori legislative assumptions—but neither can they await the inauguration of widespread commercial flights for by that time it will be too late. These are the kind of problems the independent regulatory commission is designed to cope with.

In discussing this concept of independent execution of a broad mandate I have concentrated exclusively on the experience of the Civil Aeronautics Board, but I would venture to say that each of the other six independent Federal regulatory agencies could match these examples from their experience and their prospects—the ICC, for example, in coping with the problem of declining passenger volume in the rail field; the FCC in coping with the advent of television, or the FPC in coping with the problems of regulation of the production and transmission of natural gas and of further power development throughout the country.

The dynamic forces at play in all these areas will certainly test the vitality of the independent regulatory process and will undoubtedly strain the process at certain points. Congressional intervention will undoubtedly be necessary on occasion to direct the efforts of these agencies and the refinement of procedural techniques will undoubtedly continue.

In the last analysis, however, the process wil best meet the demands on it if given the discretion within a broad outline determined by Congress, to proceed empirically, fashioning methods and remedies as it goes along and as conditions change.

In the face of the experience of the Board in the past 19 years, and of other agencies in the past 30 to 40 years, a return to narrower delegations of authority would be a retrogression that would threaten the continuation of effective Government regulation. While improvements in techniques of congressional supervision may be needed, "canalization" of authority is not one of them.

Let me summarize now some of the major points I have made on this subject of broad delegations versus specific delegations. If the commissions are to bear the responsibility for regulation in the various business fields, they need authority commensurate with that responsibility. If Congress is really going to delegate power—to free itself of the burdensome details once it has defined the basic policy objectives—it must delegate sufficient authority so that the agency can really choose the course best suited to the public interest without constantly asking for additional legislation.

In short, if the business of government is to progress, freeing Congress for the consideration of major policies and the supervision of delegated authority, the direction must be away from "canalization" of delegated powers. I think it may even be safe to hazard the opinion that increased "canalization" of legislative authority, except where needed in order to correct an administrative policy, is inconsistent with the important objectives of legislative oversight, for inevitably, the filling in of legislative detail deprives Congress and the legislatures of the time needed to devote to basic policy examination and reexamination.

In my enthusiasm to deal with this question of legislative oversight I have allowed myself very little time to discuss the countertrend I mentioned earlier, the trend toward executive concentration or domination. Perhaps it really isn't necessary to discuss this problem in front of a group of lawyers, for if it can be said that many American lawyers distrust the administrative exercise of legislative power, they abhor the very thought of the executive branch of the Government exercising a similar authority. Congress is even more adamant on this subject than is the legal profession.

It may be true, as critics of the independent commission movement have said, that executive agencies could conduct some of this regulatory business more efficiently than a commission. An executive agency could undoubtedly match a commission-type agency for "expertise." It could probably gather facts and information just as effectively. It may even be that a regulatory program would have greater support with the prestige of the President's high office behind it.

The fact remains that the independent commissions are exercising legislative, not executive or judicial powers. Recent history in some foreign countries has reinforced the historical belief in this country that the Executive should not exercise legislative power. Congress is not going to give those powers over to the Executive, nor will it, I am sure, ever prefer the Executive decision-making process to the deliberative process of the independent commission with its hearing procedures and decisions on the record.

On many occasions, of course, Congress has delegated broad authority to executive agencies, particularly under the emergency War Powers. But as I have said, the fact remains that as a general rule, Congress will not deliver its legislative authority to the Executive even if it could constitutionally do this.

Perhaps the prevailing political situation in Washington provides another key to the understanding of this proposition, aside from any constitutional barriers. The responsibilities delegated to the commissions must be exercised in season and out, when Congress is in session and when it is not, and whether the White House and Congress are controlled by the same party or not. A Congress of one party will, I presume, never freely entrust its legislative powers to an Executive of another party if it has any alternative. It will—and perhaps somewhat reluctantly at times—entrust some of these powers to a bipartisan Commission responsible to the Congress.

This mention of the relation of independent commissions to the Executive gives me an opportunity to bring up an aside that is nevertheless very close to my heart. I am sure that everyone here knows that I am a Republican. I am proud of it and both proud and happy to have been appointed by the Eisenhower administration to my present post with the Civil Aeronautics Board. I bring to that post the ideals and principles which have governed my whole lifetime. But this does not alter my realization and conviction that the President has appointed me to a bipartisan legislative body that draws its power from, and is responsible to, the Congress. I think all of the members of all independent commissions must listen to what the President has to say and give it serious consideration—just as Congress itself listens to the President when he sends up his legislative and budget programs and the various other messages he submits. This is not political servility. It is the very essence of responsibility.

However, just as Congress retains its freedom to act as it sees fit after it hears the President, so do the members of the independent commissions in their exercise of the legislative powers which they get from Congress.

I think that I have said enough now to convey to you my basic ideas on this subject of independent commissions. Before I close, though, I should like to hit one more relevant point. All of the lawyers here are familiar with the classic description of the independent commission which says that these commissions exercise quasi-legislative, quasi-judicial and quasi-executive powers. You see that the word "quasi" is in there in each part of the description. The dictionary says that "quasi" means "as if" or "in a sense." I suppose it has been used in the description I have just given you to mean "like" or "similar to."

There may be some truth to that kind of a description of administrative powers and I know that I often use the word "quasi-judicial" as a shorthand description of the Board's decisional process in route cases. But the description makes me a little "queasy"—intellectually queasy.

Justice Jackson described the use of the word "quasi" as a "smooth cover which we draw over our confusion as we might use a counterpane to conceal a disordered bed," and I would alter this slightly to say that the word "quasi" in this context is an intellectual counterpane used to conceal disordered thinking. The truth is that the independent regulatory commissions are legislative, pure and simple, exercising delegated legislative powers.

They may follow judicial procedures in exercising their legislative powers, they may have judicial duties and executive duties incidentally, but the essence of the commission statute—the reason for its being—is the legislative power granted. Maybe it would help our thinking some if we borrowed a descriptive term from the lawyer's office which to my mind gives a pretty good idea of what a commission is—and that term is "junior partner." The commissions are legislative junior partners, giving a responsible position in the firm with considerable leeway in making decisions but always subject to the senior partner's ultimate supervision and authority where needed.

I have brought you this message tonight, on a subject that is probably far from the daily interests of most of you, because I feel that there is a real need, throughout the Bar and not just among administrative practitioners, for a better understanding of the administrative process. I have only touched upon one of the host of problems in this field, but it is an important one because of the emphasis on this problem in the American Bar Association's general program. I am convinced, as a former trial lawyer myself, that as fuller understanding of the value of the administrative process to our Government increases among lawyers, we shall see the legal profession turn its attention away from efforts to cripple or destroy this process, to efforts to improve it. That will be a good day for both our profession and the regulatory agencies. Still more important, it will be a good day for the people of this country in their constant search for better government.

CIVIL AERONAUTICS BOARD,
Washington, May 7, 1957.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: With no intent to impose unnecessarily on your time, I call to your attention the enclosed speech to be delivered tomorrow by Chairman Durfee.

In it he expresses his philosophy of the Federal regulatory agency as an arm of the Congress—a conviction which he brought to the Board a year ago and which he has practiced and affirmed in his Federal experience

I believe his text will be interesting to a Member of Congress who is concerned with the regulation of civil aviation.

With best wishes,

WILLIAM KLOEPFER, Jr.,
Chief, Office of Congressional Liaison and Public Information.

Operation Remember

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr DAGUE. Mr. Speaker, I rise to speak on something that gives me great pleasure and satisfaction. On May 2, the Navy League sponsored one of the finest and most appropriate tributes we can expect to see—Operation Remember. Operation Remember was dedicated to the people who have made it possible for us to continue to enjoy the way of life which has made the United States the most prosperous, strongest, freest, and finest country this world has ever seen. Dedicated to those who led and fought to protect our spiritual, moral, and intellectual heritages, it served to revive knowledge of the great service to mankind these men performed.

Though a general tribute, the occasion was specifically directed toward the tremenodus accomplishments of the leaders and men of the United States Navy and the United States Marine Corps. The group assembled could not but refresh our memories to the fact that our balanced fleet—ships, naval aviation, and Marine landing forces—serves the Nation as the bulwark of our defense.

I was particularly impressed by three addresses delivered on the occasion of Operation Remember. The one given by Mr. Gates, the Secretary of the Navy, was a stirring recital of the victories of the Pacific by the Navy and Marines. He recalled vividly the tremendous contribution made to our country by those who led, whether sergeant or admiral, the greatest exploitation of seapower known to man. Admiral Burke, Chief of Naval Operations, paid homage to the leaders of World War II who not only led us to victory but, in addition, trained and developed the leaders who today assure that we have the strongest and best naval protection for our country. General Pate, Commandant of the Marine Corps, recalled how Guadalcanal was the turning point of World War II and marked the flow of tide toward victory. How, in that subsequent battles, the Navy and Marines proved the value of the functional fleet. He emphasized the high state of readiness today, as always, of the Navy and Marine Corps. He pointed out the cooling effect the 6th Fleet had on the war temperatures recently generated in the Middle East.

These speeches pointed up the fact that we have a safeguard to our safety in the United States Navy and the United States Marine Corps. So that we are, in the future, assured of the maximum protection for our country, we must remember that maintenance of the balanced fleet is our guaranty of an adequate defense to attacks of any and all types wherever they may be launched.

I would like to add that the dinner chairman of Operation Remember, Rear Adm. John J. Bergen, United States Naval Reserve, was elected the national president of the Navy League during this recent meeting. I am certain that under the able and distinguished leadership of Admiral Bergen the Navy League will continue to perform the great public service of keeping us aware of the tremendous value to our Nation of strong naval power through the vehicle of the balanced fleet.

Under unanimous consent, I include in the RECORD the three outstanding addresses I have mentioned:

ADDRESS BY SECRETARY OF THE NAVY GATES, BANQUET, 55TH ANNUAL CONVENTION, NAVY LEAGUE, WALDORF-ASTORIA

This is Operation Remember.

Today, the jungle grows high over Guadalcanal.

A lone fisherman walks Omaha Beach.

Anzio is rebuilt.

Espiritu Santo means only its English translation, and Truk is a lonely atoll.

The world forgets quickly.

Men who were there remember, and there were millions of them. Those who were there will never forget:

The flares of the early torpedo attacks.

The hastily built beer places, that came later.

The smell of the dead.

The jungle rot of the Solomons.

The perfection of the German, the Kamakaze.

The stories grown better with the years.

The friendships, deeper than any.

The bridge games that changed as a regular member did not return.

The bloody beaches of Tarawa.

The thrill of the Halsey "get moving tonight" dispatches.

The careful planning of Spruance.

The confidence instilled by the brilliance and calm of Nimitz.

The fleet lit up by Mitscher whom the pilots loved.

The dream of a lifetime when Oldendorf crossed the T at Surigao.

The flag at Iwo.

The boys in the water.

The names *Enterprise, Lex, Yorktown, South Dakota, Salt Lake City, Boise, O'Bannon, Barb.*

Those of Vandergrift, Howling Mad Smith, McCain, Butch O'Hara, Killer Kane, Erskine, and Cates.

Those of Coral Sea and Midway.

The six Marine divisions.

"Scratch one flat top."

"The Slot."

"Send us more Japs."

The turkey shoot.

The "Can-do-Will-do-Did" Seabees.

The Nazis, the Nips.

Greater East Asia company, prosperity sphere.

The rising sun, the swastika.

Those who were there say "these things I have lived"—"These days taught me love of God."

These days brought out of the smoke and death of Pearl Harbor the greatest force on earth, the ingenuity and resources of America produced the greatest power ever devised, and the United States of America rode the airways and the seaways of the earth.

These forces were led by men—men trained for years—men who existed for such an emergency. It was their reason for being—the reason for their services to exist. Let us never forget the purpose of the military is to fight and win wars.

Many of these men are here—combat and the strain of war took many of their contemporaries.

They are the epitome of the most priceless commodity of freedom—leadership.

We are inclined these days, as a result of some of our experiences in war to think primarily of victory in terms of quantitative superiority of men, ships, and planes; in resources, money and munitions.

Remember the trojan response from mine, factory, and farm; a cardinal factor in naval success.

The amazing wartime production of ships, planes, and guns. The genius of our engineers, scientists, mechanics, and laborers.

Military success is likewise dependent more and more on new developments and new techniques, more especially nowadays on achievements in science and engineering.

Remember the superiority of carrier warfare, which spearheaded the war in the Pacific. One of the great achievements in the history of modern warfare.

Amphibious forces perfected to a degree hitherto unimaginable.

Incomparable submarine forces—which almost singlehandedly strangled the Japanese.

Fantastically flexible and responsive logistic forces—underway replenishment.

The birth of the hunter-killer teams—sighted sub sank same.

The birth of underwater demolition—the frog man.

Fantastically ingenious indeed are these techniques and developments. Just as are those of the atom, the missile, and the jet.

The United States and the free world likewise is richly endowed by natural resources. The world has never seen the like of our wealth and productivity.

Yet, these material things pale into relative unimportance without leadership. The inspirational leadership of a sergeant directing a squad of marines or the brilliant leadership of an admiral directing a task force. This is the essential ingredient above all else to victory.

Those here tonight are representative of the leadership which led our country in its exploitation of global seapower to a degree unmatched at any other time in history. They are representative of the men who filled the ranks and manned the ships in the magnificent manner required, which characterized our World War II Navy.

Throughout the war, their leaderhip employed our balanced fleets in such a manner as to exploit fully the ability of the Navy to concentrate naval power at any desired point in such a manner as to overwhelm the defense at the point of contact. This leadership demonstrated the capability of seapower to make use of the principles of mobility, concentration, and economy of force, to a degree approaching the ultimate. Modern weapons are changing the appearance and the means of application; the principles of applications are unchanged. These principles guide our leaders of today—Radford, 30-Knot Burke, Pate. They will guide our leaders of tomorrow.

Thus, they have played a vital part not only in history, but in the future—which is full of promise, because of the strength and will of all the free people of the Western World, an oceanic confederacy cemented together by seapower.

For your contributions to the glorious past and the bright future, we thank you and we salute you.

REMARKS BY ADMIRAL BURKE, THE CHIEF OF NAVAL OPERATIONS, OPERATION REMEMBER, NEW YORK, N. Y., MAY 2, 1957

This is a memorable occasion. It is the first time that the people who have played so important a part in developing the spirit and effectiveness and soul of the Navy—the things on which the traditions of the Navy are founded—have ever been gathered together in one spot.

Ever since the United States has been a nation—the Navy has been in the forefront—the bulwark of the Nation's security. This has been true throughout our entire history. It is true now.

The fleet commanders of the Navy are deployed across the seven seas today—protecting the interests of the United States—supporting United States policy. They are carrying on the traditions they have had instilled in them in the course of their naval careers.

You in this audience must take great interest and pride in these commanders—because these commanders were trained and developed by you. Under your leadership and guidance they gained their habits of thought—their habit of service—their willingness to put ship first and their own interests second. They were taught this in the small Navy of the years before World War II—under you.

Under you they gained their experience in combat. They were taught to think in battle. They learned their combat lessons—they learned their traditions from their predecessors—from you.

There are others who also taught traditions—and valor—and devotion to duty—others who are not here among us. It is of those people of whom I would now speak.

I speak of men like Cassin Young—Butch O'Hare—Mush Morton—Dan Callaghan and the thousands of others—officers and men of the United States Navy—who gave their lives in the line of duty. These men—all of them—are part of the priceless tradition from which our Navy proudly draws its strength today. Our destroyers carry some of their names—but if we had a fleet of a thousand destroyers we could not begin to honor them all.

It is more than a ship's name that makes these men live in our memories. It is their deeds. It is what they believed. It is what they stood for—what they fought for—what they died for. They are the heart and soul of the integrity of our country. They are the well spring of the strength—the integrity—of our Navy.

It is in this tradition—forced by those who fell in battle at sea—that Navy men of the past—Navy men of today—and Navy men for all time to come—cheerfully dedicate their lives to their God and to their country—to their ship and to their shipmates—to the cause of human freedom and the cause of all humanity. Mere men can give no more. Honorable men can give no less.

In a spirit of great pride and deep humility—let us salute our shipmates—who met death at sea—in defense of the United States—and in the finest tradition of the naval service.

REMARKS BY GEN. R. MCC. PATE, USMC, COMMANDANT OF THE MARINE CORPS, AT THE 55TH ANNUAL BANQUET OF THE NAVY LEAGUE OF THE UNITED STATES, MAY 2, 1957, NEW YORK CITY

Distinguished guests, gentlemen, I don't believe that I have felt so much like a "J. O." since I was in fact a second lieutenant. In looking over the lists of honored guests, I have made the rough computation that, if all had been able to be present the group would have represented a galaxy of 297 stars—on one side of the collar! Of far greater significance, they represent an aggregate of some 2,765 years of devoted and distinguished service to our Nation.

The Navy League is due the thanks of all of us for making available the occasion of their 55th Annual Banquet to honor these distinguished Americans. This has been too long delayed. I am pleased that a great organization like the Navy League has moved forward to see that this was done and I am honored to participate.

It is a wonderful experience to be able to see again—in person—so many of my old friends and comrades-in-arms, the inspiring leaders of World War II.

Seeing them brings back a flood of memories. Many events are in the passing parade, but one predominates. All of these great men here had a hand in it, in one way or another. The planning of some made it possible; others carried it into execution; still others moved the tide of battle forward on the wave of this initial success. I will never forget it. This was the battle that turned the course of the war in the Pacific: Guadalcanal.

To me that victory was the greatest moment of World War II. It was vindication for the devoted band of marines who had insisted, through the years of uneasy peace, that amphibious assault was possible; it was justification for their Navy colleagues who had believed them, and who assisted in developing the doctrine that carried United States forces successfully onto enemy shores the world over.

Guadalcanal was a high moment in the history of our Nation; it was a test of men, of doctrine, a service, and a Nation. They all proved worthy.

To the world, Guadalcanal proved the flexibility and efficiency of the functional fleet; it demonstrated the great professional lesson that flexible forces, balanced, completely ready forces, can seize the fleeting opportunities of war and turn them to our Nation's advantage. This we must remember.

Such a force cannot be improvised. Where improvisation was attempted, history is replete with failure. The force must exist. The force must be ready—on a day-to-day basis.

Tonight I can assure you that the Marine Corps and Navy are in a high state of readiness. New men and new weapons are being incorporated into a balanced fleet with its fleet Marine forces. They are bound together by a common doctrine, tested and found successful in the wars of the past—and under constant reexamination and development in the light of events of the present and our knowledge of the future.

I speak for the Marine Corps when I say we view our place with double pride—pride in the fleet as an instrument of national policy, and pride in our own contribution.

I know of no more effective instrument of national policy than the 6th Fleet with its Marines in the eastern Mediterranian. It is a tangible symbol of our national interest in that troubled area. And it is there now—for all the world to see and note.

Those of us who still serve on the active list are mindful of what these men have left to us by way of example. They have shown us high courage, judgment, vast professional knowledge. Most of all, I feel that we are indebted to them for their clear example of integrity—that quality of moral soundness, absolute honesty, and pure devotion to duty and country. This has made our country great, our Navy great, our Marine Corps great, and it has made these great men. Thos of us who follow them are much in their debt.

This we will remember.

Tampa Harbor Project

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. CRAMER. Mr. Speaker, appearing before the Subcommittee on Public Works of the House of Representatives on Wednesday, May 8, in addition to myself were representatives of the Hillsborough County Port Authority, Mr. J. B. Colbert, director, and Mr. Norman S. Brown, attorney, speaking in behalf of the request for $2.25 million to be used in fiscal 1957–58 continuing work on the Tampa Harbor project. The brief presented by the group is a remarkable presentation disclosing the phenomenal growth of the port of Tampa and the area it serves. I ask inclusion of a part of that report in the RECORD at this time so that the Members may learn of the development of this public-works project that is so well qualified, so graphi-

cally demonstrates the impact on the community, of this worthy project, and which demonstrates great willingness on the part of the community to cooperate with this Congress. This is a striking example of the good that results from congressional support of a sound harbor project.

Further, Mr. Speaker, the Hillsborough County Port Authority has, in my opinion, done an outstanding job of community service. They have served diligently both the community and the Congress in meeting the demands made upon them for services and in presenting a planned and productive program of growth for this great harbor. I would further include extracts from the brief of that authority presented to the committee today and which is an excellent analysis of both the growth of the great west coast of Florida and the needs of the area in regard to continuation of the development of the port of Tampa, Fla. From this presentation, I am sure, a full understanding of the phenomenal results of the Tampa Harbor project can be learned:

The Hillsborough County Port Authority and the Florida communities served by Tampa Harbor are deeply grateful for the action of last year which led to the appropriation by the Congress of $4 million to continue the Tampa Harbor project.

The port of Tampa is the major port of fabulous Florida. This port in many ways is exceeding the tremendous growth of the area which it serves. The port of Tampa continues to be one of the most rapidly growing ports in the United States—and this rapid expansion had its genesis in the knowledge of the start of this project in January of 1955.

This fact is mentioned to the end that you may better understand our request for appropriations for fiscal year 1957–58. The sum of $2,250,000 is being requested for the continuance of the Tampa Harbor project in fiscal year 1958.

The requested sum of $2,250,000 is the amount recommended by the President in his budget message for fiscal year 1958. The Corps of Engineers, Department of the Army, has advised us approximately $3½ million could be economically utilized in the performance of work on the continuance of this project in fiscal year 1958. This would continue the rate of work performance at the same level as that of fiscal year 1957.

We realize, however, the tremendous task confronting your committee in meeting the appropriation demands for our entire Nation. We are perfectly willing to accept the judgment of the committee in this matter and accept the recommended appropriation of $2¼ million.

It is emphasized that the forecasts of growth which we have submitted to you each year for the past few years have in truth and fact been too conservative as demonstrated by the actual happening of events.

This again is the case this year. The actual increase in new and additional port facilities, in industrial additions and the increasing utilization of the port have in actuality substantially exceeded the estimates which were presented to you in July of 1955. The necessity for the rapid completion of usable segments of the project coextensively with completion of these new port facilities becomes increasingly imperative.

I. CURRENT STATUS OF PROJECT

1. Estimated total cost, $13,196,000: The outstanding modifications to the Tampa Harbor project were authorized in the 1950 River, Harbor, and Flood Control Act (see H. Doc. No. 268, 81st Cong., 2d sess.). Generally, this authorizes deepening the 54 miles of existing main ship channels from an actual depth of 27 to 30 feet to a minimum depth of 34 feet, and widening channels from a minimum existing width of 300 to a minimum width of 400 feet. Estimated total cost of the project has been increased from $10,800,000 to $12,196,000. Attached is a chart showing the various channels, cuts and turning basins with the Corps of Engineers' cost estimates for each of the various segments of the project. This increase in project cost is almost entirely due to the increased cost of dredging which is being generally encountered throughout the United States.

2. Already appropriated, $4,977,000—already spent, $4,857,000: Fiscal year 1956 Congress appropriated $977,000 for this project and for fiscal year 1957 appropriated $4 million. The latter appropriation was $1½ million more than was initially recommended by the engineers and recommended by the Bureau of the Budget. The additional $1½ million was appropriated due to the fact that between the time of the recommendation of the Budget Bureau and of the engineers work proceeded at a greatly accelerated pace which was completely unanticipated. The Senate Appropriations Committee was advised of this fact and upon the recommendation of the Chief of Engineers increased the appropriation to $4 million so that work on the project could continue throughout the fiscal year 1957. Had this appropriation not been made work would have been interrupted. The $4,977,000 so far appropriated has been expended as follows (these are estimates of the port authority and have not been confirmed by the Corps of Engineers—who we understand have submitted detailed information in this regard):

	Fiscal year ending—		Total
	June 30, 1956	June 30, 1957	
Tampa Bay channels	$785,000	$2,315,000	$3,100,000
Egmont Bar and Mullet Key channels	280,000	[1] 550,000	830,000
Plans and engineering	130,000	75,000	205,000
Supervision and administration	87,000	174,000	261,000
Hillsboro channels	----------	600,000	600,000

[1] Includes supervision and administration.

As may be seen the status of the project is as follows:

1. Tampa Bay channels were completed during the fiscal year 1956–57.

2. The work on Egmont Bar channel and Mullet Key Cut which is being performed by United States Government hopper dredge is approximately two-thirds completed. That is, work remains to be performed in fiscal 1958 of total cost of $340,000. This will complete this segment of the project.

3. A contract was let in January 1957 covering all work to be performed on Hillsboro Channel in the total amount of $2,377,814. As of July 1, 1957, work will remain to be performed having a total cost including supervision and administration of approximately $1,670,000. This is proposed to be done in fiscal year 1958 and the estimated completion date is April 1958. This will complete the project up to Hooker's Point (i. e., the port authority terminal). This will provide immediate direct economic benefits and relief to shippers and tankers using the newly renovated port authority dock which provides 2,000 feet of berthing space with 34 feet of depth.

4. Requested: Amendment of completion schedule; to complete usable segments of channel to upper Tampa Harbor:

The port authority respectfully requests that the phases of the project be completed in the following order of priority:

1. First complete Egmont Channel; Mullet Key Cut and the Tampa Bay channels.
2. Hillsboro Channel.
3. Sparkman Channel and Ybor turning basin.
4. Port Tampa Channel and Port Tampa turning basin.
5. Alafia River.
6. Hillsboro River.

(Under the original recommendation items 1 and 2 were the same and items 5 and 6 had the same relative positions. Items 3 and 4 were relatively as follows:

(3. Enlarge Port Tampa channels.

(4. Enlarge Sparkman Channel and Ybor turning basin.

(5. Enlarge Port Tampa turning basin.)

The reasons an amendment of the completion schedule is requested are as follows:

(1) There has been a substantial change in conditions since the original recommendation was made to the district engineer some 3 years ago. This essentially is due to the fact that since the original recommendation was made over $9 million in new port facilities have been undertaken or committed and over $90 million in new industrial facilities requiring deep water have been undertaken or committed; the volume of traffic not only has substantially increased but economic savings have correspondingly increased.

(2) This is the most economical schedule of completion. A contract has been let which will complete the Tampa Harbor project through the Hillsboro channels (i. e., items 1 and 2 above). Obviously, it would be better to leave the equipment on site and proceed with the dredging operations through Sparkman Channel and Ybor turning basin which are approximately 1.5 miles in length.

(3) This completion schedule will immediately provide a completed usable segment of the project—and this will be provided to not only the greatest affected volume of tonnage but also to the greatest number of vessels, shippers, affected members of the public as well as to the Department of Defense.

In 1955 Port Tampa handled 37 percent of the tonnage of petroleum—63 percent being handled in the upper harbor. (Port Tampa, 1,830,000 tons; upper harbor 3,115,000 tons.) In 1955 Port Tampa handled 46 percent of the phosphate, i. e., 1,563,000 of 3,399,000 tons.

(4) The port authority estimates that the completion of this segment of the channel (i. e., Egmont, Mullet Key, Tampa Bay, Hillsboro, Sparkman, and Ybor Channels) will immediately effect approximately $1½ million in calculable annual benefits.

II. REQUESTED FOR 1957–58: APPROPRIATION OF $2,250,000

The sum of $2,250,000 is requested for the continuance of work on the project for fiscal year 1957–58. This is the sum recommended by the President. This sum would be spent as follows:

1. Completion of work upon the Egmont Bar Channel and Mullet Key Cut by Government hopper dredge ($340,000). It is our understanding that this is in accordance with the plans of the Engineers. It is understood that availability of United States Government hopper dredge permits the scheduling of such dredge for the performance of all of the incompleted work on these two channels.

2. The remaining part of the funds to be used in discharging the obligations under the contract currently being let on Tampa Bay channels ($1,670,000).

3. The remaining appropriated funds ($240,000) would be spent on work performed on the Sparkman-Ybor Channels during May and June 1958.

We wish to emphasize that this sum contemplates the use of only one dredge under private contract work and it also contemplates that no advance of funds would be made during the current fiscal year.

III. JUSTIFICATION OF APPROPRIATION

1. The tremendous growth of the port of Tampa: 3 years ago, and each year since that time, we have advised you and testified before you that the start of this project would unquestionably "trigger off" an unprecedented growth of the port of Tampa. That the shallow and inadequate channels of the port of Tampa impose a tremendous economic burden upon our port, which is not borne by any other major port in the United States or by any sizeable port in the South Atlantic or Gulf of Mexico. Events have more than amply substantiated that statement. The port of Tampa is the major marine gateway into "fabulous Florida." The tremendous growth of the State of Florida, is, of course, one of the major contributing factors to the growth of the port of Tampa. But this is only one of the reasons for the tremendous growth of this port.

We still believe, and so believing urge upon you, that the start of the Tampa harbor project has been the single greatest contributing factor to the tremendous growth of the port of Tampa. We hope that this factor of growth will be given the same consideration by you this year as you have in the past. We urge that these growth factors clearly indicate and strongly justify appropriation of sufficient funds to keep work proceeding apace and with unbroken continuity.

2. Nineteen hundred and fifty-six export and coastal rail car unloadings—Tampa, fifth largest port in the Nation—1956 export and coastal car unloadings—Tampa is fifth ranking United States port: The port of Tampa in 1956 had a total of 62,614 export and coastal carloads unloading (except coke and coal). It is the fifth ranking United States port in this regard. Tampa's 1956 car unloadings exceeded 1955 by 22 percent (11,148 cars).

The growing national commercial importance of the port of Tampa is seen by comparing the 10 ranking United States ports in 1956 rail car unloadings.

Port in order of rank	1956 number of car unloadings	1956 increase (or decrease) over 1955 cars	1956 percent increase (or decrease) over 1955
(1) New York	209,608	9,610	5
(2) New Orleans	119,529	4,168	4
(3) Baltimore	99,208	4,893	5
(4) Galveston	90,188	13,643	18
(5) Tampa	62,614	11,148	22
(6) Philadelphia	58,954	2,854	5
(7) Hampton Roads	57,163	(−5,758)	(−9)
(8) Portland, Oreg	56,932	12,792	29
(9) San Francisco	47,993	785	2
(10) Houston	42,096	3,897	10

NOTE.—PT Rept. 6A, sheet 17, Association American Railroads.

For the first quarter of 1957 the car unloadings at the port of Tampa continued at a growing pace of a total of 16,677 cars—an increase over first quarter 1956 of 1,434 cars, or approximately 10 percent.

The port of Tampa is increasingly becoming the marine hub of the Southeastern United States. Its commercial importance as a port in the Southeastern United States is evidenced by the fact that its total 1956 car unloadings exceeded the combined 1956 car unloadings of Charleston, Savannah, Jacksonville, Port Everglades, Miami, Pensacola, and Mobile—and the Tampa increase in cars unloaded in 1956 over 1955 exceeded the combined increase of the compared ports.

Port	1956 number of car unloadings	1956 increase (or decrease) over 1955	1956 percent of increase (or decrease) over 1955
Tampa	62,614	11,148	22
Mobile	23,689	6,885	41
Pensacola	3,430	455	15
Miami	3,234	(−665)	(−17)
Port Everglades	2,048	530	35
Jacksonville	5,634	1,134	24
Savannah	14,125	(−849)	(−6)
Charleston	9,764	568	6

These car unloadings at the port of Tampa largely comprise bulk commodities—the water transportation of which is receiving severe economic penalties due to "light loading" and "delay time" caused by the present shallow channels. This emphasizes the necessity of completing the Tampa Harbor project with all reasonable speed.

We think it particularly pertinent with reference to increased usage of the port and utilization of its facilities that this is an increase of over 800 percent over the corresponding period of 1940—it is by far the most substantial increase of any South Atlantic or gulf port for this period of time.

3. Fiscal year 1956 customs receipts, $3,897,000, up 39 percent over fiscal year 1955. Foreign commerce, too, is increasing at an accelerated pace—and at a rate in excess of our forecast of prior years.

Customs receipts of the port of Tampa for the fiscal year 1955 totaled $3,896,932. An increase of $1,104,000 over 1954. Or to express it differently, customs receipts for 1955 were up over 39 percent over 1954.

Customs collections for the first 8 months of fiscal year 1957 total $3,587,675. It would indicate that for fiscal year 1957 they may reach or exceed $5 million. Another indication of the growing commercial importance of this port—an increase over 1950 customs collections of over 250 percent.

Foreign and domestic commercial interests even more than the home folks are aware of and inquiring into the tremendous growth and potentialities of the port of Tampa.

The customs value of goods imported from nations of free Europe through the Tampa district totaled $37,670,000 in 1955. This was greater than the value of such goods imported through the districts of Mobile and New Orleans combined. This tremendous growth is not a shift in emphasis from our larger sister ports; it is essentially to meet the demands for these foreign products made by the area served by the port of Tampa.

This continued increase in customs collections evidences the fact that imports into the port of Tampa are becoming increasingly diversified in nature and of much higher value. In 1956 foreign imports (exclusive of petroleum products) exceeded over 500,000 tons comprised of 58 different classifications of general cargo.

4. 1955 port tonnage, 10,656,000 tons, up 8½ percent over 1954; 1956 port tonnage; 12,265,000 tons, up 13.1 percent over 1955. In 1955, 10,656,046 tons of cargo passed through the port of Tampa.

This was the largest tonnage that ever moved through, the port of Tampa in a single year. This represents an increase of approximately 850,000 tons over the port tonnage for 1954 and was an increase of over 8½ percent over the year 1954.

Based upon preliminary estimates, which in prior years have proven reasonably accurate, the port authority calculates 1956 tonnage to be 12,265,000 tons, an increase of 13.1 percent over 1955.

We mention this, as we have in our prior appearances before you, calculated prospective port tonnage upon the bases of an increase in port tonnage of 7.6 percent annual increase. We now consider that too conservative as in each of the past 3 years port tonnage has increased over 8½ percent per year over the preceding year. In this regard you will note from the following comparative port statistics of the compared ports Tampa is increasing the utilization and useage of its port tremendously. It is the largest port lying between Hampton Roads and Mobile. Its growth continues unabated.

Comparative port statistics

Present channel depth	Date deepened	Prior channel depth	1950 national port ranking	1940 port tonnage	1950 port tonnage	1955 port tonnage	1940 custom collection	1956 fiscal year customs collected
		Feet						
Tampa	27 to 30 feet, 1936	27	23	3,953,724	7,517,476	10,656,046	$1,799,531	$3,896,932
Mobile	36 feet, 1954	32	22	4,900,000	7,233,103	15,483,028	1,058,501	1,223,445
Jacksonville	34 feet, 1951	30	34	3,112,958	4,159,074	6,475,048	1,283,931	2,878,809
Savannah	34 feet, 1953	30	39	3,880,120	3,471,199	(1)	2,441,156	4,000,000
Everglades	35 feet, 1930	None	56	876,727	1,866,552	2,884,256	337,838	1,332,435
Panama City	32 feet, 1949	27	72	939,707	1,040,606	1,253,523	148	3,805
Pensacola	32 feet, 1934	30	74	651,041	447,506	702,091	20,475	33,970

[1] Not known.

5. Over $9 million new port facilities since January 1955: Since the apparent assured start of this project in January 1955 over $9 million in new and improved port facilities have been undertaken by private interests. This is an additional $3,500,000 in new port facilities since our appearance before you last year. These new port facilities include piers, wharves, bulkheads, privately dredged channels and turning basins, bulk cargo loading, unloading and storage facilities for oil and other petroleum products, phosphate and chemical products, molasses, grain, and other commodities.

We submit that this is clear and present evidence of the fact that the local community served by this port is aware of its responsibility and is fulfilling that responsibility.

These new port facilities include:

Florida Power Corp.: Dredging over 5,000 yards of new channel with turning basin to 34-foot depth; bulkheading, docking and petroleum discharge facilities. Total cost, $4,500,000 (increase of $1,800,000 since last year).

Tampa Electric Co.: Dredging new channel to Black Point to 30-foot depth (docking and unloading facilities fill), $500,000.

Atlantic Coast Line Railroad: Improving Port Tampa Terminal by widening slip 107 feet for distance of 1,500 feet and dredging slip to depth of 35 feet, relocating piers, bulkheads, road and railroad tracks, $850,000.

Illinois Grain Corp.: Grain elevators, wharf and mechanized unloading facilities.

Tampa Terminals, Inc.: Construction of phosphate storage silos, wharf loading and unloading facilities.

Tampa Sand & Material Co.: 1,000 feet bulkheading on Ybor Channel.

Tampa Molasses Co.: Molasses terminal and storage facilities.

Ingram Oil Co.: Oil terminal facilities.
Texas Co.: New storage tanks.
Pure Oil Co.: Oil terminal facilities.
Republic Oil: New storage tanks.
Gulf Oil Co.: New storage tanks.
Shell Oil Co.: New loading facilities.
Hillsborough County Port Authority: Renovation of 1,000 foot dock, dredging to depth 34 feet, 2,000 feet berthing space.

6. Over $95 million new "deep water" industrial construction—Since January 1955: We advised you last year (May 1956) that since January of 1955 over $70 million in new "deep water" industrial construction had been undertaken—that is, construction by new industries or expanding industries requiring as a part of their operation deepwater sites or deepwater shipping facilities.

Since last year an additional $25 million in new deep water industrial construction has been undertaken. A total of $95 million of industrial construction utilizing the increased depth to be provided by completion of the harbor project.

It is anticipated that the industrial dispersal requirements of the Defense Appropriation Act of 1956 will in immediate future years result in more industries of this nature moving into the port area. General Electric Corp. and Minneapolis-Honeywell Corp. have commenced construction of large plants in the area served by the port.

Requirements of the Defense Department itself are requiring greater utilization of port facilities. It is our understanding that petroleum storage facilities of the Air Force are being substantially increased at Tampa. The details of this information are readily available to you.

None of these very substantial expenditures are included in the above amount of $95 million. All of this is indicative of the increasing utilization of this port and of the necessity for providing it with channel facilities permitting use of modern vessels.

These new industries include:

Schlitz Brewing Co.: Export brewery, capacity 1 million barrels per year.

Southland Petroleum Co.: 30,000 barrel gasoline refinery and manufacture of attendant byproducts.

Tampa Electric Co.: 125,000-kilowatt generating plant.

Florida Power Corp.: 125,000-kilowatt generating plant.

American Cable Co.: Cable manufacturing plant (completed in 1956 at a cost of approximately $5 million. The company in October 1956 announced a 60-percent plant expansion program.

Dibbs Aluminium Products Corp.: New manufacturing plant.

Ingram Oil Co.: Oil terminal facilities.

Texas Co.: New asphalt plant.

Pure Oil Co.: Oil terminal facilities.

Tampa Terminals, Inc.: New phosphate terminal, storage loading and unloading facilities.

Illinois Grain Corp.: Marine grain elevator and terminal facilities.

Tampa Molasses Co.: Molasses loading and storage.

There are others, these are the principal starts. If desired, data concerning each can be furnished to you—or the same may be obtained from the United States engineers to whom it has been given.

7. Proposed port facilities and industrial construction. As presented to you last year there is approximately $5 million in proposed additional port facility construction. Surveys and studies for which are now underway. This is both public and private construction. The port authority is now in the process of completing 35 acres of new dredged-channel-front industrial acreage.

It is reasonable to assume that a substantial part of this proposed new port-facility construction will be undertaken.

In speaking of new industrial construction the trend of new industries to Florida and to this section of Florida is truly so fabulous that a projection of its use would be so fantastic as to be unbelievable. As a matter of fact, what has occurred in the past 2 years could not be believably forecast 3 years ago. The inescapable fact is that both established and new industries, as well as prospective industries, in the formation of their plans and in the determination of their business moves are depending upon the speedy completion of the Tampa Harbor project. As you have in the past, we know that you will give your thoughtful consideration to this most important factor.

8. Population served by Tampa Harbor, July 1956, 1,520,000 persons—up 13 percent over July 1954: The population of 25 counties served by the port of Tampa was estimated at in excess of 1,520,000 as of July 1, 1956. An increase of over 13 percent over the July 1, 1954, estimate. It was estimated that at July 1, 1956, the city of Tampa had a population of 250,000—an increase of over 10 percent over its population at July 1, 1954.

The estimated population of the Tampa-St. Petersburg metropolitan area is 578,347. These estimates were made using standards and criteria generally approved by the United States Census Bureau and the same criteria were used for making both estimates.

The nonagricultural employment of Hillsborough County for the month of June 1956 totaled 86,900 persons, an increase of 8 percent over the 80,400 persons so employed in the preceding period of 1955.

All of these establishments are reflecting regular and steady increases in employment. In this regard, we submitted to you the results of a survey conducted last year by the Greater Tampa Chamber of Commerce showing over one-third of the businesses and manufacturers were users of the port.

IV. 1956 BENEFIT-COST RATIO: 3.2 TO 1

1. Annual savings, $1,513,000—up 57 percent over 1955: The Corps of Engineers in October of 1956 estimated the benefit-cost ratio of the Tampa Harbor project to be 3.2 to 1. This is based on 1955 port tonnage and on the revised estimate of a total project cost of $12 million and direct annual benefits $1,512,900. The Corps of Engineers estimate that the annual benefits to be derived upon completion of the port of Tampa and main Tampa ship channels are as follows:

	United States engineers 1950 project document estimate	United States engineers Oct. 1, 1956, estimate based on 1955 tonnage	Port authority 1956 estimate based on 1955 tonnage
Savings from reduced layover time, tankers	$123,000	$601,500	$601,500
Savings from reduced layover time, dry-cargo vessels	90,000	256,000	256,000
Savings from increased loadings, petroleum products	163,000	454,400	1,021,440
Alafia River: Savings from elimination of rail line haul costs	108,300	191,000	191,000
Total annual savings	495,300	1,512,900	2,069,440
B/C ratio		3.2 to 1	4.3 to 1

We believe it particularly noteworthy that the Corps of Engineers submitted to you last year a benefit-cost ratio of 2.25 to 1 based upon a project cost of $11 million and annual benefits of $966,400. In 1 year the estimated annual benefits have increased 53 percent. In other words, even though the cost of the project is increasing with generally increasing costs this is more than offset by the increase in annual benefits to be derived, so that the benefit-cost ratio is becoming more favorable each year. We think this worthy of your consideration as being indicative of the necessity for a prompt completion of the project.

The port authority estimates the direct annual benefits based upon 1955 figures to be $2,069,940. The criteria and standards used in making this estimate are those used by the Corps of Engineers. The evaluated annual benefits are the same as the engineers with the one exception "savings from increased loadings petroleum products." The port authority estimates that this amount is $1,021,440 rather than $464,400, as estimated by the United States Engineers. The basis of calculation is based upon an actual survey, tanker by tanker, of the tankers using the port in 1953 and 1954. This survey was eliminated in 1955. However, there is no change in the factual circumstances and those facts ascertained by the survey would be true. Upon this basis of annual benefits of $2,069,940 the benefit-cost ratio is 4.3 to 1. An increase in benefit-cost ratio in the past year of 39 percent. This is an increase in annual benefits of over 400 percent over the 1950 estimates by the engineers of $495,300. We believe these figures briefly and dramatically show the immense benefit to the port area that will be brought by the completion of the project. This evidences the need for rapid completion of this project.

V. ELIMINATION OF MARINE HAZARDS

We have heretofore submitted to the district engineers, Corps of Engineers, a survey of marine casualties occurring in Tampa Harbor and which were attributable in whole or in part to the inadequate channels of Tampa Harbor. The increasing traffic in the port is correspondingly increasing the dangers that are involved. In the past 15 months there have occurred the most costly collisions and marine casualties in the history of the port.

The completion of the project will most substantially lessen these marine risks.

VI. PROSPECTIVE PORT USAGE

In 1959: 17 million tons—benefit-cost ratio, 6 to 1: The port authority estimates that the annual tonnage of the port of Tampa in 1959 will exceed 17 million tons. This estimate is based upon two factors:

1. That the normal business of the port will continue to grow at the rate of 8.5 percent per year over the previous year for the next 3 years. This gives an estimated normal port tonnage for 1959 of 15,667,000 tons. As mentioned, we believe this to be conservative as the rate of growth each year for the past 5 years has exceeded this figure. For example, 1956 tonnage exceeded 1955 by over 13 percent, and the first quarter of 1957 has exceeded the first quarter of 1956 in excess of this amount. March of 1957 produced the largest volume of port traffic both in tonnage and number of ship entries ever enjoyed by the port of Tampa; over 225 merchant vessels with a total tonnage of approximately 1,200,000 tons.

2. In 1959 there will be 1,750,000 additional tons of commodities required by new industrial plants now under construction, as follows: Coal, 750,000 tons; petroleum 750,000 tons. This projection does not include the tonnage that will be produced by the proposed Southland Refinery. This does not include the potential tonnage that will be produced by the 1,000-acre planned industrial site of the Tampa Chamber of Commerce.

Proposed, as well as started, new industries and facilities by 1959 will increase port usage by 3,800,000 tons, as follows:

	Tons
Petroleum	2,486,000
Coal	750,000
Other products	650,000

Upon this basis it is entirely realistic to anticipate a maximum utilization of the port in 1959 of approximately 19 million tons.

This analysis of prospective port growth and usage is also substantiated by examination of the principal factors contributing to port usage.

(A) Rate of growth by known port usage factors.

1. Petroleum.—In 1959, 7,374,000 tons: In prior years we have advised you that the normal annual increase in tonnage of petroleum and its products would approximate 10 percent each year (e. g., see last year's brief, p. 25).

Actual experience indicates this to be accurate. In 1955 petroleum tonnage totaled 4,945,000 tons. The experience in 1956 continues to indicate that this projection is realistic.

This projection does not include or give any weight to the increased tonnage resulting from location of Southland Oil Refinery adjacent to Black Point in the upper harbor. Reasonableness of the projection is seen in the new industries and facilities and known oil terminal expansion plans heretofore set forth in detail.

2. Phosphate.—In 1959, 4,712,000 tons: In 1955 there were 3,399,000 tons of phosphate which passed through the port of Tampa. This is an increase of 38 percent in the past 5 years. Based upon known factors, including new and improved storage, loading and terminal facilities and known waterborne plans for phosphate, a projected increase of 8.5 percent per year is believed realistic and the attainable fact. On this basis, in 1959 the tonnage of phosphate will be 4,712,000 tons. This is embodied in the projection of 1959 tonnage of 15 million tons. It is important to note that the above projected 1959 tonnages for petroleum and phosphate when combined maintain the historic ratio of 75 percent to 80 percent of total port tonnage. Experience during part of 1956 indicates the above projection to be accurate.

3. Coastwise trade.—In 1959, 8,427,000 tons: Last year we estimated a projected growth of coastwise trade of 5.1 percent each year for 5 years using 1954 as the base year; that is, a 1959 coastwise tonnage of 7,024,000 tons. It is apparent that this estimate is too low. In the 5-year period 1949–1954 the average annual increase in coastwise tonnage was 9.1 percent. In 1955 tonnage totaled 6,071,000 tons—an increase over 1954 of 10.8 percent. Based upon the known factors of normal growth it is believed 9 percent is an accurate basis of projection. Using the 1954 tonnage of 5,477,000 tons as the base the 1959 coastwise tonnage will total 8,427,000 tons.

4. Latin-American trade—1959, 981,000 tons: Last year we estimated 1959 Latin-American tonnage to be 981,000 tons. This is based on an average annual increase of 44.3 percent. The 1956 tonnage has not yet been compiled; our preliminary estimate indicates this projection to be sound.

The port authority is now sponsoring a special project study of Latin-American trade. The increasing interest in Tampa as a marine gateway to Latin America further substantiates this projection.

(B) 1959 benefit-cost ratio, 6 to 1—Direct annual savings, $2,878,600: Based upon an estimated tonnage in 1959 of 15 million tons, of which petroleum accounts for 7,374,000 tons and phosphate 4,712,000 tons, direct annual savings would total $2,048,000 based upon the direct annual savings as estimated by the United States engineers for the year 1955 (e. g., $1,512,900, see supra). This savings is calculated as follows: Savings from reduced layover time, tankers—$909,000; savings from increased loadings, petroleum products—$691,918; the other figures of the engineers are accepted on a current basis although it is known that they are inadequate based upon 15 million tons.

Based upon the savings from increased loadings of petroleum products as computed by the port authority ($1,522,000), the total annual savings would be $2,787,600.

It is to be noted that the benefit-cost ratio in one instance would be 4.3 to 1 and in the other instance (using port authority estimate) 6 to 1.

CONCLUSION

We appreciate the understanding of our situation and of our problem which you have demonstrated in the past. Our appreciation of the assistance which you have given us in the past we believe is best evidenced by the tremendous growth and investment in new port facilities and in new deep water industries.

We also realize the problems confronting your committee. Namely, the complex problem of determining the amount of public works appropriations within budgetary limitations for the fiscal year 1958. As we have stated before, we stand perfectly willing to have the comparative merits of our project as a navigation project determined upon any external criteria applied with equal force to other navigation projects.

We urgently request that you recommend for the fiscal year 1957–58 the appropriation of not less than $2,250,000 for this project to the end that the project may go forward on a sound and economical basis and provide a completed usable segment of the project within the fiscal year 1958.

The members of the Hillsborough County Port Authority who are the local governing body having jurisdiction over this project are as follows: J. M. Ingram, chairman; James L. Ferman, vice chairman; Richard E. Knight, secretary; W. J. Barritt, Jr., J. B. Colbert, Jack P. Fitzgerald, manager.

Hazleton (Pa.) Chamber of Commerce Wins Top Award

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following lead article from the Hazleton Plain Speaker of May 8, 1957, which states that the Hazleton job opportunities for its men earned the top award in a community development contest:

HAZLETON WINS COMMUNITY DEVELOPMENT CONTEST—EFFORTS TO BUILD NEW WORK OPPORTUNITIES IN AREA CITED

Greater Hazleton's campaign to increase job opportunities for its men earned the top award yesterday in a statewide contest on community development.

This city, which was entered in competition by the Greater Hazleton Chamber of Commerce, won over such cities as Philadelphia, Pittsburgh, Allentown, Wilkes-Barre, and Scranton.

Hazleton's first prize of $1,500 for achievements in 1956 was awarded in the top class of Pennsylvania's second annual community development contest, Communities of 25,000 and Over Population.

PRESENTATION PLANNED

Certificates of achievement will be presented to community leaders and representatives of sponsoring organizations at a luncheon in Harrisburg, May 27. Later, a ceremony will be held in this city for presentation of the cash award and an aluminum plaque citing the community's accomplishments.

OTHER WINNERS

Other winners in the class A division (for cities of over 25,000 population) were announced by the Pennsylvania State Chamber of Commerce as follows:

Second prize of $1,000: Washington. This award will be matched by West Penn Power Co., raising Washington's winnings to $2,000.

Third prize of $750: Uniontown. Matched by West Penn Power Co., making Uniontown's winnings $1,500.

Fourth prize of $500: Erie.

Honorable mentions in class A were given to Allentown, Lancaster, Reading, and Williamsport.

Carlisle was the winner in the class B division for communities with a 10,000 to 25,000 population.

CONCRETE RECOGNITION

Wilbur J. Evans, local chamber president, remarked that "It is always pleasant to secure recognition for a good job well done. In this particular instance we of the chamber of commerce feel it is especially gratifying because it is concrete recognition by an outside agency of the tremendous efforts and accomplishments by the people of our community."

President Evans added that winning this award will not only encourage further efforts but will give our area additional publicity and spread the name of Hazelton throughout the State and entire Nation.

"To all of those people who have had a part in winning this award," he stated, "we want to again extend our thanks and congratulations."

The contest is sponsored by the State chamber of commerce, Bell Telephone Co., State Commerce Department, Pennsylvania Electric Association, State Farm Bureau Federation, Pennsylvania Gas Association, Pennsylvania Motor Truck Association, and the Pennsylvania Natural Gas Men's Association.

SIX PROJECTS ENTERED

The local chamber of commerce submitted six projects for the calendar year 1956:

1. Formation of a planned industrial park, a $740,000 industrial fund-raising effort.
2. The "operation trees" campaign.
3. Dime-a-week campaign, with a goal of $25,000, and its successor, Can-Do.
4. Secure airline service to Hazelton Municipal Airport.
5. Construction of a general purpose factory building to secure jobs for men.
6. Development of job opportunities.

Included in the above projects were these area communities: Hazleton, West Hazleton, Conyngham, Beaver Meadows, Weatherly, McAdoo, and the following townships: Black Creek, Butler, Conyngham, Hazle, Sugarloaf, Banks, Lausanne, Lehigh, Kidder, Packer, Delano, East Union, North Union, Kline, and Rush.

THIRTEEN COSPONSORS

Thirteen regional organizations participated as cosponsors of the Greater Hazleton entry in the statewide contest.

These organizations and their entering officials:

Southside Playground Association, Richard M. Parsons, president.

Arthur Street Playground Association, Irene T. Dobra, chairman of the landscape committee.

Twelfth Ward Community Association, Charles Schadder, president.

Thirteenth Ward Civic and Social Club, C. J. Humenick, secretary.

Anthracite Council of Girl Scouts, Inc., Mrs. Philip Herbert, president.

Girl Scouts of Troop 12, Drums, Mrs. John S. Williams, leader.

Greater Hazleton Chamber of Commerce, Wilbur J. Evans, president.

Boy Scouts of America, Anthracite Council, Inc., H. J. Peterson, scout executive.

Weatherly Rotary Club, John Timko, secretary.

Weatherly Boy Scouts, John Koehler.

Weatherly Flower Club, Mrs. Robert Kunkle.

Hazleton Garden Club, Mrs. Karl H. Young, president.

Bureau of Employment Security, Pennsylvania State Employment Service, Joseph J. Garrity, manager.

In addition, the participation of all organizations active in the Can-Do program was considered as a factor in the final decision.

THE HIGHEST COMPLIMENT

Dr. Edgar L. Dessen, president of Can-Do, remarked last night that the award, the highest commendation in the State of Pennsylvania for community improvement, is "the highest compliment that could possibly be given to our loyal and hard-working citizens."

Rivers Bridge Confederate Memorial Association

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. HEMPHILL. Mr. Speaker, I would like to have included in the Appendix of the RECORD a speech the Honorable W. J. BRYAN DORN, a Representative in Congress from South Carolina, made at the 81st annual celebration of Rivers Bridge Confederate Memorial Association in South Carolina on May 10, 1957.

This speech was made on Confederate Memorial Day and the Battle of Rivers Bridge occurred at the end of the Civil War when a handful of southern soldiers held off more than three divisions of Union troops.

The speech follows:

ADDRESS BY WILLIAM JENNINGS BRYAN DORN, MEMBER OF CONGRESS, 81ST ANNUAL CELEBRATION OF RIVERS BRIDGE CONFEDERATE MEMORIAL ASSOCIATION, MAY 10, 1957

It is fitting and proper that you, now and forever, honor the brave and gallant men who fought here at Rivers Bridge for a cause they believed to be right and just. The Confederate soldier faced overwhelming odds for 4 years because he believed in the principle of States rights and local self-government. While finally losing on the battlefield, his efforts were crowned with success in staving off for nearly 100 years the autocratic Federal dictatorship now looming menacingly on the horizon. The men at Rivers Bridge were dedicated men. They were courageous, independent, self-reliant. They sacrificed everything—their homes, their lives, their fortunes in an all-out effort against unconstitutional usurpation. We, the grandsons and granddaughters of these brave men, will do no less today in upholding the principles and ideals for which they fought and died.

In a sense, the War Between the States was a renewal of the Revolutionary War. In the Revolution, the American patriots were fighting against the autocratic power of King George III. The South, in the Confederate War, was fighting against what they believed to be usurpation of States rights and individual liberty by an autocratic, powerful Federal Government. It was a continuation of the long struggle for local government against autocracy. This is a never-ending struggle. Liberty is something that has to be won, defended, and fought for over and over again. Basic and fundamental principles of government and political philosophy never change. They are the same "yesterday, today, and forever."

In America today, we see a renewal, on a large scale, of the fight against centralization and federalism. The stakes today are higher than in 1861. The same fundamental issues are involved. The revolution today will be peaceful but no less determined. It will be fought out in the State legislatures and the halls of Congress, before the Supreme Court, and by television, radio, the press, and in the hearts and minds of individual citizens. It is not a sectional fight today between the North and South, but it is a battle between those, on one hand, who believe in a strong nationalist, socialist state, and those, on the other hand, who believe in States rights and a maximum of individual liberty. At stake today is trial by jury, freedom of speech, freedom of worship, freedom of the press, and the time-honored principles and ideals so paramount in previous revolutions and struggles for freedom. We must fight today, by peaceful means, just as our forefathers fought in the Revolution and as our grandfathers fought in the cause of the Confederacy. The fate of the entire free world rests on the outcome of our efforts. Federal encroachment, for a while, was a creeping encroachment. It was often intangible and little noticed by the average citizen, but today it is open and is moving at a fantastic pace.

We have, in 20 years, seen the Federal budget go from $6,150,000,000 to a proposed budget of 72 billion for the fiscal year 1958. We have seen those on the Federal payroll increase from 876,600 in 1937 to 2,407,491 today. There has been no such increase in the national income nor in the increase of our population. In 1937 the population of the United States was 128 million. Today our population is estimated at 168 million—an increase of only 33 percent. The Federal budget, on the other hand, has increased by 1,050 percent over 20 years ago. The interest on the national debt today is greater than the entire Federal budget 20 years ago. We, the taxpayers, are paying the colossal sum of over $7 billion on the money that we owe during this fiscal year.

The departments and agencies of the Federal Government are writing 90 percent of the legislation today or are making rules and regulations with the full force and intent of law. The direct representatives of the people are being bypassed and subjected to propaganda by these ever-growing agencies of the Federal Government. The taxpayer's money is being spent to propagandize him of the glories of the welfare state. The American citizen is being subjected to a barrage of propaganda extolling the virtues of the Federal autocracy. The people are being led into a socialistic pit of no return. The moral character of our people is being undermined by excessive taxation to support this Federal army of national and international spenders—professional spenders who have done nothing in 20 years but spend the money of the once-sovereign American citizen. In the name of fighting communism, the Federal Government is adopting socialistic and communistic methods. This centralized authority is pretending to stop a disease by spreading more of that same disease—the plague of international socialism. While wasting billions of dollars abroad in a futile effort to stop advancing communism, we are adopting Marxist doctrines through the back door here at home and subjecting our people to unprecedented regimentation.

Almost every Federal department and many of the committee reports of Congress justify their actions in the name of opposing communism. It seems that all Russia has to do to get this Federal bureaucracy to adopt many of its methods is to criticize our Constitution and our way of life. Already, Government is extracting from the American people, on the average, nearly 35 cents on every dollar that they earn. We are, therefore, one-third of the way to national socialism or communism because we are forced to work one-third of the time to support the Federal hierocracy. The danger point will be reached in a few years when the Federal Government starts extracting from our people 50 percent of their income. The French people rose in revolution against Louis XVI when his autocratic dictatorship took from the people 50 percent of their earnings.

The present civil-rights bill before the Congress is aimed at the rights of the States and our individual liberties. I do believe our forefathers, in their heroic struggle of 1861–65, postponed the day of Federal encroachment until recent times. The advocates of centralization are today making another all-out effort. Today the South is again opposing this centralization. We are being aided by patriotic Americans in every State of the American Union. Our numbers are daily increasing, and I am optimistic of some measure of success. The present civil-rights bill is another attempt to circumvent our Constitution and our legal processes to please the Communist and Socialist propagandists. This bill proposes to deny trial by jury in civil-rights cases and substitute trial by commissions or by Federal judges. It proposes to harass our people and our local and State law-enforcement agencies. It would create a Federal gestapo within the Attorney General's office to intimidate our people.

I want to remind the descendants of those brave men who fought here at Rivers Bridge and my fellow South Carolinians whose forebears followed Wade Hampton that the civil-rights bill now before your Congress would create a Federal commission appointed by the President to investigate unwritten charges of discrimination, a Federal commission empowered to subpena citizens to appear hundreds of miles away in a strange city to answer vague and unfounded charges. These charges could be brought against you by word of mouth without the identity of the accuser becoming known. The bill plainly states that anyone about to engage in an attempt to discriminate can be brought before the Commission or into the Federal courts. This bill would create another Assistant Attorney General with a staff of assistants charged solely with investigating charges of discrimination and tampering with the election laws of certain sovereign American States. This type of legislation is being strongly advocated by pseudoliberals who claim to champion the cause of minority groups and the underprivileged. I believe we in the South and in other sections of our country of a like mind are the real, true liberals. We believe in the principles and ideals of Thomas Jefferson. We believe, with him, that the least governed are the best governed. We share his fears about the power of the Supreme Court and a centralized Federal Government. As true liberals, we are fighting to preserve the liberties of our people, the sovereignty of our States, and local self-government.

The so-called liberal of today is advocating more Federal authority and is supporting every decision of the Supreme Court. He is a phony liberal who seeks to take away from the people and add to the already bloated Federal autocracy. In all the history of the world, when power was placed in the hands of a few men, it was at the expense of

the power of the people and, I might add, it was principally at the expense of the underprivileged and the minority races. When excessive taxation is wrung from the people and the money placed in the hands of dictators, the people lose their freedom. Likewise, in all history no liquidation or persecution of peoples could take place until first the machinery of persecution was placed in the hands of one or a few men.

This civil rights bill before Congress today, if enacted, could create the very means through which, someday, the minorities in America could be persecuted or even liquidated. No minority or religious sect in America can be persecuted or liquidated as long as we have a maximum of local authority and States rights. No mass persecution or widespread race discrimination has taken place in world history where there was local self-government and States rights. It has only taken place through dictators, centralized authority, and in the name of the "divine right of kings." Yes, we in the South are the true liberals who are fighting today to save minority races and minority religious groups and minority sections from the dictatorial machinery of a Federal Himmler. History will prove that where the machinery for a federal dictatorship was set up, the iron-fisted dictator would soon follow as night follows the day. The Spanish Inquisition in Spain, St. Bartholomew's massacre in France, the persecutions of the Church of England and Rome could never have taken place unless there was a strong federal authority.

This should be a warning today to many of our church leaders who are supporting a Socialist state, the Supreme Court, Federal aid to education, and this civil rights legislation. Make no mistake about it. If this civil rights bill passes, if the Supreme Court usurps more power, if Federal aid to education comes, the man, too, will come and will persecute the minorities in America who are advocating this type of legislation. Hitler posed as a friend of labor and of the people, but when the machinery was placed in his hands alone, he destroyed labor and wrecked the German Republic. Right here let me make it crystal clear that there was no persecution of the various Christian faiths in Germany until Hitler abolished the states in Germany and made the German Reichstag a rubberstamp Congress. Many church leaders in his early rise supported Hitler and his wild dreams of Socialist plenty—only to find themselves later in concentration camps for attempting religious freedom. The same can happen in America to our church leaders, to our minority races, if local government and the sovereignty of the States is seized by the Federal Government. Once firmly entrenched in power with a ruthless gestapo at his bidding, Hitler turned the power of his federalized state against a minority race of people. Without local government and state government, they were liquidated in the most horrible and inhumane way.

Joseph Stalin spent years consolidating the power of his federal state and then ruthlessly liquidated millions of southern Russians and herded minority peoples into the slave-labor camps of Siberia. Mussolini followed the same course when wielding absolute power from his headquarters in Rome. With individual liberty, local government and States rights, these millions would have been alive today. If we are successful in our fight to keep local government and States rights, we will be saving our people from religious persecution and our minority races from the fate of their brothers in foreign lands.

We must exert every effort today, before it is too late, for our constitutional processes, for the proper balance in our form of Government between the Federal Government and the States, between the Congress and the executive, and between the people and the Supreme Court. The Supreme Court is interpreting into the Constitution and reading into the law things that were never intended by the Congress or the people. Americans everywhere are becoming alarmed at the usurpation of power by the Supreme Court. The Pennsylvania sedition case, the New York City school case, and, the other day, the Philadelphia private school case are enough to shock Americans in every State and in every section. The people are looking to their duly elected Representatives to curb the power of the Supreme Court, executive branch of the Government, and this new international monster—the Charter of the United Nations. I hasten to assure you that your South Carolina delegation in the Congress is fighting night and day, long and hard, to curb and to forestall this sinister Federal authority. We of the South represent only 100 votes in the United States House of Representatives. If we are to be successful, we must gain support in other sections. I believe with our united efforts, support is forthcoming.

Federal aid to education, though supported by some well-meaning people, is an octopus in disguise. With Federal aid, eventually will come Federal control of education and the youth of our land. This is a familiar road followed by Hitler, Goebbels, Mussolini, and Stalin. Every dictator since the beginning of time saw the absolute necessity of controlling education to further his dictatorial ambitions. They were as afraid of locally controlled education as they were the plague. If we are to remain a free Nation, we must preserve local control of our schools.

Every American State in this Union today is in better financial condition than the Federal Government. If the great State of South Carolina, one of the poorest in the Union, can build this magnificent school system that we see around us, surely Ohio, Pennsylvania, Indiana, and Illinois can build their own schools. Any community that builds its own schools and solves its own education problems will grow morally and spiritually. Local government will be strengthened, our people will have more pride in themselves, and confidence in their ability to solve their own problems. This, in turn, will strengthen the Republic. Federal aid to education would strike the final blow to the America as we have known it. America is great today because of its different sections, of its different people, and because of its difference of opinion, and even diverse political philosophy. If America ever begins to look and act in a single pattern, America will cease to be a great Nation. The American body politic will become a rubberstamp without willpower or courage—to be used by the Washington autocracy, to further their own ambitions. My admonition to you today, my fellow countrymen, is to oppose with united effort this civil-rights legislation, Federal aid to education, this stupendous budget and Federal encroachment, just as those heroes so valiantly fought here at Rivers Bridge.

Our struggle today is greater, more far-reaching, and more important than theirs. If we lose America and the free world, we will be plunged backward 1,000 years into medieval darkness. We should zealously guard freedom of speech, trial by jury; freedom of choice, freedom of the press, and religious liberty. To preserve these basic freedoms guaranteed to us in the Bill of Rights, we must save our Constitution given to us by the Founding Fathers of this Republic. To save this great document, we must first preserve the integrity and sovereignty of the several States. We in the South have been plagued for generations by a negative psychology. I see signs of our beloved South going today from the negative to the positive. We are on the offensive. We know that the freedom of our sons and daughters depends upon the outcome of our battle today. The destiny of America itself hangs in the balance. The southern people fought for the South in the War Between the States. The southern people today are fighting for America.

We in the South are in the forefront in this desperate struggle today to preserve not just the southern way of life but to preserve the principles enunciated in the Declaration of Independence, the Constitution, the Bill of Rights and the American way of life, not just for the South but for every single one of the 48 American States who have flourished under that same Constitution. Yes, this fight goes beyond the borders of the South, the Middle West, or the Union, but it extends and beckons to the whole free world. Our fight is the battle of free peoples everywhere—Europe, Asia, the Philippines and beyond the Seven Seas of the world. Totalitarianism, dictatorship and centralization is on the march. This is no time for appeasement or compromise or for adopting just a little regimentation or a little centralization. We must draw the line. The die is cast. We must save all of our freedom or lose all of our freedom.

I am proud that I was born a South Carolinian. I am proud that my great-great grandfather was a captain in the Revolutionary War. I am proud that my grandfather volunteered in the war for southern independence, fought in the first battle at Manassas and was surrendered at Appomattox Court House. I am glad that you have permitted me a humble part in this, the greatest fight of all—to protect and pass on this palladium of liberty—the America of today. I solemnly promise you today to tell the glorious South Carolina story. We in South Carolina and in the South do have a different philosophy. It is the philosophy needed to bolster the sagging courage of free men. This is an age of public relations, advertising, and salesmanship. Let us advertise our political philosophy. In this offensive we are now waging, let us all be ambassadors of good will, ambassadors of the American way of life, and ambassadors of Constitutional government. Let us resell to the Nation and the world individual liberty and local self-government.

The South played a leading role in the War of the Revolution. A southerner, Thomas Jefferson, wrote the Declaration of Independence. A southerner, George Washington, led the American armies to victory. Again, it was a southern leadership that prevailed in the Constitutional Convention under its president, George Washington, ably assisted by Madison and Monroe. George Mason of Virginia was the author of our sacred Bill of Rights. In the formative years of our Republic, great southern justices molded the Supreme Court into an instrumentality of justice and protector of States rights and the people's liberty. Edward Rutledge of South Carolina as Chief Justice and John Marshall of Virginia won the admiration of the true exponents of freedom. In the early history of the Republic during its most trying years, steady southern heads guided the Ship of State—Washington, Jefferson, Madison, Calhoun, Clay, Andrew Jackson, Monroe, James K. Polk and many others. We southerners are proud of the early American patriots. We are just as proud of Robert E. Lee, Stonewall Jackson, Wade Hampton and the courageous men who followed the cause of the Confederacy. With their blood in our veins, with our great heritage, with these traditions and with the spirit of the men who fought here at Rivers Bridge, and the fidelity of those who are here today preserving the memory of this event, the South can and will be successful.

The Nation's Older Citizens

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of our colleagues in the House to a series of studies recently issued by the Committee on Labor and Public Welfare of the Senate, which deals with a problem of growing concern to the whole Nation.

People are living longer today and while we all rejoice that this is so, it is nevertheless creating problems to which we as a nation must face up sooner or later. Both Congress and our State governments are giving increased and continuing attention to these problems as the plight of growing numbers of our older citizens taxes to the utmost the social and economic resources of almost every community.

In West Virginia, individuals 65 years of age and older represented 7.6 percent of the State's total population in 1954. This was one percentage point under the national average, according to figures contained in a series of Studies of the Aged and Aging, compiled by the Senate Committee on Labor and Public Welfare, released this past December.

In 1900, according to this same source, the average life expectance of boy babies at birth was 46 years; by 1954, they could expect to live 67 years. Girls born in 1900 could look forward to reaching the ripe old age of 48; by 1954, this had increased to 73 years.

By the same token, out of a total population of 76 million Americans in 1900, only 3.1 million, or 4.1 percent, were 65 years of age or older. By 1955, with the total population swelled to 165.2 million, this older age group had increased to 14.1 million, or 8.6 percent; and by 1975 it is estimated that some 20.7 million, or 9.3 percent of the total population will have reached or passed their 65th birthdays. If West Virginoa continues to follow the national trend, in 20 years from now at least 8.3 percent of the State's population will be in this older age group.

What this could mean in terms of West Virginia's present and future economy, and the Nation's, can best be explained by some of the further facts set forth in the Senate Committee's studies.

Most importantly to be noted, it seems to me, is the fact that the increased years of life granted us will be spent in enforced and unproductive retirement if current hiring trends are continued. Age restrictions now bar many older workers from substantial gainful employment. Recent Department of Labor surveys reveal that in 5 of 7 large cities checked, more than half the job openings listed with the employment offices in the month of April had upper age restrictions—starting in a significant number of instances at age 35.

In June 1956, a period of comparatively high employment, the Labor Department's monthly survey showed that nearly 40 percent of the unemployment insurance claimants in the United States were 45 years of age or over. Census data for the full year 1955 reveals that the average monthly unemployment rates were higher for older workers than they were for the younger age groups; that these older workers had more spells of unemployment; and that the jobless periods were of longer duration for them than for their younger competitors.

It follows, of course, that as their earning capacity diminishes, the purchasing power of these older citizens proportionately declines. This not only tends to have a restrictive effect upon business conditions, but it also taxes the resources of the local community to meet the greatly intensified special needs—for housing, sustenance, medical care, hospital services and recreational opportunities of the older individual.

Old-age and survivors insurance under title II of the Social Security Act is already helping to lift some of the burden of their care from the back of the local community. It is helping many to meet their own needs, in part at least, and thus to enjoy the independence, the dignity and the self-respect which are the rightful properties of those in their sunset years.

But for too many more, with no other sources of income, the low minimum benefit of $30 or $40 a month now being paid under the OASI program is insufficient to provide the bare necessities of even a substandard existence when the recipient is in good health. When illness strikes—as it is so likely to do among older people—the situation becomes hopeless. No recourse is left save to ask for public assistance. And with due credit and great admiration for those who administer our present public-assistance programs, I am nevertheless compelled to protest the humiliations, indignities and often the injustices forced upon the hapless recipients of public aid by the restrictive laws imposed in a majority of our States.

Senator HUBERT HUMPHREY exactly expressed my sentiments in one of his recent vibrant speeches on the Senate floor when he said:

> To me, the practice of forcing an older person to sign over his little home that he has spent most of his life acquiring (and if this is not thrift, what is?) as a condition of receiving aid in time of need is an abomination.

In West Virginia, the public-assistance program has recently had to be cut back because of the demands upon its resources of the growing numbers of the needy aged, the blind, the physically handicapped and the dependent children who must have help to survive.

The extent of the problem and its growing proportions, it would seem to me, can only be solved by congressional action which would merge the resources of this richest of all nations so that those in the less prosperous areas of the country may have help equal to that available in the wealthier communities. Surely what we are trying to do for the underprivileged peoples of other lands, is worth trying to do for our own at home.

In subsequent issues of Keenotes, I shall tell you about what Congress is planning upon doing, and about the bills which I and many of my colleagues are introducing to meet this serious and continuing challenge to the Nation—the problems of our older citizens.

The Sight Conservation and Blind Work of Lions International

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. MARTIN. Mr. Speaker, the International Association of Lions Clubs—more familiarly known as Lions International—this year celebrates the 40th anniversary of its founding. Through its 563,000 members, who belong to 13,000 clubs in the United States and 80 other countries across the face of the globe, this great service club organization has made Lionism synonymous with grassroots neighborliness and kindly helpfulness in every corner of the free world.

It is not my purpose here to list the many activities which Lions Clubs have adopted in their program of community and personal service. They now sponsor more Boy and Girl Scout troops than any other civic or service organization. They finance and encourage hundreds of Little League baseball teams; they provide athletic and recreational equipment for thousands of schools and orphanages, camps and playgrounds. In county fairs, agricultural exhibits, livestock tours, land-conservation projects, and rural health programs, the emblem and hand of the Lions is increasingly prominent. Last year alone this great fraternity of civic-minded men sponsored 170,230 activities dealing directly with the health, improvement, betterment, education, and welfare of the towns and cities in which they live.

Great as this contribution to their communities, their nations, and the wide world may be, I believe that the greatest single service to humanity by the men of Lions International is in the field of sight.

Ever since its founding in 1917, the association has made the conservation of sight and rehabilitation of the blind a major project. Every one of the 13,000 clubs in lionism has a sight conservation and work for the blind committee, constantly alert to help those living in the world of perpetual darkness. In thousands of communities here and abroad Lions have provided sight-testing equipment for schools and free clinics, instituted better school lighting, purchased countless eye glasses for needy children and adults, established blind persons in business, promoted the sale of blind-made merchandise and in a thousand and one ways have made life more normal and livable for those afflicted with the threat or tragedy of blindness.

Permit me to spotlight a few of the major projects which this great association of kindly men has fostered.

At Little Rock, in the State of Arkansas, the Lions Clubs of that region operate a rehabilitation center which teaches newly blind persons to live with their handicap. The housewife learns to keep house and care for her family, children learn good health and personal habits, the aged are given courses in weaving, woodwork and other handicrafts. Through this agency, and Lions-promoted State cooperation, Arkansas has become a leader in its work for the sightless.

The Lions of Massachusetts have established the Massachusetts Lions Eye Research Fund and have raised sufficient funds in the past few years to provide financial assistance in the form of grants or fellowships to doctors working in the field of research to discover the causes and cures of blindness.

In Iowa, the Iowa Lions Sight Conservation Foundation operates the Lions Eye Bank at the State University Hospital and has restored sight to scores of persons through surgery, treatment and corneal transplants.

The Lions of Ohio, through the Ohio Lions Eye Research Board, have provided funds for laboratory research into the causes and cures of blindness. Plans are underway for an ophthalmic institute where diagnosis, therapy, and surgical rehabilitation will be available to the needy.

In California, Lions coordinate the work of all agencies in the State which serve the blind. The San Diego Lions Club developed the banks braille writer—a pocket-sized machine which is the braille typewriter for students and professionals. Hundreds of Lions Clubs throughout the world have purchased these machines for blind persons in their communities. The Monterrey Park Lions Club created the miniature white cane, used by Lions as a lapel pin in their fund-raising activities for blind aid.

In Florida, where many clubs are leaders in blind work, the Winter Haven club recently designed a series of tests for school students which promises to revolutionize testing of eyes in the lower grades.

The Lions of New York State have been pioneers in the eye bank and corneal transplant movement. The Buffalo Eye Bank and Research Society, sponsored and financed by Lions, operates in the field of research, surgery, and corrective treatments. The Sight Conservation Society of Northeastern New York is carrying on an intensive program in the treatment of glaucoma and other blinding diseases.

In Illinois the Hadley School for the Blind, financed and directed largely by the Lions of Illinois, distribute free correspondence courses in braille, together with braille texts, magazines, and books, to blind people in all 48 States and many foreign countries.

Michigan is famous for Leader Dogs for the Blind at Rochester, a training school for guide dogs which is supported solely by contributions of the Michigan Lions.

The list is endless; every State has some phase of blind work or sight conservation which it supports, and it was to this unselfish humanitarian service which President Eisenhower referred when he wired the Lions of Washington, D. C., recently:

> Congratulations to you upon the dedication of your Eye Bank and Research Foundation. This is another practical expression of your concept of broad service to the Nation and to your fellowmen around the world.

ORIGIN OF THE WHITE CANE

A blind man crossing a street in Peoria, Ill., more than 25 years ago gave birth to the idea of the Lions white cane—a symbol of blindness and a protection for the blind, in every civilized country of the world. Caught in a swirl of traffic, the blind man desperately tapped his black cane on the pavement, appealing for the consideration that busy drivers did not know he needed.

George A. Bonham, then president of the Peoria Lions Club, saw the incident. There must be, he said, some way in which this blind man and scores of other Peorians in his predicament could warn motorists of their blindness. Suddenly the idea came; why not paint the cane white, with a red band, and let the blind man hold it out when he crossed a street. The Peoria Lions approved the idea, white canes were made and distributed, and the Peoria City Council adopted an ordinance giving the bearers the right-of-way at crossings.

Furnishing white canes without expense to the blind promptly became an international activity of the Lions. Ninety percent of the 190,000 sightless adults in the United States have received canes from their local Lions clubs; every State in the Union has adopted legislation making the Lions white canes an official protective symbol for the blind. Last year 19,555 white canes were distributed as new equipment or replacements, and thousands of blind persons owe their safety and their lives to the respect which this Lions-conceived symbol of blindness commands.

WHITE CANE WEEK

Man's love for his fellow man, translated into the rich flood of kindness and helpfulness pouring from the hearts and hands of over half a million Lions, is a manifestation of human desire to aid the halt, the sick and, above all, the blind. To memorialize that great contribution in the field of blind work and sight conservation, Lions International White Cane Week has been established in the United States to be observed each year, during the month of September. Its celebration will serve as a lasting tribute to the continuing contribution that Lions clubs are making to this important phase of our national health and welfare.

A Look at the Forest

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. BETTS. Mr. Speaker, sometimes I think we forget that this is a Government, as Lincoln said, "of the people." We act as if it was a Government of bureaus, agencies, and departments. The current budget discussion has served the useful purpose of reminding us that the people have the last say—and are really using it. It is possible that after the "shouting and tumult dies" it may be the people crying out for economy who will ultimately decide the budget issue. The following editorial from the Marion Star elaborates on this possibility much better than I can, and I suggest it as recommended reading for every Member of Congress:

A LOOK AT THE FOREST

People who work in Washington and get their ideas ready-made from Government sources say they cannot understand what is causing so much criticism of Federal spending.

They point to charts and records to prove that nothing is out of the ordinary; that criticism is not justified.

President Eisenhower has been advised to go over the heads of the Congressmen hacking at his $71.8 billion budget, to explain to the people why it cannot be cut.

But in a weird mixup of timing, the White House has queered Mr. Eisenhower's appeal in advance by announcing that he, himself, has just trimmed 520 million off his 4.4 billion foreign-aid request.

That is exactly what millions of Americans who do not work in Washington and do not have the Washington point of view think should be done about the budget as a whole—that it should be pruned of billions, because it would do no harm to anyone except the direct beneficiaries of public spending.

This is the thing Washingtonians cannot understand. This is the forest they cannot see for the trees that block their view. They are spenders. They have lost touch with taxpayers.

The American people are in the throes of a psychological reaction from too much public spending too long sustained by too many hopes that have not been realized.

It may have been disillusionment about the Middle East that set off the reaction. It may have been the cumulative resentment of confiscatory taxes in peacetime. It may have been realization that their 1952 hopes about curbing Government spending with a change of administration had turned sour.

It probably was a combination of all these things. But it set off a reaction that was spontaneous and nationwide. The American people suddenly were in no mood to take Washington's word for it any longer that everything proposed in Washington was indispensable and untouchable.

Politically, the reaction is being misread as a revolt against Dwight Eisenhower and his governing group. That is a too-easy explanation—a politician's malicious explanation.

The revolt is against Government that grows so big the servant has become the master. The revolt is against the credo that dollars are a substitute for prudence, self-reliance and earning a penny by saving a penny.

Politics is sometimes defined as the art of the possible. Any politician who misreads what is possible in dealing with the people's revolt against Federal spending which budgetmakers call untouchable is in for a teeth-rattling jolt.

A Tribute to Rumanians on Their National Holiday

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. ROOSEVELT. Mr. Speaker, the 10th of May is a day of national dedication for Rumanians. It symbolizes the fulfillment of the aspirations of all Rumanians for nationhood and independence.

Today Rumania has been deprived of her national independence. The oppressive hand of communism has imposed uniformity throughout the entire state. Dissent is not tolerated in the political life of the nation. The economy has been drained of its vitality in the service of Moscow. And Rumania's colorful cultural life has been reduced to the lowest norm of Marxist-Leninist ideology. All creative writing in Rumania has been compelled to conform to the narrow limits prescribed by the Communist leaders.

Scientia House is the instrument of Communist literary tyranny in Rumania and the ideological fountainhead of Rumanian communism. It is the headquarters of the Ministry of Education and culture and the leading Rumanian Communist newspaper, Scientia. It is also the state publishing house for political literature. Head of the 6,500 shock troops on this ideological front employed at Scientia House is Miron Constantinescu, the Minister of Education and Culture and the acknowledged chief theoretician of Rumanian communism.

The production of propaganda by Scientia House is considerable. It is estimated that every day 2 million copies of newspapers are published. Scientia alone has a circulation of 1 million. Scientia House also publishes 170,000 pamphlets, booklets, and periodicals in an average working day. Everything is published in strict conformity with the line laid down by the leaders of the Rumanian Communist Party.

One cannot help wondering whether the Rumanians can maintain their cultural identity under this avalanche of Communist propaganda. Indeed, the great challenge for Rumanians in the future lies in this cultural area; for once the sense of cultural uniqueness has been destroyed and supplanted by the alien concepts of communism the way is then prepared for the broader attack on the idea of nationality and nationhood.

But Rumanians have known subjugation and national suppression by a foreign power before. They survived that tyranny, and they shall survive the present one.

On this anniversary of Rumanian independence let us, therefore, join with freemen everywhere in solemn resolution to oppose Communist imperialism with all the strength within us. Let us also join with all friends of Rumania in an expression of regard for the Rumanian people that their hopes and aspirations for freedom shall one day be fulfilled.

It Could Happen Again

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. HERLONG. Mr. Speaker, reports of foreign submarine activity off the coast of Florida again point up the need for the proposed Florida barge canal which would cross the State from the gulf to the Atlantic. Had there been such a canal during World War II the loss of shipping would have been reduced tremendously. As it was, many ships and tankers went down off the Florida coast due to enemy action. In this connection, I wish to insert a timely editorial from the Ocala Star Banner, Ocala, Fla. The editorial follows:

IT COULD HAPPEN HERE

Drew Pearson, in his column dated April 11, made mention of the presence of foreign submarines off the coast of Florida in the neighborhood of Cape Canaveral. At that time Pearson said:

"Since these are not subs of any allied nation, such as England and France, the conclusion is unescapable that they are Russian, and that they are lying off Florida to watch for and spy on the first intercontinental missile, which presumably is to be fired soon."

United States military and naval authorities gave no confirmation of the presence of Russian subs off the coast of Florida. However, there was some official comment that there was nothing to prevent enemy subs lying off the coast of continental United States.

But what amounts to official confirmation for the Pearson report came the other day from Senator BRIDGES, Republican, New Hampshire, who gave out a statement that Russian subs may be prowling off Florida coasts in an attempt to watch United States missile experiments.

BRIDGES, who is a senior member of the Senate Armed Services and Appropriations Committees, mentioned the Pearson report, indirectly, and commented:

"They were not ours or our allies. If the submarines are in this vicinity and they are Russian it may well be that they are watching our progress on the first ICBM. I am confident that the Navy is pretty well alert to the submarine menace."

Yes, we can have every confidence that the Navy is "pretty well alert to the submarine menace" now, but it was also alert to this "menace" during World War II, and what happened?

Shipping losses due to enemy action along the gulf coast and South Atlantic waters, totaled 53 vessels; 29 American tankers and 11 foreign tankers; 13 dry cargo vessels of American and foreign register. The total value of ships and cargo lost was $89,700,000.

Submarines will be a greater menace to coastwise shipping if another war comes than they were in the last war. Why? Because it is estimated that Russia alone has upwards of 500 modern submarines.

In his report to the President, on the subject of the Florida barge canal in May 1951, Robert A. Lovett, Deputy Secretary of Defense, said this in connection with shipping losses during the war:

"During World War II, many cargo ships and tankers were lost off the coast of Florida due to enemy action. Many of the cargoes that were lost would and could have moved by barge or small freighter had the barge canal been in existence at that time. The saving in lives, ships, and valuable and critical cargoes would have been great. Similar and comparable savings would also accrue in future national emergencies if the canal is in operation * * *"

It is believed the economic benefits of a barge canal across Florida will justify opening the canal. But what of the defense benefits?

In revising upward the economic benefits of the Florida canal, surely the United States Engineers will also upgrade the benefits to national defense. With the canal open in time of war, a protected waterway would be provided for the transport of dry and tanker cargoes from the gulf coast across Florida to the North Atlantic seaboard, and shipping losses from submarine attack would be reduced.

What happened, in the sinking of tanker and cargo vessels, in Gulf and South Atlantic waters, could happen again, and a heavier toll would be taken, if cargo and tanker vessels were exposed to attack by Russian submarines along the Gulf and South Atlantic coasts.

There Must Be an End to It—An Editorial by Max Ascoli

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. PORTER. Mr. Speaker, in the May 16 issue of the Reporter appears this outstanding editorial by the Reporter editor, Max Ascoli, concerning a matter every Congressman will find urgent and important because it relates to the survival of the human race. The editorial follows:

THERE MUST BE AN END TO IT

This is nuclear weapons season. The Soviet Union has already at least seven tests of nuclear weapons to its credit; the United States will have a new series of tests from the middle of this month to the beginning of September; and, within the next few months, Britain will find out how powerful its H-bomb is. This is also the season when the protests against nuclear weapons have been forceful as never before. Albert Schweitzer has spoken; so have the leading German atomic scientists, and, through official and unofficial channels, the people of Japan. Atomic scientists or

geneticists may disagree among themselves about the amount of man-made radiation a human being can safely absorb. But the Japanese have some valid reasons for thinking they have been exposed well beyond the tolerable limit.

The article that follows is a case study of some of the happenings in Nevada and neighboring Utah as a result of the continental tests the Atomic Energy Commission has been conducting since 1951. During some of the testing periods, particularly that of 1953, life was quite rough for several thousand citizens of those two States. It was rough on the AEC too, and particularly on the men it sent into and around the test site. These men did not know—in fact, could not know—a great deal of what they needed to know about the vagaries of winds and fallout. It was partly because adequate knowledge was not available that the Nevada tests were decided on, and competent men were stationed there to keep a check on the results. These men frequently blundered. More than once the measures they took to forewarn the people of the area about the dangers of radiation proved inadequate. Yet, for all their blunders and their inadequacies, these public servants deserve only compassion.

Of course it is not for laymen to judge whether, or to what extent, the Nevada tests brought enlarged knowledge of low-yield atomic weapons. Our ignorance and our curiosity are well protected by the Government's policy of classifying what may be beyond the reach of our understanding anyway. But the case of the Nevada tests proves that the AEC has frequently used the strictures of the security regulations to cover up its failures to give adequate protection or warning to a sizable number of people in the region. We like to assume that the intentions of the AEC and its men in Nevada have always been of the best, and that the AEC had no responsibility for the harm that some people allege they suffered. But for the many little acts of uncandor in covering up probably inevitable miscalculations, for a tendency to gloss over with public-relations blandishments the evidence of its failures—for this the AEC must be held accountable. An all-powerful Government agency too frequently is tempted to use the cloak of secrecy to shield the ignorance rather than the knowledge of the men in the know.

THE ATOM RUSH

Yet once more we should be compassionate in passing judgment on the behavior of the men working for the AEC, from the highest to the lowest. The cloak of secrecy they wear must be excruciatingly heavy, for it imposes on these unfortunate men—particularly those at the top—too great a burden both of certainty and of doubt. Perhaps no one who has had the secret of the atom entrusted to him by his own genius or by chance of official appointment, has escaped being, somehow, marked for life.

The technicalities of atomic science must be the least oppressive part of the burden. At present, knowledge of the atom, its promises and threats, is becoming only too accessible. Atomic secrecy—even of the most advanced kind—has a built-in time limit. This consideration cannot contribute to make life particularly easy for the custodians of our Nation's atomic secrets. Moreover these men, who powers within their own agency are frighteningly unchecked, can scarcely resist formidable pressure from outside.

War and peace seem equally hell-bent on going the atomic way. Our Government is supposed to be producing—and of course testing—the biggest and most powerful weapons of massive retaliation, together with the tiniest pocket-sized bullets or missiles. We hear about atom-powered surface vessels, airplanes, and motor cars—and the appalling part of the story is that within a few years most of these gadgets will be with us. The AEC may or may not deserve to be criticized for not having pushed hard enough the development of atomic power at home and abroad. But certainly no authoritative scientist denies that, as of now, atomic reactors are rather hazardous things. Actually, until the time comes when atomic reactors are safer, and a way is found for the harmless disposal of atomic waste, those men may be correct who say that the peaceful atom is at least as dangerous to the human race as the weapons tests.

We of our generation have a vivid picture in our minds of the gold rush as something full of color, and adventure and rowdiness. But if the atom rush is not slowed down somehow, then only a negligible number of human beings in negligible lands may live to have a dim memory of it.

If the atom is such a danger to humanity—a danger that makes the prospect of any gain from it somewhat ludicrous—then we may ask, Why so much secrecy? Why don't the hapless men responsible for our atomic program speak more frankly, more candidly, so that the atom may, in all truth, be tamed and made to work for peace?

Never, perhaps, has the opportunity been as great as it is now, for never has the danger been so obvious and so vigorously denounced by so many different people at the same time. The major threat, of course, is not in a runaway program of atoms for peace. Rather, it is in the fact that, as Britain has shown, the American New Look on atomic armament has proved contagious.

If the sovereignty of a nation is to be real, it must be guaranteed and testified to by that nation's capacity to produce—for defense and offense—nuclear weapons of its own. This is just about what the British white paper said. As the destructive power of nuclear weapons—no matter whether of the A or H variety—is pretty well known, the practical peacetime evidence of sovereignty is the capacity to produce an atomic test. Britain, at the very moment it acknowledges that it can no longer be counted as a major nation, puts its reliance for its own defense on nuclear weapons, and—mutation or no mutation, Japan or no Japan—stubbornly sticks to its decision to test its first hydrogen bomb.

There was a time when many of us honestly believed that our country could keep for an indefinite number of years what we thought was the absolute secret of the atom bomb. With a flattery somewhat unbecoming his true greatness, Winston Churchill repeatedly told us that in our monopoly lay the only guaranty of peace. Then came the second phase, when Russia acquired the secret of the atom bomb, and proved it with its own tests. We are now in a third phase, and Britain, with its armament programs and its tests, is showing the way to other nations. There are nearly a hundred nations in the world, each claiming sovereignty.

IN THE FOURTH DIMENSION

Perhaps we needed to reach this point, this particular turn in history, when the vista of what the future might have for us is so clear—though by no means irrevocable—and seen by so many. The more nations have atomic weapons of their own, the more tests there will be. The more nations place reliance on fission or fusion weapons, the greater the chance that the detonation of the first atomic weapon—not in a test but in earnest—will be followed by much louder ones.

In fact, all nuclear-weapons tests, no matter how tiny the weapon, are acts of hostility against mankind. For practical purposes and in order to reach some standstill agreement with Soviet Russia before too many other nations go atomic, we may distinguish between H- and A-weapons, strategic and tactical, or dirty and clean bombs. But the difference is of quantity rather than of quality; for every atomic explosion, no matter how controlled and clean, produces results that go beyond the reaches of peace and of time. This weapon, for which Einstein provided the formula, truly operates in the fourth dimension. The rays and the patricles it releases, even when the detonation is only for testing purposes, are brought by the winds and by the rotation of the earth well beyond the boundaries of the nation that has exploded it. The same rays and particles keep showing up at later times, their power of destruction frequently multiplied.

The little that can be known about the atomic tests in Nevada makes an oppressive, nightmarish story. Yet we can be sure that they were the best, the most responsibly supervised tests ever. No evil men were involved. The thing itself is evil.

The remedy? Of course there is a remedy. An old man in equatorial Africa has said the word. The leading German scientists have said the same word. The word is "No." No cooperation on the part of any man who can deny his skill—not to speak of his enthusiasm—to this insane, unending race. No cooperation on the part of anyone who may have acquired even a microscopic fragment of truth and does not by keeping silent, want to trade it in for a share of guilt.

Our national leaders have fallen into a rather trying mannerism: They never speak of liberty without saying the blessings of liberty. They should know that liberty is seldom a blessing. When it is exercised at its best, it can be a great and risky load. There are enough men with a passion for liberty everywhere—in the United States, in equatorial Africa, in Germany, in Japan, maybe even in Soviet Russia—men courageous enough to bring this mad business to an end.

Foster Mother Honored for Aid to Retarded Boy

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to have my commendation of Mrs. Randolph G. Lavine, 8825 9th Street, Oak Lawn, Ill., inserted in the RECORD. Mrs. Lavine's actions in caring for a retarded child show that she possesses the fine qualities of womanhood, motherhood, devotion, religious principles, patience, all of which make her an example to others.

As the father of eight, when I look back, it seems that everything has struck us by lightning—one child fell out of a tree and broke her hip—another was knocked flat by an automobile and when I saw her, she looked like a war casualty. Another was stricken with polio. I could relate other happenings. In being a parent a person realizes the importance of the qualities which Mrs. Lavine manifests.

Today we realize that the health, education, and welfare of our children reflects the type of training and the principles instilled in our children at home. We are cognizant too that retarded or exception children need special care.

The Washington Evening Star of May 10 had the following to say about Mrs. Lavine:

FOSTER MOTHER HONORED FOR AID TO RETARDED BOY

CHICAGO, May 10.—A young mother, who reared a foster son who was deaf, unable to speak, and believed mentally retarded, was honored yesterday for the "miracle of her achievement."

Ten years ago Mrs. Ann Lavine heard a radio plea for foster homes. She was 25 and the mother of 2 young sons but she offered a home for another child, preferably a girl.

She got instead a 5-year-old boy, deaf and mute. Mrs. Lavine said she believed almost immediately the child was not deaf.

"He seemed to hear me when I called," she said. "He'd perk up and look around."

Gradually, over the years, she taught him to talk.

"I'd take him around the house," Mrs. Lavine said, "pointing out many things, calling them by name—the way you would with an infant."

RESULTS SHOW

Her devotion to her foster son began to pay off. Soon he was able to quit the special classes he attended and enroll in a regular school. He showed a notable artistic talent. He became a good student and athlete.

In addition to the foster son, now a healthy, normal 15-year-old, the Lavines have 3 sons of their own, 8, 12, and 14, and 2 other foster sons.

Mrs. Lavine, in addition to running the house and mothering her five boys, is busdriver, scorekeeper, first-aid technician, and bat boy for the neighborhood baseball team in suburban Oak Lawn.

Her husband Rudolph, an aircraft engineer, beamed happily yesterday as his wife was chosen "foster mother of the year" in Cook County by the county commissioners and county department of welfare. She was among 17 finalists.

Her winning citation said, in part:

"With a 10-year investment of your precious gifts of mothering, you have transformed this child's life into a bright inspiring miracle of unbelievable progress and normal development which has confounded, surprised, and pleased a variety of medical specialists, an outstanding children's hospital, psychologists, psychiatrists, schoolteachers, and others—but not yourself, for you never wavered in the quiet belief of the power of a mother's love."

The Supreme Court

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ABBITT. Mr. Speaker, apparently, there is a race between certain liberals in the Congress and the Supreme Court of the United States to see which one can completely federalize, nationalize, and socialize this country. All that is necessary to assure the attainment of their goal is for good men to do nothing at this time.

It is alarming to me to see the so-called Supreme Court day after day take over new fields of jurisprudence and to take from the States one by one jurisdiction that was and has been historically theirs exclusively. Apparently, there is no end to what the Court will do and how far it will go. Nothing is sacred nor permanent judicially speaking; previous Court rulings and precedents mean nothing; and constitutional guarantees are not worth the paper upon which they are written so long as we are dominated by a capricious, irresponsible, erratic and giddy Supreme Court, a majority of whose members are determined to wipe out every vestige of State sovereignty, individual liberty and to foist upon the people of this country their individual sociological political philosophy regardless of its legality or constitutionality. I fervently hope that the people of this great Nation will awaken to the dangers that are about to engulf us before it is too late.

Every opinion held by the so-called Supreme Court brings new pronouncement of sociological philosophy. Monday, May 6, was another blot upon the horizon. Its two opinions dealing with States rights were the subject of a very fine editorial appearing in the Richmond News Leader on Thursday, May 9, 1957, entitled "The High Court Keeps on Course" and also one entitled "Not for Ladies." In the Friday, May 10, 1957, issue of the Richmond Times-Dispatch there appeared an equally good editorial entitled "Another State's Right Usurped." These editorials point out cogently the path the Supreme Court is chartering. I commend the editors for their splendid analysis of the distortions of the Court and I recommend to the Members of the House that they read with care these editorials and act before it is too late:

[From the Richmond News Leader of May 9, 1957]

THE HIGH COURT KEEPS ON COURSE

This past Monday, the Supreme Court of the United States continued its studied campaign to obliterate the States of the American Union. In two opinions, both relating to the admission of lawyers to State bars, the Court again encroached deeply upon powers and prerogatives of the States.

The first case came from New Mexico, where the State board of law examiners had refused to approve an application from one Rudolph Schware. The second case came from California, where the State committee of bar examiners had made a like ruling against one Raphael Konigsberg. In each case, the State supreme court had upheld the action of the examiners. On Monday, the United States Supreme Court reversed both State courts, and ordered the applicants admitted to bar examinations.

These cases are of the keenest importance. It was just a year ago, in the Griffin case, that the Supreme Court undertook a gross invasion of the long-established rights of the States to fix their own requirements for State appellate proceedings. Now, in the Schware and Konigsberg decisions, the Court has pushed its attack upon State judicial process still further. Monday's decisions are important not only to lawyers; they are of the highest significance to every person interested in the structure of his government.

Hearings in the Schware case established these facts: That Schware, over a period of 6 to 7 years during a period of responsible adulthood, had belonged to the Communist Party; that at various times he had employed aliases; that he had been arrested at least two times on suspicion of criminal syndicalism. Schware's known membership in the Communist Party terminated in 1940. Since then, he had lived what appeared to be an exemplary life; a number of witnesses testified, during the 1954 hearings, to his good character.

The New Mexico bar examiners, it may be fairly assumed, were as able as any Supreme Court Judges to deduct 1940 from 1954 and conclude that 14 years had elapsed since Schware had been a member of the Communist Party. They were able to judge for themselves the weight to be given the testimonials in the applicant's behalf. And their conclusion was that Schware's moral fitness to become a member of the New Mexico bar had not been sufficiently demonstrated.

Now, what is the rule on these matters? Mr. Justice Frankfurter, in a concurring opinion on Monday, set forth the guiding principles splendidly. "Admission to practice in a State and before its courts necessarily belongs to that State." Of course, he added, "legislation laying down general conditions of an arbitrary or discriminatory character may, like other legislation, fall afoul of the 14th amendment." But was the Supreme Court here concerned with such arbitrary State legislation? Not at all. "A very different question is presented," said Frankfurter, "when this Court is asked to review the exercise of judgment in refusing admission to the bar in an individual case, such as we have here." Then he said:

"It is beyond this Court's function to act as overseer of a particular result of the procedure established by a particular State for admission to its bar. No doubt satisfaction of the requirement of moral character involves an exercise of delicate judgment on the part of those who reach a conclusion, having heard and seen the applicant for admission, a judgment of which it may be said, as it was of 'many honest and sensible judgments' in a different context, that it expresses 'an intuition of experience which outruns analysis and sums up many unnamed and tangled impressions; impressions which may lie beneath consciousness without losing their worth' [citing 204 U. S. 585, 598]. Especially in this realm it is not our business to substitute our judgment for the State's judgment—for it is the State in all the panoply of its powers that is under review when the action of its Supreme Court is under review."

But having voiced this clear statement of what was not the Court's business, Frankfurter proceeded to make the Schware case the Court's business. He proceeded to do what he had said must not be done—that is, to substitute the Court's judgment for the State's judgment. New Mexico's action, he asserted, offended the dictates of reason. Whose dictates of reason? Why, Mr. Justice Frankfurter's dictates of reason. Therefore, New Mexico's action violated the due process clauses of the 14th amendment, and was unconstitutional.

The Konigsberg case was an even more flagrant substitution of the High Court's judgment for the State's judgment. The California rule is that an applicant for the State bar must be prepared to show that he does not advocate the overthrow of State or Federal Government by force. Konigsberg, an outspoken leftwinger, had been tentatively identified by a witness as a person who had attended Communist meetings in 1941. This testimony against him obviously had limited value; opposed to this frail evidence, moreover, were a number of affidavits to Konigsberg's good character.

But when the California bar examiners attempted to question Konigsberg, he stubbornly refused to answer their inquiries. Standing on the single, naked statement that he did not, never had, and never would advocate the overthrow of Government by violence, Konigsberg invoked the first amendment and made evasive speeches. Time after time, the California examiners, pa-

tiently offered the applicant a fair opportunity to establish his fitness to become a member of the bar. And time after time, Konigsberg brushed aside the questions. But a majority of the Supreme Court held this lack of candor could not be considered. Konigsberg had been denied due process. California had violated the Constitution.

It is not necessary for this newspaper to criticize the Supreme Court's opinion in the Konigsberg case. Mr. Justice Harlan dissented. Let him speak at length:

"Whatever might be the conclusions to be drawn were we sitting as State judges, I am unable to understand how on this record it can be said that California violated the Federal Constitution by refusing to admit petitioner to the bar. * * * We have here a case where a State bar committee was prevented by an applicant from discharging its statutory responsibilities in further investigating the applicant's qualifications. The petitioneer's refusal to answer questions in order to dispel doubts conscientiously entertained by the committee as to his qualifications under a valid-statutory test can, it seems to me, derive no support from the 14th amendment.

"The principle here involved is so self-evident that I should have thought it would be accepted without discussion. * * * It is not only that we, on the basis of a bare printed record and with no opportunity to hear and observe the applicant, are in no such position as the State bar committee was to determine in fact the applicant was sincere and has a good moral character. Even were we not so disadvantaged, to make such a determination is not our function in reviewing State judgments under the Constitution. Moreover, resolution of this factual question is wholly irrelevant to the case before us, since it seems to me altogether beyond question that a State may refuse admission to its bar to an applicant, no matter how sincere, who refuses to answer questions which are reasonably relevant to his qualifications and which do not invade a constitutionally privileged area. The opinion of the Court does not really question this; it solves the problem by denying that it exists.

"But what the Court has really done, I think, is simply to impose on California its own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern.

"For these reasons I dissent."

If a State no longer can fix standards of propriety and fitness for its teachers (as in the Slochower case a year ago); if a State no longer can operate its public schools so as to avoid domestic strife (as in the school segregation cases); if a State no longer can establish its own rules for appellate proceedings (as in the Griffin case); if a State no longer can pass upon the fitness of prospective lawyers who would become officers of State courts—what, then, if left to the States?

Mr. Justice Harlan called the Konigsberg decision "an unacceptable intrusion into a matter of State concern." He said the court had wrongfully imposed "its own notions of public policy" upon a State. That is exactly what this newspaper has been saying for the past 3 years. When the mere "notions" of judges are permitted to overcome fundamental law, great violence is done to our most vital institutions. Surely an apathetic people, outside the South, must soon awake to the disaster overtaking them.

[From the Richmond News Leader of May 9, 1957]

NOT FOR LADIES

Monday's twin decisions of the United States Supreme Court, involving applicants for the bar who were deemed unfit by State agencies, recalls a decision by the Supreme Court in 1873, when a Mrs. Bradwell, in Illinois, sought to be admitted to the bar. Her contention was that under the new 14th amendment, the State of Illinois could not discriminate against her by reason of sex.

The very idea of a woman's practicing law almost unnerved the High Tribunal. Miller wrote the Court's opinion. Bradley wrote a concurring opinion. Swayne and Field concurred with Bradley. Chief Justice Chase dissented from the judgment of the Court and from all the opinions.

Bradley said, among other things: "The natural and proper timidity and delicacy which belongs to the female sex evidently unfits it for many of the occasions of civil life. * * * The harmony, not to say the identity, of interests and views which belong, or should belong, to the family institution is repugnant to the idea of a woman adopting a distinct and independent career from that of her husband."

In any event, said the Court, it was the right of Illinois to fix limits upon the practice of law in Illinois. That was what the 14th amendment meant 5 years after its adoption, when judges were a great deal closer to its meaning than they are today.

[From the Richmond Times-Dispatch of May 10, 1957]

ANOTHER STATE'S RIGHT USURPED

The United States Supreme Court on Monday reversed the judgments of New Mexico and California courts which had upheld the refusal of their respective bar examiners to grant licenses to applicants.

The New Mexico examiners' refusal was based on the ground of applicant's past membership in the Communist Party. In the California case, the application was rejected because applicant, among other reasons, had failed to prove that he did not advocate violent overthrow of the Government.

The Supreme Court's decision in the first case was 8 to 0, in the second, 5 to 4.

Both decisions were hailed by the National Lawyers Guild, which had filed a brief in support of the California applicant.

In case No. 1 the unanimous decision (in which Justice Whittaker did not participate) is debatable. The applicant had joined the Young Communist League in 1932, and later the party, but had left it in 1940, and volunteered as a paratrooper in 1944.

The question, to which the State examiners found a negative answer, is whether a young man affiliated with the Communist Party for 8 years may be assumed to have embraced the ethical principles underlying "government by law" American style as opposed to "government by men," a la Moscow.

The examiners undoubtedly considered the possibility that, in the more than 15 years since his quitting the party, the applicant might have adjured his prior convictions. But they decided not to take a chance.

They played it safe in the interests of the people of New Mexico—their paramount responsibility transcending whatever consideration they may have had for the applicant as an individual.

In the California case, a former Communist, Mrs. Alice Bennett, had told a State legislative investigating committee that she had seen the Austrian-born applicant at meetings of a Communist cell in 1941. When asked about his party affiliations by the California examiners, applicant had refused to answer on the ground that the question intruded on right of speech and belief guaranteed by the Federal Constitution.

Whatever the merits and professional qualifications of the two young men here involved, this is another instance where the United States Supreme Court has flagrantly usurped the right of States to apply their own discretionary standards.

This was made clear by Justice Harlan, in dissenting from the California decision. Harlan charged that, by its majority decision, the Supreme Court had "imposed on California its own notions of public policy and judgment"—a usurpation of State sovereignty "representing an unacceptable intrusion into a matter of State concern."

The right to join the Communist Party, and the right not to reply to questions concerning party affiliations may be guaranteed by the Constitution.

But the Constitution does not guarantee the right to practice law in State courts.

The discretionary power to decide whether or not that right should be granted is vested in boards of examiners, acting for the States.

Now the United States Supreme Court has denied that right. But it is at least somewhat reassuring to have one of its justices rebuke his colleagues for their trespass.

Edward P. Morgan Wins Peabody Award for Radio Reporting

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. CANFIELD. Mr. Speaker, under permission granted, I include an article by Mr. Lawrence Laurent, of the Washington Post, concerning Mr. Edward P. Morgan, who recently won the Peabody award for radio reporting. Mr. Morgan is widely known among the Members of Congress.

In addition to this signal honor, I think it is well to point out that Mr. Morgan is also held in high esteem by his colleagues of the Radio-Television Correspondents' Galleries. This is evidenced by the fact that he was recently elected vice chairman of the executive committee which governs the galleries:

Radio, the medium of immediacy, has taken some odd turns since the development of television. One of the main developments for radio has been the wide expansion of the news, music, and sports formula.

In the news part of the formula, there have been two key developments. First, there is the news, every hour on the hour, a form of headline reporting usually done by a staff announcer and in which more questions are raised than are answered.

The collateral development has been the emphasis on commentary, a term which has become a euphemism for coloration of news to suit a particular point of view.

Because of the recent developments in radio news, this department was particularly pleased with the recent announcement by the George Foster Peabody awards committee. The Peabody awards are generally considered the highest in radio and TV, roughly equivalent in electronic journalism to the Pulitzer prize for work in the printed medium.

As the winner of its award for radio news, the Peabody committee chose a middle-of-the-road reporter who is sponsored by a labor union. The winner was Edward P. Morgan, soft-spoken and never hysterical reporter for the American Broadcasting Co. (Edward P. Morgan and the news is broadcast at 7 p. m., Monday through Friday, and is heard in Washington on WMAL radio.)

The citation which accompanied the award to Morgan reads:

"Mr. Morgan's daily 15-minute program of hard news and commentary has developed a wide public acceptance because of the skill and brilliance of its presentation. * * * Mr. Morgan, as an experienced reporter, gives the news and his independent interpretations in accordance with the highest traditions of radio journalism."

More pleasing to Morgan, personally, were the Peabody committee's words about his sponsors:

"Notable is the circumstance that the AFL-CIO, as his sponsors, bring this public service to the radio audience without any suggestion of special pleading or propaganda."

This independence has been in particular evidence in recent weeks. Many radio reporters ignored the Senate hearings on the powerful oil industry. Morgan made a point of reading from transcripts of the hearings, night after night.

Morgan came to radio in 1951 after 19 years of reporting for newspapers and a press association and writing for magazines. He was in Mexico for the United Press in 1940 and scooped his fellow reporters on the assassination of Bolshevik leader Leon Trotsky.

He covered news in Honolulu and at posts in Europe. He was with the Fifth Army when American troops captured Rome in 1944 and he was in London when that city felt the effects of Hitler's V–2 rockets.

After World War II, he reported the fighting between the Jews and British in Tel Aviv.

Before Ed Morgan returned to the United States in 1950, he felt the tug of destiny from the movie industry.

In Italy, a movie producer decided that Morgan was just the man to portray not 1 but 2 roles in a film, Teresa. He enacted the part of a wounded soldier and the part of a priest on a bicycle.

In the final version of the film, Morgan was seen on the screen for nearly 2 seconds.

Loss of Jury Trial and States Rights Inherent in H. R. 6127

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ROBERTS. Mr. Speaker, today I appeared before the Rules Committee in opposition to H. R. 6127, an evil bill that is stirring alarm in the South and in other parts of the Nation.

Under leave to extend my remarks, I would like to insert the following statement into the RECORD:

STATEMENT OF HON. KENNETH A. ROBERTS, MEMBER OF CONGRESS, FOURTH DISTRICT, ALABAMA, BEFORE THE HOUSE RULES COMMITTEE MAY 13, 1957

Mr. Chairman, on many another occasion, I have taken an unwavering stand in opposition to the various bills collectively referred to as proposed civil rights bills. Before this committee, however, I will confine my remarks to the single piece of legislation now pending before you. That measure is H. R. 6127 and I strongly urge rejection of it by this committee.

This bill, if reported favorably by this committee and enacted into law, would tend to abrogate certain precious rights of the citizens of this country while it would provide for no benefit above what our citizens now possess. Among the privileges bound to suffer should this measure ever reach passage are the right to trial by jury and the right of the States to govern themselves insofar as possible. To take away these, Mr. Chairman, would be to annul something of value. And what would be left in the stead of these valuable rights? This bill would pave the way for disgruntled persons or organizations to pour allegations of civil rights complaints into a special commission. And this bill makes sure these complaints would be legion in number. It allows an open-end appropriation for providing for those making allegations. When subpenaed as witnesses, they would receive generous expense accounts. In effect, a sort of left-wing secret service corps, snooping into all parts of the country, would be hired at taxpayers' expense. Most of the allegations would be without basis of fact, as a perusal of recent history will indicate. Out of 13,000 civil rights complaints received in 1947, for instance, only 4 convictions were obtained. In another year—1940—prosecutions were recommended in only 12 out of 8,000 civil rights complaints. The allegations in the great majority of cases were not bona fide, but they were numerous. This bill would spawn an even greater deluge of complaints.

And while the persons or organizations making the allegations of civil-rights complaints are well provided for, what of the intended victim of the allegations? This bill gives little thought to the accused. He must move quickly, without regard to family or business, to the site of the hearing to face his accusers. He must pay the way of any witnesses he himself might need in defense, and the expense thereunto could conceivably reach large proportions.

The Attorney General, under this proposed legislation, would become the powerful monarch of a teeming kingdom of an admittedly inestimable number of assistants and clerical workers. When an amendment was offered in the Committee on the Judiciary that the proposed Commission on Civil Rights not spend more than $300,000 during the 2 years of operation provided for in the bill, the amendment was defeated. As those who made the thoughtful minority report on this bill point out, the premise for the defeat of this amendment must have been that this Commission in 2 years would cost the American taxpayers far in excess of $300,000. And it is fallacy to believe that the Commission would be allowed to slide into oblivion at the end of the 2 years specified; the professional liberals and minority pressure groups who have pushed this bill will never allow it.

Mr. Chairman, this bill would allow the Attorney General czarlike powers of law through injunction. Proceedings would be initiated against boards of education, election officials, and law-enforcement agencies throughout the States, counties, cities, and towns of our Nation. The usurpation of States' rights would be more perilously near complete than ever before. Citizens, it is understating to say, will not abide the abolishment of their rights, including the safeguard of their right to trial by jury.

I submit that the right of jury trial even now is in jeopardy, without the added perils inherent in H. R. 6127. As evidence of this, let us consider the Clinton, Tenn., situation. In February of this year, the Department of Justice quietly moved to substitute the words "the United States" for the names of members of the local school board as party to a suit in Federal Court. By this action the 17 defendants arrested for allegedly hindering the Federal injunction at Clinton could have been deprived of a jury trial and put in jail as unfairly as if they were living in some totalitarian country. That is the way of the Federal injunction; it has unlimited implications. But according to press reports, the United States District Judge in the Clinton case now has yielded to the wave of public indignation through the country. He has ruled that the 16 men, charged with criminal contempt of the most sweeping, most outrageous court injunction in history, may have a jury trial. This case shows what can happen—what would have happened had not the people risen in anger—when the jury trial right is threatened.

The people of this country are quick to stand up for the right of trial by jury. Likewise, they will speak quickly for the rights of their own States to supervise law-enforcement agencies, to keep the law and order, and to maintain elections in accordance with State laws and in harmony with the United States Constitution.

The bill before this committee brings to my mind the historic address made before the Senate of the United States a half-century ago by one of Alabama's illustrious sons, the Honorable John T. Morgan. A resolution came before the Senate aimed at giving Congress jurisdiction to determine whether certain persons, especially Negroes, were being denied the right to vote. During discussion that such a resolution might become an enactment, Senator Morgan rose to speak. His words echo down time's corridor with resounding relevance. "It is too plain for argument," he said, "that such a measure would abolish the State as to all its rightful sovereign powers, and would remand it to the condition of our organized Territories, all of whose laws may be replaced by Congress and all of whose officials may be placed under the power of appointment and removal by the President." That is my argument against the bill before you today.

The individual States rights to handle their own local problems would be wrested from them by the ever more powerful Federal Government.

This is an ill-conceived bill, it brashly impinges on time-honored individual rights, while adding nothing to existing rights. It opens the taxpayers' purse to pour out an undetermined sum of money, while giving no promise of evident returns. It is simply another attempt by northern liberals to gain support of certain minority groups, using the South as their scapegoat.

As a forceful statement in objection to the far-reaching dictatorial legislation this committee is now considering, I submit the following editorial which appeared in the Montgomery, Ala., Advertiser on May 6, 1957:

THE CLINTON JUDGE COMES DOWN OFF IT

United States District Judge Robert L. Taylor's ruling that the 17 persons accused of stirring up integration trouble in Clinton, Tenn., may have jury trials, is clearly in retreat.

After the Clinton High School was ordered integrated, Judge Taylor issued a blanket injunction which was widely denounced as judicial tyranny; he enjoined anyone, anywhere from doing anything contrary to his decree against the school board.

So broad was the injunction, it embraced, at least according to Judge Taylor, all criticism, however peaceful, all objections that the law was wrong and should be reversed. This left Clinton under an imperial law with one man as prosecutor, judge, and jury.

The 17 arrested were charged with criminal contempt of court, on grounds they violated Taylor's permanent injunction. Protests were heard from all sides of the race question, including the following questions asked by a Washington attorney in the Washington Evening Star:

"Where is the statute, constitutionally passed by Congress, which defines the crime of which they stand accused?

"Where is the statute, constitutionally passed by Congress, which gives any court

jurisdiction over anyone and everyone who he thinks might disagree with his decrees?

"Where is the presentment or indictment by a grand jury accusing these men of violating what law?

"What are the limits of this power. If a judge, without a law, can sentence a man to 30 days in jail, can he also hang him?

"By what authority of law does he enforce the 14th amendment against private parties who are not parties to the suit before his court?

"If the courts can create such jurisdiction and powers for themselves, what other powers may they assume?"

Others joined in, including the New York Times' respected constitutional authority, Arthur Krock. They pointed to the evolution of barriers against judicial tyranny, the Bloody Assizes under James II in England, the Magna Carta, down to our own Bill of Rights and Constitution.

Under such fire, Judge Taylor has relented and agreed to a jury trial. Which is simply a way of confessing that his injunction was invalid, and passing the buck.

All this illustrates the danger of increasing the powers of the judiciary under the proposed civil-rights legislation. Good men may not abuse the powers, but as the Washington lawyer noted, there is always the danger of judges who "confuse themselves with the gods."

Rear Adm. George Dufek Proposes Permanent United States Airbase in Antarctic

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. TOLLEFSON. Mr. Speaker, one of the foremost authorities in the world on the subject of Antarctica has recently returned from an expedition there. He is to be applauded for proposing a permanent American airbase there. I have long urged our Government to take some positive action with respect to the Antarctic and I was happy to read about Admiral Dufek's proposal in an article appearing in the Evening Star on April 25:

Rear Adm. George J. Dufek, commander of Operation Deepfreeze, yesterday urged construction of a permanent American Air Base at McMurdo Sound in Antarctica at a cost of between $50 million and $60 million.

"We can open up the Antarctic for keeps," Admiral Dufek told a luncheon at the National Press Club.

"I have been over the area and airmen and scientists tell me an airfield can be constructed there within 4 or 5 years. It would have all the modern controls, including GCA (ground controlled approach) and housing.

"We are presently in the same situation in Antarctica as we were 25 years ago in the Arctic. Now the Arctic is a heavily traveled area. The great circle routes are the same. I see no reason as a private citizen, why we should not go ahead and get a 5-year jump on the project."

ICE UNRELIABLE

Admiral Dufek explained that the ice field now used for landing large transport planes at McMurdo Sound is impermanent. The ice is not always there, and if it goes away soon, we will have no place to land our large aircraft, Admiral Dufek declared.

The explorer also advocated establishment of a permanent agency of the Government to guide American policy on polar matters and act as a repository for all data and information on the Arctic and Antarctic regions. He explained that Defense Department support of the International Geophysical Year ends in 1959 and, after that, he knows of no plans for continuing exploration or scientific work at the South Pole.

He said the Antarctic is getting colder. With Washington enduring a plus 88 degree day yesterday, he said Antarctica was having minus 88 weather.

But the 18 Americans who are spending the Antarctic winter on the exact spot of the South Pole will endure temperatures of as low as 120 degrees below zero.

Reserve Officers' Retirement Pay

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, there is a real need for enactment of the Sparkman-Jackson-Huddleston bill (S. 1085) which would specifically include Reserve officers for retirement pay under the Pay Readjustment Act of 1942.

The latter bill referred to "any officer" who served in World War I as well as World War II and "is eligible for retirement." The current interpretation of the term "officer" to signify only Regular Army officers is unreasonable and unjust.

As an example of what type officer is being excluded by this discrimination against Reserve officers, I cite the case of an officer friend of mine. This officer has 43 years' creditable service for pay purposes. He served actively from 1912 to 1915 on the Mexican border, from 1917 to 1919 with the AEF in World War I, from 1942 to 1945 in World War II, and from 1952 to 1955 during the Korean crisis. During all in-between periods he was active in the Reserve Corps. He received the Legion of Merit in World War II. He was considered "essential" when recalled in 1952. At that time, at the age of 54, he gave up an excellent position as a top executive. He came back at age 57 to start, in effect, a new career. This type of uprooting and consequential readjustment to civilian life is a type of sacrifice unique to the Reserve officer in the Army.

Those officers, who maintained Active Reserve status between World Wars I and II, worked against odds to do so, and without compensation.

In interpreting the Pay Readjustment Act of 1942, officers who were cadets at West Point during World War I, have just been ruled eligible on the basis that "any service" qualifies them, yet the term "any officer" is not interpreted to mean any officer other than Regulars.

I urge the enactment of the Sparkman-Jackson-Huddleston bill so that the inequitable situation, whereby the Reserve officer is excluded from the officer class, will be remedied.

Federal School Aid—Do the States Want It?

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. BOSCH. Mr. Speaker, I am sure the membership of the House is aware of the fact that the Committee on Education and Labor voted on May 9, 1957, to report H. R. 1, Federal aid to school construction, to the House. Before this bill is considered by the House, I urge my colleagues to read Federal School Aid—Do the States Want It?

Under leave to extend my remarks, I include the above-named article from the May 13, 1957, edition of Time:

FEDERAL SCHOOL AID—DO THE STATES WANT IT?

(EDITOR'S NOTE.—Of all the items in President Eisenhower's domestic program, few seem less likely to succeed than Federal aid for school construction. But would the defeat of this proposal be as great a calamity as its backers insist? Last week Time surveyed the 48 States to find out. The answer: No. Though the Nation as a whole must keep building classrooms faster than ever before, a surprisingly big proportion of the States do not need—or do not want—any help from the Government.)

THE DESPERATE

Even among the States that hope for Federal aid, only seven seem to qualify for the critical list. The Alabama Legislature, for instance, has called the condition of its school buildings appalling. According to the latest available figures (1953), 726 had no artificial light, 960 no water, 375 no toilets. To build the $300 million worth of classrooms needed by 1960, says Superintendent of Education Austin Meadows, Alabama most urgently needs Federal money.

Wealthy California faces quite a different sort of problem: The staggering shift and growth of population make it impossible to keep pace with the classroom shortage. Though the State has appropriated $675 million for school construction in the last 10 years, it will need a whopping $3½ billion more by 1970. Arizona has a similar population problem, but the legislature has consistently refused to do anything to aid construction. Result: Most educators, desperate, hope for Federal aid.

If New Mexico does not get Federal aid, says Assistant Superintendent Floyd Santistevan, the State will probably be able to raise only $5 million of the $25 million it will need by 1960, and practically every community will have a hopeless educational problem. In West Virginia, only 3 out of 55 counties have kept their school buildings up to par; the rest have either been unable or unwilling to foot the bill. Rhode Island, which says it needs between $60 million and $70 million in the next 4 years, also has a crisis. (Example: Pawtucket recently had to close temporarily 9 out of 23 schools as too dangerous to use.) In Kentucky, almost all of the 220 districts have already reached the maximum tax rate allowed by State law. Though the 1956 legislature appropriated more than $54 million to help districts maintain certain minimum standards of quality, only a small part of the amount was earmarked for construction—in spite of the fact that 200,000 children now go to schools with no inside plumbing or central heating. Without outside help, say Kentucky officials,

the State will be able to raise less than half of the $350 million it will need by 1960.

THE WORRIED AND THE WILLING

In other States that want Federal aid, the picture is not nearly so black. Arkansas' 423 districts have been spending a total of $6 million a year on construction, but they will have to up the ante to $78 million to take care of 1960's student load. On the other hand, overcrowding and the necessity for double shifts are not yet serious problems, and the various district have still not used up their bonding capacity.

Maine estimates that it should raise $41 million in the next 3 years, but it has already taken some impressive steps on its own. Main's School Building Authority has the power to build schools, then rent them back to poor districts at nominal rates. The legislature is considering a plan to award construction grants to school systems on the basis of per capita income and need. Actually, Maine's problem is pretty well limited to 5 or 6 heavily populated counties in the south.

Pennsylvania has so far done an outstanding job in keeping up with its school needs. But, says Superintendent of Public Instruction Charles Boehm, it must have Federal aid in the future. "Our foreseeable needs in the next decade will require an expenditure of more than $1 billion. If Pennsylvania should raise taxes to increase school construction, it will be unable to compete successfully with its neighbors." Oregon is also reluctant to raise its taxes and the State house of representatives has come out in favor of Federal aid.

Though North Carolina says it needs Federal aid, a $50 million bond issue voted in 1953 has kept the State in fair shape. But even though it has been building about 2,000 classrooms a year, it still needs 2,800 more. Oklahoma, which has already received $80 million in Federal aid for federally impacted areas, would not be averse to taking more. But this is largely so because the legislature has no plans to meet the classroom shortage. Speaking for Minnesota, Commissioner of Education Dean Schweickhard says: "Without Federal aid, we'd struggle along. But we wouldn't get the job done as fast."

THE DIVIDED

In Kansas, farmers who have happily accepted soil-bank subsidies and drought relief from Washington are opposed to Federal aid. But education officials say that unless the legislature removes bond limitations from local districts or unless the United States Government steps in, Kansas will fall $75 million short of what it will need by 1961. Utah is even more widely split. The State's Education Association hired an independent research agency to make a poll, found that 80 percent of the people wanted Federal aid. But a respected group called the Utah Committee on Education came to the conclusion that all foreseeable school building needs can be met from existing sources of revenue. True enough, there are districts where classes are held in hallways and gymnasiums, but of 40 school districts, only 10 have reached their bond limit, and there are State emergency funds available to help those. Nevertheless, the educators are definitely after Federal aid.

In spite of strong opposition in the legislature to Federal aid, Wyoming's educators also want help. But some of them admit that the State may be able to take care of its own needs. Says superintendent Velma Linford: "Yes, we are able, but I'm not sure we'll do it." Vermont's Swedish-born Governor Joseph Johnson flatly says that Vermont can and is taking care of its own school needs. But Commissioner of Education A. John Holden, Jr., thinks that Federal aid is just the thing to give extra help to the most needy districts.

In New Hampshire, where only a quarter of the communities have exhausted their bonding capacity, Gov. Lane Dwinell is inclined to favor Federal aid just to get over the hump. But the legislature has adopted a resolution asking Congress to refrain from enacting new grant-in-aid programs. Though Nevada is lukewarm to Federal aid, it will accept the money if it is offered. Iowa officials think that it can afford a State-aid program big enough to take care of its needs. Unfortunately, the wealthier areas are unwilling to take on the burdens of the poor, so Iowa may find Federal aid its only solution.

Florida's Gov. LeRoy Collins placed bebefore the legislature a 2-year $92 million program to take care of the State's immediate needs. But this does not touch the backlog of $85 million needed for classroom replacement. While the Governor is against Federal aid ("There is really no sound reason why the States shouldn't handle the problem"), State School Superintendent Thomas D. Bailey is for it. The various counties, says he, may well have enough bonding capacity to wipe out the backlog, but they are not going to do it.

South Dakota's Senate passed a resolution opposing Federal aid; the house let it die. In Tennessee the State education association has come out for Federal aid, but the legislature failed to pass a resolution authorizing the State to take it. Missouri, which will need to spend $185 million by 1960, is also divided. Educators favor Federal aid, but the senate is now considering a bill to enable the State to make sizable (up to $250,000) loans to districts at 2 percent interest in order to make sure the Federal Government will not "enter our Missouri school picture with controls and meddling."

THE SELF-SUFFICIENT

The rest of the 48 States not only feel confident they can take care of themselves; a good many just don't want outside help. In Delaware even the educators admit that the $400,000 the State would probably get from present Federal-aid proposals would look slightly silly alongside the $44 million school-construction plan now before the State house of representatives. Since 1949 the legislature has appropriated $100 million for buildings, and still only 2 out of 102 districts have exhausted their bonding capacity.

Colorado estimates that its local districts must dig up $35 million a year for 4 years to take care of their building needs. But last year the State raised more than $37 million, and Commissioner of Education H. Grant Vest has "not the remotest doubt that Colorado can build all we need without recourse to Federal aid." Idaho reports no critical problem; the State department of education is sure that it has ample resources available for needed construction. In neither Wisconsin nor Michigan has any community reached its bonding capacity. In Louisiana only 12 out of 64 parish school systems seem unable to meet their needs over the next 5 years. Of these, only two are in critical condition. Louisiana's main problem is not a shortage of classrooms but of qualified teachers, a problem Federal aid will not touch.

The Washington Legislature has passed a $52 million bond issue to be matched with $60 million from local communities. Though Washington officials do not think they will be able to go it alone indefinitely, most agree that Federal aid is not needed now. In Connecticut only three communities have applied for hardship grants from the State board of education, and the legislature now has a plan before it to put up at least half the cost of local construction. Mississippi, which would probably get $3 back for every dollar it paid out in taxes on any Federal-aid bill, is darkly suspicious that the Government will attach strings to its handouts. Gov. J. P. Coleman believes that the State can take care of its own building program.

In a speech to his legislature, Texas Gov. Price Daniel summed up the sentiment of his State: "Texas should have the finest school system in the Nation, and this should be accomplished with Texas money." In spite of serious shortages in New York City and on Long Island, New York officials are not at all worried about raising the more than $1.5 billion the State will need by 1960. But New York—like Massachusetts and New Jersey—has another reason for being cool to Federal aid: it would have to pay out far more to support a National program than it would get back.

If only the legislature in Ohio would take action, says Assistant Director W. Dwight Darling of the department of education, Ohio could handily take care of its needs. This year a legislative service commission report declared that "regardless of what may be the actual school enrollment in 1960 * * * the $1,000,400,000 of uncommitted debt capacity present in Ohio's school districts is far more than enough to supply the needs."

THE OPPOSED

If Montana voters approve a constitutional amendment to allow districts to increase their bonding limit, the State will have no trouble. Says Superintendent of Public Instruction Harriet Miller: "Until we exhaust our resources and abilities, we should not ask for Federal help." South Carolina, which has put up 8,000 classrooms since 1951, neither needs nor wants Federal help. In 1955 both North Dakota and Nebraska school officials went on record for the White House Conference on Education as definitely opposed to it.

In spite of the pro-Federal-aid efforts of the Illinois Education Association, Illinois officialdom does not want Federal aid. In Virginia, not a single county or city has exhausted its bonding capacity, and from Gov. Thomas Stanley and Senator HARRY BYRD on down, most political leaders vigorously oppose help from the Government. In Maryland, the most serious classroom shortage is in Baltimore county, but even there educators are looking not to the United States but to the State for the funds they need.

In Georgia, which is now completing a 5-year, $261 million building program, both Gov. Marvin Griffin and Senator HERMAN TALMADGE are against Federal aid. State Superintendent of Schools M. D. Collins has endorsed it because he thinks it would hasten school construction. "Georgia," says he, "is certainly capable of financing its own school program, but it would have to be on a long-term basis, say 20 years. The question is whether Georgia wants to take on such an obligation."

Though the powerful Indiana State Teachers Association has endorsed Federal aid, Gov. Harold Handley and his elected superintendent of public instruction, Wilbur Young, do not want it. According to their estimates, the State needs to build somewhere around 1,600 classrooms a year, has actually built more than that since 1955. Says Governor Handley: "I am opposed to Federal aid for the primary reason that we can take care of ourselves." Adds Superintendent Young: "We can do it better, we can do it cheaper, and surrender none of our rights in the process."

Antarctic Valuable to United States

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. TOLLEFSON. Mr. Speaker, Rear Adm. George J. Dufek, who has recently

returned from Operation Deep Freeze in the Antarctic, believes that the Antarctic Continent is of value to the United States, according to an article by Winzola McLendon appearing in the Washington Post and Times Herald on May 3, 1957.

Under leave to extend my remarks in the Appendix of the RECORD, I include it herewith:

(By Winzola McLendon)

"Today the Antarctic is a question mark," Rear Adm. George J. Dufek—author of Operation Deep Freeze and the first American to set foot on the South Pole—told the Society of Sponsors of the United States Navy yesterday.

But, in 5 or 10 years the Antarctic should prove itself, the admiral said. In his speech, which followed a luncheon in the ballroom of the Mayflower Hotel, he gave his answer to the often-asked question, "Of what value is the Antarctic to the United States?"

There are three values, he told his audience of some 350 sponsors (all are ladies who have christened a combatant ship of the United States Navy). These are (1) economic, (2) strategic, and (3) scientific.

At the present time, the economic values are practically nil, the explorer said. Tracings of gold, silver, and other precious minerals have been found. But, it would cost too much to mine them at the present time. With nuclear power, the minerals can and probably will be mined in later years.

"I will pass over the strategic value," said the admiral, "because I get in trouble with the Defense Department when I don't."

The scientific values are tremendous, he said. Right now, there are seven bases in the Antarctic where scientists are wintered in. They are part of the third international geophysical year in which 60 nations are participating. As part of the international scientific survey, there are stations throughout the world.

Eventually we will have 60 weather stations in the Antarctic. And weathermen say that they will be able to give 6 months in advance forecasts. They also predict they will be able to control weather someday.

Coal Lands

EXTENSION OF REMARKS

OF

HON. KEITH THOMSON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. THOMSON of Wyoming. Mr. Speaker, on May 6, I introduced H. R. 7253 to increase the acreage of coal lands that can be held by a lessee or permittee in a single State, from 5,120 acres to 20,480 acres. I believe that the enactment of this legislation is essential if the coal industry in the Western States is to properly develop and make its full contribution to the national economy. At a meeting of the Western Governors Mining Advisory Council, held at Reno, Nev., April 24 and 25, 1957, the following resolution was adopted:

COAL

Coal production in Colorado, New Mexico, Utah, Washington, Montana, and Wyoming has suffered a sharp decline during the past 10 years. The greater part of this decline has resulted from the shift of the major railroad companies from coal to diesel fuel for their motive power.

Coal is a vital force of energy. Power companies in the West are looking for suitable areas to establish generating plants and should be given, on a State and Federal level, all legitimate assistance available.

The Council recommends that:

1. The Government give equal consideration to all available energy resources before deciding which is to be the source of generating power in any given area.

2. The States foster and the Federal Government assist in establishing research centers to develop better uses of coal and its byproducts.

3. The Leasing Act of February 25, 1920, be amended to permit any one person, association or corporation to lease not more than 20,480 acres of Federal coal lands. The present acreage limitation on such leases is far too small to meet modern requirements for large-scale coal-mining operations.

4. Quota limitation upon oil imports be diligently reviewed by the responsible Government agencies under existing statutes providing for such studies.

The Conference of Western Governors, which was attended by 9 of the governors of the 11 Western States, unanimously approved this recommendation. I believe this further points out the necessity of early enactment of H. R. 7253.

Government Employees' Right to Vote Bill

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ANFUSO. Mr. Speaker, I have introduced a bill which I call the "Government employees' right-to-vote bill."

This bill, H. R. 7385, provides that Federal Government employees should be given the opportunity to vote in person in national, State and local elections. In order to enable them to do so, each such employee is to be excused from duty, without loss of pay or deduction from his annual leave, for a period of not less than 2 hours, but not to exceed 4 hours.

The bill further provides that Government employees, who maintain voting residence in another State or area beyond the commuting distance from their place of employment, shall be excused for a maximum of 1 day for the purpose of voting, unless they are able to vote by absentee ballot.

The purpose of my bill is to encourage as many of our citizens as possible to exercise their rights of citizenship on election days and to utilize these rights by voting as free citizens according to the dictates of their conscience. It is both deplorable and very disturbing that far too many of our citizens fail to perform their citizenship duties on election day. In the last few presidential elections only about 50 to 60 percent of those entitled to vote in the United States actually went to the polls, and even fewer than that have voted in the off-year congressional elections.

Voting is a privilege as well as a right which we should not ignore. The greater the participation of our citizenship on election day, the more we shall be able to maintain this country as a true citadel of democracy. When millions stay away from the polls, it shows a lack of interest in the problems and welfare of our Nation. If this trend continues, it may prove dangerous to our form of government and our way of life.

The people of this country should be encouraged to cast their ballots, and the Government should be the first to do so by enabling its employees to vote in person. The Federal Government has a moral obligation to encourage good citizenship by affording its employees sufficient time off to cast their ballots on election day. Unfortunately, during the presidential election last November no allowances were made for voting on the part of Government agencies and many of their employees failed to exercise this right because of a lack of time. In the Brooklyn Navy Yard, located in my Congressional District, there were numerous complaints and many of the shipyard workers were incensed over the situation. The same, I understand, was true in other Government establishments in various parts of the country.

Mr. Speaker, I feel it is of utmost importance that Government employees be given sufficient time off to exercise their sacred duties as American citizens. Give them the opportunity to lead the parade to the polls on election day. It is for the good of our Nation and its future.

The text of my bill is as follows:

A bill to provide that certain Government officers and employees shall have sufficient time to vote in elections

Be it enacted, etc., That, in order to enable officers and employees in the executive branch of the Government to vote in person in National, State, and local elections, each such officer or employee shall be excused from duty, without loss of pay or deduction from his annual leave, for a period not less than 2 hours, but not to exceed 4 hours.

SEC. 2. Employees holding voting residence beyond commuting distance from their duty stations shall be excused not to exceed 1 day for the purpose of voting, unless voting by absentee ballot is permitted.

Senator Joseph McCarthy

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. SMITH of Kansas. Mr. Speaker, a great many articles have appeared in the press as to what the passing of Senator Joe McCarthy meant to America. As the years go on I am sure a great deal more will be written.

It is quite evident that even in death Senator McCarthy remains a highly controversial figure. To many of us we believe he will be looked upon in future years as a genuine American patriot who saw danger signals for his country and tried to stamp out these dangers.

No one will ever say Senator McCarthy did not possess strong opinions and a will to carry them out. He had a great heart, true faith, and ready hands—also a rapier-like tongue to chastise and ridicule those whom he believed to be enemies of his country's well-being.

But throughout history men of opinion and a will have been persecuted. Socrates, drinking the hemlock—and Martin Luther tacking his thesis on the church door. Little men passing pious resolutions for political expediency never yet have dimmed the luster of real patriots. Who knows but in after years patriotic pilgrims may go to Appleton, Wis., to pay homage to the memory of Senator McCarthy and May 2, the day of his death, will be celebrated as Patriot's Day—in opposition to May 1, world communism day.

I append hereto a tribute to Senator Joseph McCarthy by Charles A. Walsh, of Concordia, Kans., which appeared in the Downs News, Downs, Kans.:

SENATOR JOSEPH MCCARTHY

(Tribute by Charles A. Walsh, Concordia, Kans.)

In a world which has lost its understanding of the concepts of right and wrong, truth and error, good and evil, and seeks only to adjust itself to what is expedient, a man like Senator McCarthy is a living contradiction of such Machiavellianism. The man of faith in a world of unbelief is more than an oddity; he is its mortal enemy. The man of faith and courage in a world crawling with cowardly toaders, has the sword of Damocles hanging over his head. The plain, blunt man, who loves his country, in a groveling world of sycophants, kneeling at the altar of such illusionary gods as the United Nations, is subject to persecution and hounding as a reactionary barbarian.

Senator McCarthy not only had the ability, but the courage to uphold to the face of the unbelieving and cowardly world, the mirror of its errors, sins, and offenses. The great men of his age were not pleased with these reflected likenesses. They could not forgive him beause the images they saw made them appear as fumblers and dunces. Their errors and stupidities were naked before the world. This was his great offense. The intellectuals, internationalists, and "certified gentlemen" were so outraged and cut to the heart, that they must destroy him. For those of us who understood the nature of this controversy, it was, indeed, a horrible thing to watch the sibilating hatred and foaming at the mouth, as it were, of those he called to account for their stupidities and errors. We saw them as they spat at their tormentor the most reckless and unfounded calumnies and slanders, and taunted him as an irresponsible demagog.

As a young Senator, Joseph McCarthy looked out on America after the Second World War, dismayed and appalled by the thought that after we had expended $300 billion in treasure, and suffered a million casualties, the world was rapidly falling into the clutches of atheistic communism. He understood, as all sensible men must know, that the military might of the United States, which was great enough to overcome all opposition, had been betrayed by its officials. He was intrigued, no less appalled, by this and was determined to uncover the men responsible. To this task he dedicated himself and his life. From the very start he understood the consequences of his mission. He knew that he would call down upon himself, not only the damnation of the Communist world, but the insults, threats, and abuse of all of their associates, fellow travelers, and dopes. He withstood all of this abuse with the heroism of a truly great man. He saw and understood. Others might also see, and understand, but would not have the courage or dedication to make the sacrifice necessary to preserve their country and its liberties.

Now that he is dead, I am wondering if during his last days and hours, he was not grieved by the thought, which would suggest that the battles which he had fought had all been lost and that the country which he loved, might be finally engulfed in the torrent of atheistic communism. When the virtues of moral courage and patriotism come out of the storm cellars once more the stature and greatness of this man will be manifest. In many respects, Senator McCarthy may be likened with the great English martyr, lawyer, and statesman, St. Thomas More, who was an uncompromising, dedicated man, who harkened to the voice of conscience.

The Visit of Hon. Robert Briscoe, Lord Mayor of Dublin

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ROONEY. Mr. Speaker, you will recall with pleasure the visit of the Honorable Robert Briscoe, lord mayor of Dublin, Ireland, on March 26 last, when through your kindness about 200 Members of this body were accorded the opportunity of meeting him in your private office.

Under leave to extend my remarks in the RECORD, I include the following interesting article published in the New York Post of Sunday, May 12, 1957, concerning Mr. Briscoe's visit to this country:

MR. BRISCOE: HE FOUND ONLY FRIENDLY FACES

Every day of the week, without moving a muscle, Robert Briscoe brings off the neatest trick of three centuries.

The only agility required for the execution of this trick is to sit perfectly still and be the first Jewish lord mayor of Dublin since that office was established in 1641.

Unfortunately, no one has been inclined to let Mayor Briscoe sit still from the moment he was elected.

He has, in fact, just completed a tour of this country during which he visited 40 cities, attended an estimated 200 public functions and private banquets, signed over 5,000 autographs, shook over 20,000 hands and blinked at 10,000 flashbulbs—a schedule that left him 6 hours of free time in 2 months.

When he returns to Ireland next week, he will take with him a memento of his visit that is the most remarkable tribute to the unique duality of his position.

"It's a wonderful thing," said the Mayor, relaxing in his Waldorf Towers suite with a favorite cigar. "From one end of this country to the other I didn't see a single frowning face."

It was an experience few men are apt to share or even believe. But the mere notion of a Jewish mayor of Dublin—a city that is 93 percent Catholic and 100 percent Irish—dissolves all frowns into complaisant smiles. It's a heart-warming cartoon that defies the caption writers.

There is one joke current since Briscoe's arrival here that runs like this:

Two Jews stood side by side, at the St. Patrick's Day parade, beaming fondly at Mayor Briscoe in the reviewing stand.

"He's one of ours," said the first.

"Yes," said the other, "and where else could it happen but in America."

It happened in Dublin, of course, on June 25, 1956. Briscoe and incumbent Dennis Larkin were tied with 19 votes each in the council. In accordance with tradition, the names of the two candidates were dropped into the council clerk's bowler hat.

In the tense hush that followed, the clerk reached into his derby and pulled out a historic plum. Brisco was the new mayor of Dublin. The council chamber rang with cheers. It is reported that one councilman solemnly arose and said in a choked voice: "Now he belongs to the agents."

Briscoe's own view of this extraordinary climax to an extraordinary career is philosophically tempered.

"I never wanted to be mayor," he said. "I hadn't any ambitions for the position. I felt there were so many others who were able and who would be happy at getting it.

A young man when moved by certain events develops his own sort of reaction. And then begins a spiral of circumstances begetting further circumstance. You begin to climb the ladder with full knowledge that you might fall down. Your convictions become more solid. I had to carry out the proper attitude. If you feel something is wrong in principle, you must do something about it.

Events were moving quite dramatically during Briscoe's youth in Dublin. He had been born there in 1895, 35 years after his grandparents emigrated from Lithuania. His father was a prospering furniture dealer.

Briscoe studied languages at the St. Andrew's School and Trinity College in his native city. Then he went to Berlin to take up electrical engineering and commerce. He was an amateur boxer and a lover of good Gaelic football at college.

At 20, he crossed the Atlantic to take an export-import job in New Jersey. But a year later he was caught up in the spiral of circumstances that led to his present eminence.

After the Easter uprising of 1916, he returned to Ireland and obtained a commission in the Irish Republican Army from Gen. Michael Collins. His knowledge of languages led Eamon De Valera to single him out for the job of smuggling guns and ammunition from the Continent.

In 1923, De Valera sent him back to the States to raise money for the IRA. It was a frustrating mission.

"I used to stand on an orange crate at Columbus Circle and plead for pennies for Ireland." Meanwhile he lived on pennies himself, in a small unfurnished room. "I didn't even have enough money for a downpayment on a bed."

Briscoe, along with several other IRA members, presently found more comfortable quarters. In a daring coup, they invaded and seized the Irish Free State Consulate in Manhattan. There they remained entrenched for a week before they were driven out by a harassed police bomb squad.

In 1926, Briscoe joined De Valera's new party, Fianna Fail (soldiers of destiny) as a founding member. The following year he was elected to the Dail Eireann, the Irish Parliament, where he has held a seat ever since.

Over two decades, he continued his double identity. He remained active as the only Jew in Irish politics. At the same time he became an ardent promoter of Zionism, and a leader in Jewish charities. He built up a thriving interest in the manufacture of Irish textiles and established a flourishing kosher meatpacking business.

He married Lillian Isaacs, of Dublin, and blessed the union with 4 sons and 3 daughters. His eldest daughter, Joan, is now an Ontario physician. His oldest son, Abraham

William, is a pilot with KLM Airlines. His son, Joseph, is a Dublin dentist.

Invitations began pouring in from the States from the time Briscoe was elected, for the dual causes of Irish tourism and Jewish charity. America, like the two apocryphal spectators at the St. Patrick's Day parade, was ready to claim him for its own.

The duties of the Lord Mayor of Dublin have been described as more ceremonial than functional. But Briscoe is nonetheless concerned about his lengthy absence from office.

"No Member of Parliament has ever been accorded such a long leave of absence," he said with a momentary seriousness in his humorous eyes. "If you're absent more than 10 weeks, you can forfeit your job. But the council recognized that my mission was of great importance."

Briscoe will leave for Ireland on Wednesday, a day after the departure of his wife and son Joseph, who accompanied him here. Back in Dublin, he said, some formidable problems await him.

"Like most large cities anywhere," he said, "we have to wage a war on slumdom. We need better housing for the working classes. Dublin is a very old city that has doubled its population in less than a lifetime. We now have over half a million people to provide for.

"We need new roads to ease the traffic congestion. There is a need for hospital facilities and adequate fire protection and water supply." (It might have been Bob Wagner talking.)

As a Member of Parliament, he keeps an eye on the big picture as well.

"In Ireland," he said, "we have a very serious unemployment problem. The great task is how to find work for people and stem our heavy emigration. The Fianna Fail is a conservative nationalist party that combines elements of your Democrats and modern Republicans. It includes social legislation that apparently both your parties accept.

"We are trying to change an agricultural country into one that is self-sufficient, with a balanced economy, with well-developed industries."

But at 62, Briscoe indicated he is willing to relinquish the commissions of progress to younger men.

"I'm not looking for the usual 3-year tenure as mayor," he said. "I've served my country in a variety of ways for over 40 years, since 1917. I'd like a little spare time now to indulge in my favorite pastimes—fishing and target-pistol practice.

"My state of mind at the moment is inclined toward rest—affected, if you like, by this rugged tour."

Aside from its rugged aspects, Briscoe considers the tour a huge success.

"It's like being in the ring for 10 rounds," he said. "When it's all over you don't know what you did wrong until your manager tells you."

His manager, Irving Rockmore, answered the implied question with an utterly serene smile. For millions of Americans, Briscoe could do no wrong. What he did do was to leave a trail of delightful confusion from here to California.

In Governor Harriman's mansion, he had matzoh ball soup on the first Seder night, as the first course of a dinner catered for 70 persons by a kosher restaurant: "The whole house was kosher."

The Notre Dame Alumni Association went to the utmost lengths to serve him a dinner that was in strict accordance with Orthodox Jewish dietary laws.

In St. Louis, moist-eyed citizens hastily organized the Robert Briscoe Club—members have to be either Irish or Jewish.

In Chicago, politicians at a dinner for Briscoe confided happily: "This is the first time we've ever been able to to get the Irish together in this town."

In San Francisco the Ancient Order of Hibernians and the ancient order of B'nai B'rith joined forces to organize a special new "Brisco" tour for vacationers: Dublin and Tel Aviv, by air.

Passover and Purim greeting cards flooded in on him from all over the country. Most of them, the mayor says, came from Irishmen. "My great hope," he added, "is that someday Tel Aviv will elect an Irish mayor."

Briscoe proudly displayed honorary doctor of laws degrees from three Catholic universities. One of them, from John Carroll University, included a citation that quoted from the Reverend James Laynez, himself a Jew and one of the founding fathers of the Society of Jesus:

"May our God never permit that the favor of kings, the flattery of nobles, the prejudices of nationalism, the conceit of private judgment, or disdain for another's flesh as though one's own were compounded of different and finer clay, should cloud our recognition of the bonds of union and esteem which ought to govern the relations of the Society of Jesus with one of Jewish stock."

Briscoe denied rumors that he was planning to settle here after his term of office expires. "I have no designs on any spot in America," he said. "Having loved my own country all my life, I look forward to my permanent rest in the little Jewish graveyard in Dublin."

But before he goes to any rest, permanent or temporary, the Jewish lord mayor of Dublin is apt to be a very busy man.

Seaboard & Western Becomes First Airline To Complete 10 Years of Continuous Transatlantic All-Cargo Service

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item:

SEABOARD & WESTERN BECOMES FIRST AIRLINE TO COMPLETE 10 YEARS OF CONTINUOUS TRANSATLANTIC ALL-CARGO SERVICE

NEW YORK, N. Y.—Seaboard & Western Airlines today became the first airline to complete 10 years of continuous transatlantic all-cargo service. Two giant Seaboard Super-Constellation freighters crossing the North Atlantic on scheduled flights in both directions signaled a decade of growth which has seen an increase of over 500 percent in transatlantic air trade since 1947, the company reported.

The only scheduled transatlantc all-cargo airline, Seaboard initiated operations on May 10, 1947, with one DC–4. Today it operates a fleet of 10 Super-Constellations and 3 DC–4's. In the 10-year span its aircraft have flown 48,247,700 revenue-miles while logging over 8,700 ocean crossings. Seaboard has grown from an initial investment of $150,000 to a publicly owned company with a net worth of over $8,100,000. Its common stock is listed on the American Stock Exchange in New York.

"Transatlantic air freight will assume an even greater position in international trade during the next decade," Arthur V. Norden, Seaboard's executive vice president, stated. "Traditionally, all forms of transportation eventually carry more goods than people. In the present state of development of air transportation, the carriage of people far exceeds the carriage of cargo. Ultimately, however, air freight will exceed greatly passenger air travel. Marked progress in this direction has been made in the last year. Transatlantic air freight will grow at an even faster rate in the next 10 years."

Since the start of its scheduled service, Seaboard's air freight volume has grown substantially. In the first year of this service, Seaboard traffic increased 62 percent. During the first 3 months of 1957, historically slow months in transatlantic air cargo movements, it increased 78 percent.

Mr. Norden pointed out that in 1956, transatlantic freight traffic by all carriers increased 28 percent. During the first quarter of 1957, the industry's traffic figures show an increase of 20 percent. Tonnage for 1957 is expected to increase by 33 percent, he said.

Seaboard's first flight, from Newark (N. J.) Airport to Shannon, Ireland; Geneva, Switzerland; and Milan, Italy; carried a load of 14,000 pounds of wearing apparel, aircraft parts and other American manufactures.

Manufacturers and merchants began to learn the basic economy of distribution cost made possible by transatlantic air transportation: (1) Reduced inventories, warehousing and handling; (2) less risk and lower insurance costs; (3) greater turnover of capital investment; (4) reduced requirements for bank loans with resultant lower costs for credit financing; (5) increased sales at peak seasonal demand.

All of these added up to increased business volume and greater profits. As a result, the early trickle of merchandise moved by air developed into a volume airlift of many different commodities.

In its first decade, Seaboard airlifted a large variety of commodities in bulk, including livestock, tropical animals, textiles, wearing apparel, optical goods, chemicals, photograph equipment, electronic and electrical equipment and parts, production machinery and machine tools, furs and hides, pharmaceuticals, glassware, business and office machinery, machine, aircraft and automotive parts and household furnishings. The company pioneered the movement of such commodities as elephants, domestic and foreign automobiles, small airplanes, helicopters, 19-ton electronic computers, and multiton ship's parts.

A leader in the history of international airlift, Seaboard inaugurated the commercial airlifts in connection with the Berlin airlift in 1948 and the Pacific airlift in support of the Korean war in 1950. During the Korean situation, Seaboard flew more than 30,400,000 pounds of military supplies, mail and personnel on the 6,700-mile transpacific route between the United States and Japan.

The airline presently operates six scheduled all-cargo flights weekly in both directions across the Atlantic. Five of these are made with Super Constellation freighters, the fastest and largest commercial all-cargo aircraft. The company, operating from New York, serves Gander, Shannon, London, Glasgow, Amsterdam, Brussels, Hamburg, Frankfurt, Dusseldorf, Stuttgart, Nuremberg, Munich, Paris, Geneva, and Zurich.

Employment of the Handicapped

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. JOHNSON. Mr. Speaker, in recent years there has been increasing rec-

ognition of the fact that handicapped persons may still take their proper places in society if they are given the opportunity to hold jobs for which they are fit. As part of this program of encouraging employers to consider the handicapped, the Wisconsin Governor's Committee on the Employment of the Physically Handicapped annually sponsors an essay contest among high-school students. This year's winner, Mary Louise Stanley, of Eau Claire Senior High School, writes significantly, "All the handicapped person needs is the opportunity to assume his place in society and to make the best of whatever he does." Under leave to extend my remarks, I would like to insert her entire essay in the RECORD.

The essay follows:

EMPLOYMENT OF THE HANDICAPPED A COMMUNITY RESPONSIBILITY

(By Mary Louise Stanley)

It happens so quickly, so very quickly. It may be a blinding flash, a sharp blast, and the scream of a mutilated soldier. One moment a child has a bad fever and complains of stiffness, the next moment he is crippled for life by polio. The driver of the car sees the bright, blinding headlights of an approaching car, and then hears the doctor saying the fatal sentence "You'll never walk again." These events happen so swiftly and yet their effects remain forever. So often a life is ruined because a faculty is impaired. We hear these things with heavy hearts and then we forget about the unfortunate people. Well, why should we worry about our handicapped brother? Why should we be concerned about someone's wasted life?

It happens so quickly. It could be anyone, any of us or any of our loved ones. So many of the handicapped people today were once normal, healthy people leading a happy, active life who fell prey to a cruel stroke of fate. Eight hundred thousand people meet such fates each year. Who knows who the next 800,000 may be? Each of us has a personal interest in the welfare of the handicapped man. Each of us must realize the duty he has and do his share.

Mere pity is useless. Pity will not build up the shattered life of a disabled man or woman. A quarter or a half dollar will not restore his pride of accomplishment. Tears and contributions alone cannot help the handicapped person to find his place in society. The handicapped must be able to hold his head up knowing that he is a useful human being playing his role in life. In order to do so he must have an occupation in which he may use his abilities unhampered by his disabilities. This titanic undertaking of rehabilitation is in the hands of every citizen of every community.

But, what can we do?

The employer's role in rehabilitation is the greatest in importance. In his hands lies the ability to accept or reject disabled workers. It is far too easy to say no. How can one tell if the person is capable enough to be on the payroll? Other employers experienced with handicapped workers have found the quality and amount of production of these employees equal to the standards of the nonhandicapped. Handicapped people are not only willing to work but grateful for the opportunity to do so. Rarely are the blind, crippled, or otherwise impaired payroll free riders. These men and women are willing to give their all to their job.

In our modern age of machines, full use of all faculties is not really necessary. A factory provides many opportunities for the disabled. A good personality is something that may be found in handicapped people as well as those in perfect condition. A charming manner is a great asset to a clerical or sales department as well as it is a necessity to a receptionist. Writers, world leaders, entertainers, inventors, educators, even great musicians have come from the ranks of the physically handicapepd. Who has not heard names such as Franklin Delano Roosevelt, Jane Froman, Helen Keller, Sarah Bernhardt? Names of men and women who have transcended the barriers of physical defects to achieve immortal greatness. Even the greatest composer this world has known, Ludwig von Beethoven, wrote many of his masterpieces after he became deaf. All the handicapped person needs is the opportunity to assume his place in society and to make the best of whatever he does.

The majority of us may be tempted to shrug off our responsibilities. We have no way of providing jobs for the handicapped. What can we do? We, as citizens, have the mighty weapon of public opinion to wield. Our duty is to restore the confidence of the handicapped in their abilities. Our opinions can influence employers to give occupational opportunities to the disabled. We can tell the world of the abilities of the handicapped worker and make them realize that the abilities are far more important than the disabilities. No one has the right to look down on his fellow man because of a physical defect.

It happens so very quickly. Very little time is necessary to handicap a man or a woman for life. The rehabilitation process requires a great deal of time. One man, one company, one organization cannot carry out the task of providing employment for the handicapped. It is only when every man, every company and every organization of a community work together to provide an occupation and a new life for the handicapped that rehabilitation may be successfully executed. It is our responsibility as citizens to work together to help our fellow man.

Prayer by Father Manton at Breakfast Honoring Lord Mayor Robert Briscoe

EXTENSION OF REMARKS

OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. BYRNE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most unusual prayer given by Father Manton at Governor Furcolo's recent breakfast for the Lord Mayor of Dublin, Robert Briscoe, in Boston. The prayer was printed in the Boston Globe.

Although I did not come from Dublin I am not a synthetic Irishman. My mother was a Murphy and came from Cork and my father came from Donegal. It was my pleasure to meet the Mayor of Dublin a few years ago when I was in Ireland.

The prayer follows:

Almighty God, our good and gracious Father, we find ourselves a bit bewildered this morning. You know that the first President of the Irish Republic was a Protestant; the present Lord Mayor of Dublin is a Jew; the Lakes of Killarney belong to a Yank and the historians keep hissing in our ears that St. Patrick was a Frenchman. Please, keep the blackthorns from becoming bamboo.

Help us this morning to hold high the brimming cup of hospitality to a good and great man and to greet him not as a stranger but as a treasured friend. And while he is over here, make him in the best sense of the word a fair-weather friend, with none of those "soft" days they sometimes have in Ireland, where, of course, it never rains—those are only silver harp strings coming down—just a few drops of Holy Water sprinkled on the windshield. Deign to give him serene and mellow weather so that he will go back as bright and fresh as the colors in the Book of Kells.

And, dear God, stay the man up with monumental patience as he heroically endures a hundred toastmasters, who will gaily imagine that the very filling in their teeth are fragments of the Blarney Stone, as they ring out all the obvious changes on a Jewish mayor of Dublin. Help the poor man not to be "banquet weary" of all these glib attempts to paint a green beard on Moses, or by the end he will be seeing little "Lepra Cohens."

Deliver him, O Lord, this real Irishman who risked his life for the land he loved, from any professional Irishman with an angle. There are mercifully very few, but spare him from these, the sham shamrocks, the bogus bog-trotters, the synthetic Sinn Feiners and especially the psycho-Patricks who love too loudly through a green haze an Ireland that never was.

Instead let him meet our wonderful, best, the many genuine practical people who appreciate that the purpose of this trip is not merely the wearin' of the green, but the sharin' of the green by touring in Ireland and by trading with Ireland.

Finally, Dear God, bless this man, our friend, and this meal, our food, and today let the blessing come down even on the English muffin and the orange juice, so that having broken our fast at the top of the mornin', we may rise thanking you from the bottom of our hearts. Amen.

Fluoridation Strategy

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. TABER. Mr. Speaker, without the slightest degree of taking a position on the subject, I am submitting for printing in the RECORD a speech delivered by George Calingaert, professor of chemistry at Hobart and William Smith Colleges, Geneva, N. Y., with reference to the fluoridation situation. I believe that the article should serve a useful purpose and that those of us who do not know about it would be glad to hear what an experienced chemist has to say.

The speech follows:

FLUORIDATION STRATEGY

(Address by George Calingaert, professor of chemistry, Hobart and William Smith Colleges, Geneva, N. Y.)

"PTA meeting tonight in school auditorium. After the presentation of the new bylaws, the president will introduce a local dentist, who will give a brief talk on dental hygiene."

It sounds innocuous enough. What could be better than for parents to hear some sound professional advice on dental hygiene for school-age children? In most cases, however, what actually takes place is quite different: the dentist says nothing about the daily care of children's teeth, or about good and bad dietary practices for children whose teeth are in the formative stage.

Instead he delivers an emotional speech on the number of draftees who have bad teeth, and on how we ought to buttress our national defense by—of all things—adding fluoride to our drinking water supplies.

The listeners are under the impression that they are hearing the personal, considered opinion of a dentist of their own community. Actually what is being presented to them is a canned speech, prepared by a clever propagandists. We are indebted to the Honorable Charles P. Nelson for having made the speech available to the public by introducing it in the CONGRESSIONAL RECORD, 84th Congress, 2d session, as Extension of Remarks, on June 5, 1956, under the title: "Fluoridation, a Vital Defense Measure."

Instead of a temperate and clear discussion of the scientific and legal aspects of the problem, this document is a sad example of emotional appeal calculated to evade the real issue. Briefly, the thesis is that too many draftees have bad teeth, and that this situation could be remedied to a large extent by adding fluoride to the public water distribution systems. Appeal is made for support of this plan by making it a patriotic duty: "Shall we stand shoulder with the Department of Defense, the United States Army, the United States Navy, the United States Air Force, the American Legion, and 22 million Americans throughout the length and breadth of our land, who sincerely believe that strengthening our defenses with fluoridation is in the public interest?"

And by making derogatory statements about the opponents of this measure:

"We are letting what the Hartford Courant has called 'one of the greatest aggregations of quacks and medical phonies in history' scare us out of solving our No. 1 military problem, rejections for dental defects."

"As we listen to these people rant and rave against what the Department of Defense has called 'a public health asset;' as we listen to them try to break down our confidence in American institutions."

Actually, the whole issue of fluoridation hinges on a number of points which are carefully avoided in this canned speech.

1. Many dental, medical, and scientific authorities challenge the much advertised tests of fluoridation, on the grounds that the information collected was inadequate and incorrectly interpreted, and that the stated conclusions are not supported by the evidence.

2. Despite all the categorical statements to the contrary, there is no proof that the continuous ingestion of fluoride will not lead to some trouble in at least a small percentage of our population.

3. Even if such proof existed, there would still be no justification for forcing 7 people out of 8 to take this unnecessary medication on the grounds that it might be beneficial to the 8th person.

4. If fluoride is beneficial to children 3 to 14 years old, as alleged, putting it in the city water supply would not control individual dosage; some children would not get enough to benefit from the treatment, and some would get more than the safe dose.

5. The proposed method of treatment neglects completely about one-third of our population, the farmers, who have individual or local sources of water supply.

6. There are several alternate methods of supplying fluoride to children (tablets, solution, fluoridated salt, topical application, toothpaste) each of which has the advantage of constituting a freely chosen and personally prescribed treatment.

7. Confusion is deliberately created when fluoridation is likened to vaccination and to chlorination of water. Vaccination is a necessary protection against a communicable disease, which dental caries is not. Chlorination is necessary to make unsafe water safe for human consumption; fluoridation does not make water better, but is merely a device for distributing someone's pet medication haphazardly to the few it might help, and indiscriminately to the many others.

None of these issues is faced squarely in this canned speech. The emotional appeal to parents of schoolchildren is much preferred: parents have been urged to accept "on faith" the statements of the dentists, and thus to forego their right and responsibility to know the facts and make their own decision.

The only sound response to this insidious propaganda is to bring this issue out into the open, and to make clear to the people that the issue is not whether or not fluoride is good for the teeth of growing children, but whether we shall permit a group of well-meaning but ill-advised do-gooders to force the whole population to consume daily a substance which is most likely to be harmful to some, and which is conceded even by the proponents of fluoridation to be of no benefit to over 85 percent of our population.

Address of Vice President Richard Nixon at De Pauw University

EXTENSION OF REMARKS
OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. HILLINGS. Mr. Speaker, the Vice President of the United States delivered a most interesting address last Saturday at De Pauw University. The university bestowed an honorary degree upon him for his outstanding service on behalf of our country.

I agree with the Vice President's statement that consideration should be given toward the allowance of tax deductions for tuitions and fees paid to institutions of higher learning. Early in this session, I introduced H. R. 231 to provide for such deductions which would particularly benefit our private universities and colleges who are having difficulties at the present time.

I urge my colleagues to read the Vice President's remarks with the hope that some action may be taken soon to meet the problem he has discussed.

The address follows:

REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE BUSINESS AND INDUSTRY DAY LUNCHEON, DE PAUW UNIVERSITY, GREENCASTLE, IND., MAY 11, 1957

The United States is facing a major crisis in the field of higher education. It is essential for our national survival that we continue to maintain the military and industrial superiority which we presently have over the Communist bloc nations. We cannot do this unless our colleges and universities produce both the skilled technicians and the enlightened leaders the Nation needs.

The Soviet Union has recognized this fact by embarking on a program of mass higher education which is frightening both in its basic philosophy and its size. As evidence of the extent of their efforts, it is estimated that 60 percent of the Soviet college graduates each year are in the natural and physical science fields, as compared with approximately 13 percent in the United States. In actual numbers, 53,000 scientific and technical students were graduated in the Soviet Union in 1956, while there were only 38,000 in the United States.

It is estimated that our college population will be twice as large 10 years from now as it is today. To meet this problem, we will need new physical facilities and more teachers.

The task of obtaining and keeping good teachers in our colleges and universities is becoming increasingly more difficult. A dedicated teacher does not expect to earn as much in his chosen profession as he would in another field requiring similar qualifications. But he must have, and is entitled to, compensation which will enable him to maintain the standards which his position requires.

At the present time the average salary of all teachers in private colleges and universities in the United States is only $4,700 per year. We can see how inadequate this is when we compare it with the $5,500 which is the average pay for all industrial workers in the city of Flint, Mich. Unless steps are taken to remedy this situation, we can only expect that both the quality and number of those who choose teaching as a profession will deteriorate.

The answer to the overall problem is not simply in expanding tax-supported colleges and universities. Since 42 percent of all college graduates come from private schools, it is obvious that we need both types of institutions to meet the need. It would be a tragedy of the first magniude if tax-supported State institutions were to gradually drive the private colleges and universities out of existence.

I am particularly concerned about the future of the smaller private colleges and universities of which DePauw is such an outstanding example. I am prejudiced in their favor because I attended one. But, in addition, I believe that they occupy a vitally important role in our National educational system.

Both the larger State institutions and the smaller colleges have their strong points. In considering the advantages offered by the smaller college, perhaps the outstanding one is that the student can have intimate and personal contact with the teacher. In the larger institutions, classes, particularly in the first 2 years, are so large that virtually no class discussion is possible and there is practically no personal relationship between teacher and student. In the smaller institution, instruction is essentially individual and personal. The student has the opportunity to discuss problems directly with his professor. And the teacher has more opportunity to liberate and stimulate the student's mind so that he will be able to rise to the pinnacle of his creative ability. The teacher can encourage an attitude of mind and a desire to think which better prepares the student to enter society with a desire to be of service. The small college also offers a religious emphasis which is usually lacking in the larger State institutions.

And as long as we have strong privately-supported colleges and universities as well as State institutions, we will not run the risk of Government domination and control which might develop if higher education was completely dependent upon the State and Federals Governments.

Providing the necessary support for private colleges and universities is becoming increasingly difficult. The answer will not be found by enrolling more students who can pay tuitions. On the average, tuitions provide ony one-half of the total cost of a college education.

Nor is the answer to be found is raising tuitions. They are already so high that too many qualified students are unable to get a higher education. One recent survey disclosed that 40 percent of the students in the top 5 percent of their high school classes did not go on to college. The United States cannot continue to afford this tragic waste of talent and ability.

Direct Federal aid to private colleges and universities is both unlikely and in many

respects undesirable. There is always the risk that such aid could impair the independent integrity which is so essential for a private institution to maintain.

Contributions from individuals are increasingly difficult to obtain because of high income tax rates. I believe that when the fiscal situation of the Federal Government is such that we can afford a reduction in taxes we should give the most serious consideration to provisions which would encourage such contributions, as well as to various plans which have been suggested for allowing tuitions and fees of both public and private institutions to be treated as tax deductions.

A major new source of endowment income for private institutions must come from corporations and other business enterprises who are competing today for the graduates the colleges are producing. Such contributions should be considered just as important an item of business expense as an investment in basic research.

Today our Nation is faced with an adversary intent on controlling the minds of men. This challenge cannot be met solely with technological developments or weapons or sheer good will. But it must be met with ideas. The smaller college can help to give us the potential leaders who have the character and desire for service, and who have the purpose, direction, and ideals with a moral and spiritual basis. Smaller colleges have produced many of our great leaders in the past and they merit the support of all Americans so that they may continue in their important and vital mission.

That Mess in Washington

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. ROONEY. Mr. Speaker, I wonder if anyone can figure out what is going on in the White House these days. It was reported in the press of Wednesday, May 8, that President Eisenhower was going to bat again for his record peacetime budget. The following newspaper article by Francis Stephenson was carried in the New York Daily News under that date:

IKE SET TO GO ON AIR TO BUDGE THE BUDGET

(By Francis Stephenson)

WASHINGTON, May 8.—President Eisenhower said today he probably will make two radio-TV speeches to the Nation in behalf of his harassed budget and legislative programs.

He confirmed at his press conference that Secretary of the Treasury George Humphrey has wanted to get back to private business for 2 years. He said Humphrey has not resigned but "I do know that sooner or later Secretary Humphrey has to go."

Also, he said certain others in the Cabinet have been giving him "very cogent, urgent reasons why they should leave." Defense Secretary Charles E. Wilson has been hinting he would resign soon.

NO COMMENT ON ANDERSON

The President refused to comment on speculation that Robert Anderson, of Texas, former Deputy Secretary of Defense, would succeed Humphrey.

As for the possibility Humphrey's successor might change the administration's "tight money" policy, he said emphatically:

"The monetary policy of this Government is mine, and no one underneath me is going to change my policy."

Once more Ike emphasized he knew of "no difference whatsoever" between himself and Humphrey on the budget.

Going to bat again for his record peacetime $71.8 billion budget, the President said any big cuts in spending would mean a slash in the $38 billion defense appropriations.

"You are not going to cut national defense markedly," he contended, "until you have eased tensions in the world."

Ike said funds for the State Department, mutual aid, technical aid, and the information service—all under severe attack in Congress—were put in the budget "to wage the peace so you can finally tackle the defense item and make cuts in the budget that this country really is looking forward to with great longing."

"Now, that is not going to be done in a hurry," he said, "but we have got to aim at real cuts in this budget."

Now, in this morning's New York Times we find that our former colleague, Sherman Adams, who served in this House for one term, in the 79th Congress, and who is now assistant to the President, has made the statement that President Eisenhower's budget can be cut by $2 billion without detriment.

The following article by Allen Drury was on the front page this morning:

ADAMS SAYS BUDGET CAN BE CUT TWO BILLION WITHOUT DETRIMENT

(By Allen Drury)

WASHINGTON, May 12.—Sherman Adams, the assistant to the President, said today that the budget could be cut as much as $2 billion without interfering with the quality of the services by the Government.

Mr. Adams' statement came as the Senate prepared to take up this week its first two appropriations bills for the fiscal year 1958. They are the Treasury-Post Office bill and the bill for State, Justice, and Commerce Departments.

The House already has trimmed $1,200,000,000 from eight appropriations bills, and there are strong indications that the Senate may be in a similar economizing mood.

The President's assistant appeared with Representative KENNETH B. KEATING, Republican, of upstate New York, on a television program for transmission on New York stations.

Mr. Adams defended General Eisenhower's request for $71,800,000,000 for the fiscal year beginning July 1. But he said the administration was as anxious to find places to trim as was Congress. He added, "We won't ask you to do it; we will do it ourselves as we already are."

He said it was "pretty difficult to say just exactly where you are coming out, but I think the magnitude of the cut in the vicinity of a $1,500,000,000 to $2 billion will not interfere with the quality of the services, nor the ability of the administration to carry out those services."

Beyond that, Mr. Adams said, "it depends, as you well know, on the items themselves and the judgment on whether or not those reductions applied to that item will interfere unnecessarily with the services.

"As a matter of fact, as you know, here is a case of whether the Congress is going to cut in the right places. It very well could be that those cuts would be made in the places where it would have a rather considerable effect."

The President's budget provides for spending $71,800 million, but asks for new appropriations of $73,300 million. Representative KEATING asked Mr. Adams specifically about the $71,800 million spending figure.

Mr. Adams said the administration's request for funds for foreign military and economic aid could be "reduced somewhat." But he warned that it must not be allowed to go below "what will give our administration the opportunity to carry out this program for the benefit of the defense and security of this Republic."

The administration originally requested $4,400 million for foreign aid. This figure was subsequently cut by President Eisenhower to $3,800 million.

Four Groups Hit Federal School Aid

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present for consideration by the Members of Congress an editorial entitled "Four Groups Hit Federal School Aid" which appeared in the Tuesday, May 7, 1957, issue of the Shreveport Times, Shreveport, La. The editorial follows:

FOUR GROUPS HIT FEDERAL SCHOOL AID

Four great national organizations have presented powerful cases against the pending Federal aid to school-construction legislation, cases based on simple facts and logical conclusions and not on guesses and emotional interpretations.

These four organizations are the American Legion, the American Farm Bureau Federation, the Investment Bankers Association of America, and the United States Chamber of Commerce. Each in its opposition covers the whole subject of Federal aid, but each also emphasizes some certain phase of the reasons why such legislation should be defeated.

Each of the organizations presented its case in testimony by an official representative before the General Education Subcommittee of the House Committee on Education and Labor.

Testimony from the United States Chamber of Commerce especially dealt with flaws and misstatements of facts in arguments being used by proponents of the Federal-aid legislation. The American Farm Bureau emphasized the importance of home responsibility for home-school systems. The Investment Bankers Association of America—made up of the financing organizations which handle public-school bonds—revealed startling facts concerning the upsurge in school construction throughout the Nation under financing by local school districts. The American Legion gave especial stress to the fact that Federal aid inevitably must weaken the American way of life itself through destruction of local responsibility.

The Legion's case was presented to the congressional subcommittee by Richard C. Cadwallader of Baton Rouge, a member of the national Americanism committee of the American Legion. He cited first of all the Legion's resolution at its Los Angeles convention last September which reiterated the Legion's stand on Federal aid to education, the resolution being passed without a dissenting vote. It said, in part:

"1. That the State and local government ought to, can, and should assume and take care of primary and secondary school needs.

"2. That under the Constitution of the United States, the full responsibility and authority (including financing) over the

education of our children is reserved to the several States respectively and to the people in local communities.

"3. That the States and local communities have the capacity to meet the financial requirements for education.

"4. That the National Government should avoid interference, control, or direction in educational processes or programs of the respective States, either directly or indirectly, or by grants-in-aid, appropriation, curriculum, or program control, or by action of any agency, branch, or department of the United States Government."

Mr. Cadwallader then stated the Legion's view that "if substantial financial support is provided to local public schools by the Federal Government, local community interest and responsibility will diminish."

"The wealth of the Nation," the Legion case continued, "is to be found in the States. In most instances, this wealth is as available to the States as to the National Government. Generally speaking, all taxes come from the same pocket. Sending tax dollars to Washington, which are intended for local use, merely increases overhead and administrative costs and adds to the size of the Federal bureaucracy."

The Legion's case further pointed out that such assistance could not be administered through the States and achieve the objectives sought by Federal aid "without imposing important and unwanted conditions." Further, the Legion said, through Mr. Cadwallader:

"Federal funds for general public education could place in the hands of those in political authority the power to transform our whole way of life. The opportunity which would be opened up for the imposition of requirements as to what would be taught is frightening."

A major weakness in the whole Federal aid theory, that it would penalize self-sufficient local school districts, and a major danger, that Federal aid would destroy the initiative and self-reliance of these districts by forcing them to take more and more State and Federal aid, made up another part of the Legion's case.

The facts presented by these four organizations—and the nature of the organizations—create a case that should make Congress realize that the pending legislation should be defeated. The Legion is a cross-section of everybody in every State. The Farm Bureau Federation is the world's largest organization of farmers. The investment bankers know public school fiscal conditions better than any other organization. The United States Chamber of Commerce is made up of chambers of commerce all over the Nation, most of them in the smaller cities and towns. Together, the four groups are a solid cross-section of American life.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. REUSS. Mr. Speaker, fourscore years ago today—on May 10, 1877—Rumania became a fully independent state.

I draw this anniversary to the attention of this House because as Americans we cannot but feel a common bond with all peoples who are struggling to attain national freedom. The Rumanian people today are once again under the subjection of an alien power, yet the spirit of liberty burns as brightly in their hearts as it ever did.

The United States has a responsibility to work unceasingly for the liberation of Rumania and its neighbors behind the Iron Curtain. For too long we have either mouthed slogans or uttered threats. It is time for us to put forward a positive program.

The withdrawal of Soviet troops would be the best possible step toward restoration of Rumania's freedom and independence. I believe that the United States should offer to draw back its troops to the Rhine on condition that Russia withdraw its forces to its own borders and with the understanding that the entire area between the Rhine and the Soviet Union would be demilitarized. It seems to me that we have nothing to lose by such a proposal and everything to gain.

I hope, Mr. Speaker, that before another May 10 comes around, the people of Rumania will have renewed assurance that in their determination to be free they have the unwavering support of the United States.

Christian Citizenship

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a letter that won a top award by Miss Ellen Lucille Heacock in a contest conducted by the Christian Endeavor World. Miss Ellen Lucille Heacock is a student at West Denver High School, where her letter was judged the outstanding one submitted in this contest. The letter was addressed A Letter To My Congressman.

Miss Heacock has been active in the Christian Endeavor leadership and held many offices. Denver is proud that she has received this recognition. The letter is as follows:

DEAR MR. CONGRESSMAN: Today's teen-agers are faced with many serious problems—problems such as communism, racial prejudices, juvenile delinquency, dope, and alcohol. The world is giving us these problems and demanding an answer to them from the teen-agers. We fully realize the seriousness of them. We acknowledge the fact that our lives are directly affected by them, whether they be international, national, or local problems.

Communism is one of the problems that concern not only teen-agers but people everywhere. This is an especially big problem to Christians because the Communists don't believe in God. The few that know Him are forbidden to worship Him. We are deeply humble that we live in a country that is willing to fight against such human oppression. We feel it is our obligation to God and mankind, not only to fight to free these people from communistic domination, but to share with them our wonderful message of peace and joy with Christ. With Christian love and perseverance we can make this a world filled with peace and the love of Christ.

We have another problem in the United States that is of major concern to most of us. This problem is racial segregation and prejudice. God is no respecter of race or color. Then why should we be? We are disobeying the command to "love one another" when we refuse to associate with people whose skin is a different color than ours, whose speech is accented, whose customs are different than ours. Love is the answer to this problem. When we have brotherly love for people of different races we have an understanding of them and their problems. Instead of forcing them to accept our way of life we must make them feel welcome and wanted. We teen-agers have many opportunities each day to spread Christian love to both the new and old Americans of different races. With Christ's help, we can all do our part to end racial strife.

Juvenile delinquency is a problem that has plagued people through all ages. It seems to have reached its height with our age. Why do so many young people use dope, drink alcohol, and smoke? Why do they destroy public and private property? And why do they steal? Poor home conditions, unbalanced emotions, and bad influences are the answers, say some people. The main cause of juvenile delinquency is a lack of Christ in the teen-ager's life. It is our responsibility to let Christ's light shine through us to them. We needn't shun these teenagers because they have gone astray at one time. Instead we should befriend them and try to guide them in a straight path. We have a responsibility to show these teenagers that they don't have to smoke and drink to act grown-up, that they don't have to use dope to be one of the crowd. We have a responsibility to prove to them that by being a Christian they can rise to greater heights than they ever dreamed of.

Yes, Mr. Congressman, we teen-agers are faced with these problems and many others. We realize that we have many responsibilities to our God and to our world in accepting them. Our acceptance of these responsibilities will affect people of all nations and of all races. If we can bring Christ into the lives of non-Christians we will eventually wipe these problems off the face of the earth. It is our responsibility to let others know of Christ and of the wonderful peace He brings to those who love Him. When others learn of this there will be no communistic domination. There will be no racial prejudices. There will be no teen-ager vandalism.

How we handle these responsibilities and problems will not only affect our generation, but it will affect the future generations of the world. We can pave the way to a peaceful world, but we have to train our children to follow and maintain the road of peace. Just as we have come to know Jesus Christ through our parents' guidance, so we must train our children to know Him. Only in this way can peace be truly preserved.

Just how will we handle these problems? We have many things to contribute toward solving these problems. We have education, a high standard of living, and a free Government with which to work. All of these tools are worthless without Christian love, understanding, energy, and perseverance. In the hands of non-Christians these tools could become weapons of war. Therefore we Christian teen-agers must put forth every effort we have to overcome these problems that are facing us.

Yes, today's teen-agers are faced with many problems. We realize that we cannot make this a better Christian world by ourselves. Just as America's foundation is a faith in God, so we are accepting the challenge to make the foundation of the world a faith and trust in God. We are thankful for the

Christian leaders of our country and pray that we might follow in their footsteps. It is with God's help that our leaders function now and it is our earnest desire that He will always help those, who like you, help govern America. Mr. Congressman, we teen-agers realize that it is only with God's help that we will be able to fulfill this challenge which we have accepted.

Yours in His service,

ELLEN LUCILLE HEACOCK.

The Gerry Murphy Case: In Defense of American Justice

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reply to the remarks of my distinguished colleague from Louisiana, Representative GEORGE S. LONG, which appeared on page 5322 of the CONGRESSIONAL RECORD for April 17 of this year:

On April 17 my distinguished friend and colleague, Representative LONG, of Louisiana, again saw fit to address remarks to the House concerning the Gerry Murphy case. Like Mr. LONG, it was not my intention to enter into a controversy regarding the case. In fact, after the Department of State sent to the Dominican Government its biting rejection of that Government's explanation of the circumstances of Murphy's death, I did not believe there remained an issue to debate.

In unequivocal terms the Department of State branded the Dominican tale a pack of lies. It is a mystery to me why my esteemed colleague, in his lengthy remarks on the case, chose to ignore completely the damning evidence submitted by our own investigative authorities. Perhaps he, or his expert advisors, inadvertently overlooked in their research the crucial State Department note—although on April 8 I called attention to the text of the note which appears in the Appendix of the March 25 RECORD. I beg to remind him of its indisputable contents.

The State Department note states: First, that De la Maza's suicide letter was in fact not written by De la Maza; second, that information available to the United States Government, contrary to the report of the Dominican attorney general, indicates that Gerry Murphy was well acquainted with high Dominican officials, among them Brig. Gen. Arturo R. Espaillat—who denies knowing Gerry; and, third, that Murphy's income while in the Dominican Republic must have exceeded the $350 per month salary which the Dominican attorney general states he earned as a copilot for the Dominican Aviation Co.

It was certainly the privilege of my distinguished senior colleague to doubt the contentions I held regarding the veracity of Dominican authorities when I first presented Gerry Murphy's case to the House. Assuredly the accusations I leveled at the government of a friendly nation were startling indeed. Most Americans have learned, as Mr. LONG tell us, that Communists "are not at all concerned with truth, decency, morality and justice." It comes a lot harder to accept the lamentable fact that a presumably friendly government and ally is engaging in the same contemptible un-Christian tactics we have come to associate with the Communists.

In any case, my distinguished colleague no longer need base his judgments on what he terms my intemperate remarks. He now has the expert testimony of the FBI confirming my original contention: that is, the Dominican Government fabricated, even to the point of sacrificing the life of yet another victim, the whole ridiculous story of Gerry's murder and De la Maza's suicide. The question remaining is what dark secret led the Dominican officials to resort to murder and monstrous lies in order to cover up their deeds.

Mr. LONG would have the House believe that some insidious Communist plot is behind what he calls the unprecedented smear and vilification campaign being waged against the Government of the Dominican Republic. He further suggests that I am, albeit unwittingly, serving the Communist cause. Does, then, the distinguished gentleman from Louisiana mean to imply that the FBI and the Department of State are also serving the Communist cause? I am sure he will agree that it was not in my power to persuade the FBI to declare the alleged De la Maza letter a forgery. Nor by any stretch of imagination could I have prevailed upon the Department of State to declare that evidence in its possession contradicts the Dominican attorney general's report. If we are to follow my learned colleague's reasoning to its logical conclusion, then the Department of State and the FBI are also serving the Communist cause.

We will not serve the cause of freedom by closing our eyes, in the name of anticommunism, to the treacherous machinations of the Trujillo regime. I would remind my esteemed colleague of the wisdom set forth in the Biblical admonition:

Ye shall know the truth and the truth shall set you free.

We must not be afraid to face the truth about the Trujillo dictatorship simply because Trujillo has managed to cloak his viciousness with the respectability of anticommunism. Anticommunism, while a virtue, does not bring with it the privilege of abusing every other positive virtue which gives democracy its strength and makes it worth preserving from communism.

I come now to a particularly perturbing section of my esteemed colleague's remarks. He takes young Gerry Murphy to task for the part he appears to have played in the kidnapping of Jesus de Galindez.

Mr. Murphy—or the memory of Mr. Murphy—

Says Mr. LONG,

does not come to us with clean hands. We are a law-abiding people. As such we cannot be too concerned with what did or did not happen to Mr. Gerry Murphy.

This strikes me as very strange reasoning from several angles. The gentleman from Louisiana [Mr. LONG], by condemning Gerry's character in most abusive fashion, appears to accept the theory that Gerry had a part in the abduction of Jesus de Galindez. If so, the gentleman from Louisiana [Mr. LONG], must then accept the complicity of officials of the Dominican Republic in a conspiracy to kidnap a man right in the heart of New York. That being the case, my colleague's vituperative assertions about Gerry Murphy must also be meant for the Government of the Dominician Republic, which engineered the criminal conspiracy. Why does my esteemed colleague plead the Dominician case so eloquently while mercilessly condemning a young American citizen?

On the other hand, if the gentleman from Louisiana [Mr. LONG], does not accept the thesis that Trujillo's thugs engineered a kidnaping on United States soil and Gerry played a part in it, then we are left without a key to Gerry's disappearance. In which case it becomes even more difficult to understand the gentleman from Louisiana's [Mr. LONG] advice to me to forget Murphy because he was, according to my colleague, "a wanton character" for the part he played in the kidnaping. I submit that my distinguished friend cannot have it both ways.

Whether Gerald Murphy did or did not, knowingly or unknowingly, play a role in the mysterious disappearance of Galindez is not the point. I beg to remind my esteemed colleague that both the precepts of Christianity and of our system of jurisprudence do not judge a man guilty without trial. Moreover, Gerald Murphy, as a citizen of the United States, was entitled to the protection of our laws. I submit that whatever Gerry's crimes, he was entitled to a fair trial. He was entitled to something more Christian than the jungle law apparently prevailing in the Dominican Republic. I am convinced that my friend who represents the great State of Louisana would exert all his power to secure American justice for one of his constituents should a foreign government take the law into its own hands in gangster fashion.

As for the matter of the damages paid to the parents of Gerry Murphy, ostensibly by the family of De la Maza—once again I refer my colleague to the note from the United States Department of State to the Government of the Dominican Republic. De la Maza's suicide note, it states, was not written by De la Maza. Somebody forged that note to make it appear that De la Maza had murdered Gerry. Why should the family of the man sacrificed on the altar of Trujillo's egomania pay damages to the Murphy family for a murder he never committed? Where is our sense of justice? Are we to hide it under the cloak of anticommunism?

My distinguished and learned colleague concludes his remarkable address with a plea for not meddling in the affairs of a neighboring country. He says:

What business is it of ours as to what type of government the people of the Dominican Republic have, or in which manner their

government operates, so long as that government and its operations presents no danger to our own rights?

I am glad he added the qualifying phrase, "so long as that government and its operations presents no danger to our own rights." In the case of the twin disappearances of Galindez and Murphy, our investigative agencies have unearthed some startling information about Trujillo's bold and criminal operations in our country. I am certain that Mr. LONG would agree that murder of United States citizens and residents, and their kidnaping and intimidation, does constitute a danger to our rights. It is unthinkable that a foreign government carry on its brutal machinations in our peaceful country. It is equally inconceivable that we accept in a supine manner the bold-faced lies of a foreign government because it purports to be anti-Communist.

The Government of the Dominican Republic has lied to the United States Government. The Department of State has declared, and I quote:

In view of the foregoing observations and other evidence which it has developed within its domestic jurisdiction, the Government of the United States considers the case of Gerald Lester Murphy as unsolved. The Dominican Government is urgently requested to reopen and vigorously pursue its investigation of the disappearance of this citizen of the United States.

Trujillo's answer to the note was to stick by his original trumped-up nonsense. He claims the De la Maza note to be authentic on the basis of the judgment of a Spanish authority he had brought to the Dominican Republic from Spain. Whose testimony is likely to be credible, the FBI's or a handpicked Spanish expert? Trujillo clings to the story that Murphy was not acquainted with any high Dominican officials. The FBI states otherwise. Trujillo reiterates that Murphy's salary while in the Dominican Republic was $350 per month. The FBI found Murphy's income far exceeded the amount Dominican authorities will admit.

As I stated earlier in the case, I do not propose that we go in and clean the vipers out of the Dominican Government. But we can see to it that they do not make so bold as to carry on their sordid intrigues within our territory or against our citizens.

Recently a first healthy step was taken. The Department of State on May 1 sent to the Senate the nomination of Joseph F. Farland to replace Ambassador Peiffer in the Dominican Republic. Mr. Farland, I understand, besides possessing a law degree, served as an FBI agent from 1942 to 1944. In view of the present situation, I would say his experience should serve him in good stead.

A second step to strengthen our resolve to stand for justice in our dealings with the Dominican Republic has been the nomination of Dick Rubottom as Assistant Secretary of State for Inter-American Affairs. For 8 months the position was vacant. It is a good thing that someone in the Department will now be in a position to assume responsibility for events in the vital Caribbean area.

I appreciate the interest shown by the gentleman from Louisiana. His interest, I feel sure, will lead him to reconsider his position, once he has had an opportunity to learn the facts. If more Congressmen can be informed about the Gerry Murphy case, a vital change may occur in our foreign policy in Latin America: The United States may once again assume its rightful role as the champion of the oppressed and as the Nation where government by consent of the governed and justice under law are revered and held as an example for all the world.

Moral Issues Involved in the Use of Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. ROONEY. Mr. Speaker, recently the distinguished majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], made a recommendation here on the floor of the House for the reappointment of the Honorable Thomas E. Murray as a member of the Atomic Energy Commission.

Under leave to extend my remarks in the RECORD, I include the following newspaper article written by Mr. J. J. Gilbert:

NUCLEAR ENERGY HAS MORAL ANGLE—MR. MURRAY'S EXPIRING TERM WITH AEC HAS REVIVED THE ISSUE

(By J. J. Gilbert)

WASHINGTON, N. C.—Moral issues involved in the use of nuclear weapons are being brought prominently to public attention here.

Significant in this regard is the imminent expiration of the term of Thomas E. Murray as a member of the Atomic Energy Commission. For years Mr. Murray has insisted on raising the moral issues associated with the use of nuclear weapons.

HAS STRESSED MORAL ISSUES

Members of Congress have taken the unusual and perhaps unprecedented course of recommending to President Eisenhower that he be reappointed. Ten members, Senators and Representatives, of the 18-member Joint (Senate and House) Committee on Atomic Energy have joined in this recommendation. Mr. Murray, himself, has let it be known that he would like to be reappointed.

An interesting fact is that while Washington has come to think of Mr. Murray in connection with the moral aspects of nuclear weapons, he could very well be the most practical member the AEC has ever had. He is widely recognized as an engineer and businessman, and he personally holds some 200 patents.

Moreover, while he is usually associated with the moral issues of nuclear war, much, if not most, of what he has said and written has to do with the most practical military features of nuclear warfare. While he recognizes the deterrent value of large weapons, he has called for greater emphasis on the smaller weapons adaptable to limited wars.

Mr. Murray's argument is that massive nuclear weapons are so horrible in their results that the world just can't afford to indulge in an all-out nuclear war.

Meanwhile, an aggressor, appreciating this fact as well as we do, can conquer the world piecemeal, through small localized aggressions. Aggressors might be stopped if small nuclear weapons were available to use against them.

Legislators who have urged Mr. Murray's reappointment have stressed his courage, his efforts to avoid political partisanship, and his advocacy of the common good as the criterion in making policy decisions.

Mr. Murray has for years advocated wider public understanding of the hazards associated with radioactive fall out. Here again his arguments are being brought once more to mind, by warnings and protests emanating from numerous diverse sources.

His concern for the threat posed by nuclear weapons has also led Mr. Murray to advocate greatly increased efforts to develop peaceful uses of atomic energy, particularly atomic electric power.

He has repeatedly warned that our present programs for the development of industrial atomic power are not adequate and that steps to accelerate its development are urgently needed.

Earlier this year, in testimony before Congress, he again proposed measures designed to rectify the deficiencies in our present program.

One of the most recent utterances of Pope Pius XII on this topic has been an urging that scientists of all nations expend their efforts to put nuclear energy to work in the service of men, instead of engaging in "this exhausting and costly race to death." This appeal was contained in a message which the Holy Father gave to Japan's Minister Matsushita, who called upon the Pontiff in the interests of limiting the dangers of nuclear tests and warfare.

The Pope's latest remarks recall to mind that there has long been one in this country who has given serious and expert thought to these problems. Mr. Murray is that one.

Nasser and Saud in Mideast Drama

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following articles by Joseph Alsop, which appeared in his syndicated columns throughout the Nation on May 6 and May 8, 1957. Both articles were written from Beirut, Lebanon. He repeats what I have been saying since 1955. Will the State Department pay any attention now?

[From the New York Herald Tribune of May 6, 1957]

NASSER, SAUD IN MIDEAST DRAMA—ARABIA, PLOTTED AGAINST, STOPS FINANCING PLOTS; NOW REDS DO IT

(By Joseph Alsop)

BEIRUT, LEBANON.—The latest and not the least extraordinary scene in the vast Middle Eastern drama has now been played in holy Mecca, according to deeply interesting and apparently authentic recent reports.

The cause of the scene was King Saud of Saudi Arabia's discovery that the Egyptian military attaché in his capital was briskly engaged in organizing and financing armed leftwing terrorist activities ultimately di-

rected against the Saudi Arabian Government. King Saud's emotions, on learning of this latest manifestation of the loyal affection of his Egyptian ally, can be easily imagined.

Because of his discovery King Saud refused to receive Egypt's President Nasser when Nasser wished to confer with him about the Jordan crisis. He was too busy, he said, making his devotions in Mecca. Therefore Nasser sent his satellite, Syrian President Shukri Kuwatly, whom Saud particularly likes, to conciliate the Arabian King by all means possible.

The means adopted was not to deny the activities of the Egyptian military attaché, which were undeniable. Instead, Nasser's knowledge of those activities was passionately denied.

In part, at least, the grand denial scene was played in the very shadow of the sacred Kaaba, where King Saud had gone to pray. And at one point, apparently, an Egyptian member of the delegation accompanying President Kuwatly actually clutched the Kaaba's great embroidered curtain, to give force to his oath that Egypt's right hand knew not what Egypt's left hand did.

The episode so completely belongs to the ornate tradition of Middle Eastern politics that its hard practical significance may perhaps escape attention. But it has the very greatest and hardest practical significance all the same.

The discovery of Egyptian military attaché in full career as a left-wing terrorist organizer is not the truly significant feature. Indeed, this has become almost a monthly occurence in this part of the world. Already there have been similar episodes, usually with such melodramatic trimmings as the disclosure of large bomb or dynamite caches in the Egyptian officer's possession, in Libya, the Sudan, and Lebanon. And in Jordan, the Egyptian military attaché, Fuad Hilal, was well known to be a leading organizer of the plot against King Hussein.

The real point of the marvelous scene in Mecca was, rather, the sharp emphasis it gave to a major reversal of role that is deeply affecting the whole Middle Eastern political situation.

It was not so long ago—as late as last September in fact—when Egypt's military attachés and other agents were working, all over the Middle East, in closest collaboration with the Saudi Arabian embassies. Not to put too fine a point upon it, Saudi Arabian money was everywhere being used to finance Egyptian political and propaganda activities. Furthermore, the largest share of King Saud's dollars was going to extreme left-wing Arab nationalists, and particularly to the Communist-linked Baathists, in Syria and Jordan.

Very probably, indeed, the terrorist bands which the Egyptian military attaché was training and equipping in Saudi Arabia were originally intended for export. They were only turned against King Saud himself when the King finally grasped the danger to his own Government of the pro-Egyptian Leftist and revolutionary activity that his dollars were paying for in so many other countries.

This important awakening occurred last October. But it is now abundantly clear that when King Saud turned off the tap of his oil-earned dollars, the Egyptians at once called on the masters of the Kremlin, who turned on the tap of their rubles. The same underground, terrorist, pro-Egyptian activity that was once financed by Saudi Arabia is now financed by the Soviet Union.

This raises two kinds of questions. First, the changed relationship between King Saud and Nasser, like the Jordanian crisis, raises the gravest questions about the future of Nasser's quadripartite Arab alliance of Egypt, Syria, Jordan, and Saudi Arabia. Second, Nasser's vastly increased dependence on the Soviets raises even graver questions about the extent to which he can still be considered a free agent. But answers can only be attempted in a subsequent report.

[From the Washington Post and Times Herald of May 8, 1957]

IS EGYPT TO BE A SOVIET CLIENT-STATE?

(By Joseph Alsop)

BEIRUT.—Egypt's President Nasser, who is still for good or ill the biggest figure in the Arab world, is plainly approaching his final choice between East and West.

He will either strengthen his anchor to windward—the bearable relations with America he has always been careful to maintain. Or he will cast off the anchor altogether, rapidly steering Egypt toward a new status as an open Soviet client-state. The moment of choice between these alternatives has been greatly hastened by the defeat of the Egyptian plot to take over little Jordan, and perhaps too by the Syrian elections.

Some hope for, some fear this moment. King Saud of Saudi Arabia, for instance, is one of those who fear it. He now knows the true, undying loyalty of his old friend, the Egyptian dictator. He has just discovered Nasser's military attaché in Arabia organizing terrorist activities against the Arabian Government.

But the great flood of oil money has washed away the old Arabian tribal loyalties. It has changed the whole structure of Arabian society. It has made King Saud much more vulnerable than most people suppose to the kind of propaganda and underground attack Nasser knows so well how to organize. Hence King Saud is not at all anxious to hear his own name heading the list of villains of Nasser's powerful "Voice of the Arabs."

For these reasons, King Saud has just sent young King Hussein of Jordan home again from Arabia with what amounts to half a flea in his ear. In particular, Saud refused Hussein's urgent invitation to join an active combination against the left-wing nationalist, pro-Egyptian groups which are now working with the Communists in all the Arab countries.

But King Saud is still supporting King Hussein. He is still America's friend. He has not altered his crucial decision, reached last October, to withdraw his rich financial support from the Egyptian network of subsidized agents, terrorists, and "nationalist" Arab politicians. Hence King Saud will hardly escape if Nasser finally decides to go all the way with the Kremlin.

There are those who argue that Nasser has chosen the Kremlin already but just has not bothered to tell the American Ambassador in Cairo about it. Some signs, such as the renewed publication of a Cairo paper by the allegedly suppressed Egyptian Communist Party, certainly hint that Nasser is no longer a free agent. Most serious of all, he is now accepting Soviet rubles instead of Saudi dollars to finance his agent and propaganda net in the Arab world.

Yet there are still several important things to be said about Nasser's choice. In the first place Nasser has a legitimate complaint against the American policymakers in this matter.

American policy has never firmly supported or firmly opposed the western allies in the Middle East. American dealings with Egypt have alternated appeasement and humiliation with dizzying frivolity. In the short space of 5 months, we have gone from Secretary Dulles' exhibition of brinksmanship in the rejection of the Aswan Dam scheme, all the way to President Eisenhower's trust in Divine Providence and the U. N. in the climactic stage of the Suez crisis.

Until the Jordanian drama, therefore, Nasser was never plainly notified that the United States, as leader of the West, would not indefinitely stand for his making political capital by the simple method of kicking the West in the belly. On the contrary, Nasser has been allowed to suppose, and he has supposed, that the United States would stand for almost anything if he only refrained from kicking the Arabian-American Oil Co. in the belly.

If this confusion had been early removed from Nasser's mind, he might not have edged so far toward a Soviet choice. To be sure, Nasser gains cheap personal prestige by sponsoring and leading Communist-linked, violently antiwestern movements in other Arab countries. But the suffering masses of Egypt do not gain a piastre.

The position is clearer than ever now, since the Suez crisis has placed so many inflamed issues on the dust heap of accomplished facts. All Egypt's practical national interests are on the side of a truly neutral policy, which would include friendship with the West and eventually help from the West. The only obstacle is Nasser's activity beyond his own borders.

The last stage of the Suez crisis was of course the golden opportunity for the American policymakers. But even now it just might not be too late to persuade Nasser to make the wiser choice.

Looks Like the Reds Plan Long Antarctic Stay

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Jim Lucas, Scripps-Howard staff writer, in which he points out that apparently the Russians plan to stay in the Antarctic for a long time. It would seem that the United States ought to have some long-range plans with respect to that part of the world also:

[From the Washington Daily News of March 28, 1957]

LOOKS LIKE THE REDS PLAN LONG ANTARCTIC STAY

(By Jim G. Lucas)

The Russians have installed the first dial telephone system in the Antarctic. For their bases there, they also brought rugs and wall paper, indicating they were settling down for an indefinite stay.

This was learned today from members of the U. S. Navy's Antarctic Operation Deep Freeze.

Rear Adm. George Dufek, Deep Freeze commander, described his latest trip to the region as "the toughest yet." It was his third.

COULD CONTROL ROUTES

Russian headquarters is at Mirny, 2,000 miles from Australia. From their base there, and outlying posts, the Russians could control the sea routes around the Cape of Good Hope—routes of crucial military importance if the Suez and Panama Canals should be closed.

The Russians' main base, spread over an area of several miles, is hooked up by dial telephone with the other posts. They even boast a central exchange.

The Russians are participating in observance of the International Geophysical Year along with other powers. So far, cooperation has been good. Admiral Dufek has visited

the Russian ships and they returned the call. The Russians wanted the honor of setting up the first South Polar camp, but yielded gracefully when the United States was named.

UNITED STATES WILL LEAVE

Though the United States has spent $55 million so far as its part in observing the Geophysical Year apparently we have no intention of remaining in the Antarctic. Admiral Dufek recently announced that Little America would not be maintained as a permanent installation. In all, the United States has seven Antarctic bases, but all are considered temporary.

The Australians are considerably concerned about the indications that the Russians are there to stay. Russian airbases soon will accommodate planes from Moscow, with a final staging base in Australia. The Australian Government has consented to this temporary arrangement. They fear now that the Russians will ask to make this a permanent deal, using it for commercial purposes.

Reports from Canberra also reflect Australian fears that the Soviets hope to establish submarine bases in the Antarctic.

NO CLAIMS

Neither the United States nor Russia recognizes any claims to sovereignty in this area. Control of the frozen continent has never been established. If the matter of possession ever came to a test, however, Uncle Sam could be expected to make a strong bid.

Interest in the Antarctic is threefold—scientific, strategic, and economic. Admiral Dufek has discounted any immediate strategic importance. In speeches in New Zealand, he also stated he felt it was of little economic importance, claiming that minerals—largely coal and gold—detected there are of low quality. However, he pointed out that only two-tenths of 1 percent of the polar area has been surveyed, and that casually.

Cut the Budget and Reduce Taxes

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. FEIGHAN. Mr. Speaker, under leave granted, I wish to insert in the RECORD an address I delivered over WHK radio station, Cleveland, on April 20, titled "Cut the Budget and Reduce Taxes":

The real news in Washington is the budget proposed by the President and the reaction of Congress. Immediate reaction of Congress to the largest peacetime budget in our history was unfavorable. Secretary of the Treasury Humphrey appeared to be in agreement with the consensus in Congress because he made a public statement to the effect that the President's budget was too high. Another feature is that vested interests have been busily at work trying to make sure that their pet projects will not be cut by Congress.

The end result is that Congress is more economy-minded this year than usual. This is good news for the overburdened taxpayer. The drive for economy and efficiency in Government is long overdue.

After a most careful study of the proposed budget and taking part in debates in the House, I conclude that the present methods being used to cut the budget will not produce the substantial results the people are looking for. An examination of the budget will show that 63 percent of the tax dollar goes for what are generally called national-defense purposes.

In the world in which we live, our national defense can no longer be predicated on the belief that we are separated from most of the world by the Atlantic and Pacific Oceans. Today our national defense takes on global dimensions because we cannot escape the hard, cold fact that the Atlantic and Pacific Oceans are no longer effective barriers for possible invaders or aggressors.

The global dimensions which have been added to our national defense policy have been imposed by the worldwide threat of Russian communism.

The experts responsible for the defense of our country tell us that the possibilities of war in the future demand that we be fully prepared to meet the enemy anywhere in the world. Added is the realization that freedom's cause cannot be defended by the United States alone and that all nations of the world that believe in freedom must do their part in defense of it. That is the real reason why we initiated programs of foreign, economic, and military aid.

I believe that the tremendous sacrifices which the American people have made over the past 10 years in support of our peacetime national defense program are now beginning to bear fruit. There is no doubt that the Communists are in a weaker position today than they have been in many years. Many countries of the free world are becoming more able to defend themselves. Many of the countries enslaved within the Russian empire are showing a determination to throw off their chains of slavery and to oust the Russian Communists who occupy their soil. There are also signs of uncertainty and confusion within the Kremlin itself. The Russian overlords are faced with tremendous internal problems which they cannot solve except by the application of the most ruthless tyranny and despotism over the people. But the Russian Communists have not abandoned their goal of world conquest.

Since 63 percent of our national budget is spent for purposes of defending our own free way of life, the question before the Eisenhower administration is whether it feels we can coexist in safety with the Russian Communists or whether we must continue on with programs calculated to defeat the conspiracy of communism.

This decision must be made before we can realistically and honestly expect a reduction in the national budget and thereby a substantial reduction in taxes. Any substantial reduction in taxes can only be done by a substantial reduction in the funds now being expended for our national defense program.

The administration has not yet made up its mind on this basic question. On the one hand, the Department of State is engaging in activities which afford the Russians the breathing spell they so badly need.

I refer to a story which appeared in the Washington Evening Star last November to the effect that the Department of State had sent a message to the Kremlin assuring it that the Government of the United States did not favor governments unfriendly to communism on the borders of the Soviet Union. According to this newspaper, this message was sent right at the peak of the Hungarian freedom revolution—a revolution of all the Hungarian people which was anti-Communist in nature and sought a free democratic government of the Hungarian people. Shortly after this message the Kremlin sent Red Army reinforcements into Hungary to destroy the great victory won by the Hungarian patriots. Such activities as this, and I presure the Washington Evening Star is accurately reporting the facts, does not weaken communism, but gives it the breathing spell that it so badly needs.

There is increasing talk in Washington that the so-called summit meeting at Geneva ended up in a secret understanding between the Russians and the United States that a status quo would be acceptable to both. Such a status quo would allow the Communists to keep the many nations and millions of people which it now holds in bondage. Such a commitment, if given, would prevent the United States from taking any steps whatever to help the patriotic forces behind the Iron Curtain. These rumors are gaining increasing credence because of the failure of our Government to do anything effective by way of the United Nations or on its own to help the heroic people of Hungary in their fight for freedom.

I remind you again that about $42 billion are included in the budget sent to Congress by President Eisenhower to cover his estimated cost for our national defense program. I repeat our national defense program is calculated to defend our free way of life against the conspiracy of communism and to help all other nations who are willing to fight for their freedom and independence. To put it bluntly it would appear that the Department of State wants to make a deal with the Russians and the Department of Defense understands the threat of communism to our free way of life and insists upon an everready defense force to meet any possible Communist aggression. Before Congress can make any substantial cut in our national budget, I believe we must have a national policy on communism.

At the moment Congress does not have a clear idea of what our national policy is in this respect. You have a right to expect consistency from the administration in Washington. You are asked to put up $42 billion next year to defend our free way of life against communism, then you have a right to demand a clear and sharp national policy which prohibits any deals with the Communists and excludes any programs or actions whatever which would tend to give the Communists a breathing spell.

If it is our national policy to work toward the elimination of communism as a threat to world peace, then I would ask whether or not our Defense Establishment has been modernized to conform with latest scientific advances. I have in mind the intercontinental guided missiles which are capable of carrying atomic warheads, aircraft that exceed the speed of sound, and electronic devices unheard of 10 years ago.

Modernization of our Defense Establishment cannot take place overnight. We must maintain at all times the capability to completely defeat any enemy who would make the foolish mistake of attempting aggression against the United States. This means that we must have in being a military force with the capability to win and win quickly. Modernization must bring economies with increased defense efficiency.

It is important that all of us bear in mind that 63 percent of our tax dollar goes for our national defense program. To make any deals with the Russian Communists is to deny the need for 63 percent of our national budget. Unless we have a clear national policy on communism, the American taxpayer will be burdened for years to come.

It's Time To Expunge This Resolution

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, at the request of the Honorable Goodwyn H. Harris, Jr., attorney, Mans-

field, La., I submit an editorial appearing in the Thursday, May 9, 1957, issue of the Shreveport Times, Shreveport, La. The editorial is entitled "It's Time To Expunge This Resolution" and is as follows:

IT'S TIME TO EXPUNGE THIS RESOLUTION

Senator GEORGE MALONE, of Nevada, has asked the United States Senate to expunge from its records the resolution it voted a few years ago condemning Senator Joseph R. McCarthy, of Wisconsin, for attacks he made on other Senators in Senate floor speeches. Senator MALONE made his request in the Senate yesterday.

The condemnation of Senator McCarthy should be expunged from the record—not because Senator McCarthy is dead but because passage of the resolution was wrong from the start. It was an act of Senators taken in heat, thoughtlessly, without regard to the true import or consequences of what they were doing, and without proper cause.

The resolution sometimes is referred to as a "censure" action, but the Senate removed the word "censure" from the original version before passing it. Even in the political heat and emotions and passions that reigned at the time, there were heads sufficiently level to realize that no resolution of actual "censure" should be passed. So, "condemned" was substituted for "censure."

That did not in any way change the wrong of the action. It was a technical point which some Senators used to soothe their own consciences. They would have done better to have obeyed those consciences to begin with and refused to pass any such resolution.

Senator McCarthy said things on the floor of the Senate about other Senators that might well have been left unsaid. Senators have done that throughout the years from the first session of this legislative body. But they were not censured or condemned by official Senate resolution.

The Senate always has recognized that its floor is a forum of free speech, so much so that Senators are immune from any type of legal action for anything said on the Senate floor, libelous or otherwise. A Senate which constitutionally and by statute has made itself immune from legal action for what its Members may say about people outside the Senate should not complain about what Senators say of other Senators inside the Senate.

Senator McCarthy may have spoken in bad taste and ill grace at times. Certainly he spoke in anger on some occasions, anger incited through hounding by his political enemies and those who, intentionally or unintentionally, did so much during that period of American history to aid and further the Communist cause in its objective of destroying the American form of government by force.

None of these things justified a resolution of censure or condemnation. Even if things he said were untrue—and in most instances any contention of untruthfulness would be a matter of individual opinion—he still had the right constitutionally and statutorially to say them in the Senate and he still acted under precedent established by many a previous Member of Congress on back to the days of Daniel Webster.

Daniel Webster denounced the War of 1912 and denounced the Senators who voted in favor of it and to support it with taxation. He refused to vote taxes for it. He was not censured. On the contrary, only a few days ago, he was selected by the present United States Senate as one of five "great dead Senators of all time" whose portraits will hang in a Senate lobby.

The late Robert M. La Follette, Sr., of Wisconsin—McCarthy's State—denounced the First World War and did everything he could to block legislation to support it and to prevent America's youth from fighting in it. He was, in effect, "tried" by his own State legislature while a United States Senator. That legislature demanded that the United States Senate expel him. He refused to appear before a Senate committee to answer charges which were, in effect, that he was following the course of a traitor to his country. He was not censured or condemned by resolutions. A few days ago, like Daniel Webster, he was selected as one of the five great Senators of all time.

One of the "counts" in the Senate's condemnation of Senator McCarthy was that he refused to testify before a Senate committee, and that this was "slight" and "insult" to the Senate itself. Senator La Follette made the same refusal—in arrogant manner. Other Senators through past decades have refused. None were censured or condemned—only McCarthy.

Even if Senator McCarthy had been 100 percent wrong in everything he said and did during his entire meteorlike career in attacking Communists and their friends and dupes—and certainly he was not wrong except in some matters of personal judgment and action—he still had the right and, under precedent, the privilege of saying everything that he said on the Senate floor without retaliation from the Senate as a whole.

It is because of these things, because of the deep principles of Americanism involved, that the Senate's resolution condemning the Wisconsin Senator should be expunged from the record.

Mr. Helicopter

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. CRETELLA. Mr. Speaker, I include for the RECORD an article from the May 8 New Haven Register on Igor I. Sikorsky, a pioneer in the field of aeronautics.

Mr. Sikorsky has dedicated his entire working life toward the perfection of the helicopter. It was through his tireless efforts that the helicopter has emerged as a popular, reliable, and even indispensable machine to the United States both in peace and war. Today the helicopter is continually called upon to perform daring and heroic rescue feats, and if it were not for the modern development of the helicopter, such service would never have been realized. The aircraft industry will sorely miss Mr. Sikorsky's active participation in it but I hope that his wealth of knowledge on the subject, his technical expertness, and keen imagination will be often utilized in the future.

The article follows:

CAREER OF BRILLIANT PIONEER SPANS HISTORY OF POWERED FLIGHT

BRIDGEPORT.—Igor I. Sikorsky, aeronautical pioneer and founder of the aircraft firm which bears his name, retires this month from active duty as engineering manager of the Sikorsky Aircraft division of United Aircraft Corp. He will, however, be retained by the corporation as a consultant for an unspecified time.

Sikorsky, 68 on May 25, has had an active career spanning the entire history of powered flight. Known today throughout the world as "Mr. Helicopter," Sikorsky's career includes pioneering efforts as designer, builder, and pilot of the world's first multiengine aircraft; designer, builder, and pilot of the first modern all-metal transport airplane; designer and builder of flying boats which blazed transoceanic air routes; and designer, builder, and pilot of the first successful helicopter in the Western Hemisphere.

BUILT MODELS AS BOY

The son of a psychology professor, Sikorsky was born in Kiev, Russia, on May 25, 1889. As a lad, thanks largely to the influence of his mother, a doctor, and his father, Sikorsky showed great interest in contemporary sciences—particularly aviation. While still a schoolboy, he built and flew several model aircraft made from tissue paper and strips of bamboo.

A youthful tour of Germany in the company of his father, during which he first heard of the Wright Brothers and came in detailed contact with the work of Count Zeppelin, more or less settled the question of what career Sikorsky was to follow.

He graduated from the Petrograd Naval College, studied engineering in Paris, returned to Kiev and entered the Mechanical Engineering College of the Polytechnical Institute in 1907. But in 1909, his young mind full of aviation, Sikorsky went back to Paris, then the aeronautical center of Europe, to learn what he could of the budding science.

While in Paris he became known to many of the men who later were to make great names in aviation—Bleriot, Feber, and others. Despite advice to the contrary from these and other experienced men, Sikorsky announced plans to build a helicopter. And so, having learned all he could of aviation as it was then known in Europe, he bought a 25-horsepower Anzani engine and went home to Kiev to begin building the aircraft of his first love, a helicopter.

The helicopter failed, as did its successor. Power was lacking; not enough was known of the rotary-wing art. Sikorsky then turned his attention to fixed-wing aircraft.

FIRST SUCCESS

First success came with the S–2, the second fixed-wing plane of his design and construction. In the S–5, Sikorsky had an aircraft which won him national recognition as well as an FAI license No. 64. His S–6–A received the highest award at the 1912 Moscow aviation exhibition, and in the fall of that year, won for its young designer, builder, and pilot first prize in the military competition at Petrograd.

Sikorsky's success in 1912 led to a position as head of the aviation subsidiary of the Russian Baltic Railroad Car Works. In this position, as a result of a mosquito-clogged carburetor and subsequent engine failure, Sikorsky conceived the idea of an aircraft having more than one engine—a most radical idea for the times. With the blessings of his parent company, he embarked on an engineering project which gave the world its first multiengined airplane—the four-engined *The Grand*. The revolutionary aircraft featured such things as an enclosed cabin, a lavatory, upholstered chairs, and an exterior catwalk where passengers might take a turn about in the air.

The Grand was followed by still a larger aircraft which, in military versions, proved the most successful bomber to see service in World War I. But, as it did to many things, the Red Revolution put an end to Sikorsky's career in Russian aviation. He gave up a considerable personal fortune and fled to France, where he was commissioned to build a bomber for Allied service. The aircraft was still on the drawing board when the armistice was signed and Sikorsky, after casting about in vain for a position in French aviation, headed for the United States.

He was surprised and disappointed to find postwar aviation in the United States on the wane. After a fruitless search for some posi-

tion in aviation, Sikorsky resorted to teaching and lecturing in New York, mostly to fellow emigres. Finally, in 1923, a group of his students who knew of his reputation in prewar Russia, pooled their meager resources and launched Sikorsky on his first American venture—the Sikorsky Aero Engineering Corp.

FUND SHORTAGES

First aircraft built by the young and financially insecure concern was the S–29A (for America), a twin-engine, all-metal transport which proved a forerunner of the modern airliner. Despite periodic bouts with a shortage of funds, a number of aircraft followed including the twin-engine S–38 amphibian with which Pan American Airways blazed trails to Central and South America. Coincident with success of the S–38 was an opportunity for Sikorsky's company to become a subsidiary of United Aircraft in 1929.

Sikorsky's association with United gave aviation an unsurpassed series of flying boats which for years were outstanding record aircraft. In the S–42, air trails were blazed to Hawaii and the Orient. The S–44 for years held the blue ribbon for the latest transatlantic passage. All Sikorsky aircraft of the time were known for ease of handling and luxurious comfort.

In 1937, with two careers behind him, Sikorsky turned again to the helicopter. From time to time, throughout the years, he had taken out an occasional patent on some phase of helicopter design. And during the years, he had taken exhaustive notes—jotting down his ideas, the results of tests, sketches of possible designs.

HELICOPTER SUCCESS

Finally, on September 14, 1939, Sikorsky whirled his VS–300 a few feet off the ground to give the Western Hemisphere its first successful helicopter. Within 2 years of rapid development, Sikorsky and his VS–300 had broken all the world's helicopter records. During these evolutionary years, he tried practically all possible configurations settling, finally, on the single main rotor, with torque-compensating tail rotor, design which is characteristic of all Sikorsky helicopters.

Military contracts followed VS–300, and in 1943 the R–4 was ordered into production, the first such helicopter in the world.

Since R–4, 9 Sikorsky helicopters have been introduced, including the S–51, the S–55, the S–58, the turbine-powered S–59, and the mammoth twin-engine record-holding S–56.

Unquestioned leadership in rotary-wing aeronautics, plus outstanding contributions to contemporary life, have brought Sikorsky many honors and awards. He has received honorary degrees from Yale University, Wesleyan University, Lehigh University, Northeastern University, Rhode Island State College, University of Pittsburgh, and Florida Southern College.

He was elected an honorary fellow of the Institute of the Aeronautical Sciences, an honorary fellow of the American Helicopter Society, a fellow in the American Society of Mechanical Engineers, and to various honorary positions in several scientific and professional fraternities.

HONORED BY INDUSTRY

On behalf of the entire helicopter industry, Sikorsky received the Collier Trophy for 1950, presented by Harry S. Truman.

In 1954 he was named winner of the John Scott award, presented annually by the city of Philadelphia. He was also named recipient of the James Watt international medal for 1955, presented by the Institution of Mechanical Engineers of Great Britain.

In 1952 Thomas K. Finletter, then Secretary of the Air Force, presented Sikorsky the national defense transportation award and dubbed him "Mr. Helicopter."

In making the award, Finletter likened Sikorsky to the Wrights, Santos-Dumont, and Count Zeppelin, and said, "He (Sikorsky) is a milestone in the history of aviation, an equal giant and pioneer. Look upon him well and remember him."

A Small But Rare Triumph

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. HILLINGS. Mr. Speaker, the Los Angeles Times of May 12, 1957, contained an editorial pointing up the successful efforts of our colleague, the gentleman from California, Mr. LIPSCOMB, in bringing about economy in the Federal Government. As the editorial declares, Congressman LIPSCOMB's hard work and persistence has resulted in a benefit to the Nation's taxpayers.

The gentleman from California was assisted in his efforts in bringing to light the public opinion poll conducted by the State Department by Mr. Robert Hartmann, chief of the Los Angeles Times, Washington bureau.

Mr. Hartmann is recognized as one of the Nation's outstanding journalists. He not only assisted Congressman LIPSCOMB in bringing the facts concerning Federal inefficiency to light, but he aided in the complete investigation of this matter. He deserves real credit for his dedication to the public interest in exposing Government waste.

I wish to join the editorial writers of the Los Angeles Times in paying tribute to my distinguished colleague, Mr. LIPSCOMB, who not only talks about economy in Government, but who has done something positive to help effect economy.

The editorial follows:

A SMALL BUT RARE TRIUMPH

The $43,000 spent this year surreptitiously by the State Department for a privately conducted public opinion poll, which Representative GLEN LIPSCOMB, Republican, of Los Angeles, has succeeded in cutting from future Federal budgets, seems a small sum compared to the billions at issue in the current debate.

ESSENTIAL FUNCTIONS?

Yet this curious case, happily concluded in a rare triumph for the taxpayers, illustrates in miniature most of the things that are wrong with our swollen Federal Government and the fallacy of claims that spending can't be cut without eliminating "essential" functions.

After the California Congressman discovered this tiny hole in the dike and put his finger on it, further exploration by the Times Washington Bureau established that more than $600,000 had leaked through it during 14 years without public accounting for a penny.

Laying aside, for the moment, the merits of the foreign aid program which costs about $4 billion a year and the reliability of a poll which, after sampling 1,300 persons, concluded that 90 percent of the American people favor foreign aid, consider these facts which have now been conceded:

POLLING DEAL

First, and most important, the State Department didn't really need what it bought. The most conclusive proof of this was its alacrity in terminating the polling deal when discovered. No one can complain about our foreign policymakers wanting to keep abreast of United States public opinion, but they are not immured. Last year they spent $888,111 on domestic travel, which is said to broaden the mind. Moreover, the Department hires a dozen public studies experts of its own at some $72,500 a year, who listen to radio-TV pundits, read current magazines and clip daily newspapers, even subscribing to one published west of Kansas City.

Second, since nobody at the State Department dared ask Congress for $43,000 more each year as poll money, the interested parties brazenly tapped a secret $1 million-a-year fund given the Secretary under the intriguing title of "Emergencies in the Diplomatic and Consular Service." This fund never has to be accounted for in public, for reasons one might wish to know more about. Since it is another classified subject closed to press inquiries, however, nobody missed the money for 14 years until some foreign aid bureaucrat became a little too bold.

Third, having purchased unnecessary data with unauthorized funds unbeknown to Congress and the taxpayers, the poll findings were passed around by the State Department and were used by the International Cooperation Administration for a dubious and possibly illegal purpose, to propagandize its own program and payroll in the controversial foreign aid budget debate.

PERFECT EXAMPLE

As Representative LIPSCOMB said, "This is a perfect example of how entrenched spenders go about perpetuating themselves in the Federal bureaucracy in spite of the will of Congress and the people."

It is also a perfect example for any Congressman who really wants to cut the budget instead of just making speeches about it. Perhaps some of LIPSCOMB's colleagues will now be moved to demand public answers to such corollary questions as these:

How many more such $43,000 items, useless relics of a bygone "emergency era" when Congress wrote blank checks by the gross, are still hidden in the $71,800,000,000 Eisenhower budget?

How many more unaudited million-dollar funds have past Congresses complacently transferred to executive agencies to use as they please, even to contradict or convert congressional critics?

What else besides polls has Secretary Dulles' $1 million-a-year fund for "Emergencies in the Diplomatic and Consular Service," continued in next year's budget, been used to pay for?

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Hells Canyon

EXTENSION OF REMARKS
OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. ULLMAN. Mr. Speaker, one of the most gratifying aspects of the long fight which has been waged in support of Federal construction of the high dam at Hells Canyon has been the unwavering support of the people of the Pacific Northwest. Certainly the most impressive demonstration of that support is to be found in the results of last November's election. Yet, I think, equally significant has been the steadfastness of that support as indicated by the constant stream of letters which come into my office calling for early congressional approval of this important project.

I believe my colleagues will find it highly informative to consider a few of these and so, under unanimous consent, I ask to have these letters included in my remarks.

The letters follow:

REEDSPORT, OREG., *April 29, 1957.*

Representative AL ULLMAN.

DEAR SIR: I think that the high dam of Hells Canyon is one of the most important issues before Congress and hope that you will give this your full support.

I think that such issues should come before the voters, thus preventing a giveaway by an appointive officer and also relieve Congress of so politically potent a decision.

Respectfully,

MILOM GRIFFITH.

BUILDING AND CONSTRUCTION
TRADES COUNCIL,
Eugene, Oreg., April 24, 1957.

Hon. AL ULLMAN,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE ULLMAN: It was our opinion that on November 6, 1956, the people wanted a full development program of the rivers of this Northwest. The people so indicated when they marched to the ballot box on November 6. We believe the Congress should now deliver in accordance with the wishes of the people and the question of the Hells Canyon Dam is up to the Congress—no one else.

We cannot conceive of our Congressmen letting us down by permitting legislation on this issue which will provide less than the high dam at Hells Canyon. We appeal to you to carry out the mandate of the people and to assist in this fight by talking to your coworkers in the House and Senate and asking them to support you in this vital phase of legislation which the people have sent you to Washington to enact.

This, Mr. Representative and Mr. Senator, Mr. Speaker and Mr. President is not politics—this is economics. Without the Hells Canyon our Northwest suffers severely. Please, may we have your support until the Hells Canyon bill becomes a reality? Thanking you in advance, we are,

Yours very truly,

JOE L. WILLIS, *Secretary.*

BAKER, OREG., *April 24, 1957.*

Congressman AL ULLMAN,
Washington, D. C.

DEAR CONGRESSMAN ULLMAN: In answer to a plea of the Oregon Labor Press of April 19 asking each laborer who supported you before to do it again in your fight to save Hells Canyon Dam from plunder.

Teddy Roosevelt rescued our natural resources from plunder. Right now our need for another Teddy is much greater than it was then.

Thank you, Congressman ULLMAN, for what you have already done for Hells Canyon Dam.

Sincerely yours,

LLOYD WIRTH.

COUNTY OF MULTNOMAH,
OFFICE OF THE CONSTABLE,
Portland, Oreg., April 23, 1957.

Hon. AL ULLMAN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ULLMAN: We, the undersigned members of the constable's office for Multnomah County, Portland, Oreg., urge you to spare no effort in securing passage of the Hells Canyon Dam bill.

Without the Federal high dam, our region will have no opportunities for industrial expansion, no new jobs or new markets.

The Federal high dam at Hells Canyon is the only means left to us to protect our region from permanent affliction of high-priced power from other sources.

The outcome of the Hells Canyon vote in Congress will determine once and for all the economic future of our entire region. We urge its passage.

Yours truly,

John Bain, constable, A. U. Runola, chief, Roy F. Garrison, Scott W. Bennett, Charles Edwards, E. J. Nesbitt, G. J. Van Hoomissen, James Callan, John F. Erickson, Geo. M. Ferguson, Vernon J. Oberg, Harry J. Grant, Melvin S. Komp, Delbert Carrell, Grant W. James.

WOODBURN, OREG., *May 3, 1957.*

Hon. AL ULLMAN,
House of Representatives,
Washington, D. C.

HONORABLE SIR: We defeated Douglas McKay because we were opposed to private power—we wanted public power—Hells Canyon. We are standing back of all those who are for what the people voted for.

Sincerely and respectfully,

SIDNEY E. HARRIS.

JEWELL, OREG., *April 26, 1957.*

Representative AL ULLMAN.

DEAR SIR: We want the high Hells Canyon Dam. Let's build our West, not give it away. Let's have the high Hells Canyon Dam, not 3 low dams.

JOHN JEPPEAM.
ENAR JEPPEAM.

SPOKANE PUBLIC FORUM RESOLUTION

SPOKANE, WASH., *April 20, 1957.*

Whereas the Federal Power Commission, apparently more interested in big dividends for the private-power monopoly than it is in Government power at cost for industry and economical service in the home, continues its policy of obstructing the building of the multiple-purpose dam at Hells Canyon for the people; and

Whereas Grand Coulee Dam, meeting the same opposition of the monopoly-power-propaganda barons, was finally built and put in production for the betterment of all: Therefore be it

Resolved, That the Spokane Public Forum go on record at this critical time, calling upon the merchants, the people, and all organizations interested in the full development and expansion of our resources here in the new Northwest to get in the harness working for the high dam in Hells Canyon.

JOSEPH E. NESBITT,
President.
MARY J. WELSH,
Secretary.

HILLSBORO, OREG., *April 22, 1957.*

Hon. AL ULLMAN,
Congressman.

DEAR SIR: I think it's about time this administration does some things for the common people, the voters who put them in office. I know Republicans that want High Dam at Hells Canyon and these politicians are letting the people down who helped vote them in office. So let's have Hells Canyon High Dam.

Thanks.

JAS. E. WOLFORD.

THE DALLES, OREG., *May 3, 1957.*

Hon. AL ULLMAN,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Possibly for the last time, this May the Congress will consider Federal construction of the Hells Canyon Dam.

Through all the controversy, Hells Canyon Dam has retained eminence as the proper unit in the orderly and comprehensive development of the Columbia-Snake Rivers.

It still represents maximum water storage for flood control.

It still represents maximum power development, at site and for downstream benefit.

It still represents lower per-kilowatt-hour power cost.

Hells Canyon Dam still represents maximum advantage to the Northwest, and thus to the Nation as a whole, for maximum assistance in economic development of an industrial economy to supplement our present basic agriculture and timber economy.

Thousands of us, the little people of the Northwest, look to you and to the Congressional delegations of the Northwestern States to safeguard our interests, to promote our economic welfare, to demand and to fight for comprehensive development of our resources to the maximum benefit in the public interest.

This trust you can discharge by unified effort to return to the orderly and comprehensive development of our great asset, the Columbia-Snake Rivers in its next logical step—authorization of Hells Canyon Dam.

Very truly yours,

ROBERT WELTY,
Consulting Engineer.

WASHINGTON PUBLIC UTILITY DISTRICTS' ASSOCIATION,
Seattle, Wash., April 30, 1957.

Hon. AL ULLMAN,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE ULLMAN: Congress should take affirmative action on the authorization of the high Hells Canyon Dam on the Snake River or the Pacific Northwest and the Nation will lose this valuable water-storage site forever. The height of hypocrisy was reached by the Idaho Power Co. in their program of wasting the river for their own interest by the certification for rapid amortization of their plants. Surely this should prove to Congress what is going on.

The Hells Canyon legislation must be brought to the floors of both the House of Representatives and the Senate in order that a definite vote can take place on this issue because of its national importance. We feel that you as a Member of Congress from the Pacific Northwest are well acquainted with the issues involved.

It is time that a decision be made on this issue. We feel that the people of the Pacific Northwest, as well as the Nation, are entitled to such decision.

We urge your support to move ahead as rapidly and as far as possible to save this river.

Sincerely yours,
CLYDE RIDDELL, *President.*

FERNHILL GRANGE, No. 592,
Rainier, Oreg.

RESOLUTION IN FAVOR OF A HIGH HELLS CANYON DAM

Whereas it is a known fact that the lower Columbia is in need of more adequate flood control. We have seen our friends and neighbors work day and night on dikes trying to save their homes, farms, and businesses. At times many have suffered severe losses due to the lack of flood control; and

Whereas there is a great need of a greater supply of low-priced power to bring more industry to the Northwest and to keep the industry we now have operating on a full year-round basis; and

Whereas the impounded lake behind a high Hells Canyon Dam would firm up the interruptible power of all lower dams during the low-water period which now slows our industries and keeps out new ones; and

Whereas it is evident that the program of the Idaho Power Co. on the Snake River is not intended to promote either flood control or power priced low enough to attract industry to the Northwest: Therefore be it

Resolved, That the Fernhill Grange, No. 592, go on record favoring the high Hells Canyon Dam on the Snake River; be it further

Resolved, That copies of this resolution be sent to Senators Wayne Morse and Richard Neuberger; Representatives Walter Norblad, Edith Green, Charles Porter, and Al Ullman; Senator Majority Leader Lyndon Johnson; Speaker of the House Sam Rayburn; and President Dwight D. Eisenhower.

Respectfully yours,
W. W. KIMBLE, *Master.*
LUCILLE KIMBLE, *Secretary.*

The above resolution was adopted by the Columbia County Pomona Grange, No. 18, at their regular meeting May 4, 1957.

JERRY FILDES, *Master.*
FAYE TARBELL, *Secretary.*

DIXIE GRANGE RESOLUTION

Whereas it is clearly evident that the decision rendered by the Federal Power Commission (FPC) on the high Federal dam at Hells Canyon on Snake River was purely political instead of engineering wise; and

Whereas there was extreme political pressure exerted on several Members of the Senate the last time a Hells Canyon bill was presented to the Senate; and

Whereas the wishes of the majority of the people of the area were clearly indicated at the last congressional election; and

Whereas the benefits of a proper river basin development program has been clearly proven by the operation of the Norris Dam of the TVA these past 11 years; and

Whereas this area, and the whole Nation, is in drastic need of the benefits derived from the low-cost power such a project would provide: Therefore be it

Resolved, That we, the members of Dixie Grange, No. 843, Baker County, Oreg., assembled in regular session on the 1st day of May 1957, do urge that the Congressmen hold a nonpartisan caucus to adopt a majority program in support of a high Hells Canyon Dam, and full comprehensive development of the Columbia River system: And we further

Resolve, That the entire delegation petition the national administration to remove all opposition to storage projects as a policy, and to immediately unite with the people of the Northwest region in the development of our uncontrolled rivers for storage and power.

GRACE STORIE,
Master.
[SEAL] MARGARET GRIFFITH,
Secretary.

BLACHLY, OREG., *May 2, 1957.*

Representative AL ULLMAN,
House Office Building,
Washington, D. C.

DEAR SIR: In accordance with a motion passed by Triangle Grange No. 533 of Blachly, Oreg., we are writing you to urge that you use your influence in obtaining a high dam at Hells Canyon instead of the three pitifully inadequate dams for which the Federal Power Commission has granted a license to the Idaho Power Co. to build.

We feel that the incomparable Hells Canyon Dam site should be fully developed. The tremendous potential of this site can work for the betterment of the Pacific Northwest in bringing in new industries thus helping the economy of the entire western section of our country. With plenty of water storage as provided by a high dam, we would not be subject to our annual "brownout" periods.

Hoping you will give this your attention.

Yours truly,
TRIANGLE GRANGE, No. 533,
LEGISLATIVE COMMITTEE,
JOSEPH T. BALLF,
PHILIP HUTT,
GEORGE PENNOCK,
Master.
LEONA JOHNSON,
[SEAL] *Secretary.*

CHETCO GRANGE No. 765,
Harbor, Oreg., April 25, 1957.

Hon. AL ULLMAN,
House Office Building,
Washington, D. C.

DEAR SIR: Due to the fact that the Hells Canyon Dam bill will be up for a final vote in the United States Senate about May 15, our grange feels that we should definitely take a firm stand on this problem that is so vital to the Pacific Northwest.

The Chetco Grange's executive committee hereby passes a resolution of being in favor of the high dam in Hells Canyon.

We feel the people of the Pacific Northwest will definitely be standing a terrific loss if the Federal Power Commission carries through with their plans to grant the Idaho Power Co. the right to build three pitifully, wholly inadequate, nuisance dams in Hells Canyon.

The Hells Canyon damsite is one of the great damsites of the world, let's not give it away.

Yours very truly,
JOE ZUMPFE, *Master.*
VIRGEL L. CLARK,
BENJAMIN C. JONES,
CLYDE BRAYNARD.

THE EXECUTIVE COMMITTEE,
VALE GRANGE 696,
Vale, Oreg., April 22, 1957.

Representative AL ULLMAN,
House Office Building,
Washington, D. C.:

Whereas it has come to our attention that there is still an opportunity of saving Hells Canyon for the people of the Pacific Northwest; and

Whereas this high Federal Hells Canyon Dam is urgently needed and wanted by the majority of the people, industry and farmers of the Pacific Northwest; and

Whereas this Hells Canyon Dam, like Bonneville, would pay for itself and not cost the taxpayers a dollar in the long run; and

Whereas this is admittedly the best undeveloped, multipurpose dam site left in the United States; and

Whereas the tremendous potential of this dam site is on the verge of being wasted on pitifully inadequate development: Therefore, be it

Resolved, That the Vale Grange No. 696 goes on record as urgently requesting all forward looking United States Senators and Representatives to do all they can to save this dam site for the people of America.

L. H. JACOBSON, *Master.*
ALLAN F. WESTCOTT,
WM. G. ROSS,
RUBY GIRVIN,
Secretary pro tempore.

A Republican Farmer Looks at His Party's Farm Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, I was interested to find in the Washington Post and Times Herald of May 7 a very illuminating letter from a Republican farmer in Lititz, Pa. Because I feel this example of growing unrest and dissatisfaction on the part of Republican farmers with the Eisenhower-Benson farm program, and the administration's policies in general, should be given wide publicity, I have requested permission to insert the letter in the RECORD:

FARMER IN THE ATTIC

I am a conservative Republican farmer who has heard much about the New Look in our Republican administration in Washington. Yet this New Look involves the following facts:

The family farmer is treated like a stepchild by the Republican administration. He gets a scrubbing and a clean shirt before the election and then afterward is kicked back to the third-floor attic.

I know that any industry that has to depend on politics for its existence is in a sorry state, but why can't the politicians leave us alone?

What has happened to the large sums of money paid to the cheese manufacturers as a bonus that was neither turned over to the farmer nor the consumer?

What has happened to the large grain combine that sold the Government rodent-infested wheat for shipment to France and Italy which they refused?

What has happened to the grain firms who were short in their inventory of Government grain? What has happened to the real-estate operators who rented Army buildings and then re-leased them to the Department of Agriculture at three times the rent paid to the Department of Defense?

What has happened to the feed mills that bought dried milk and resold it to the farmer for calf meal without any discount for the lower price the Government sold it to them?

What has happened to the millions of dollars of cottonseed cake sold to big ranchers at half price, while the family farmer paid the full price?

These and many other instances prove that the Department of Agriculture in the past 4 years has been the biggest source of racketeering and misappropriation of Federal funds of any agency in Washington.

This is the New Look in the Republican Party. This is the liberal approach to our farming problem.

S. GERALD DARLINGTON,
Lititz, Pa.

Povilas Zadeikis, Lithuanian Envoy, Dies

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following obituary from the Washington Post of Monday, May 13, 1957, on the death of Povilas Zadeikis, Lithuanian envoy to the United States, in Washington:

Povilas Zadeikis, 70, Lithuanian envoy to the United States and symbol of resistance to Soviet and Nazi oppression, died of a heart attack Saturday at Emergency Hospital.

He was stricken at the Lithuanian Legation, 2622 16th Street NW., where he had lived since becoming Minister here in 1935.

Mr. Zadeikis had had no government to report to since 1940, when Russia first invaded his country. But through 3 years of German occupation and the 13 years since Lithuania was again swallowed up by the Soviet Union he was persistently optimistic.

"Mr. Zadeikis never lost his faith," a Legation spokesman said yesterday. "He believed all the time that Lithuania would be free again."

Backed by an American policy which never recognized Soviet annexation, the Legation continued operating with funds deposited in this country by the Lithuanian Government before the occupation.

Mr. Zadeikis used his position to make public more aware of his country's plight.

There was no announcement of a successor to Mr. Zadeikis. Details are to be worked out between the State Department and S. Lozoraitis, chief of Lithuanian diplomatic services abroad and Minister to the Vatican.

Mr. Zadeikis was born on his father's farm in Lithuania, then part of the czarist empire. He became an army reserve officer shortly after graduation from the Imperial University at St. Petersburg in 1912.

He fought against Germany during World War I and in its aftermath helped stave off Lithuania's aggressive neighbors. He served with the Lithuanian mission to Leningrad in 1918 and was defense minister the following year.

In 1920, Mr. Zadeikis made his first vist to the United States, helping to sell $2 million worth of bonds to finance his country's successful drive to complete freedom. Later he was the first consul in Chicago and consul general in New York.

Surviving are his wife, Mary, and a daughter, Mirga Zita, both of whom lived at the Legation.

Friends may call at the Legation from noon to 10 p. m. Tuesday and Wednesday. Requiem Mass will be offered at 10 a. m. Thursday at St. Matthew's Cathedral, Rhode Island Avenue near Connecticut Avenue NW. Burial will be in Mount Olivet Cemetery.

He Was a Fighter

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I am happy for this opportunity to include in the RECORD a letter from the recording secretary of Division No. 1 of the Ancient Order of Hibernians in Omaha, Nebr. With the letter was an editorial from the Omaha World-Herald on the late Senator Joseph McCarthy. I would commend both items to the attention of my colleagues.

ANCIENT ORDER OF HIBERNIANS
IN AMERICA,
Omaha, Nebr.

HON. GLENN CUNNINGHAM,
Representative, State of Nebraska,
Washington, D. C.

DEAR MR. CUNNINGHAM: At the regular meeting of Division No. 1, Ancient Order of Hibernians, Omaha, Nebr., a motion was unanimously passed to send the attached editorial to you entitled "He Was a Fighter." As you will read, this editorial from the Omaha World-Herald of May 4 speaks out clearly on Senator Joseph McCarthy.

We respectfully request that this editorial be entered into the CONGRESSIONAL RECORD of the United States as a tribute to this great Catholic, Irish-American patriot, who has done more to alert America to Godless communism than anyone else in our times.

We of the Hibernians wish to go on record before the world as standing side by side with him in his fight.

Let's offset the "censure" or "condemnation" or "social outcast" label by entering this editorial tribute into the official records. We are confident that before God and man, history will record Joe McCarthy as a real champion.

Sincerely,

JERRY HASSETT,
Recording Secretary.

HE WAS A FIGHTER

In an era when most politicians were polite, dull, ineffectual, and prone to compromise, Joe McCarthy stood out spectacularly.

He was rough and tough. He once started to apologize to the Senate for what he called his bluntness, but what began as an apology ended with the ringing declaration that no matter how he said things he meant 'em.

It has been said that he made enemies unnecessarily, and perhaps in a few cases he did. But most of his enemies he made intentionally. He smoked out the odd and unlovely breed of Americans he called anti-anti-Communists, people who professed to dislike communism, but who hated and feared Communist hunters far more. He pinned the label "fifth-amendment Communists" on suspected subversives who dodged questions before congressional committees.

In his pursuit of Communists in Government, Senator McCarthy was ruthless, even savage. Sometimes his bludgeoning had unexpected results, as when he assailed the Army in the Peress case and disclosed that Army Secretary Stevens had been a pathetic blunderer.

Senator McCarthy's Red hunting drove the so-called liberals in this country to a pitch of fury not equaled in our time. Almost daily they burned him at the stake over the air or in their newspaper columns. They attacked his war record, which was honorable. They blasted his income tax returns, which were found to be in order. They started a whispering campaign about his personal habits, which collapsed because it wasn't true.

To Americans on the sidelines the fury lavished on a lone Senator was an amazing phenomenon. Why was there such unreasoning hatred of the country's most prominent Red-hunter? His enemies said they hated his methods, but it seemed obvious that many of them simply did not want his methods to be successful.

In the end, his own colleagues broke Joe McCarthy. The vote to censure adopted by a majority of the Senate amounted to the lynching of a political nonconformist. The actual charges were petty, and many Senators admitted it. As one of them put it, "We were out to get the so-and-so and we got him."

Once in a while McCarthy flared back into the headlines, as when the White House put him on the social blacklist, shortly before his death. But his fellow Senators had killed his spirit and had taken the fight out of him. Considering that Joe McCarthy had more fight than most of the rest of the Senate put together, that was quite an accomplishment.

Senator Joseph McCarthy

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like to have consent to place in the RECORD an editorial appearing in the Southtown Economist on May 5 regarding the passing of my colleague in the Senate, Joseph R. McCarthy.

The editorial is a most realistic appraisal of the Senator from Wisconsin. Americans everywhere can indeed be grateful to him for bringing to the people's attention the threat at our door and inside our door.

I was present when Joe McCarthy addressed the South Side luncheon held last year in connection with the automobile show.

The editorial follows:

SENATOR MCCARTHY

Passing of the late Senator Joseph McCarthy of Wisconsin takes from the world scene an indomitable force that long will be missed. More than any other person of modern times, Joe McCarthy awakened the Na-

tion and those overseas to the insidious and never-ending effort of the Kremlin to enslave free peoples under the Communist yoke.

In doing so he had to be as ruthless in attacking the enemies of mankind as they have been ruthless. The Reds, in and out of Government, concentrated their attack on him in the typical communistic fashion of destroying any and all who would dare challenge their aims and methods.

Senator McCarthy's colleagues in the Senate now assert he was a martyr in the cause of a free America and a free world. Failure on the part of his fellows to support him undermined his strength.

Because it realized Joe McCarthy was making a valiant and almost singlehanded fight in behalf of the United States and its institutions, the Southtown Economist invited him to address the South Side luncheon held last year in connection with the current automobile show. We are glad we did, and we mourn with millions of others the loss of a great and true American.

Statement of Representative George McGovern, of South Dakota, Before the Consumer Study Subcommittee of the House Committee on Agriculture

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. ROOSEVELT. Mr. Speaker, the following statement made by Hon. GEORGE MCGOVERN, of South Dakota, before the Consumer Study Subcommittee of the House Committee on Agriculture seems to me to have particular interest to Representatives from every variety of district.

Congressman MCGOVERN has so clearly highlighted the problem and put it in such a straightforward and simple fashion that I feel sure many of my colleagues will not only enjoy it but want to use it in preparing their own thinking and in giving full encouragement to the Consumer Study Subcommittee under the able leadership of Chairman ANFUSO.

The full text of the statement follows:

Mr. Chairman and members of this committee, before submitting my brief statement for your consideration, allow me to say that I personally consider the formation of this Consumer Study Subcommittee as one of the most constructive actions yet to take place during this session of Congress. I deem it a personal privilege to appear before you.

My first official legislative act as a new Member of the United States House of Representatives was to propose an investigation into the cost of living, with particular attention to the spread between farm prices and consumer prices. The cost of living has increased for the seventh consecutive month in April, and may I add that each successive increase represented a new record high.

After many talks with persons from all walks of life in and out of my State, I came to Washington believing that Congress perform a sorely needed service to the American people if it would appoint a distinguished group of Congressmen such as this subcommittee to look into the ever-rising cost of living. Specifically, people of my area want to learn why there has been an ever-widening spread between retail prices and prices farmers receive. Why haven't food prices come down along with farm prices?

The fact that this subcommittee is already at work on this subject is not only gratifying to me, but to the people of my State. And I am sure that what is true in my State, in this respect, is true in others, as well. The American people, as you know, are pretty much of a like mind on money, economy, and values. They want their money's worth, whether it's in Government programs or a purchase at the grocery store. And they have the right to expect it.

Americans are an inherently honest, fair-minded people. They can be depended upon to make the right decision when the facts are laid before them.

I regret to say that the facts on food costs have not been given to the American people in recent years; instead, this Nation has witnessed a deliberate campaign to turn the urban consuming public against the farmers who produce the food and fiber that have made this country the best fed and best clothed in the world.

I am grateful to note, therefore, Mr. Chairman, that in your introduction to this subcommittee's recent report on Food Cost Trends, the first objective of this group, as stated, is a study of "The cost of living and, with respect to agricultural products, the share which the farmer gets of the consumer dollar and how it compares with other costs, i. e., wages for labor, profits for middleman, retailer, etc."

May I say in all sincerity that in my opinion, this group will have made a great and lasting contribution to public knowledge if it dispels the myth that leads the urban consumer to believe that farm prices have caused high food prices. Even in the face of drastically falling farm prices, this falsehood has been perpetuated. Why?

It seems highly probable that at least part of the answer can be found in the balance sheets and profit statements of our biggest food processing and distributing chains.

Back in 1947, as you may recall, hard spring wheat was bringing as much as $3 per bushel. Bread was selling at 14 cents a pound. In 1955, wheat sold for $2 a bushel and a pound loaf of bread carried a 21-cent price tag.

Surely, no one in good conscience can blame the farmer for one-third of an increase in bread prices, while the farmer is taking a price cut himself amounting to one-third for the wheat he produces. Yet, this has been done.

I want to make one thing clear. I am not against business profits. I believe, as all of you do, in the profit system. But I do object when an industry showing a rapidly rising profit structure permits the blame for rising prices to be shifted to farmers who have not been sharing in the prosperity boon of recent years.

In the 1957 Agricultural Outlook Chartbook, published by the United States Department of Agriculture, the following report was made:

[Percent]

Net profits, as percentage of sales	1952	1955	Change
46 food-processing companies	1.6	2.2	[1] 37
5 wholesale food distributors	.7	.9	29
8 retail food chains	.8	1.0	25

[1] Up.

This same publication also reported that profits of the food corporations after taxes rose an average of 33 percent in the 1952 to 1955 period.

On the other hand, the President's Council of Economic Advisers reported that during the 1952–56 period, the wholesale price index of farm commodities fell 18 percent and net farm income dropped 23 percent.

Looking at the April 1957 edition of Economic Indicators, published by the President's Council of Economic Advisers, I note that in the period from 1951 to 1957, farm operators' net income fell 27 percent, while during the same period of time, the retail price of food paid by consumers rose 1 percent.

May I also point out that the farmer's share of the consumer food dollar has suffered a tremendous drop in the last 10 years. Looking back to 1947, the farmer's average yearly share of the consumer's food dollar was 51 cents; in 1952, it was 47 cents; in 1955, 41 cents; and last year it dropped to an average of 40 cents.

Again citing the 1957 Agricultural Outlook Chartbook, may I report the following:

	1932	1956	Change
			Percent
Marketing charges, index	114	121	[1] 6
Farm value, index	103	83	[2] 19
Farmer's share of consumer dollar (cents)	47	40	[2] 15

[1] Up.
[2] Down.

We have egg receipts in our files, Mr. Chairman, showing that our South Dakota farmers have been receiving anywhere from 21 cents to 26 cents a dozen for their eggs. I don't have to remind you gentlemen that in Washington and other large urban centers, eggs are selling at retail at a figure three times this amount.

May I quote to you now a letter from one of my constituents who tells a story, not of eggs, but of wheat and flour. This letter is dated May 6, 1957. It reads:

"DEAR CONGRESSMAN: I am a grocery merchant. And I see that Benson pegged the wheat price at $1.78 a bushel. We have been buying flour at $3.60 to $3.90 a 50-pound sack. Now they ask us $4.50 for the same flour and freight from Sioux City, Iowa."

This letter has been quoted in full. The merchant is located at Dante, S. Dak.

Mr. Chairman, I have the deepest confidence in this committee. I am looking forward to the reports that this group will make in the coming months, knowing that through diligent work, you will set the record straight on food price costs. I believe that in so doing, you will earn the everlasting gratitude of farmers and the American consuming public.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. LESINSKI. Mr. Speaker, on May 10, 1877, Rumania proclaimed herself a fully independent state, the event occurring about a hundred yars after America issued its Declaration of Independence. We in the United States are fortunate because on the Fourth of July we can celebrate with parades, fireworks, oratory, and other public demonstrations by which we express our joy and thankfulness that we are free people, governing ourselves through officials of our own choosing. Rumanians, and the other once independent nations now enslaved by Soviet Russia, cannot mark their national holidays by such celebrations. But these people do, I am

sure, commemorate the event quietly with a hope that in the future they will be able to celebrate not only the historical date of their independence but also the day they are liberated from the tyranny of Russian rule.

Throughout history Rumania has withstood the onslaught of alien aggressors, but through the strong Christian faith and patriotic spirit of its people, won independence. These same qualities will lead them to triumph over their present oppression. But it will take more than just the spirit of the people; aid must come from other directions. We have established an excellent example recently by our offer to extend economic aid to Poland; if the program succeeds there, the Rumanians and other enslaved nations will take heart and might follow the same route to freedom. We in America must stand ready to support the Rumanian people in the determination to regain their independence.

A Citizen Views Foreign Aid

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. ASHLEY. Mr. Speaker, there has been considerable conjecture over the fate of the foreign-aid program which soon will come to the floor of the House of Representatives for debate and vote. There appears to be a strong body of opinion which holds that top priority must be given to reducing the President's $71.8-billion budget for fiscal year 1958, and that deep slashes in the $4.4 billion proposed for foreign aid is a justifiable means of reaching this goal.

Most Members of Congress have realized since the budget controversy developed that defense spending and foreign aid would be the logical targets for those bent upon making substantial cuts in the Federal budget. It has been widely stated that reduced expenditures for foreign aid would win overwhelming support of our citizenry, particularly if these cuts result in lower taxes.

No solid or persuasive case has yet been made for continuing the broad assistance programs in which the United States has been engaged since the end of World War II. To many, including myself, it is most distressing that the President has done so little to dramatize the effectiveness of these programs and the necessity of their continuation.

But in hinterland, Mr. Speaker, there are many who have put serious thought to this problem and who have come to logical and intelligent conclusions. It is with pride that I submit the following letter from a constituent of mine, Mr. J. T. Bertsch, of Toledo, Ohio. I hope that all of my colleagues in the House will find time to read this communication, for I am sure they will agree that it sets forth with clarity and real perceptive the case for our continued assistance to underdeveloped nations of the world.

TOLEDO, OHIO, *April 15, 1957.*
Hon. THOMAS LUDLOW ASHLEY,
House Office Building,
Washington, D. C.

DEAR SIR: With so much emphasis being placed upon reducing Federal expenditures there seems to be a very real danger that some of the more important items will be sacrificed unnecessarily. One of the most vulnerable is foreign aid. It is conceded that the question of foreign aid should be given careful scrutiny and particularly the motives for extending financial help must be examined.

In the first place it seems desirable to separate military and economic aid. Some of us would discontinue military aid entirely, but regardless of that position all major studies of the question suggest some degree of separation which would place the burden of defending military aid to Congress upon the Defense Department and free economic planning from the pressure of military considerations.

Second, it is realized that stable, democratic governments in the world's underdeveloped countries depend upon a rate of growth that can offer hope of satisfying the new aspirations of the world's ill-fed, ill-clothed, and ill-housed people. National development programs are a constructive channel for the force of nationalism, which might otherwise find expression in external aggression. For them, the decision as to who receives aid should not be based upon whether it will make a friend, but upon whether the recipient can and will use effectively. Its nature, amount, and duration must be enough to put the economy upon the basis of self-sustaining growth.

Finally, the channels through which aid is given must be considered. An international agency such as the U. N. or the World Bank has merit because it can draw upon the technical as well as the capital resources of all member nations. Development aid so channeled could not be used as a bribe for supporting either the western or the Soviet blocs. Any loyalty which was formed would be to the world community as a whole. It also has been suggested that the conditions necessary to make development capital effective would be imposed with less suspicion of ulterior motives by an international agency.

May I invite your consideration of the subject along these lines.

Yours truly,

J. T. BERTSCH.

On Another Field

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. RUTHERFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

ON ANOTHER FIELD

It was a rather wet, foggy morning, last Sunday in the Ardennes Forest of France, as well as at Gettysburg.

No one noticed the gray-clad shade of Gen. Robert E. Lee and the blue-faded wraith of Gen. Gebrge C. Meade jeeping leisurely over the historic battleground in amiable conversation.

"And this," said General Meade to General Lee, "is where Von Rundstedt massed the cream of the German Army for a last-ditch counterattack that Christmas of 1944."

"Yes," said General Lee. "He had alined his forces to the south there along the 50 miles from Monschau Forest to Trier. This was his desperate, final attempt to change the whole course of the war."

"What about General Eisenhower's intelligence?" asked General Meade.

"It was completely in the dark," said General Lee, "when the Germans' Sixth Armored Army rushed in. The Allied defense was thin and the Germans hit in two columns. On the north they carved out a salient 10 miles wide and 6 miles deep. Their southern column, executing a pincers movement over that way, penetrated 5 miles. That was the opening of what they called the Battle of the Bulge."

"Where was General Montgomery?" asked General Meade.

"He was tidying up the battle area and massing to protect Antwerp—to the rear."

"So the Germans broke through," said General Meade, shaking his head.

"They did, indeed," said General Lee.

"An absolutely monstrous thing," said General Meade.

"I would have sacked them both," said General Lee.

"You're so right, Bob," said General Meade. And the two shades—old soldiers once bitter rivals—solemnly shook hands in agreement at last.

Grassroots Opinion on Foreign Policy

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. MADDEN. Mr. Speaker, Chairman THOMAS S. GORDON, of the Foreign Affairs Committee, and Congressman A. S. J. CARNAHAN, chairman of a subcommittee of the Foreign Affairs Committee, are to be congratulated on inaugurating the hearing policy which has met with favorable response and highly productive grassroots information on our foreign aid problem.

On next Monday, May 20, a subcommittee of the Foreign Affairs Committee will hold a 1-day hearing in the great industrial Calumet region of Indiana, sounding out public opinion of foreign aid and other matters pertaining to our international problems.

The following editorial by H. B. Snyder, editor of the Gary (Ind.) Post-Tribune, illustrates the reaction this subcommittee has been receiving in the several localities which have already been visited for hearings:

CONGRESS ASKS THE PEOPLE

The arrival of a congressional committee in a city is not always a happy occasion. Frequently committee members go out to the hinterland to probe unsavory situations. Indiana is to be visited by a Capitol Hill group seeking the sordid details on our highway scandals. It will be no occasion for jubilation.

A different sort of visit will be that of a House subcommittee to Gary on Monday, May 20. It should be a pleasing as well as informative occasion for both subcommittee members and residents of the Calumet district.

The subcommittee, from the House Foreign Affairs group, will have an opportunity to

learn what Lake County folks are thinking about overseas and foreign relations. And Lake County people will have opportunity to learn how a congressional committee conducts its business.

Hearings on the foreign aid program generally are conducted in the Capitol in Washington. Witnesses include representatives of major national organizations, the top brass of these groups. It is a rare occasion when a hearing develops any grassroots sentiment on the economic assistance program, the question of military aid to our overseas allies or our U. N. associations.

A House subcommittee did venture up into New England last winter. Hearings were held in the small town of Laconia, N. H. It was the first time a Foreign Affairs Subcommittee had gone on tour, but members were highly enthusiastic over the results.

So the group has taken its "road show" on other trips. One was made to Miami, Fla., and another to St. Louis and Kansas City, Mo. There will be a flight out to Boise, Idaho, for a hearing May 18, and then the stop in Gary on the way back to Washington.

The committee has been learning what people think. It has heard housewives, teachers, businessmen, judges, refugees. In Kansas City a former public official, Harry S. Truman, was a witness but for the most part the people heard have been just ordinary folks.

Thus far the committee has been somewhat surprised at the results. "The American people are away in advance of where we think they are on foreign policy," says Chairman A. S. J. CARNAHAN, Democrat, of Missouri. One writer commented that the committee "made the happy discovery that, although the internationalism may come to the grassroots with a flavor of reluctance or resignation, it is there just the same."

Through the suggestion of Representative RAY J. MADDEN and cooperation of the League of Women Voters, the subcommittee will visit Gary. It is a desirable extension in the group's travels. By the time they get here, the legislators will have sampled opinion in New England and the South, in the Prairie States and the Northwest. In the Calumet, they will test the feeling of an industrial center, but also one with strong nationality groups.

It will be possible, during the subcommittee's brief stay here, for it to hear all who might want to be heard. But an effort will be made to let the group hear from a good cross section of Calumet opinion. And when the legislators resume their deliberations in Washington, they should be much better prepared to act wisely on issues concerned with our foreign relations.

Where There Is Vision

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an address by Maj. Gen. E. C. Itschner, the Chief of Engineers, before the annual meeting of the Delta Council at Cleveland, Miss., on May 9. The Delta Council is one of the keystones to agricultural and industrial development in the Midsouth, and the gentlemen who speak at its annual meetings are always outstanding leaders in fields of significance to the Nation as a whole as well as to the South. General Itschner, as Chief of Engineers, is truly one of the country's foremost experts on flood control and water resources development. His discussion of the importance of vision in dealing with water resources problems demands the careful attention of all of us.

The address follows:

WHERE THERE IS VISION

The Book of Proverbs was traditionally ascribed to King Solomon but it is now generally regarded as a composite work completed about 250 B. C. Whatever the origin, none denies that it contains many wise maxims. Among them is one which I shall use as my theme today. It is the 29th chapter of Proverbs, the 18th verse.

"Where there is no vision, the people perish; but he that keepeth the law, happy is he."

This implies two injunctions: to exercise vision, which is active, and to keep the law, which is passive. And the penalty for failure to have vision is to perish. To keep the law is to keep nature's law as well as God's law. Ancient civilizations, like those of the Tigris and Euphrates valleys, and the North African colonies that fed Rome, perished because their people, or their conquerors, lacked the vision to keep nature's laws affecting water.

Last autumn I flew over a part of Iran, the country that was called Persia when most of us went to school, south of the capital city, Teheran. Centuries ago a Persian poet walked some 200 miles across that land, and he described how not once did he step from beneath the shade of trees which grew along the irrigation ditches. He told about flowers and fields full of grain and melons. As I passed overhead, I searched, but could see only one shadow—that of the plane on the hard desert floor. Two hours later we came to green fields and orchards in the irrigated land surrounding Baghdad, on the Tigris River. Having seen how badly water was needed and lacking in the region, I expected to find the Tigris little but a dried stream bed. Instead, there below us was a large river. Then I understood why the valleys that gave birth to the earliest civilizations, provided sustenance to ancient Babylon, and prospered until its irrigation works were deliberately destroyed by the grandchildren of Genghis Khan, are now, save for isolated spots, a barren desert. The reason is simple: The modern inhabitants are utilizing only a small fraction of the water that flows through that parched land. Until the last few years, they definitely have not had vision, and lacking vision, they have all but perished. However, they are now constructing huge water resource development projects so as to restore the great civilization that once was theirs.

Yet it is not any lack of awareness of the problems that has caused this failure to make the best use of what God has given us. On the contrary, since the dawn of civilization people have shared the fear of flood and the dread of drought, and they have recognized the necessity of navigation. Time and man's inventive genius have added a requirement for the generation of electricity and other related water uses.

Nature can be severe, unrelenting, ruthless, cruel. Too much water, raging on its destructive way, creates in man the fear expressed by the honest old counselor, Gonzalo, in the first act of Shakespeare's The Tempest, when he cried:

"Now would I give a thousand furlongs of sea for an acre of barren ground—long heath, broom, furze, anything. The wills above be done. But I would fain die a dry death."

While not so inspired as either the scribes of the Bible or the Bard of Avon, an old Negro expressed this same feeling during the 1937 floods at Louisville, Ky. When one of our boats attempted to rescue him, he steadfastly refused to leave his cottage. Later, in a final sweep, another rescue boat cruised by his home in the dark. A flashlight picked him out, on his knees astride the peaked roof, some precious possession clutched in his arms, praying:

"Oh Lawd," he prayed, "send me a angel. An don't send me no amachuah" (amateur)—"send me Noah!"

I doubt if many Army engineers could qualify as angels, but we did have a kind of ark that rescued the old man.

On the other hand, nature can be benevolent. In spite of occasional destructive floods, we look upon our rivers, lakes and ocean perimeters as great benefits to mankind. Civilizations have flourished only where there has been water, and they have been successful and enduring only to the extent that they have been properly engineered.

Engineering is the science which guides and controls nature so that it will best serve the needs of man. Engineers have learned that they can accomplish their objectives most satisfactorily if they work with nature, rather than stand squarely in its path. An excellent example may be found in the Mississippi River cutoffs, where pilot cuts were dredged across the narrow necks formed by the meanders of the river. Engineers were thus merely doing something nature itself would have done in time. When the pilot cut was completed, and nature saw what man was trying to accomplish, she bent her shoulder to the task and widened and deepened the cut. When completed, she seemed to accept the improvement, although, like a restless child, she continuously had to be restrained and disciplined.

In our own country the Corps of Engineers has been charged with a large share of the responsibility of keeping nature's laws affecting water. Our first great water challenge was the Mississippi, where we began work 187 years ago, initially in the interest of improving navigation. After the damaging floods of 1849–50 Congress passed laws by which all unsold swamplands were granted to the States for sale, funds from which were to be applied to State and local drainage, reclamation, and flood-control projects. Lack of coordination between States killed possible success.

Concern over floods grew, but flood control remained a State and local responsibility, and was dealt with piecemeal and generally ineffectively. Nature will be tamed only by efforts on a scale commensurate with her own great forces. Learning that, the people turned to the greatest counterforce they could command—the resources of the National Government—for assistance. Our vision in dealing with the mighty forces of the lower Mississippi did not become broad, or nationwide in scope, or comprehensive in character until our own time—until, in 1928, the United States came to grips realistically with the problem.

In the Yazoo Basin, a similar pattern has been followed. I think there is no place in the United States where the people labored harder to solve water problems by their own efforts. For many years individual planters attempted to protect their lands, but they found nature an overpowering and merciless adversary. They formed levee boards and drainage districts, and invested $25 million or more of their own money, only to discover that the problem was far too big and complex for efforts of even that grand scale. So here, as in the Nation at large, the resources of the National Government were called in.

In order to obtain some background information on the Yazoo River, so that I could better understand your problems, I asked my staff to mark the important parts of Con-

gressman FRANK SMITH's book, the Yazoo River. I found the first 2 or 3 marked pages so interesting that I went back and read the book from cover to cover. I learned that yours is a history in which you can take great pride, and I was amazed to read how great a part in it your river has played.

But the present and future are far more important to you than your glorious past. You are sharing in a period of great economic expansion. Our population is increasing at an unprecedented rate. The pressures of growth in this Nation and in the Mississippi Valley are tremendous.

We are definitely entering a new era of economic development in the valley. It is most intense in the lower 250 miles of the river, but it is extending rapidly into this magnificent delta and beyond. It is evident here that industry and agriculture are developing side by side. No longer is it solely an agricultural economy of cotton, as you well know. Diversification will be an element of future planning probably to even a greater degree than we now can conceive it. Mechanization will increase. Industry, attracted by nature's gifts, water, climate, living space, will absorb available labor and bring in many more people. Vision and courage will be necessary to meet the challenge of these fast-developing trends.

This is a period of great progress in the construction of industrial and commercial facilities and all other major construction for the advancement of our living. These facilities are enormous users of water and polluters of rivers. In this tremendous, growing, vital age our water-resources program must keep pace.

As factories rise in formerly pastoral valleys, and suburbs spread out over the countryside, flood hazards increase and water supplies often become critically short. Community leaders are made sharply aware of the importance of both flood protection and abundant water supply to industrial expansion and community life. Problems of stream pollution become acute in many areas. In some valleys domestic water use is curtailed; water must be brought from great distances through expensive facilities; the cost rises and a small segment of the serious national water problem is introduced suddenly and unexpectedly into the life of a community. Finally, the floods and hurricanes of the past few years dramatically show how such local problems are linked with problems national in scope.

We cannot hold back these expansion forces while leisurely resolving our water resource problems or, as many intelligent people propose, waiting for an economic recession to occur when it would be opportune to take up the slack with an accelerated public works program. Water resource development and flood control projects are vitally dependent upon their proper timing. They easily can be too late and become too expensive to undertake, because of the encroachments of our expanding population and booming economy.

Capital investment is a proper expenditure for our people and our Government to make in the interest of this generation, but it is even worthier when it is done to preserve our resources for future generations. Oh, I know it is considered smart to belittle and degrade by the term "pork barrel" such sound investments in water resource development. Nevertheless, we are now engaged in a gigantic water resource development program. The Corps of Engineers' portion alone consists of about 3,000 projects, some of which are groupings of many project units within a given river basin. All the work in the Alluvial Valley of the Mississippi River, including the work in the Yazoo Basin, for example, is lumped as one project.

An individual project starts out slowly with a mobilization period and then accelerates until it nears completion, when it tapers off and progress is slow until the project is completed. We can visualize the overall water resource development program in exactly the same way. It is presently well past the formulation stage and considerably on its way, at a relatively fast rate, toward ultimate solution. There is so much work to be accomplished, I visualize this very active period as continuing for many years. Of course the problem will never be completely solved, but eventually—scarcely in our lifetime—we are certain to get all the major rivers under control. Such a stage has been reached in parts of Europe, and essentially so on the main stem of our Tennessee River. Of course, even when the program has been completed, it will be necessary to maintain and operate the component projects. With the proper amount of repair, and replacement of metal and other materials that deteriorate with age, the engineering works we are now building should last literally for centuries. So the water resource development program will someday decrease, but that day is far off. Our current need is to increase the rate at which this vital development is being accomplished.

But while much planning has been done and many policies have been promulgated, the program is a flexible one, responsive to the changing needs of the people. For instance, the recent droughts in wide areas of the country have demonstrated the great need for more storage of water. Consequently, the omnibus bill now before Congress, and already passed by the Senate, provides for the inclusion of planned storage in Federal reservoir projects for present or anticipated future demand for municipal or industrial water supply.

Another area in which the Corps has recently become interested is hurricane damage along our coasts and what can be done economically to reduce or prevent losses caused by hurricane-induced tides or wave damage. We are making good progress in this study, with solutions to the problem in some localities already recommended.

Still another area of increased interest is the recreational potentialities of our reservoirs. Recreational benefits have provided an unexpectedly large dividend upon our investment in the four dams in the upper Yazoo Basin. Annual visitors to Sardis are well over half a million, and recreational benefits are actually exceeding the planned and primary flood-control benefits in money value. Grenada is already an even greater attraction, with over 800,000 recreationists in 1956. Arkabutla has become a fisherman's paradise. Enid approaches half a million mandays of recreational water use. Our experience with these reservoirs has added support to the belief that recreational benefits should be included in justifying future projects. Legislation to this effect is now being considered in Congress.

The question of cost sharing is always a troublesome one. There are honest differences of opinion as to what share of these improvements should be local and what share Federal. These are problems to which the Congress should give attention, since only by legislation can this controversial problem be solved. But regardless of how the costs are shared there is no sounder investment our Nation can make than in the water-resource field.

The Yazoo Basin has shared in this gigantic water-resource development and flood-control program. Much has been accomplished; a large program is under construction, and more remains to be done. As you know the four completed reservoirs in northern Mississippi are capable of holding back floodwaters from the upper Yazoo. While backwater from the Mississippi is still a problem, generally speaking, the danger from the big river has been greatly reduced. We are busily at work constructing levees and channel improvement in the delta flatlands. About half the estimated $180 million cost of the Yazoo Basin segment of the lower Mississippi River project has already been spent.

Major construction in the Yazoo Basin will continue for a number of years. After that considerable effort will be needed to improve, extend, and maintain these works. Meanwhile you will develop this safeguarded land not only with diversified farming, fertilizing, and restoring the soil, but by nurturing a whole new economy which is developing and will spread. This new economy must be adapted to new mechanized methods to fully support and realize the benefits of these water-resources developments.

Let us recall the parable of the talents. You remember how the servant who received 5 talents from his master traded with them and made them 10; the servant who got 2 talents doubled them. But the servant who had only 1, hid it in the earth and returned but the 1 to his master. And his lord took away the 1 talent and gave it to him who had 10.

The Delta Council, together with the Mississippi State College Experiment Station and other agencies, has won deserved national recognition. This has come from coordinating work and educating the people of the region toward full and effective use of their natural resources. This investment in water resources development is a modern version of the Biblical parable of the talents. Certainly you have not buried your talents in the ground.

We can sense the greater feeling of security which people now have, within the valley and even far beyond, concerning the progress which your forces and ours have made in this region over the last 28 years. We believe that confidence in the protection against main-stem floods is well based and warranted. But we should not be complacent, nor should we assume the full job is done. As a matter of fact the lands in your delta are only partly protected. Large floods on the main stem can back up into the Yazoo Basin. The backwater project has not been started and even the headwater plan of protection is only 48 percent complete. Should large floods occur those who get wet would find little comfort in finding that the main-line levees held.

So today, in dealing with the elemental forces of water, our vision is broad and our method of controlling these forces has been proven. Where once we thought the Mississippi flood control and navigation systems as geographical entities within themselves, we now regard them as but one unit of a vast integrated system embracing a major part of the Nation. You are part of a great, interconnected water transportation system embracing the Great Lakes, the Mississippi, the Missouri, the Ohio, the Intracoastal Waterways of the gulf and the Atlantic. Industries, welded together by low-cost water transportation, will reach from Montreal and Duluth to Port Isabel on the Mexican border; from Pittsburgh to Sioux City. These developments will have two outlets to the seas, past New Orleans and through the St. Lawrence. Already work is underway or under consideration which will provide feeder lines into this system.

This is the fruit of vision—applied vision. Such a concept was bound to come slowly in the days when our country was sparsely peopled. But the enormous increase in population which has more than doubled since 1900, and the geometric increase in water consumption, now six times that of 1900, have forced water problems and their solutions upon us in a veritable deluge.

Water resources once developed must be exploited for maximum use. Before waterborne commerce can expand on this vast, new navigation system to the seven seas, it first must be generated by initiative and invest-

ment in the communities having access to the system. The growth of industry visitation is coupled with how well pollution is controlled, fishing and hunting preserves maintained and expanded, and water recreation protected.

Here you have an abundance of water for all purposes, including agriculture; a beautiful and fertile land where people of vision live. What more could one want? The country is growing fast. About 1975 its population will approximate 225 million. What better place than the delta country could these millions select for their homes? Diversified agriculture and industry will, I predict, produce the soundest kind of homegrown economy and increasing prosperity in this valley.

For decades we have sat at a table putting together the jigsaw puzzle of water resources on the map of the United States. We progressed from the smallest levee boards and drainage districts and isolated emergency projects, through interstate and multi-State cooperation and cost sharing with the Federal Government, to our present-day concept of a national approach. The big picture emerges. Where do we go from here?

Keep multiplying your talents and put them to work. Obey the laws of nature and turn them to your use.

Where there is vision, the people perish not, but shall live; and he that keepeth the law, happy is he.

The Panama Canal Situation

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Panama Canal Society of Florida as well as supporting data on the Panama Canal problem:

RESOLUTIONS RE PANAMA CANAL

THE PANAMA CANAL SOCIETY OF FLORIDA,
St. Petersburg, Fla., January 16, 1957.

Whereas the Panama Canal situation has been dangerously simmering for over 2 years without constructive results; and

Whereas the inadequacy of the Panama Canal to meet increasing traffic requirements has become more and more acute and the absolute need for a speedy determination of the overall subject is of the most vital importance; and

Whereas there is developing a determined movement to force the Congress into authorizing a sea-level canal and to which radical change practically all engineers familiar with local Canal Zone conditions are unalterably opposed as a dangerous and costly experiment not warranted or supported by experience gained over 42 years of Panama Canal operation and maintenance: Therefore be it

Resolved by the Panama Canal Society of Florida at its annual reunion at St. Petersburg, January 15–16, 1957, as follows:

1. That the society respectfully and most earnestly urges the Congress of the United States to enact, without further delay, legislation providing for the creation of an independent Interoceanic Canals Commission to study and review all the problems involved in the matter of increased capacity for the canal, with recommendations in the premises.

2. That copies of this resolution be furnished the press and the Members of Congress.

3. That copies of this resolution also be furnished each of the 2,400 former members of the original canal construction force now comprising the membership of the Panama Canal Societies located throughout the United States, with the request that these members utilize every opportunity to support in the public press and through their congressional Representatives the action recommended in this resolution.

TROY HAYES,
President.
MRS. LUCILLE S. JUDD,
Secretary.

H. R. 4774, to create the Interoceanic Canals Commission, was introduced by Hon. DANIEL J. FLOOD on February 14, 1957, and we earnestly solicit your support of the bill.

ANDREW W. DEWLING,
Past President,
Panama Canal Society of Washington, D. C.

PANAMA CANAL PROBLEM: STATUS, SEPTEMBER 1956

1. Congress:

(a) No action by either the Senate or the House was taken on important canal measures before the 84th Congress. Indications are that new measures will be introduced in the next Congress to replace S. 766 (Martin bill) and H. R. 3335 (Thompson bill), 84th Congress, to create an Interoceanic Canals Commission, also S. 2167 (Magnuson bill) and its companion measures in the House to make certain changes in the administration of the canal enterprise.

(b) Legislative cognizance over interoceanic canal problems in the Senate is exercised by the Committee on Interstate and Foreign Commerce, of which Senator WARREN G. MAGNUSON, of Washington, is chairman, and Senator JOHN W. BRICKER, of Ohio, is minority leader; in the House by the Committee on Merchant Marine and Fisheries, of which Representative HERBERT C. BONNER, of North Carolina, is chairman, and Representative THOR C. TOLLEFSON, of Washington is minority leader (see Congressional Directory).

2. Principal issues:

(a) The preponderant judgment of experienced engineers and others, including atomic warfare experts, is that the best canal for the transit of vessels economically practicable of achievement would not be supplied by the sea-level project advocated by the canal authorities in 1947.

(b) The recently retiring Governor of the Canal Zone, in May 1956, advocated the 1947 sea-level project— a proposal of a small engineering group that the Congress and the President did not accept when submitted in 1947 and since then has been increasingly challenged on many grounds by eminent engineers and others of broad experience.

(c) Pending authorization of major increase in transit capacity and operational improvements, Canal Zone authorities have proceeded with a repair and alteration program for existing structures to enlarge dependable capacity—a work that, while nonbasic in treatment of symptoms, possesses merit as an alternative to a major improvement, the implementing of which is long overdue.

(d) At the meeting of the Presidents of American States in Panama, July 21–22, 1956, there was some discussion of additional canals via Nicaragua and Colombia.

(e) The Suez crisis of July 26, 1956 has served further to focus world attention on the Panama Canal, especially its diplomatic implications.

3. Evaluation:

(a) More than 10 years' delay, coupled with confusion of issues and with failure of routine officials to clarify them, still serves to prevent constructive thinking and enlightened discussion in the national press.

(b) In April 1956 the Proceedings of the United States Naval Institute printed An Engineer's Evaluation of Isthmian Canal Policy, by E. S. Randolph, former principal engineer of the Panama Canal, in which the author supported the Terminal Lake solution and opposed the sea level. It was republished in remarks of Representative FRANCIS E. DORN, of New York, in the CONGRESSIONAL RECORD Appendix of April 18, 1956.

(c) On June 1, 1956, Economic Council Paper, volume XI, No. 2, published an analysis, What More Will America Give Away at Panama? by Earl Harding, in which he carried forward his series of clarifying statements on key issues of the canal question.

(d) In the House, Representative DANIEL J. FLOOD, of Pennsylvania, in the CONGRESSIONAL RECORD Appendix of May 29, 1956, recorded an extremely able historical summary of significant events in Panama Canal history, which included the 1906 "battle of the levels" and an acocunt of the 1906–08 discussions of the Pacific-lock location.

(e) In the Senate, Senator THOMAS E. MARTIN, of Iowa, made two important statements:

(1) The first on June 4, 1956, quoting the 1954 memorandum to the Congress and including several excerpts of letters from some experienced engineers not signatory to that memorandum.

(2) The second on June 21, quoting an important declassified 1944 report of Gov. Glen E. Edgerton in which he approved the Terminal Lake-Third Locks plan in principle. General Edgerton was Governor when the Terminal Lake solution was being developed.

(f) Thus, the canal question is still exactly where it was 50 years ago in 1906—in a debate over the type, with many experienced canal engineers urging the economical and operationally superior Terminal Lake-Third Locks proposal and other, for reasons not primarily related to operations, urging a canal type of unproven value and astronomical cost at ocean level. Moreover, in event of a sea-level project, Panama would inevitably demand a new treaty with a huge indemnity and a still greater annuity—matters of paramount import that appear to have been overlooked in the 1947 studies.

4. Documentation:

(a) An extensive bibliography on Isthmian Canal policy, prepared by Representative CLARK W. THOMPSON, of Texas, was published in the CONGRESSIONAL RECORD Appendix of March 23, 1955.

(b) Subsequent issues of the CONGRESSIONAL RECORD contain additional articles and statements of importance.

(c) A report on Panama Canal: The Sea-Level Project and National Security, prepared by a committee of the National Rivers and Harbors Congress of which Henry H. Buckman is chairman, was ordered published as a House document, 84th Congress.

(d) Annual reports of the governor and annual audit reports of the comptroller general starting in 1952 supply useful information on the administration of the Panama Canal Company and the Canal Zone Government.

(e) Canal Zone officials, as far as known, have not produced a single comprehensive statement on basic issues but the recent governor in May 1956 urged pressing studies of possible improvements in the existing waterway until a sea-level canal is built, clearly revealing the strategy of sea-level advocates of opposing any major change in the present canal.

5. Conclusions:

(a) The history of the Panama Canal since 1931 establishes that problems in major planning will not be properly resolved by routine canal officials nor by harassed administrators in the executive departments who depend on canal officials for advice.

(b) It is apparent that a limited routine official group is determined, if at all possible, to bring about the ultimate authorization of a new ocean-level canal, regardless of costs and consequences. These costs and these consequences have never been adequately presented to the Congress.

(c) Present programs to increase dependable capacity, regardless of the elements that may rightly be justified, are serving to delay consideration of the fundamental problem until a time arrives for certain advocates to launch another drive for foisting a sea-level canal upon an unsuspecting public and a Congress with its guards down.

(d) The vital importance of a simpler, operationally superior, and vastly less costly plan makes imperative a sustained effort on the part of all who favor national solvency and low-transit tolls.

(e) The situation at Panama, which has been revealingly unfolded over recent years, has resulted in a vacuum in leadership on fundamental questions, with attention presently focused on the Isthmus of Panama by the Suez crisis.

(f) Unless the United States meets the pending situation with an American commission, there is certainty of demands for an international commission, with all the hazards its recommendations would imply.

(g) As repeatedly stated by leading authorities, the best means for an adequate resolution of the canal problem is by an independent Interoceanic Canals Commission under Congressional authorization, and composed of qualified men who will not be dominated by partisan politics or departmental pressures.

6. Suggestions for helping:

(a) Become acquainted (1) with recent canal literature in libraries, (2) with current happenings as reported in the newspapers, and (3) with the record being made in Congress. Upon request your Congressman will gladly furnish pertinent information that from time to time appears in the CONGRESSIONAL RECORD.

(b) Watch for magazine and newspaper articles on canal questions, and write letters to editors setting forth significant facts, commending when they are right and pointing out fallacies when they are wrong.

(c) Seek candidates for Congress in your area, if practicable, during the coming campaign, and discuss the canal problem, warning of the pitfalls.

(d) Establish and maintain contact with your Senators and Representatives, keeping them informed of developments.

(e) Check on membership of both Senate and House committees as listed frequently in the Congressional Directory at present and after organization of the 85th Congress, and establish contact with them; the Congress is the ultimate authority to determine the Isthmian Canal policy; its Members welcome reliable information from all sources.

Copies of clippings, letters written, and suggestions will be appreciated—when necessary, by airmail.

W. R. MCCANN.

HOPEWELL, VA., *September 30, 1956.*

Our State

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Chesterfield (S. C.) Advertiser of May 9, 1957:

OUR STATE

The following facts from J. M. Eleazer's Seen Along the Roadside, makes us feel proud to be counted as South Carolinians:

South Carolina is a small State. Yet I wonder if any State could stack up historic "firsts" comparable to the list of 45 our district agent, A. H. Ward of Aiken, has compiled for South Carolina?

Here are a few of them:

First museum in America; first chamber of commerce; first man to pilot a steamship across the Atlantic; first long railroad; first train to carry mail; oldest railway junction in world; first submarine ever built; first musical society; first State hospital for the mentally ill; first orphans home; first monument to women; largest earthen dam; first agricultural society; first Bible society; first YMCA in America; first girls 4-H Club work; first Home Demonstration club; first Negro school; first public library; first special library building; first to observe Memorial Day; first normal training school; first inoculation given for smallpox; first native American to receive degree as doctor of medicine; first monument erected to slaves; first high school with military feature; country's first botanical gardens; first to erect statute to Indian; first in textiles; its rivers carry more water into the Atlantic than any other State; first hydroelectric plant; has highest percentage of native born Americans; history's mightiest industrial enterprise, the Savannah River project; the first county fair; and so on.

Now stand a little more erect when you walk among men. Proud, not haughty.

A Young General

EXTENSION OF REMARKS

OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. JENNINGS. Mr. Speaker, I wish to call the attention of the Members to a special celebration that is taking place tomorrow in Scott County, Va., in the Ninth Congressional District.

Wednesday, May 15, is the 111th birthday of Virginia's only surviving veteran of the Confederate Army, Gen. John Salling. An appropriate observance of this occasion is planned for him at his home, Slant, Va., and I know that you, Mr. Speaker, and every Member of the Congress, join me in wishing the general a happy birthday and many more years of health and happiness.

The birthday celebration is being sponsored this year by the Civitan Club of Gate City with Mr. C. G. Quillen in charge of arrangements. The Gate City High School Band will furnish appropriate music; an address is scheduled by the Honorable E. T. Carter, judge of the circuit court, who is also representing the Governor of Virginia; and the area director of War Veterans' Claims, Col. George Blankenbeckler will also speak. Naturally, a huge birthday cake is to be provided for the general.

At my invitation in behalf of the Gate City Civitan Club, each branch of our military forces will send a representative to the celebration. It is, indeed, fitting that the Army, Air Force, and Navy join in observing General Salling's 111th birthday and thus pay tribute to all those Americans who served their cause in the War Between the States.

May I add, too, that this birthday celebration during Armed Forces Week, May 13–19, is a unique addition to this annual observance of the role our military forces play in our daily lives in providing national security. I commend the Army, Air Force, and Navy for honoring General Salling, a living symbol of America, with their representatives.

Mr. Speaker, the 84th Congress authorized the striking of a special medal of honor of the surviving veterans of the War Between the States. It was a pleasure last fall to join in the presentation of the medal to General Salling in a ceremony at his home, and I wish to report to you that General Salling was obviously pleased by this special recognition of the Congress.

General Salling is 1 of the 3 surviving Confederate Army veterans. He has been privileged in his life span to watch this Nation grow from the despair of an internal conflict to a position as the most powerful on earth. In the observance tomorrow of his 111th birthday, we find opportunity to recall the events that have taken place since the War Between the States and to resolve that our Nation, now strong and united, shall continue its growth and progress.

The Bristol Herald-Courier, of Bristol, Va., published a brief editorial last year on the occasion of General Salling's 110th birthday. Its sentiments are appropriate today:

A YOUNG GENERAL

Gen. John Salling might be classed as an old man, but the simple fact that he's 110 today seems to have done little to dim his spirit, his sense of humor or his love of life.

His greatest concern, so he told a reporter, is to find some help for his farming enterprise. Of course, General Salling isn't able to be up and around himself, but he still maintains an interest in his holdings.

In addition, he's looking forward to greeting a great many friends today. And he'll receive a shirt to go with other effects and provide him with a complete uniform.

All this indicates that years, alone, do not make age. Before we label a man or woman as old, we must consider how they, themselves, consider such a classification.

As long as the spirit is young and the mind alert, youth remains.

With that, we'll simply wish General Salling a happy birthday. He's lived 110 years, but he's not old yet. In fact, we doubt if he'll ever be so described.

D. C. Transit Arbitration

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. DEMPSEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an address

delivered by Attorney O. Roy Chalk before the District of Columbia Bar Association on Tuesday, April 9, 1957, entitled "A Lawyer Businessman Looks at Arbitration":

A LAWYER BUSINESSMAN LOOKS AT ARBITRATION

(Address delivered before District of Columbia Bar Association, April 9, 1957, by O. Roy Chalk)

Mr. President, distinguished members of the bench, members of the District of Columbia Bar Association, and honored guests, I am indeed happy to be with you this evening, and it pleases me greatly that you would listen to my opinions on the subject of arbitration.

As a lawyer, and as a businessman, I fully appreciate the inherent dangers as well as the incalculable benefits which may accrue to both parties in the arbitration of a labor dispute. Tonight I would like to talk briefly about my recent role as employer, businessman, lawyer, in the field of labor arbitration. My experience in th's area has been somewhat limited. But as a result of the fairly concentrated effort to which I was subjected during the past 6 months, it is possible that I may have gained an insight on certain questions and facets of the subject which might be a matter of interest to attorneys likewise concerned.

The story of the D. C. Transit negotiations between management and union representatives of labor, and the gradual evolvement of a settlement contract, continually hinged upon the controversial question of arbitration. Also, prior to the D. C. Transit negotiations—and referring to the unfortunate situation which existed between the former owners of the transit system of the District of Columbia and the representatives of union labor—the same controversial subject of arbitration was a key issue and brought about an incident causing a most calamitous impact upon and inconvenience to the mass of transit riders comprising the greater portion of the Washington public. Recital of a few of the highlights in the sequence of events might be an enlightening method of viewing the aspects of labor arbitration as I saw it then, and as I see it today. I shall therefore attempt to relate a few significant facts and give you my observations and opinions on those facts as they happened.

A very brief word regarding the strike of 1955, a strike which lasted for 52 days and caused hundreds of thousands of members of the public, members of the Government, members of the union, and members of the transit company untold grief. Although I do not know the same of my own knowledge, it has been said that the basic cause of that unfortunate situation was the refusal on behalf of the transit company to concede a formula for arbitration which would satisfy the union and eliminate the possibility of future strikes and economic warfare. My observation on the happenings of events of this nature is that, when they relate to a public utility, I am completely in accord with the instinctive thinking of the public and with the expressions of Members of Congress and the Government to the effect that employers and employees of such a public utility industry have a peculiar responsibility to observe and must devise a method of settling their disputes without interruption of service to the public—even more so is this true in the District of Columbia, where the vital functions of our Federal Government are performed.

Let me point out now that the basic difference between the thinking of management and labor during the 1955 period was that management contended the arbitration clause in its contract related only to arbitration of grievances and the interpretation of existing contracts. On the other hand, labor contended that the arbitration clause in the old contract created the right on the part of labor to demand that in the event a new contract did not develop as a result of collective bargaining, then in that event arbitration should take over the process and determine the terms of the new contract.

Concerning this distinction between arbitrating grievances and interpretations of existing contracts, and arbitrating the terms of a new contract, permit me to make this observation: arbitration dealing with grievances and with interpretations of existing contracts poses, as I see it, very few problems of complexity and magnitude. In most cases these problems vary inversely with the perceptiveness of the attorneys engaged in drafting the documents. The clearer the provisions of the contract are drawn, the less likely will arbitration become necessary to resolve differences of fundamental import. The more precise and comprehensive the document, the less the likelihood of disagreement and the need for the arbitrative process. Many employers now accept arbitration as the terminal point for the grievance procedure. There is, however, a much more limited acceptance by employers in the determination of the terms of new agreements. Perhaps the reason for the expanding use of the arbitration process is the fact that no more desirable or effective means of resolving labor disputes has yet been suggested. What is more important is the fact that arbitration avoids, for both parties, the immediate economic loss resulting from work stoppages. Where industry, such as the transit industry, involves the element of essential public service, stoppage for any reason is reprehensible. A public utility must maintain continuity of public service, regardless of the assertions of either management or labor. The general welfare of the public in a crisis involving such essential public service is paramount to and supersedes the problems of management or labor, or both. It is hoped that the year 1955 marked the end of an era of selfish concern—or, shall we say—selfish lack of concern of groups, as well as individuals, for the rights of the public in labor disputes.

To continue with the sequence of events, I now refer you to the period shortly before August 15, 1956: about 2 weeks prior to the acquisition of title by the D. C. Transit System of the assets of the Capital Transit Co., collective bargaining had commenced between Local 689 of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, represented by its president, Mr. Walter Bierwagen, and the newly created D. C. Transit System, Inc., represented by myself. These negotiations were conducted on a remarkably peaceful basis. From the very inception, until the final conclusion, the cooperative attitude of both sides resulted in the most friendly discussions that it has ever been the privilege of labor and management negotiators to enjoy. Harsh and bitter words were notable by their complete absence. There seemed to be a willingness on the part of both sides to discuss and attempt to understand the other fellow's point of view. Although differences of opinion were sharp and clear and, for a time, uncompromising, the maintenance of a friendly, talking climate became the true secret of bringing about an accord which was eventually applauded by both sides.

As you know, the big issue in the negotiations concerned itself with the arbitration of new contracts. What was to be done when the new contract expired, assuming that union and management could not come to mutually satisfactory terms at that time? Both sides agreed with the concept that arbitration could be the answer, eliminating intemperate impact upon the public. The point of disagreement, however, was the determination as to when, where, and how arbitration should enter into the collective-bargaining picture. At what point to start, and, when started, at what point to end? What ground rules and criteria were to be observed? What were the limits, if there were to be any limits? Would there be a range within which arbitration would operate? Would there be a range outside of which arbitration would not operate? These were just a few of the questions which consumed hours, days, and sleepless nights of friendly debate.

It should be a matter of interest to briefly describe a number of the ground rules suggested by these questions, and the arguments pro and con which developed during the discussions.

The first ground rule which was suggested by management was the criteria of ability to pay. This criteria has been used much as a game by both management and labor during recent years, depending at a particular time on whether it was to the advantage of one side or the other to advance the same. In the discussions which preceded the D. C. Transit negotiations with labor, in a different industry (the steel industry), it was labor that urged ability to pay as a criteria upon which negotiators should base their conclusions. And it was management, whose profits at the time were quite substantial, that advanced an indignant and negative reply in stating that ability to pay had nothing to do with the issues. In complete reverse of this play of the game and returning now to the D. C. Transit picture, where profits were not a question but their probable absence constituted a serious problem, it was management's contention that ability to pay should have a great deal to do with the ultimate decision, affecting the future costs of labor. It was labor's contention that ability to pay had nothing to do with a worker's earnings. In rebuttal, it was the contention of management that its position was unique * * * that as a public utility it should not be considered in the same fashion as an ordinary industry; that because of the essential nature of the services which it performed, it had been granted by the Congress of the United States a special franchise which in and of itself had set up the criteria which established the concept of ability to earn and its resultant parallel, ability to pay. It was claimed by management that this concept was paramount in determining matters relating to the economic future of the transit system. Congress had stated in the franchise that its concept of a fair rate of return was 6½ percent of either the rate base or on gross operating revenues. Therefore, said management, a board of arbitrators should not impose a condition upon management which would cause it to earn less than a 6½-percent return. At the proper time, after or prior to the conclusion of the present contract, it is the intention of management to advance this criteria before a board of arbitration, in the event the same will not have been conceded by labor at a subsequent negotiation.

Another interesting question upon which both sides dwelt for considerable length of time, involved the subject of reasonable negotiation range. It was the contention of management that arbitration was a last resort and that collective bargaining should continue until both sides were within a negotiating range of an amount to be determined (such as $500,000 or $1 million, etc.). Management contended that there were limits to the range which should be left to arbitration. For examplee: If the union seeks a 25 cents per hour increase and the company offers a 5 cents per hour increase, is that range too great to be left to arbitration? Management advanced the argument that submission of the complete original range to arbitration would actually make arbitration a substitute for collective bargaining—which was never intended.

It seems to me that wide-open arbitration on original issues will assuredly result in one or both parties neglecting the bargaining process and seeking arbitration as a point of beginning rather than as an alternative conclusion. Management's suggested solution to this reasoning was the establishment of a predetermined reasonable range by pressing diligently the process of collective bargaining before resorting to arbitration. This procedure would tend to encourage, rather than discourage, labor and management to attempt to strive for agreement. It is the intention of management at any subsequent negotiation of a new contract to advance the principle of reasonable negotiating range.

A third question of importance, which was one of the pivotal arguments in the recent discussions involving arbitration, was the geographic sources of members of an arbitration group. It was the contention of management that in a public utility affecting a particular locality, it was essential that at least two or more members of the impartial arbitrating group be residents geographically in or near the area where the public services were performed. It was the contention of labor that this was an unfair limitation. The question has not at yet been resolved, for it is the intention of management at a subsequent negotiation and a subsequent arbitration to submit this as a fair and proper ground rule for future contracts involving arbitration. Whether either party may suffer materially when geographic limitations are imposed with respect to the composition of the arbitration group, remains to be seen. Certainly, labor and its problems of public relations are matters essentially local in nature; certainly there is benefit to be derived from familiarity with the circumstances surrounding the problems that are subject to arbitration. On the other hand, labor contended that locality has no monopoly on objectivity and that familiarity with problems in a given type of enterprise without regard to geographic limitation is an element to be considered along with familiarity with local circumstances in selecting an impartial arbitrator.

The three ground rules which I have just described to you: (a) Establishment of criteria for arbitrators, such as "ability to pay"; (b) consideration of a "reasonable negotiating range"; (c) determining the geographical limitations on members comprising the board of arbitration, are typical of some of the practical problems of a labor negotiation involving the subject of arbitration. I could, of course, enumerate additional perplexing problems, but these should suffice to illustrate my typical views as a businessman-lawyer.

May I say, in conclusion, that one of the prime factors in bringing about an amicable solution to the deliberations involving the D. C. Transit System with the union, was the Herculean efforts of the Federal Mediation and Conciliation Service and its 3 outstanding mediators who, together with the president of the union and myself, actually constituted a friendly board of 5 arbitrators. Commissioners Donohoo, Lee, and Holden deserve a hearty vote of thanks—not only from management and the union, but from the community at large. Their performance as impartial men of open mind and good will was sufficient to convince me that the Federal facilities for the settlement of disputes by arbitration should be greatly encouraged and extended, particularly where a public utility and the public interest are seriously or critically involved. Certainly they deserve a fair trial by both management and labor.

May I say thank you again for having me here tonight.

Guy H. Jenkins

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. CHAMBERLAIN. Mr. Speaker, on May 4 the State of Michigan lost her most able and beloved writer on politics and Government affairs in the passing of Guy H. Jenkins, State capitol correspondent for the Booth newspapers of Michigan.

For three decades Mr. Jenkins had written news and interpreted developments for his newspapers in such a manner that he had become an institution and a legendary figure in his own time. I am certain most of the members of the Michigan delegation to this House knew him and his work and that most of them agree with me. There have been a large number of tributes to his memory from State and National figures.

Although the significance of Mr. Jenkins' life and work is beyond measure to the people of Michigan, I feel that the best effort in this direction was a story written by one of his associates, Mr. William C. Kulsea, and an editorial, both of which were published in the Flint (Mich.) Journal on May 6. Under leave granted by the House, I insert these articles in the CONGRESSIONAL RECORD:

[From the Flint (Mich.) Journal of May 6, 1957]

GUY H. JENKINS

Michigan journalism lost one of its ablest and most picturesque figures in the death of Guy H. Jenkins, chief of the Lansing bureau of the Flint Journal and associated Booth newspapers. He was the dean of the correspondents there. None was better versed in State politics nor better informed on Michigan government.

He was distinguished for his integrity as well as his competence. His writing was colorful, but he never strayed from fact. In many instances politicians who had been critics came to respect him and even seek his counsel. This was true of several governors, including both major parties.

His fearlessness, his sense of humor, and his vast knowledge set him apart. He was fascinating company and had a great capacity for friendship and loyalty. There was real significance in the honorary degree accorded him by the University of Michigan.

Guy Jenkins was a rare newspaperman, a fine citizen, and a beloved colleague.

We will miss him personally and in our columns.

[From the Flint (Mich.) Journal of May 6, 1957]

STATE NEWSPAPER FIELD LOSES TOP HAND IN JENKINS

(By William Kulsea)

LANSING.—The Michigan newspaper field has lost a top hand.

Guy H. Jenkins, 69, chief of the Lansing bureau of the Booth newspapers, died Saturday after covering State politics and government for 30 years.

Few will forget Jenkins—the tall, straight man with the thick crown of steel-gray hair; the play of storm and sunshine on his face, the fury of his deep voice scolding the mudder in public office; the reporter to whom newspaper work was a priestly mission, to be done with purpose and dignity.

He broke into the business in 1908 on the forerunner of the Saginaw News. Eighteen years later he began to climb the stairs and walk the corridors of the statehouse and over the years became as much a part of State government as the statue of Austin Blair on the capitol lawn.

Jenkins never just got a story; he swarmed all over it, and made it truly his. His articles were not echoes sung by press agents. He always went out and got his own, from the headman and seldom took "No" for an answer. He was inquisitive and prying and to the end was poking a forefinger into every stuffed shirt that came along.

"Get the guts of the story," he said. "Start it and finish it, and send it out. That's all."

In his stories he packed more meaning into one paragraph than most reporters do in a page of copy. He didn't know anything about fine writing, or care about it and over the years faced almost daily a series of developments without cluttering his mind with literary fancies to obscure the facts. He just went around asking questions, and when he sat down to write he was full of facts.

His roaring voice gave some the impression he was a volcano on two legs, but those who knew him well were aware of a soft streak that raced through his body. He raged at official corruption but months later, when the dishonest politician was on his way to prison, Jenkins worried about his family and their welfare.

Once, for months, he wrote items about excessive telephone bills legislators were running up at taxpayers' expense. He was asked why he was concerned since the cost was minor, compared to other spending.

"If you tell the people what the small chiselers are doing, the big chiselers in government will know you're watching them," he said. "It may keep them from really getting their hands in the public kitty."

For a quarter century, Jenkins wrote a weekly political article for his eight newspapers. It recited the inside, outside and underside of political life and became "must" reading for politicians.

No subject, political, governmental or economic, was too big for Jenkins. He dealt with them all in print and in corridor conversations, and even governors and presidential candidates listened when he spoke. Never a detached observer but always a passionate participant, often warmly partisan, Jenkins cut with his rapier of words into all corners of Michigan government.

With some governors, both Republican and Democrat, he was ever in joyous antagonism. He knew them all personally, from the late Alex Groesbeck to the present, and often shouted in anger when he felt they weren't doing the right thing. He counted Democrats Frank Murphy and William Comstock and Republican Harry F. Kelly as his favorite chief executives.

Jenkins was at his best in political talk, and his chief weapon was a phenomenal memory. He recalled dates and incidents back to the 1920's and beyond on the spur of the moment.

A few years ago a young reporter asked him about legislation adopted in the early 1930's.

Jenkins, drawing deeply on his homemade cigarette, named the month and the year the bill was passed, the introducer, how and why it passed the House and the Senate and what eventually happened to the bill's author.

One reporter, obviously awed, commented: "Guy, what was the color of his tie?"

Over the years Jenkins taught himself and others fundamentals in the newspaper business.

He always held that a newspaperman is only as good as his source of information. If a public official says he was misquoted, the reporter hasn't got a leg to stand on. Or a newspaper reporter is important only when he has a newspaper behind him. The good reporter is good only because he has a newspaper that will print his stories. Let him quit his job, and he'll be welcome as poison.

Sometime after Warren Harding became President, Jenkins dropped out of the newspaper business for a year or two to sell trucks in Saginaw. But he came back.

"I was never happy in any other business," he said.

He left many friends in the newspaper, political, and business fields. He knew Harlow H. Curtice, president of General Motors Corp.; George M. Humphrey, Secretary of Treasury, and Federal Judge Frank Picard, as well as he knew Bill, the capital parking lot attendant. He advised the late Arthur H. Vandenburg, Michigan Senator mentioned for the Presidency several times, and held confidential talks with GOP Presidential aspirant Thomas Dewey during the 1940's.

Jenkins went to his first national political convention back in 1936 and covered the annual national governors' conferences regularly up to 3 years ago. He drew heavily on these for knowledge about mental health and relayed much of his information to legislators, who enacted into law some of his ideas.

Jenkins had his triumphs, as triumphs are rated in the newspaper business. He had more, too—the knowledge that his coworkers regarded him as a newspaperman's newspaperman. There's no greater tribute than that in this business.

He never sought the applause of his critics, but his greatest legacy as a reporter is found in the many people who disagreed with him yet respected him.

In his later years, he had many lucrative offers from private business to leave journalism, but he denied them all, for his loyalty to the newspapers he worked for was more important than anything else.

What Gives, Mr. Benson?

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, the recent decision by Secretary of Agriculture Mr. Benson to cut the price support for wheat has prompted an editorial comment by the Nebraska Farmer, a newspaper widely read on Nebraska farms and respected for its editorial voice throughout the State. I would like to include the editorial in the RECORD at this time.

WHAT GIVES, MR. BENSON?

Secretary of Agriculture Benson certainly didn't make any friends among the wheatgrowers for himself or his party when he cut the price support of wheat for 1958 to $1.78 a bushel. This compares with $2 a bushel for the 1956 and 1957 crops.

Wheat farmers, as well as all other agricultural producers, are going through a price-cost squeeze. This hammering down further of the price which is tied to Federal marketing quotas will hurt wheat farmers that much more.

Some of Benson's policies just don't add up. On one hand through some USDA agencies, he is extending financial assistance to small wheat farmers, and with the other hand he cuts the price of the commodity they produce.

Benson's policies have been out of tune with the basic philosophy of the Eisenhower administration. And yet the President seems to go along with Mr. Benson.

Nebraska's 1958 allotment was set at 3,228,377 acres. This is slightly below the 3,234,827 acres allotted for 1957.

Before this reduction becomes operative, the marketing quotas must be approved by at least two-thirds of the wheatgrowers in 36 designated commercial wheat-producing States.

The 22-cent reduction in the support rate was not expected. Many farm leaders felt that since there was a reduction in our wheat surpluses this past year there would be little change from the current rate.

This year's rate, set a year ago at $1.86, was raised to $2 because, Mr. Benson said, we were working out of our surplus problem in wheat.

The new 1958 rate is the lowest parity figure that can be used under the Eisenhower administration's flexible price-support system. The law specifies that supports must range between 75 and 90 percent. The new rate is 75 percent of parity.

The referendum is to be held June 20. If growers reject quotas, the 55-million-acre-planting allotments would remain in effect. However, price supports would be reduced to 45 percent of parity or about $1.19 a bushel.

Farmers wouldn't have to comply with allotments. However, only those who did would be eligible for the $1.19 support rate.

Benson's program could clip another $198 million off the national agricultural income just on wheat alone.

James H. Godtfring, of Wilkes-Barre, Retires From YMCA Work

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 11, 1957, which comments on the retirement from YMCA work of Mr. James H. Godtfring:

For about 15 years James H. Godtfring has served the Wilkes-Barre YMCA as general secretary. Having reached the age of retirement, he is about to relinquish his post. The YMCA and the organizations allied with it in carrying out a community program of wide scope will be losing an able leader and a wise counselor.

During his tenure the Wilkes-Barre Central YMCA has greatly extended its activities, for Mr. Godtfring was personally instrumental in fostering and establishing the Memorial, North, and Back Mountain branches. His achievements covered an even broader field in the direct work of the Y. Examples are the YMCA Industrial Management Club, the Toastmasters' Club. The latter has served as an inspiration to other organizations and other communities.

If we take into account his service to Y's in other States prior to coming to Wilkes-Barre, it can be said that James Godtfring has lived his life for the YMCA. His achievements in our own area have crowned a career which was auspicious even in the earlier years. He is widely known in Wyoming Valley as a leader in one of the most useful of fields, the service of youth and the upbuilding of character.

Statement on Proposed Amendment to H. R. 6127

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I place in the RECORD a statement I presented to the Rules Committee this morning, May 14, with respect to an amendment I propose to offer to H. R. 6127 when it comes to the floor:

STATEMENT BEFORE THE RULES COMMITTEE BY HON. JOHN H. RAY OF NEW YORK

Mr. Chairman and members of the committee, I appreciate very much the opportunity to present a proposed amendment to H. R. 6127.

The portions of that bill which I would amend are in parts III and IV which authorize the Attorney General to sue in the Federal courts for injunctive relief. The amendment I propose would not let him proceed in the Federal court if a plain, adequate and speedy remedy is available in the State court.

To accomplish that purpose, I suggest striking out the words "or other" in line 12 on page 10 and the same words in lines 12 and 13 on page 12. Then I would add at the end of line 12 on page 10 and at the end of line 13 on page 12 the following sentence:

"The district courts shall not exercise jurisdiction in proceedings authorized by this section if a plain, speedy, and efficient remedy may be had in the courts of the State or Territory in which the party aggrieved resided at the time the cause of action arose."

It will be noted that my amendment does not affect the Attorney General's authority to disregard administrative remedies. Cutting out the words "or other" would, however, make it clear that he cannot disregard judicial remedies, and the new sentence expressly prevents his proceeding in the Federal court if State laws provide a plain, speedy, and adequate remedy.

The idea for the proposed amendment came from section 1342 of title 28 of the United States Code which forbids the Federal courts to grant injunctions in certain cases otherwise within their jurisdiction "if a plain, speedy, and efficient remedy may be had in the State courts. It has been on the books for about 30 years and it has worked well. Prior law had permitted many utilities to go into the Federal courts for injunctive relief when they thought their property was being confiscated by an order of a State regulatory commission. In those cases the basic issue arose under the 14th amendment and companies had almost made it a habit to move immediately into Federal courts. This procedure aroused much controversy and finally Congress enacted the language above

quoted. Now the companies merely proceed directly in the State court, or, if they start in the Federal court, must show that the remedy available in the court does not meet the specifications above stated.

I think the clarification and simplification of the definitions and the remedies for violation of civil rights are matters of first importance. They are long overdue. I think the Supreme Court, in the Virginia school decisions was particularly wise in recognizing that the segregation problem must be left largely in the hands of the States, and that they must proceed with deliberate speed.

The amendment I propose is consistent with those decisions. It recognizes the sovereignty of the States and preserves the right of the States to declare and enforce rights of their citizens. It provides a remedy in the Federal court where the States do not make such provision.

Beyond the fact that the amendment provides a practical procedure which will greatly improve H. R. 6127, I think it has broader and perhaps more important merits.

In my home State, New York, we have comprehensive and adequate remedies for any interferences with registration and voting. Many other States have corresponding statutes. As the bill now stands, there is a serious question as to whether or not its passage would enable an Attorney General to bypass those statutes.

The question as to whether or not Congress, if it were to enact H. R. 6127, would preempt the field, has been presented fully to this committee and I need only to say here that I, too, see the danger and that I believe the amendment I propose would avoid that danger.

In the next place, if the Congress finds it necessary to enact legislation to clarify and provide remedies for violation of civil rights in other fields, the legislation adopted can, and I hope it will, protect the sovereignty of States by including a provision such as I am proposing here today. The clarification and definition of civil rights and the provision of remedies for violation of those rights is one of the most important questions ahead of us and it has many facets.

If Congress is now to enact legislation in the field covered by H. R. 6127, it will be setting a precedent for that series which lies ahead and I believe that the amendment I propose, or its equivalent, should be a part of any such legislation.

It is my purpose to offer the amendment on the floor and my reason for bringing it to the attention of this committee is to add another reason, if one is needed, for reporting H. R. 6127 under an open rule.

Address of Superior Court Judge Robert E. Woodside at Testimonial Dinner to Judge John S. Fine at the Mayfair Supper Club on April 1, 1957

EXTENSION OF REMARKS

OF

HON. JOSEPH L. CARRIGG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Superior Court Judge Robert E. Woodside at a testimonial dinner to Judge John S. Fine at the Mayfair Supper Club on April 1, 1957:

Reverend clergy, Governor Fine, ladies, and gentlemen, this is a great day for Luzerne County. The turnpike connecting this area to the port of Philadelphia represents the opening of a new era in the development of this county. The importance of this highway to the industrial development of the community and to the welfare of its people cannot be overestimated. Just as the waterways developed the great seaports, and the railroads developed strategically located inland cities, so will the superhighways of our generation develop great communities of the future. It is not to be supposed that these highways will replace the waterways or the railroads whose importance to the economic welfare of the country will remain for many years to come. It is to be supposed, however, that the communities bypassed by the superhighways will develop no faster than the areas untouched by railroads a generation or two ago.

John S. Fine, who has long loved Luzerne County, foresaw the importance of this highway to the future of this community. Without his keen interest, enthusiastic support and determined efforts this road would have been delayed for decades, and the present generation of people in this community would have lost the opportunity to regain its position of leadership as a great industrial area of the State.

The world will little note nor long remember what was said today at the official opening of the turnpike but this State and its people will never forget that John S. Fine was the father of this northeast extension of the Pennsylvania Turnpike.

Governor Fine should be a proud man. There is always a feeling of satisfaction in a great accomplishment. There is justifiable pride in seeing a dream brought to realization. There is justifiable pride in a parent seeing a child graduate from high school. Such things are accomplished only through sacrifice and persistent effort. Today the efforts that John Fine put into his dream of a superhighway joining this county to Philadelphia is realized. He is the father of this turnpike. It is his baby. The people of this area should be forever grateful to him for it.

Most people are fond of their home community, but John Fine seems to have a special love for his community. Whenever he could, with fairness, help this county by securing from the State better roads, or better bridges, or better hospitals, or new opportunities for employment, he did it.

I recall, particularly, when the location of a new penal institution to be constructed for the housing of defective delinquents was under consideration. Pointing out that it would give several hundred jobs to the community as well as benefit business, he argued effectively that it should be placed in this area where competent help was available.

While talking about prisons I should like to digress just a few minutes to mention the role which Governor Fine played in the settlement of prison riots. You remember the wave of riots which was sweeping the country. Coddling the rioters fostered new riots until they had swept through over a score of States and finally broke out in Pennsylvania. It was the firm stand taken by Governor Fine in Pennsylvania that not only solved the problem in this State, but ended the wave of riots throughout the country. When prisoners learned that they would be punished for rioting and attacking guards the riots stopped. In the four years since that time there have been fewer prison riots in this country than there were during the four months prior thereto. Governor Fine showed courage far beyond that exhibited by some local officials and by high officials of other States who were willing to have the State accept dictation from its imprisoned hoodlums.

Following the settlement of the riots a penal program was adopted and a new code of laws enacted in Pennsylvania which was the envy of the other States. Since then many States have patterned a revision of their own penal system after the system adopted here under the leadership of Governor Fine.

Praising the accomplishments of John Fine at this meeting is certainly carrying coals to Wilkes-Barre—to localize and modernize an ancient saying. All of you have seen at firsthand the interest of John Fine in this community. You who know him best are aware of the courage which he exhibits when in a position of trust, and the sympathy and understanding which he shows for all the people whenever he has an opportunity to assist them either individually or collectively.

There were many accomplishments in his administration, but the one with which we are concerned tonight is the construction of the turnpike.

The Pennsylvania Turnpike Northeast Extension Act was signed by Gov. John S. Fine on September 27, 1951. It was introduced at his suggestion in the house of representatives as house bill 1484 by Vincent F. Gutendorf and James J. Jump, of Wilkes-Barre; William P. Kohl, of the second legislative district; John J. Mikula, of Hazleton; Harold E. Flack, of Dallas, and Leonard A. Najaka, of Glen Lyon, on June 20, 1951, and passed the legislature, without a dissenting vote.

There was much work to be done in getting the turnpike started. Investment concerns had to be convinced that it would be profitable, traffic surveys had to be made to prove the necessity, engineering services were required. It was only as a result of Governor Fine's continued demand for immediate action that brought the early realization of his dream.

On July 28, 1953, Gov. John S. Fine signed a second bill which would have extended the turnpike to the New Jersey line where Governor Driscoll agreed to have the New Jersey turnpike constructed to New York City.

Another spur was to be constructed to the Susquehanna River north of Harrisburg leading into that city. Had it not been for financing difficulties completely beyond his control these roads would now be nearing completion.

The present administration has announced it is opposed to the extension of the Pennsylvania Turnpike System. Thus, these superhighways so vital to the welfare of the people of this community will now be long delayed, if not forever lost to them.

Because of the liberal aid which the Federal Government is giving, there is the hope that, in addition to the turnpike, modern highways will find their way into this community, but as yet these are mere dreams. Many of the roads being talked about are but paper highways roughly sketched on the map for further consideration at some future date. If this area had been forced to wait for the construction of these roads industries which will now be attracted to this area would have long since settled along the present turnpike extending from Chicago to New York, and this community would have been bypassed during this critical period.

Were it not for Governor Fine only obsolete roads would wind their way along the river, around the mountains, and through the towns in and out of this county. But now one of the greatest highways in the world will take people and produce to and from this county.

The Pennsylvania Turnpike law provides that eventually the turnpike will be free from toll. This has always been the intent of the State, but to free these roads from tolls at this time would be a mistake. Taking the money from motor funds of either the State or Federal Government in order to free the tollroads would of necessity delay the construction of other highways connecting this community with New York and

the West, and extending elsewhere throughout this Commonwealth. We need roads too badly to exhaust the motor funds of the Federal or State governments to pay the bondholders of the turnpike. These funds must be used at this time for the construction of new highways.

It must be remembered that little can be accomplished under the Federal highway system in the next few years. Even the presently planned interstate superhighways will not all be constructed within the next 15 years. This community could not have afforded to wait for this Federal road program. The community which has superhighways available years before other communities, as you now do, will have an economic advantage which cannot be overcome in our times by the cities waiting for superhighways to come to their door.

It might be well to note here briefly the first great turnpike of this Commonwealth. It was built in 1794 for a distance of 66 miles from Philadelphia to Lancaster. About 12 years earlier a lottery had been authorized to raise money for improving roads and the Schuylkill River, but little could be done with the sum thus raised. In 1791 the Society for Promoting the Improvement of Roads and Inland Navigation in Pennsylvania surveyed the road to Lancaster, and reported that a toll road should have a prosperous future. Thereupon, the Philadelphia & Lancaster Turnpike Co. was organized and 1,000 shares were sold at $300 each. The turnpike was paved with stone the whole way and overlaid with gravel so it is never obstructed during the most severe weather.

As a result of this highway the city of Lancaster developed rapidly as a great inland city of this Commonwealth. Although the road was not profitable to the stockholders at first, grossing only $14,000 in 1799, and $25,000 in 1803, most of which was needed to keep the highway in repairs, it did have much to do with the development of both Philadelphia and Lancaster and the adjoining territory. Later it did become profitable. It paid dividends as high as $72 a share until the railroads obtained the hauling business and the dividends of the turnpike company went down to 25 cents a share. In the early 1900's the Philadelphia-Paoli Turnpike was sold for $8,000. Then as a result of the development of automobiles this part of the highway was finally sold to the Commonwealth of Pennsylvania in 1917 for $165,000.

Just as that highway developed the communities of that area during the early part of the 19th century so will this turnpike develop this community. For its building the people of this area should be forever grateful to John S. Fine.

Keeping America Strong

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. SMITH of Mississippi. Mr. Speaker, we were honored to have Mr. Harvey S. Firestone, Jr., the chairman of the board of the Firestone Tire & Rubber Co., as one of the principal speakers at the annual meeting of the Delta Council on May 9 at Cleveland, Miss. The Delta Council is one of the foremost agricultural and civic development organizations in the South, and Mr. Firestone's address, devoted to the fundamental importance of our free-enterprise system, not only to the progress of our country, but to the peace and progress of the world as well, is of significance to all of us. Under unanimous consent, I include Mr. Firestone's address before the Delta Council:

Governor White, President Percy, members of the Delta Council, distinguished guests, ladies, and gentlemen, it is a very great pleasure for me to be here with you today. I am honored, indeed, to have been invited to have lunch with you, and to talk with you about matters which have a common interest for all of us who are in agriculture and industry.

Some people regard agriculture and industry as separate and apart from each other. Personally, I do not agree. To me, their objectives are mutual and identical.

The farmer is just as much a businessman as one who runs a rubber factory. He is basically a manufacturer. And just like any other manufacturer, his job is to produce goods. You know, the word "factory" comes from the Latin word "factus," which means to make or to do. And surely the farmer is busily engaged in making and doing many things. In reality, the farm is simply a factory without a roof.

Fundamentally, there is not much difference between farming and making tires. Both the agricultural industry and the rubber industry are largely dependent on the fruits of the earth for their operations.

The farmers take sun and soil and seed, mix them with fertilizer and water and, with the aid of manpower and machinery manufacture food and feed and fiber.

We take cotton, rayon, or nylon, all of which originate in the earth; natural rubber, which is, of course, an agricultural product, or synthetic rubber, the ingredients of which come out of the ground; mix them with such products of nature as sulfur, zinc oxide, and carbon black, and with the help of manpower and machinery, turn out tires.

Here in the delta area, you have recently embarked on a program of diversification which has led in several different directions. Many delta farmers are now producing cattle, small grains, and soybeans in place of cotton. However, at present your greatest emphasis is being placed on the need for attracting industries to the delta area in an effort to balance your heretofore predominantly agricultural economy with industrial installations.

I am sure that you must have many advantages here in the delta country which will appeal to manufacturers in certain lines of business. However, not all industries require the same facilities. For example, when we of the Firestone organization find it necessary to establish a new manufacturing plant, we are restricted to localities which have very large resources of highly skilled labor, enormous supplies of water, favorable tax laws, reasonable land values, acceptable railroad rates and facilities, extensive networks of good highways and other considerations too numerous to mention. On the other hand, there are many industries which do not need such large numbers of skilled workers, such huge supplies of water or some of the other items which I have enumerated. Therefore, it seems to me that you must examine your natural facilities, make an accurate and realistic appraisal of what you have to offer and concentrate on those industries which can economically and profitably utilize your natural assets.

More than 20 years ago, we of the Firestone organization recognized the strategic importance of this area. When we decided to establish a plant in the South, we made a careful investigation of all of the facilities then available. We selected Memphis as the site of our new plant, because while other localities offered many advantages, Memphis had a large number of highly skilled craftsmen, so vital to our type of business. And, because we realized that the South was making rapid progress and because we felt that this progress would accelerate even faster in the years to come, we bought enough land in Memphis to allow for expansion of our plant there for many years to come.

So, therefore, while we have, nearby, ample facilities for the foreseeable future, we believe that there are many industrial concerns in the United States who might profit by our experience and establish plants or other industrial operations in this general area. And, I am sure that the many and obvious advantages which you in the delta country have to offer will prove most attractive to industries of many and diverse kinds.

We of Firestone are proud to be your neighbors and we will be delighted to help in any way we can such as, for example, acting as a reference if those with whom you talk want confirmation of the economy and efficiency of industrial operations in this general area.

As one who shares with you the responsibilities of farm and factory, I am keenly aware of the many problems and difficulties which we face in these troubled times of cold wars and hot words. Today, however, I want to talk to you about a subject of far greater fundamental importance than the irritations and annoyances which beset the daily lives of those engaged in agriculture and industry. I refer to the necessity of keeping America strong by preserving and defending the very source of her strength.

What is the source of America's strength?

It lies in our three fundamental freedoms, spiritual, political and economic, each one complementing and reinforcing the strength of the other. I believe that it is highly improbable that we could have progressed as a nation along any one of these three lines unless we had developed simultaneously along the other two.

The tremendous abundance of our natural resources, the superior intelligence and transcendent skills of our people, our republican form of government, our religious freedom and the absence of powerful neighbors that might threaten our security, have all been important factors in making and keeping America strong. But there are other countries that have possessed these advantages to a greater or lesser degree.

Surely, then, one of the great sources of America's strength lies in our economic system, which we call individual competitive free enterprise. And that is what each and every one of us must intensify our individual efforts to preserve and defend.

Our country has been forced by circumstances into a position of world leadership. All eyes are upon us. What we say and what we do influence the whole world. We are the chief proponents of the individual competitive free enterprise system. If we weaken our support of this successful economic system, all the other free nations of the world will crash with us. But if we retain strong economically, if we not only defend but also extend free enterprise, we shall keep our country so strong that none will dare to attack us or those who stand with us on the side of freedom. Therefore, it is apparent that the peace of the world, perhaps even the fate of the world, depends upon the efforts we make to keep America strong.

If we have any doubt that America's system of competitive free enterprise is the real source of her strength, we have only to think back to the early days of American history. The early colonists knew before they left Europe that they literally would have to hack their new homes out of virgin forests and that they would be greatly outnumbered in fighting savage tribes. They

knew that they faced years of backbreaking toil and constant danger before they could establish themselves. Nevertheless, they came, because they could no longer tolerate the tyranny and oppression of the old world.

Some came to worship God in their own ways. Others came to escape political punishment. Still others came to seek their fortunes. But, whatever their motives, all came to gain freedom of one kind or another. Consequently, it is not surprising that they valued above all else their right to personal liberty. They had an unshakable belief in the power of individual initiative.

To our forefathers, freedom was a heritage so precious that without it life was not worth living. So firmly did they implant this idea into the minds and hearts of their descendants that many years later, when the United States took its place among the nations of the world, safeguards for human liberties were woven into the very fabric of the law of the land. They established a republican form of government. And they laid down the rules for its operation in a living document called the Constitution. They laid the cornerstone of a new economic system, based upon individual competitive free enterprise. The rules for its operation were recorded in the first 10 amendments to the Constitution, which we call the Bills of Rights. In effect, they made it possible for every person to go as far as his will and his skill permit, provided that he does not deprive his fellowman of the same right.

As the years passed and as the United States great stronger politically and economically, people in other countries regarded America as a land of opportunity. They saw over here a country in which individual initiative was fostered and encouraged. Millions upon millions of them left their homes in foreign lands, where life was regimented and opportunities restricted, and came to our hospitable shores. And, today, millions more wish with all their hearts that they were over here instead of over there.

Yes, the great source of America's strength is our system of competitive free enterprise. We know it, but so do our enemies. And, as you would naturally expect, those who seek to destroy our power and our prosperity are concentrating their attacks on this keystone of our success. They know that if it collapses, the entire structure will fall.

Today, approximately one-half of the cost of Government is being spent for national defense. For the current fiscal year, the appropriations for the United States Army, Navy, and Air Force total about $35 billion. I cannot tell you whether this huge sum of money is too much or too little. But I can tell you that no army, no navy, no air force, however large and efficient it may be, can protect the minds and hearts of the American people against the poisonous propaganda which is being fed to them.

The only protection against this form of attack is a determined and continuous counterattack, a barrage of truth which will completely nullify the bombardment of falsehoods to which the American people are being constantly subjected.

We in America must guard against taking liberty for granted and regarding it as a natural state of man. We must face the fact that there are forces at work which are striving to deprive us of those fundamental rights for which so many brave men have fought and died. They seek to return us to those dark days when our people were subject to the whims of tyrants.

The origin of these forces lies in foreign lands where people live in poverty, in misery, and in fear. They come from countries which call themselves democracies, but where a citizen may not own land or select his own job. He may not be tried by a jury of his peers. He may not stay away from work without good and sufficient reason. He may not employ anyone to work for him. He does not have freedom of speech, freedom of assembly, or freedom of religion, and his press and radio are censored by his government.

Surely, with a knowledge of these facts, the American people are too wise, too alert, and too intelligent to be taken in by the promises and propaganda of alien doctrines, no matter how subtle or clever they may be. However, this belief in our strength may, in fact, be our weakness. Many of our people simply do not realize that liberty is not a permanent possession but must be cherished and protected.

We must always remember that an integral part of the American character is forever to seek improvements. Americans are never satisfied.

They are always looking for ways and means to improve their lives, their fortunes, their jobs and their Government. That is one reason why we have been such a progressive and successful Nation. But, on the other hand, this same restless spirit may make their minds susceptible to the false promises which are so lavishly made by the disciples of economic systems that seem, at first glance, to offer greater benefits to a greater number of people.

Unfortunately, some Americans do not consider the source of these promises. They do not remember that these highly touted economic systems have failed miserably in the past in countries where they have been tried. They do not realize that the security which these systems allegedly offer must be paid for by giving up many of the privileges which we Americans believe are the basic rights of man.

Nobody in this world is more secure than a man in a penitentiary. He is fed, clothed, and housed. But he is not free to go and come as he pleases. He is watched, guarded, and disciplined. There are millions of people in other lands who have that same kind of security. But we Americans have always believed that the only real security lies in liberty and opportunity.

In recent years, propaganda mills both here and abroad have been grinding out misleading promises. As a result, an increasing number of people are led to believe that we should have a paternalistic form of Government on which they can lean for security. This is a challenge to business, and it is the high responsibility of business to give convincing evidence that real and lasting security can be more soundly acquired through the American system of competitive free enterprise.

Frankly, I did not come here today to convince you of the worth of our competitive system of free enterprise, or of the superiority of our American way of life. As businessmen, I know that you already believe in both. Rather, my purpose is to urge that you personally carry on a crusade to keep America strong. Each one of us should use every means at our command to remind the people of the United States that no other economic system can compare with ours in providing more of the good things of life for more people.

Now, I have no doubt that you will ask: "What can we do about it?" I shall try to answer that question.

Primarily, it seems to me that we waste entirely too much time selling each other on the superiority of competitive free enterprise. With whom do we usually discuss the subject? The chances are that we talk about it principally with our fellow club members and our friends and associates whose lives run parallel to our own. But do we try to get our ideas over to our employees? Do we talk them over with our children, with Boy Scout troops, with YMCA members, or with farm-youth organizations? Do we meet and talk with women's clubs, with the teachers of our children and with church leaders? If we are not doing all these things, and more, we are not helping to keep America strong.

The next question which you will probably ask is: "What shall we tell them?" Frankly, there is much to tell.

First, the United States, although it is a relatively new country, has a higher degree of culture than any other nation. This is exactly contrary to the propaganda which is being poured into the minds and hearts of our people so forcefully and so relentlessly. But the facts are that with less than 7 percent of the population of the world, we have more young people in high schools and colleges, more musical and literary organizations, more libraries and more distribution of the written and spoken word than all of the other 93 percent combined.

Second, we have the highest standard of living in the world. We are better fed, better clothed, and better housed than any other people on earth. Our health as a nation is unparalleled and it is constantly improving. Our life span grows longer every year.

Third, we hold a position of moral and spiritual leadership. We have more hospitals, more charitable institutions and, probably, more churches per capita than any other country. After fighting and winning two world wars, which cost hundreds of thousands of lives and hundreds of billions of dollars, we gained neither additional territory nor domination over any other country. On the contrary, we helped friend and foe alike to regain political, economic, sociological, and spiritual health without asking any favors in return. Can any other nation match this record of generosity and understanding?

Fourth, from a standpoint of material possessions, we Americans have more luxuries, more comforts, and more conveniences than anyone else. Free-enterprise America has 1 automobile for every 3 of its citizens. Great Britain has 1 for every 15. Communist Russia has 1 for every 600. Under free enterprice, there is 1 radio for every 2 Americans. There is 1 for every 5 Britons. Under communism there is 1 for every 33 Russians.

One out of every three people in free enterprise America has a telephone, compared with 1 out of 7 in Great Britain and 1 out of 188 in Communist Russia. Even more startling comparisons could be made in such commodities as washing machines, refrigerators, vacuum cleaners, electric lights, food, clothing, and almost any other item which contributes to the happiness or welfare of mankind.

Fifth, let us point out that America's system of individual competitive free enterprise is tried and proven successful, whereas other systems are either untried experiments or downright failures. During World War II, free enterprise America turned out more war materials than all the rest of the allied nations combined. Under the impetus and incentive of war, companies which fought each other in good old-fashioned sales competition in peacetime pooled their resources and worked together as a well integrated team to multiply the output of war materials. Compare that system with the methods used in totalitarian countries, where government control of production restricts the number of enterprises and, consequently, results in a shortage of industrial capacity in time of emergency. It was America that furnished much of the materials for our allies, as well as for our own Armed Forces. Without those materials, the nations united with us might have been conquered by our common enemies.

Sixth, let us set the record straight about the matter of profits. Let us correct that idea which has been spread by soapbox orators, wily subversives, and well-meaning but misled reformers that the workers get

the smallest share of the income which manufacturing produces and that the owners get fabulous amounts.

Let us tell them that, actually, out of every dollar of sales made by manufacturers, 49 cents go for materials and supplies, of which 36 to 46 cents go to the workers who produce those materials. Nine cents go for taxes, of which 4 cents are paid to Government employees. Six cents go for depreciation, maintenance, repairs, and interest; 2 cents for advertising; and 1 cent for research. That leaves 33 cents from the sales dollar of which the employees get 29 cents. The remaining 4 cents are profits, of which 2 cents are set aside for tomorrow's jobs by reserves to buy new machines and to expand the business. The remaining 2 cents are paid to the stockholders who are the owners of the machines, the tools, and the factory buildings which are used by the workers to increase their earning power. All told, approximately 85 cents out of every dollar of sales by manufacturers go for salaries and wages.

Seventh, let us tell the real facts about who owns American business. Let us correct the impression that it is owned by a mere handful of individuals. Let us point out that under some other economic systems, industries are owned by the government. Over here industries are owned by the people. Every one of the 70 million Americans who has a savings account, each of the 115 million who has a life insurance policy, and each of the 9 million who has shares of stock or industrial bonds owns, directly or indirectly, a part of American industry. All of them have a stake in American business and they should be among the first to insist that business concerns make profits. Otherwise, their savings accounts, their life insurance policies, and their securities will be of little value. Anything that hurts business hurts them, personally and individually, because they are an integral part of business.

How necessary it is to get this story over is shown by a survey among teachers of social studies and clergymen of various faiths throughout the Nation, made a few years ago. The members of these professions believed that only about 70 percent of the wages and salaries and 30 percent of the income from dividends, interest and rents were paid to people who earned less than $5,000 a year. On the contrary, a national income study made by the Bureau of Economic Research of the University of Notre Dame, shows that 90 percent of all wages and salaries, nearly 70 percent of dividends and interest and 83 percent of income from rents were paid to those earning under $5,000 a year.

This same study shows that, after payment of Federal taxes, only 5½ percent of wages and salaries, 17 percent of all dividends and interest and 9½ percent of income from rents goes to those earning more than $5,000 a year. If people with above-average education, such as teachers of social studies and clergymen, can be so far wrong, imagine how completely misinformed the average American must be about this all-important distribution of national income.

Eighth, let us be realistic. Let us stop talking about the good old days, which really may not have been as good as some thought they were. Let us try to win friends and influence the people who really count. Let us stop telling each other how good our economic system is and start telling those who have some doubts about it. Let us show them that we are playing on the same team, the freedom team, and that we and they must work together if we are to win the all-important game of survival in which our individual, personal liberties are the stakes.

We have all got to realize that we are living in a new and different kind of world. We have never before found it necessary to take an active personal part in defending our way of life.

But times have changed. Today, we must reinforce the faith of our people in the American way of life. We are faced with the greatest competitive battle in history. It is a battle between those who believe in the American way of life and those who seek to destroy it. But competition is no stranger to us. We thrive on it. It is the very lifeblood of free enterprise. All of us in this room, and thousands more like us, know how to fight and win against competition. Consequently, the only thing we have to guard against is that we shall be lulled into a false sense of security and that we shall fail to realize the necessity of joining in this crusade.

If individually, we devote the same thought and energy toward waging and winning this battle of economic principles as we have in the past devoted to winning the battle for business survival, I say to you that there is no power on the face of the earth which can destroy the American system of individual competitive free enterprise. By each doing our part, we can and will succeed in keeping America strong.

Counties in Rural Development Program Report Solid Achievements

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I wish to have inserted in the RECORD the following article from the March issue of Tennessee Farm and Home Science, a publication of the College of Agriculture Experiment Station Extension Service of the University of Tennessee. I believe this will be of interest to many of the readers of the RECORD:

COUNTIES IN RURAL DEVELOPMENT PROGRAM REPORT SOLID ACHIEVEMENTS

Tennessee's pilot counties in the rural development program are making definite and encouraging progress in carrying out their plans of action.

Grainger, Hardin, and Macon Counties had the work underway for a little more than a year. Marion and Houston Counties have only recently been named as pilot counties, and are now in the process of appointing committees, studying their problems and opportunities, and making a plan of work.

The program is one designed to bring together all organizational, business, educational, apd individual resources to deal with the problem of resource development for greater economic opportunity within the county. Guiding the program and advising with county committees is a State steering committee, made up of representatives of the University of Tennessee Agricultural Extension Service, College of Agriculture, and Experiment Station; State departments of agriculture, conservation, education, forestry, vocational education, employment and health; community development sponsoring groups; TVA; industrial development commission; Farm Bureau; State Grange; Soil Conservation Service; Agricultural Stabilization Committee; Farmers' Home Administration; Farm Credit Administration; and others.

Each county participating has also named a rural development committee to determine the local program and guide it achievement. Subcommittees handle specific fields of work. The University of Tennessee Agricultural Extension Service was requested to give continuing leadership to the program on a county and State basis.

GRAINGER ACHIEVEMENTS

Grainger County's achievements to date include a partial survey of land classes and uses; surveys and contacts concerning desirable industries; appropriations for new schools and school additions; workings at the county park; preparation of a county and city dump area; emphasis on home gardens; leader training meetings; countywide fall cleanup campaign; Christmas lighting contest and tours; plans for an intensive family living survey; supervised recreation programs; a demonstration home emphasizing good home management principles; arrangements for a county health clinic; setting of 125 additional acres of strawberries; a bond issue for a safe and adequate water supply for the county-seat town; a new telephone system. An outstanding achievement, the county committee reports, is the development of a strong cooperative spirit on the part of all local agency representatives and local leaders. Plans for the coming year and additional long-range plans are now being completed.

MACON REPORTS MANY PROJECTS

Macon County reports the initiation of several activities in 1956 that would not have been attempted without the committee action. A new trades class was started at the high school. Since the school was crowded, and there was no money for a new building, the school board gave 5 vacant 1-room school buildings, and the materials from these were either used or sold to buy other materials for a building for the trades classes.

A labor survey was conducted by volunteers, and a factory secured which employs 500 women and 100 men. Work is going forward on getting new strawberry acreage planted and arranging for a fresh market; working up a grade A egg route; helping with farm credit problems. Schools have been held for farmers in farm management, dairying, animal husbandry, and poultry.

In general, the county reports, the rural-development program has created interest, brought out leadership, and stimulated the income of Macon County in many ways.

HARDIN MAKES PROGRESS

Hardin County reports extension of electric service; work toward establishing 2 industrial plants in the county (1 a pulp mill to provide a market for the county's timber resources; placement of 2 trades teachers in county high schools; organization of 8 additional rural communities; organization of an agricultural council to discuss and plan agricultural projects at monthly meetings; promotion of home gardens; promotion of new cash crops such as okra, pepper, beans, popcorn, strawberries, and sorghum; acceleration of soil mapping; health surveys, and resulting progress in health practices; expansion of rural library service; new telephone service; beginning of a meat-type hog program through placing of registered sires in different communities; food preservation demonstrations; promotion of egg-laying projects; help with additional FHA loans.

NEW COUNTIES ENTHUSIASTIC

Just entering the program, Marion County reports organization of its county committee and subcommittees. "There has been excellent cooperation," the committee reports.

Houston County says that the county's leadership "accepted the challenge of the Rural Development Program enthusiastically." Committee findings are being studied to chart a definite course of development for the entire county. "This will mean the use of every citizen to develop constructively all

resources to make better incomes now and assure a continued better way of life for generations yet unborn." The real work is yet to be done, Houston County says, but "the door of opportunity is open."

The work being done in these five counties is establishing a pattern that can benefit other counties, believe those who are participating. Seldom on such a broad scale have people and their organizations so united their thinking, their knowledge, and their efforts to find out where they are, and what they have to work with, and then chart a course to reach goals possible to them by working together, say members of the county and State committees.

Passport Racket Springs Into Open

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Stroudsburg (Pa.) Record of May 10, 1957:

PASSPORT RACKET SPRINGS INTO OPEN

WASHINGTON, May 9.—A report exposing an international passport racket that illegally feeds Chinese Communist Government agents into the United States will explode into open congressional hearings here soon.

Now in the hands of worried Immigration and Justice Department officials, this document will lay bare the activities of a ring of citizenship brokers in Hong Kong, selling fake United States entry papers for $3,000 a head. The Red Chinese Government, says the report, is the broker's best customer.

The crooked brokers utilize the derivative citizenship provisions of the Immigration and Nationality Act (McCarran-Walter law) to draft their false papers. These provisions permit any child of an American citizens, regardless of that child's color, creed, or birthplace, to enter the United States outside and beyond regular immigration quotas.

PLANNED PROGRAM

Once inside the United States, according to the report, the Red agents engage in a planned Communist program with three separate aims:

1. Destruction of all restrictions imposed on foreign immigration into the United States, and repeal of the entire Immigration and Nationality Act.

2. Creation of Communist cells in the Chinatowns which make up a part of more than a score of United States cities, and of cities in other countries.

3. Extortion, to compel the approximately 16 million overseas Chinese in 50 countries around the world to send cash to families, or "investment brokers," inside Communist China.

The liberal McCarran-Walter Act which controls foreign immigration into the United States does not bar a foreigner from entering the country simply because he or she comes from a Communist-controlled state.

Once such a foreign child wins admission to this country, it is eligible at the proper time to apply for citizenship papers and remain here permanently.

More than 100 so-called citizenship brokers acting as agents for fraudulent claimants to American passports have been identified by the Hong Kong United States consulate general and the British Crown Colony police. Prosecution of such brokers for fraud—no other way is possible—has increased in recent months. Nevertheless, according to figures on file, no sooner is one ring of brokers smashed by police, than another springs into existence.

The fraud brokers establish contact with Chinese whom the Communist Chinese Government wishes to send to America, and provide them with false Chinese-American families living in the United States. Then, the brokers carefully coach the applicants to face examination by United States consular agents. They are so skillful, and so thorough, according to the report, that they actually match blood types of the applicants with that of "mothers" and "fathers" in America. Since American investigators are not permitted to go behind the Chinese Communist Bamboo Curtain, issuance of passports depends on documents.

"Hong Kong is today the most active staging point in the world for illegal Chinese immigration to the United States and Canada," said the report now in the hands of authorities. "Unscrupulous citizenship brokers, with the assistance of undercover representatives in Red China and America, have been fraudulently processing Chinese into the United States as bona fide citizens.

"This for an average of $500, with a balance of $2,500 payable upon approved entry."

The traffic in illegal Chinese entries began originally with the sumggling of so-called relatives by Chinese merchants, laundrymen, etc. to use as workers or servants. Since the Communist conquest of the China mainland, however, the Red rulers have used the device to infiltrate agents by the hundred.

Many such illegal entrants into the United States join subversive movements. Some such subversives come over at the express orders, and by arrangement, of the Communist government; others are blackmailed into subversion after arrival in the United States.

Immigration authorities have found in recent months that these immigrants concentrate in work aimed at complete destruction of all bars against flooding immigration into the United States. This foreign-instigated campaign proved so effective last year that forces campaigning for amendments wrecking the McCarran-Walter actually won their adoption in the United States Senate. Representative WALTER, Democrat, of Pennsylvania, managed to block similar House action as the clock ticked away closing moments of the 1956 session of Congress.

These amendments have been reintroduced this year, and a nip-and-tuck battle over their enactment will be waged in Congress. Forces defending the existing liberal immigration laws have organized to fight subversive programs aimed at the law. The American Legion and numerous other patriotic societies have asked voters everywhere to write and telegraph their representative in Congress, demanding a vote to preserve immigration law as it stands today.

Proposals To Import Natural Gas Threaten Domestic Fuel Markets

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. SAYLOR. Mr. Speaker, in defense of America's fuel industries, I addressed the House on April 11 to point out the dangers inherent in the threat to import natural gas into the United States. In the intervening weeks I have discussed the problem with a number of my colleagues and am happy to note that there is a widespread sympathy for the coal miner, the railroad worker, and other segments of our populace who would suffer the direct economic impact if this gas were to invade our fuel markets.

I was particularly pleased that the gentleman from West Virginia [Mr. BAILEY] took the floor on April 17 to express his concern over the applications of the international pipeline groups that are now before the Federal Power Commission. As one of the leading authorities in Congress on international trade, Congressman BAILEY very eloquently pointed out the perilous implications contained in these applications; at the same time he testified against any philosophy that would permit sacrifice of American jobs for the sake of quick profits for foreign investors.

Today hearings on the several applications to import Canadian gas will be resumed before the Federal Power Commission. While it is expected that the Commission will exercise its clear public duty and give consideration to all of the ramifications of this highly complex issue, Congress must be reminded that the Commission lacks explicit authority with which to act decisively on behalf of the American public at large on such problems. The only standard contained in the act is a provision in section 3 requiring that the Commission authorize importation of natural gas unless it find that such proposals "will not be consistent with the public interest." This directive is entirely too vague and indefinite. I am convinced that the Commission needs a legislative mandate from the Congress to consider such other factors as the potential damage to the economy of the United States, including losses to the coal and railroad industries, unemployment, and overall effect on the national defense.

While I am hopeful that these matters will be taken into consideration by the FPC in the present case, I nevertheless feel that Congress should not delay in amending the Natural Gas Act so as to require consideration of these necessary factors in the public interest. I am therefore today introducing a bill which would amend section 3 of the act in this manner:

That section 3 of the Natural Gas Act is amended by inserting between the second and third sentences thereof a new sentence as follows: "It shall not be deemed to be consistent with the public interest to authorize the exportation or importation of natural gas in any case where the Commission finds that such exportation or importation will result in economic dislocation, unemployment, or injury to competing fuel industries of the United States."

I also call attention to an excerpt from the opinion of the Federal Power Commission in the basic Northwest gas cases defining policies on importation of natural gas June 16, 1954. It follows:

The Pacific Northwest is the one remaining large area of this country with a great need for natural gas but which is still without this highly desirable fuel and raw material. It is a section where great indus-

trial expansion has occurred and is still in progress, and one which has played and continues to occupy a very important role in the national defense. The record amply demonstrates that it has a real desire and need for natural gas.

The Natural Gas Act imposes upon this Commission the duty to protect the American public in all possible respects through the regulation and control of the transmission and wholesale sale of natural gas. It is most essential that the domestic consumers and much of the industry in any area into which natural gas is introduced be reasonably assured of a firm supply, so far as is possible through such regulation and control. We would fail in our duty if we did not jealously retain and exercise our full legal powers to this end. Therefore, in granting an application under section 3 of the act for the importation of natural gas, the Commission must not fail to give the fullest possible protection to all the prospective consumers.

Such protection would not be afforded to any segment of the American people if its sole source of essential natural gas were through importation from a foreign country without some intergovernmental agreement assuring the continued adequacy of its supply. Otherwise, all control over the production, allocation, and transportation to our border of such natural gas would be in the hands of agencies of foreign governments, whose primary interest would of necessity always be in the needs and advantages of their own people, and whose judgments and actions would be essentially dependent upon public opinion within that country, rather than upon the interests of American consumers. Regardless of any long and cherished friendly relations with any neighbor nation able to supply such area with natural gas, it would not be in the public interest to permit the importation of its gas as the sole source for the consumers in need of an uninterruptible supply at a reasonable price, which should always be assured by this Commission to the full extent of its powers.

That quotation, Mr. Speaker, is inserted in the RECORD at this time as a reminder to the Commission, to Members of Congress, to potential customers of the proposed pipelines, and to the American public. The quotation is official warning from the Federal Power Commission that to permit United States consumers to become dependent upon a foreign source of fuel supply would be irrational and hazardous. My amendment to section 3 of the Natural Gas Act removes the possibility of any misinterpretation of that philosophy expressed by the Commission in June 1954. I trust that the amendment will be quickly adopted in order that the Commission will have this precept as a positive guide for its decision on the applications now before it.

Salute to Bill Streit

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. HUDDLESTON. Mr. Speaker, today at this very hour the Birmingham, Ala., Kiwanis Club is honoring Bill Streit, at a surprise luncheon in Birmingham. This luncheon is in recognition of his splendid contribution to sports in the United States and throughout the world for the past 53 years. In view of Bill Streit's lifetime of activity in athletics, first as an outstanding participant in his youth, and later on as an actively interested coach, referee, and promoter, I believe it is entirely fitting, as his Congressman, to tell you something of this good man, and to ask the Members of the House to join with the Birmingham Kiwanis Club, as well as his friends and admirers throughout Alabama and the United States, in paying tribute to this fine American.

In the years 1904–05, Bill Streit first distinguished himself as a track star and as a tackle on the football team while a student at Alabama Polytechnic Institute, Auburn, Ala. Later, while attending Washington and Lee University in Lexington, Va., Mr. Streit was chosen by his teammates as captain of both the track and the football teams.

In 1924, as well as in the next two succeeding Olympics in 1928 and 1932, Bill Streit served with distinction as the manager of the United States wrestling team during the international Olympic games. He was the first American to be accorded the honor of selection as vice president of the international wrestling commission.

Having continued his active contribution to the international Olympics during the intervening years, he was wisely chosen as a member of the executive committee of the international Olympics for the games in 1948 and 1952. Only last year, he attended the 1956 Olympics in Australia as an unusually interested onlooker.

In addition, Bill Streit has made a significant contribution, locally and nationally, to the cause of sports over these years. This is amply evidenced by his able service from 1933 to the present time as the chairman and referee of the annual southeastern conference college track meet held in Birmingham. He has also for many years been president of the southeastern amateur athletic union.

While subtracting nothing from these richly deserved honors, I believe they serve more to point up and emphasize the even greater contributions Bill Streit has made in the betterment of our international relationships with foreign nations through the promotion of sports and athletic contests, and the significant influence he has had on the health and wholesome living of young Americans everywhere.

While all our citizens of Birmingham, which is Bill Streit's hometown, are genuinely proud to call him our own, his dedicated service and leadership rightfully make him a citizen of the Nation and of the world.

I therefore am privileged to pay my deepest respects to Mr. Streit, along with the members of the Kiwanis Club, and some 30 to 40 of his other sports-loving friends throughout the United States who, without Mr. Streit's knowledge, are in Birmingham to honor their friend today and to pay tribute for the rich contribution he has made toward a better America and a better world.

Oklahoma Enterprise

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. ALBERT. Mr. Speaker, the great State of Oklahoma is having a birthday this year. She is 50 years old. Her progress at her midcentury mark is unparalleled in the history of our country.

We want one and all to come to our birthday party. This party will continue until November 16, which is Statehood Day. We have the accommodations for you. Within the past few years we have developed the finest recreational facilities in the United States. We have the most modern lodges, cabins, and playground facilities to be found anywhere. The result is that our lakes and parks are attracting more visitors than any recreation areas in the country.

In the June issue of American Mercury, Henry Carlton Jones describes Oklahoma's new look in a most interesting article. I hope you will read it and decide to spend your vacation in Oklahoma. The article follows:

OKLAHOMA ENTERPRISE: A NEW LOOK

(By Henry Carlton Jones)

If you've never visited Oklahoma and picture it in your mind as a semiarid region, you're in for a surprise. Oklahoma today is dotted from border to border with a system of large and small manmade lakes They range in size from huge 95,000 acre Lake Texoma to little fellows of only a few hundred acres. But most of Oklahoma's 13 State park lakes cover several thousand acres. And the fishing is superb.

But the unusual aspect of Oklahoma's emergence from an almost arid State to a playground of sparkling waters is the series of six big ultramodern, State-owned resort lodges on the banks of these lakes.

All of them were built without a cent of expense to Oklahoma taxpayers.

Other States own resorts, lodges and similar enterprises, but, unlike Oklahoma, all these States have built and support their resorts through taxes. Oklahoma's lodges and resorts were financed through the sale of self-liquidating bonds to private investment firms. The lodges and concessions are leased to professional resort and hotel operators who know their business and run them with a smooth efficiency. Prices are reasonable and accommodations are luxurious

In about 20 years or so the original cost of these Oklahoma luxury resorts will have been completely liquidated, the bonds will be retired, and the State will own the lodges, free of indebtedness.

First of the Oklahoma lodges was the one at Lake Murray, opened to the public in 1949 during the administration of Governor Roy J. Turner. This one was frankly an experiment and came only after several years of debating and doubt. But finally, the Oklahoma State Planning and Resources Board got the green light from the legislature and self-liquidating bonds were sold to cover cost of constructing the 26-room lodge and 78 cottages. The main lodge building was built of native stone and timber but was of the new modern, functional type of architecture with wide expanses of glass facing the lake. It was strategically placed on a point of land jutting out between 2 fingers of the 7,000-acre lake.

Its setting was especially fortunate. Located in the rolling Arbuckle Mountains a few miles from Ardmore, in southern Oklahoma, it is midway between Oklahoma City and Dallas, Tex., a distance of about 110 miles each way, and it was an instant success. It is still hard to tell whether Oklahomans or Texans like Lake Murray Lodge best, because they use it in about equal numbers.

The venture has been so successful that the lodge has recently been increased to 55 rooms, all air-conditioned, the dining room has been enlarged to seat 500, and a convention hall seating 700 has been added. There is also a large swimming pool, a total of 86 cottages now, many with two bedrooms, numerous campsites, and picnic areas, and an extensive dockage and boating area for fishermen and water enthusiasts.

Total cost of the Lake Murray Lodge, including the recent enlargement runs well past $1 million, and its bonds are being retired on schedule out of earnings.

But elaborate as it is, the Lake Murray Lodge is already being topped by newer Oklahoma lodges. The one at Lake Texoma, completed May 1956, contains 106 air-conditioned rooms, has an extra 20-room fisherman's lodge, 80 cottages, huge dining room, an enormous swimming pool, wide paths, and community convention area.

The Texoma Lodge cost a total of $2,029,042 and it, like the first venture, was financed by sale of self-retired bonds sold to investors, mostly located in eastern money centers.

Lake Texoma sprawls over 95,000 acres in southeastern Oklahoma and was created by impounding the waters of the Red River, Washita River, Pennington Creek, and several smaller streams. The dam—fourth largest dirt-fill dam in the world—is located just over the line in Texas, but practically all the lake is on Oklahoma territory and is flanked on the Oklahoma side by 2,600-acre Texoma State park where the lodge is located.

And, while you may find it hard to believe such figures, data supplied by the United States Corps of Engineers, who operate the dam project, show that Lake Texoma broke the alltime national attendance record in 1956 with 7,461,000 visitors. The visitors to all the Oklahoma lakes numbered 16,153,400 in 1956.

Completed and opened to the public in May 1956 was the Quartz Mountain State Park Lodge, near the town of Altus, in southwestern Oklahoma. This big lake, about the size of Lake Murray's 7,000 acres, is located in a park of 11,000 acres.

The Quartz Mountain Lodge cost $718,000 and consists of a 46-room air-conditioned main lodge structure, plus ten 2-bedroom cottages, dining room to seat 200, large swimming pool and the usual camping and boating facilities. This is in the heart of the oldtime Comanche Indian country and there are many historic spots of interest in the area. The lake is blue and deep and is well stocked with bass, crappies, and other pan fish.

Another big lodge is the new 104-room structure in Lake Sequoyah State Park on the banks of Fort Gibson Reservoir, a 20,000 acre expanse of clear blue water fed by Grand River, one of Oklahoma's best fishing streams. In addition to the air-conditioned lodge there are 50 cottages plus a 20-room fisherman's lodge, a big swimming pool, and convention facilities.

This park is a few miles northeast of Muskogee in east central Oklahoma in the historic Cookson Hills country, once a hangout of outlaws in Oklahoma's rowdy and fancy-free past. Cost of the Sequoyah Lodge was about $1,600,858. It opened in midsummer 1956. The State park in which it is located covers 2,600 acres set aside as a game preserve and deer are plentiful there.

Smallest of the park lodges in the Oklahoma system is the one at Roman Nose State Park, near Watonga, about 70 miles northwest of Oklahoma City. This lodge contains only 20 rooms and has 4 cottages.

It opened in April 1956, and plans are already being made to double its size. This park takes its name after Chief Roman Nose of the Cheyennes who once made the canyons of the park area his winter tribal headquarters. The lake here is small, slightly lass than 100 acres, but it is fed by several springs, providing water that is cold enough for the lake to be stocked with trout in addition to bass.

Bonds have recently been sold and contracts let for the sixth of Oklahoma's lodges in Tenkiller State Park near Tahlequah. This lodge will cost $582,000 and will contain 47 air-conditioned rooms, 4 duplex cabins; and picnic areas will furnish 50 outdoor fireplaces and numerous camp sites. Plans include a dining room for 200 persons and the usual big outdoor swimming pool.

Tenkiller, if one may make a choice, is probably the most scenic of the 13 Oklahoma State lakes. It was created by damming the rock-lined, fast-running Illinois River, one of America's most famous small-mouth bass streams, and the water is well over 100 feet deep in many of its narrow necks and channels. The water of the lake is a sparkling blue green and, with the pine-clad hills surrounding it, this lake is a vacationist's delight. In 1955, even without the lodge, Tenkiller attracted 1,348,500 visitors, again using official records of the United States Corps of Engineers who operate the reservoir.

Total cost of these 6 lodge projects exceeds $7,200,000 and the chances are that none of them would have been built if tax money had been required to build them.

Fifteen years ago Oklahoma's tourist industry consisted chiefly of those travellers who were, unavoidably, compelled to cross the State and who had no inclination or particular incentive to linger.

But now Oklahoma boasts over 1,000 square miles of lake water and claims to be second only to Minnesota in the amount of inland fishing water. Since the construction of these big lakes and their luxury lodges, tourists and vacationists have discovered Oklahoma as a new playground and are coming in swarms. And thousands of Oklahomans who used to go to other States for their vacations are now enjoying the attractions of their own State.

How did all this happen? Who thought it up?

Not any one man. Several persons, in fact a lot of Oklahomans played a part in the creation of the new Oklahoma, but probably the most potent influence and the strongest voice advocating these developments has been Oklahoma City publisher E. K. Gaylord, owner of the Daily Oklahoman and Oklahoma City Times.

Several years ago Mr. Gaylord, who is a spry gentleman in his early 80's and still the active head of his publishing empire, pointed out a fact to Oklahomans that few of them had realized and many found hard to believe.

"Oklahoma," said Mr. Gaylord, "has more rivers and streams inside its border than any other State in the Union * * * yet we have very little usable water because we allow it to run into Oklahoma on one side and run out on the other."

Then he asked a simple question. "Why not stop some of this water in Oklahoma?" He advocated damming certain streams and creating lakes for flood-control purposes, to reduce soil erosion and for irrigation.

Mr. Gaylord assigned staff members on his paper to prepare articles about Oklahoma's possibilities as a tourist center * * * if there was water. He dug into the chances of bringing new industries to Oklahoma * * * if there was water. R. G. Miller, columnist for Mr. Gaylord's Times, thumped his drums for years on the same subject and was one of the early advocates of a State-owned resort lodge. Nobody, at that time, dreamed there was a chance of having more than one.

Eventually wheels turned. Legislation was enacted in Washington and in Oklahoma. One big lake after another was built and with the lakes came the more urgent need for public accommodations.

Lake Murray Lodge was first. Now there are six. If Oklahoma will build lodges in its seven other State parks remains to be seen.

But if the investors continue to want Oklahoma bonds the chances are that still more lodges will be built. Like most new enterprises the newest lodges have had a few troubles but their operators and the officials of the State Planning and Resources Board are confident they will become successes like their predecessor at Lake Murray.

Address by Hon. Alan Bible Before Jacksonian Democratic Club, Easton, Pa., May 8, 1957

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH BY HON. ALAN BIBLE, OF NEVADA, AT THE 61ST ANNUAL BANQUET, JACKSONIAN DEMOCRATIC CLUB, EASTON, PA., MAY 8, 1957

Mr. Chairman and fellow Democrats, it's a pleasure to be here tonight. Democrats all over the Nation have been joining the past few weeks in Jefferson-Jackson Day dinners, and it always gives me a great deal of pleasure to delve into the historical past of our party and pause to reexamine the basic concepts of our Democracy as created by Jefferson and Jackson.

I want to compliment you of the 15th Congressional District here in Pennsylvania for recognizing that in this great Democratic Party of ours we need honest, capable leadership. You have demonstrated this by electing my good friend, FRANCIS E. WALTER, to the United States Congress for 13 consecutive terms.

Your Congressman is a great Democrat, one who recognizes the many troublesome problems facing our Nation today. You should also take pride that your Congressman, along with my illustrious predecessor, the late Senator Pat McCarran, of Nevada, like some of our great political forefathers, had the courage and foresight to go forward with a complete codification of our complex immigration laws, resulting in what we now know as the Walter-McCarran Act.

In this regard you might be interested in knowing that Senator McCarran always laughingly said that when anyone praised the immigration law it was called the Walter-McCarran Act; but when they cussed it out, which was the more usual attitude, it was referred to as the McCarran-Walter Act.

Whatever one may call it—it stands as the product of the fortitude of two strong men—strong in that they stood up against violent pressures and antagonisms from all sides.

Few people understood what these two men were trying to do, or what they did—namely, to bring order out of chaos by putting together the many hundreds of amendments, all affecting our immigration laws, so that our system might operate as it was

intended to do—which was to protect this great country from conquest by immigration—the inevitable result had our doors been thrown wide open to all of those who sought to come here.

Through all of our history, we have welcomed immigrants who came to make America their home and become a part of all it means. They came because they believed in our form of government. They did not come here to destroy it, as was the intention of many individuals and certainly of some other countries, anxious to bend us to their will.

It was good that some recognized the possibility of the internal destruction of this great democracy, if the Communist design of patient planting of their agents here among us could have been carried to the ultimate.

Thank God for farsighted men who will bear the scorn and pressures, rather than take one chance on sacrificing the freedom this country has enjoyed since Thomas Jefferson and his kind molded this fine Government some one hundred and eighty years ago.

It is imperative that we, as Democrats, support men for election who have such constructive ideas, those who can examine present-day policies—and offer the leadership and intelligence that will stand through the years.

Men, such as Thomas Jefferson, the founder of our democracy; and Andrew Jackson, soldier, lawyer, and statesman—were men of action.

It has been said: Few men write their own epitaphs, but it was like Thomas Jefferson to do so—and from the long inventory of his honors and achievements, he selected three items by which he wished to be judged by his Maker and fellowman. He discarded all the honors that had been conferred upon him, ignored all the offices he had filled, and simply inscribed upon his tomb, the fact that he had written the Declaration of Independence and the Virginia Statute for Religious Liberty, and had founded the University of Virginia.

In making this selection, Jefferson showed remarkable insight into his own character and estimated with remarkable accuracy the verdict of posterity upon his public services.

It has been said of Andrew Jackson, that he taught the people to rule. Jackson believed "It is better in the long run that the people should rule themselves badly, than that another should rule them well." Here he expressed true democracy.

In Jackson's era, the people had still not learned to rule. They made many grievous mistakes, but they made a great step upward when they wrested the powers of government from the hands of the few and placed them where they belonged in a democracy—in the hands of many.

Jackson, in winning the Presidency, admonished the people that it was not the prerequisite of any favored class or condition of society, but that the humblest might aspire to it and achieve it by merit alone.

Jackson was the incarnation of a popular hope, the realization of a popular ambition. He was, to the people, a demonstration. The people had learned to rule.

We have a solid foundation for all America, in Jefferson's Declaration of Independence; and we have now, and have always had, men in the Democratic Party, willing to give this type of advanced leadership.

I have great faith in the American people. We all make mistakes, and most of us properly acknowledge them. I am also firm in my belief that the mistake made by the voters in electing a Republican President in 1956 is now being recognized and will be rectified in 1960. In the meantime, we need to strengthen our Congress with men who will not kowtow and acquiesce to a vacillating leadership.

One only needs to read the headlines in the daily papers to recognize the type of leadership the Republican Party is offering America today. Often, the confusing and conflicting remarks of the Republican leaders offer more laughs than the comic strips.

Over the past weekend, while the President was teeing off on 3 different golf course in 3 different States—on 3 different days—congressional leaders of his own party, the Republican Party, were teeing off on their own party's Republican platform and legislative program as advanced by their own Republican President.

Senator BARRY GOLDWATER, Republican of Arizona, was the first to tee off—and he did this on the all-time high, peacetime budget, advanced by his party's leader, President Eisenhower. Republican GOLDWATER said he was against this topheavy budget and would oppose unnecessary expenditures. He went a little further, in an essay on modern Republicanism, in one of the Nation's leading magazines. He stated therein that in 1953, Republican Party philosophy was referred to as "dynamic Republicanism." That was followed by "progressive conservatism," which was followed by "middle of the road," and now is known as "modern Republicanism." He referred to these Madison Avenue catch phrases as "meaningless platitudes," and continued that it was impossible for a political party to remain vigorous and strong if it is constantly plagued by shadings and changes in its philosophy and purpose.

Senator WILLIAM KNOWLAND, Republican minority leader in the Senate, was not to be outdone. Sparked by this beautiful mashie shot of GOLDWATER's, he immediately picked up his club and teed off on President Eisenhower's Federal aid-to-education program, declaring it was not needed now, even though he, along with other Republicans, were espousing the great need for this national program when they sought the voters' support at the last election.

Meade Alcorn, recently named chairman of the Republican National Committee, and the President's personal choice for the post—was teeing off at a western conference of Republican leaders in Salt Lake City. He stated that it was high time the Republicans in Congress and in the Nation joined together and sold the Eisenhower farm policy to the farmers of America. Apparently Mr. Alcorn did not realize that Republican Secretary of Agriculture, EZRA TAFT BENSON, had teed off a few days earlier and stated he was not satisfied with the way and manner the agriculture policy was working. Well, I don't know many farmers that are satisfied either.

I want to tell you here tonight, the Madison Avenue advertising boys did the greatest selling job in their careers when they sold a Republican platform—now one of unfilled promises—and a Republican President to the people of this Nation.

Of course, all the boys in the advertising game were after was that 15 and 2 percent commission.

The American people are now seeing what can happen when they bite on an advertising gimmick that favors a form of government offering coupon clipping and giveaways to only the favored business interests of our Nation.

We Democrats have in the past and now stand for a program of giving equal opportunities to all—and I believe the majority of voters are sick and tired of receiving Republican packages of void and unredeemable promises.

I think we owe a vote of thanks to the President's brother Edgar, who while recently visiting the Nation's Capital and his brother, enlightened the American voters further on the White House palace guard and the extravagant budget. In fact I'm told on reliable authority—that "I Like Edgar" buttons are now more popular than "I Like Ike" buttons.

Gov. Orville Freeman, of Minnesota, stated the President was going on the radio to defend his alltime high budget—and the Republicans in Congress had made a request of the networks for equal time.

Personally, I'm looking forward to this radio talk. If the President can give a fresh and vigorous viewpoint for the need of this budget—one without contradiction—I'm certain we all will welcome the explanation.

As you remember, when our great Democratic Congressman and House Speaker, SAM RAYBURN, received the President's budget, he was told, as were other Congressmen, that Members should examine the budget and make cuts if they could find unnecessary expenditures.

Republican Secretary Humphrey stated that if it wasn't cut we'd have a depression that would curl our hair. The House of Representatives, in all seriousness, and realizing the American taxpayer was in no mood for foolish expenditures—after much study, called on the President, to make recommendations in cutting his proposed expenditures.

Following several days and many news articles, the President was quoted as saying at his regular press conference, and I quote, "I tell you it is futile to talk about the United States keeping up the position it must keep up in the world, and measurably sticking to the programs that have already been adopted in the United States, or have been agreed to be necessary, and cut the budget severely."

Now, less than 2 weeks later, the President notified the Congress that the budget could be cut approximately a billion and a half dollars.

I sincerely hope the people of the Nation are following these quotes—this on and off again policy of modern Republicanism. I would welcome a third explanation—although I feel it hardly necessary—for this 85th Democratic Congress, that is now charged with holding the pursestrings, has already and will continue to make sizable cuts.

This Democratic Congress recognizes where the money is going—and where it comes from; and, in spite of the pleas from the Republican executive branch of the Government, they intend to tighten the pursestrings.

We Democrats recognize good American citizens have never refused a just budget, particularly if they thought the money was being spent wisely and on worthy projects for building a greater Nation.

We need to tell our people that the Republican Party leaders who told us they would economize, who would end growing bureaucracy, who couldn't fathom large Government budgets—have at long last caught on—and are expanding in a wreckless and disastrous fashion.

A very eminent and distinguished gentelman, speaking up in Paterson, N. J., a few years back, had this to say: "I don't know what the amount of taxes represents when we talk of $70 billion. Is that this room full of bills, or is it three truck loads? I don't know. But I do know this—we can't afford what we're spending and stay strong enough to lead the world to peace."

Yes, that was Candidate Eisenhower speaking in 1952. Well, it is apparent to Congress that he still doesn't realize how much money this is—for he is now asking for more—and this, mind you, in peacetime.

We need to tell the voters of America that this party, so concerned with growing bureaucracy, is now employing more people than ever, with 2½ million on Government payrolls, exclusive of the military—just a slight increase of 46,000 employees over the last calendar year.

In January of 1957 the Government had the biggest payroll ever, a monthly payroll of $1 billion. It also had an increase for

the month of nearly 3,500 employees. It is no wonder the President finds it necessary to defend his budget—for I can tell you that few Democratic Members of Congress will come to his defense.

It was interesting for me to learn that the first general tax laid down by the United States in 1798, a tax calling for payment of a special levy on houses and windows—led to the Fries rebellion—known then as the liberty insurrection, and that this rebellion was actually opposed by residents of your fine city of Easton. These residents did not go along with the views of the leaders of the rebellion, who thought the tax was being collected to finance a war with France.

I hope you all remember these famous remarks which were made 4 years ago, and I quote: "Certainly I know that we must find a substitute for the purely temporary business of bolstering the free nations through annual handouts, that get neither permanent nor real friends"—that was Candidate Eisenhower speaking—however, now we are led to believe by this administration that we should finance practically every nation on the face of the globe.

Four long years have elapsed since this classic statement was made and we're still in the same boat. Only now we have added some 19 nations to our coattails who formerly were not receiving foreign-aid assistance.

The Republican Party, despite President Eisenhower's victory in November, remains a sectional party. It does not have the nationwide responsibilities or accountability to the voters as a whole. A sectional party can promise the voters the moon with a fence around it, as long as it doesn't offend the voters of its own particular region. It can say anything that is expedient, with a blithe disregard for the consequences.

The Democratic Party does not and will not have that advantage. We cannot compete with the Republicans on the basis of promises. But, we can outperform the Republicans—and as long as we do this, the promises that we do make will ring in the ears of the voter with conviction.

The 84th Congress, under the leadership of LYNDON JOHNSON and SAM RAYBURN, was a Congress of performance. I sometimes feel that one of our major errors last fall was a failure to exploit the record of the 84th Congress and drive it home to the American people.

It was the Congress that passed the dollar minimum wage.

It was the Congress that lowered the retirement age for women.

It was the Congress that provided disability payments to our workingmen at age of 50.

It was the Congress that increased Federal payments for assistance to the aged, blind, and dependent children.

It was the Congress that enacted the highway bill—after deleting Republican efforts designed to provide a windfall for the favored few.

It was the Congress that kept public housing alive despite the best efforts of the Republicans to kill it.

These were only a few of the achievements. But they serve as the basis for my confidence that the 85th Congress—still in Democratic hands—will go on to even greater performance.

A political party must always face up to the problems of the present and the future. But its proposals will always have greater appeal when the American people realize and know that it has performed in the past.

We've been moving rather cautiously so far in this session of Congress, but we've found out many things that will give us the energy and ammuntion for exposing the unstable policies offered by our opponents.

Yes, we've been untangling the maze of figures and policies, and we're ready for action.

I predict as I stand here tonight that the 85th Democratic Congress will not let the American public down.

We have exercised patience—awaiting sane leadership from the executive branch of Government—without success.

We shall now tee off on our own, and continue to formulate legislation that will guide America onward.

A Bill To Preserve the Distinctive Character of Military Uniforms

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. KILDAY. Mr. Speaker, military men should be proud of the uniform they wear. It is a symbol to all that the individual follows the honored profession of arms in our country's defense.

Since the close of World War II, it has not always been possible for the men in uniform to feel that pride. This has come about because surplus or excess stores of uniforms have been sold upon the open market. Instead of being the pride of his honored profession the military man has seen his uniform used as work clothing or worn by those engaged in menial tasks. This has been particularly true of the Army uniform.

Rather recently the Air Force has adopted its blue uniform. None of those uniforms have thus far been disposed of on the open market. The Army is in the process of converting to its new green uniforms. The Marines are currently planning uniform changes.

This is the proper time to take steps to preserve the distinctive character of all the uniforms of our armed services.

I have today offered a bill, the purpose of which is to prevent the disposal of military uniforms to persons not authorized to wear the same until all distinctive markings and insignia have been removed and the distinctive character thereof termined by dying such uniforms black.

I believe that my bill will promote the morale and pride of the armed services by preventing the misuse of their distinctive uniforms. It will minimize the desire for the change in uniform shades and material which comes about from the use of the uniform by others than members of our armed services.

My bill reads as follows:

A bill to amend title 10, United States Code, concerning the sale or disposal of uniforms

Be it enacted, etc., That section 771 of title 10, United States Code is amended—

(1) By inserting the designation "(a)" before the words "Except as otherwise provided by law"; and

(2) By adding the following new subsection:

"(b) Prior to the disposal by sale or otherwise, except to persons authorized to wear the uniform or distinctive parts of the uniform of the Army, Navy, Air Force, or Marine Corps, the Secretary of the military department concerned, under regulations prescribed by the Secretary of Defense, shall cause to be removed from such uniforms, or parts thereof, including blouses, shirts, jackets, overcoats, hats, caps, or any other type of clothing worn as an outer garment, distinctive insignia, including buttons, chevrons, unit designations, and all other insignia or distinctive marks; and in addition, all such uniforms or parts thereof, shall be dyed black."

Retarded Children

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. WRIGHT. Mr. Speaker, under previously granted leave to extend my remarks, I am enclosing three articles which appeared in the Fort Worth Star Telegram. The articles were written by Blair Justice and comprise the conclusion of a series he has written on the subject of retarded children.

The articles follow:

CAUSES OF RETARDATION MAY GIVE SOME ANSWERS TOWARD PREVENTION

(By Blair Justice)

Prevention is the magic word in the vocabulary of mental retardation authorities, regardless of whether you're talking about the trainable or any group of the retarded.

The hope for the future lies in finding ways to prevent retardation from afflicting 3 of every 100 births (assuming that figure is correct).

Can it be done? Can ways be found?

There is no categorical answer.

It's true that more and more cases of certain types of retardation are being prevented. It's also true that many others cannot be prevented until science determines the causes.

DEFEATIST ATTITUDE

Some people tend to have a defeatist attitude toward retardation. Privately they emphasize their impression that the biggest percentage of retardation is inherited. And they ask, what can you do about that? How can you remake genes, the carriers of heredity?

It is wrong to say that heredity causes no cases of retardation. But it is also wrong, the best informed medical authorities contend, to say that heredity is responsible for the majority of retarded cases and that nothing therefore can be done.

Some authorities blame a discredited study published in 1912 for leading scientific thought astray on the subject of retardation and heredity. This was the story of The Kallikak Family.

A social worker presumed to trace the descendants of a Revolutionary War soldier named Martin Kallikak who had children by both a "subnormal" barmaid and by his legal wife, who was normal.

The findings: Those making up the first family tree generally turned out to be poor and dull, those descending from the legal union were bright, solid citizens. The conclusion: Retardation is inherited and passed on from generation to generation.

ERRONEOUS CONCLUSION

Authorities who have gone back and examined The Kallikak Family have found that it was not a scientific study, that environmental differences in the two family trees were not taken into consideration and that people who concluded from it that retardation is necessarily hereditary were just indudiging in a popular misconception.

"More recent studies have brought to light ample evidence to prove that more than half of all cases of mental retardation come from causes which have nothing to do with inheritance," states Walter Jacob, director of the Training School at Vineland, N. J.

What are some of these causes, and can they be prevented?

Scientists say many can. These include certain (1) causes before birth—German measles, hepatitis, and other diseases infecting the pregnant mother; (2) causes during birth—long and difficult labor, very rapid delivery, difficult forceps delivery; (3) causes after birth—inflammation of the brain from complications of whooping cough, chicken pox, measles, or polio.

MANY CAUSES UNKNOWN

Even so, Dr. Herman Yannet lists a whopping 35 percent of retardation causes as "unknown," and these, he believes, are prenatal in origin. Dr. Yannet, on the staff of Southbury Training School, Southbury, Conn., and Yale University, is the author of Advances in Pediatrics.

As for causes definitely hereditary, some authorities feel that minds should not be closed on the possibility that even these may someday be subject to moderation by science.

"It used to be supposed that hereditary factors were immutable (unchangeable). Although we haven't yet come up with ways to change the genes themselves, we are developing ways in which the undesirable manifestations may be mitigated," says Elizabeth M. Boggs, Ph. D., a vice president of the National Association for Retarded Children.

"A tendency to diabetes," continues Dr. Boggs, "is certainly hereditary and yet the worst effects of this disease can now be offset by insulin treatment.

"It appears that we may be able to develop comparable treatments for certain effects of a mental nature which are genetically determined."

DREAD OF PARENTS

It is one of the ironies of society that it is disrespectable to have weak genes causing slow wit or dullness yet it is perfectly respectable to inherit constitutional factors that predispose one to a weak stomach or diabetes.

Dr. Gretchen Hermann Runge, pediatrician at the Austin State School whose husband and father are also physicians, mentioned at least two major problems that the average practicing physician encounters in connection with mental retardation.

1. Concerned parents want a definite, conclusive answer as to whether their child is or is not retarded and this is not always possible to give, particularly right at brith of the child. "In the largest percent of the cases," says Dr. Runge, "you can't tell right away."

2. Even after the physician decides in his own mind a child is retarded, "he hates to tell the parents"—like anyone else, he doesn't particularly want to be the one to break the news. "He may hold out too high hopes to them," she said.

This series has not dwelt on the causes of retardation because the fact remains that there are an estimated 19,970 trainable mentally retarded children of school age in Texas. The question is not what caused them to get that way but what is to be done for them.

CONTACT WITH RETARDED INCREASES TOLERANCE, PATIENCE, LOVE IN OTHERS

(By Blair Justice)

The father turned his head away before answering. He loked out the window and said, "I do believe some good has come of our having retarded children.

"My wife and I know a lot more about patience and tolerance and love than we could have ever understood if we hadn't had these children."

A mother with a mongoloid son and two normal children said:

"Having a retarded brother hasn't hurt my other children. I think it will make them better persons in the long run. It will make them more tolerant of people less fortunate than themselves."

And from a doctor at the Austin State School:

"Retardation can draw a family closer together. Why? Because the other children have to make sacrifices and extra provisions. Any time you have something in a family that teaches members unselfishness you draw them closer together."

NOTHING TO DO WITH IT

Finally, from a State legislator: "I have never been able to understand people who are superior or self-righteous about being normal. I try always to remember that I had nothing to do with the fortunate fact that I am normal."

Because this series has tried to avoid anonymity on any phase of retardation, the people who made these statements will be named. They are: Jack Holland, dean of men at the University of Texas; Mrs. LaVerne Biser, of 4324 Donnelly; Dr. Gretchen Runge; and Representative Howard Green, of Fort Worth, who is coauthor of the house bill for trainable classes.

Dr. Runge and Green had no retarded children of their own. But the doctor has noticed tolerance, love, and understanding in the makeup of normal brothers and sisters of the retarded at the Austin State School.

She has watched these brothers and sisters during visits at the State school and she has seen in them tolerance and understanding not just toward their retarded sibling but toward people in general.

Perhaps some psychiatrists have theories on the tolerance, patience, and understanding displayed by many of those in close contact with a retarded child. Freudians probably could point to all sorts of psychological or mental mechanisms employed: Sublimation, transference, rationalization and, as one physician (not a psychiatrist) explained it—"overcompensation."

CHARACTERISTICS THERE

Regardless of what the root of these qualities of character is—and regardless of why they are manifested—the fact remains that they appear to be present in many of the parents and siblings of the retarded. Many seem to speak with a softer voice and extend a kinder hand.

A reaction that could be described as "overcompensation," authorities say, may be part of the picture when sympathy, compassion, and attention are overdone—sometimes to the detriment of the potential of the retarded child and the welfare of the normal sibling.

Since parents are individuals and families differ, no generalization can be made as to how they will react to retardation.

Mrs. Gussie Backers, of 2737 Merrimac, whose 16-year-old daughter Jean is in the West Van Zandt Elementary School class for the trainable, states she was worried about her daughter's illness or affliction but wasn't frustrated. "We all loved her, never tried to hide her, took her to public gatherings. I made no difference in the children (the mother also has a normal daughter) except she required a little more care physically. Jean has never embarrassed me or caused me not to have company in my home or have a full social life."

The degree of care, of course, will depend in large part on the degree of retardation and physical involvement. Jean has a paralysis on the right side but has coordination to the extent that she can dance and help with household chores.

DIFFERENT REACTIONS

Parents also react differently in their expression of tolerance, love, and understanding.

Mr. and Mrs. Alvin T. Hughes of 932 East Arlington are the parents of an 8-year-old retarded boy, "Bunny." While taking the son to doctors' offices and clinics, Mrs. Hughes noticed other retarded children and thought that maybe some of these might need care outside of their home.

About 2½ years ago, she read a story in the Star-Telegram about a retarded child who had been abandoned. Mrs. Hughes called authorities about taking the child but relatives had already provided him a home.

She was told, however, that there was another retarded boy who needed a home. The Hugheses welcomed him with open arms. Soon there were others taken in and the family began to grow until now the couple are caring for six retarded children.

Mr. and Mrs. Hughes moved to a larger house but are now looking for even a bigger home so more children can be cared for. With the help of one maid, Mrs. Hughes gives care to the children, most of whom are custodial cases, 24 hours a day, 7 days a week. Hughes works at Convair. The couple's nonprofit project is called Sunshine Haven.

ANOTHER HELPER

Mrs. Lawrence E. Stocker of 2306 Sixth Avenue, is another who has reached out to help the retarded of others. She teaches and trains so-called brain-injured children in her home and is working with Dr. Paul Moore of Northwestern University, on a study of these children.

Parents see the blessings of having a retarded child in different ways.

This is the way James R. MacPherson, who is working on his doctorate at the University of Texas, and his wife look upon their 8-year-old retarded son, Bruce:

"In a sense you can love your retarded child longer. Ours will always be a child no matter how old he is. He's a sweet child and will probably always remain innocent."

For others the age of innocence passes so quickly.

PHILOSOPHY, PRACTICAL PROBLEMS INVOLVED IN PLANS FOR RETARDED

(By Blair Justice)

The proposal to make trainable mentally retarded children eligible for State-supported classes for the handicapped in local school districts still has several hurdles to mount.

The senate passed Tuesday an amended version of the original bill. Proponents hope to get the bill converted to its original form before final legislative action.

A trainable bill in the house is not expected to be considered in committee before 15 to 20 days, said Representative Sandahl of Austin, bill sponsor. He estimated it would take another week before the house as a whole would consider the proposal.

This series has two concluding points to touch upon:

1. The philosophy of the bill for the trainable that will become law if the legislature gives final approval;

2. The practical problems that local school district will face.

TRAINABLE EXCLUDED

In a democracy it is the theory that laws are supposed to be just and discriminate against none.

In 1949, when the 51st legislature wrote into law the right of mentally retarded children to attend State-supported local school classes for the handicapped, many thought that meant the trainable as well as the educable.

Since that time educators have established a more definitive demarcation between the trainable and the educable. Because the 1949 law used the words "any child of educable mind," it was later decided that this did not include the trainable mentally retarded.

Hence, any child who could not learn such things as reading, writing and arithmetic was excluded from special education classes supported by the State.

This shut the door on the retarded child who could learn such things as self-care, social adjustment and usefulness to himself and others. Whether such things are "education" and such children the responsibility of the schools is a point already discussed.

BILL INSERTS WORD

Regardless of whose responsibility they are, proponents of classes for the trainable contended that in this country a person's rights are not measured by his potential. They say all persons, no matter what their mentality, should have equal opportunity to develop their potential, no matter how small.

This is one "philosophy" of the house bill admitting the trainable to State-supported classes for the handicapped.

All the bill does is to insert the word "trainable" in the already existing law making mentally retarded children eligible for special education classes.

Twenty-four States now have laws providing funds for trainable programs in public schools. In 19 the decision to establish the program is left up to the local school district.

Almost every law has what could be called the "practical side." The Texas bill for the trainable is not without practical problems. But there are those who say that the problem of implementing a law is one thing and the question of whether a law should exist, for the sake of justice and fairness, is another.

LOCAL MATTERS

Many of these practical problems would fall on the local school districts and in some cases could be so insurmountable as to make classes for the trainable impossible. But these would be matters for local citizens, not a State law, to decide.

If schools were not dependent on things like taxes and teachers, the problems of opening special classes for the trainable would be greatly reduced.

But schools do rely on teachers and taxes and such practical problems as these would have to be faced:

1. Classes for the trainable are comparatively expensive and allotments from the State would not likely cover the costs in all districts.

2. Certified special education teachers are scarce. Inducements in the form of bonuses often must be offered to obtain them.

3. No provisions are being considered by the State for helping local school districts set up, or pay for needed psychological and diagnostic facilities to determine which children are trainable and which aren't.

NO ANSWERS YET

4. If State department of education figures are correct, schools in Texas are failing to take care of vast numbers of the educable mentally retarded. If a local district has just so much money for classes for the mentally handicapped, are the educable or trainable to come first?

These are some of the problems school administrators foresee and as yet cannot answer.

There are other problems which will probably be answered for them by the Texas Education Agency and other authorities if legislation providing classes for the trainable passes both chambers.

These include: How long are the trainable to be trained and when are they to be "graduated" by the schools? Must the trainable mentally retarded be put in regular public school buildings? Can classes for them be held in separate facilities, where there will be no intermingling with normal pupils?

Some authorities say the cost would be the biggest problem in most school districts.

TEACHER SHORTAGE

Figures from the Fort Worth public schools show that the class for the trainable at West Van Zandt Elementary School, supported strictly by local taxes, costs approximately $5,000 a year. The breakdown per pupil is estimated at $500 a year. The average for the education of normal pupils in the elementary school division is $227.84. (But this is on the basis of thousands more pupils and larger classes).

State Department of Education data show that if the trainable were admitted to State-supported classes, the average paid a local school district would be $4,003 per unit. However, this is figuring the State bears 84 percent of the cost and the local district 16 percent (which would be true in a Statewide average). In a big city school district such as Fort Worth, the local district bears about 50 percent of the cost in special education, it was estimated here.

Other authorities contend the shortage of teachers would be the biggest problem; still others say lack of psychological and screening facilities would be the biggest.

Senators Bracewell of Houston and Aikin of Paris, two of the authors of the trainable bill, do not exclude the possibility of the need, and necessity, for local tax money, direct contributions and fees to supplement State funds for classes for the trainable.

Senator Aikin looks upon the cost question this way:

"If only a few children a year in each district are developed to the extent that they won't have to become wards of the State, the program will pay for itself."

But the true question is, say those supporting the legislation, which is more important at this point, cost estimates or the right of a child?

Representative Green, of Fort Worth, who is supporting the trainable bill of Representative Sandahl has a philosophy toward the rights of the retarded that can be summed up this way:

"There, but for the grace of God, go I."

Speech by Hon. Harry F. Byrd, of Virginia, at the Banquet of the Hampton Roads Maritime Association, Norfolk, Va., May 9, 1957

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. TUCK. Mr. Speaker, the senior Senator from the Commonwealth of Virginia, Hon. HARRY F. BYRD, on May 9, 1957, delivered a memorable address before the Hampton Roads Maritime Association in Norfolk, Va. Under leave to extend my remarks, I include the following complete text of his address.

I commend Senator BYRD in the highest terms upon the forthright and courageous manner in which he pointed out the dangers and evils of the iniquitous so-called civil rights bills now pending:

Now I am going to speak about civil rights, and especially about civil rights bills pending in Congress. This is a matter of tremendous consequence to all of us.

There are 15 or 20 of these civil rights bills, and while I regret to say so, this is punitive legislation to punish the South. That's all it is. Their purpose is to punish us because we will not submit to the Federal Government in Washington—or may I say the Supreme Court—when we believe what we are doing is eminently constitutional, and to follow their bidding would destroy our public-school system.

One of these bills is especially offensive, and I shall submit my discussion to that one. It would establish in Washington a special bureau which would send its grants into the South and originate suits against southerners. They could go anywhere, of course. They could go to the North, the East, and the West. There have been riots and hangings outside the South. But this is an anti-South bureau.

When its agents originate cases against southern people they would be tried in Federal courts without jury, subjected to contempt of court proceedings, and so forth.

I often think of those great Virginians who established our form of government—Jefferson, Madison, and Mason—on the basis that States were sovereign, and that the Federal Government should have no power except that delegated to it by the States, and it could be withdrawn by constitutional amendment.

I wonder what those great men would think of a Federal bureau established to go into Southern States originating suits against their citizens as punishment for conforming with State constitutions and laws.

What have we done to deserve this treatment? We have fought for constitutional democracy. We fought for it in 1860. We fought to the last ditch with the most conspicuous bravery in human history. Finally, in defeat by sheer numbers, we won everlasting world esteem.

We took our defeat with fortitude as we went through the terrible days of reconstruction. As I watch us handing out billions to defeated nations of World War II, I think of the kind of Marshall plan the carpetbaggers brought into the South to aid our reconstruction.

Since the War Between the States, as before, no section of the country has contributed more, in any respect, to the defense of the United States than the South. Yet we are to be punished because we disagree with Federal decree singularly designed to destroy the oldest way of life in the Nation.

Let me be frank, we southerners are fighting this thing with our backs to the wall, but what we lack in numbers we make up in our determination and will to protect our Southern States and the welfare of our people. We know that our form of government cannot exist over the years if States are to be mere provinces of a central government.

I never expected to see the day when the Attorney General of the United States appeared before Congress and requested the right to abolish in civil rights cases the inherent privilege that Anglo-Saxons have enjoyed for centuries—trial by a jury of our peers.

I joined with the senior Senator from Mississippi [Mr. EASTLAND] and the junior

Senator from South Carolina [Mr. THURMOND] in introducing S. 1735, a bill to amend title 18, United States Code.

This bill simply guarantees the right of trial by jury in criminal contempt cases except, of course, when the contempt is committed in the presence of the court or so near thereto as to interfere directly with the administration of justice. It gives to all the same right to jury trial in criminal contempts as is presently granted by the code in labor disputes.

Our bill has been castigated by the Department of Justice as an attempt "to emasculate" the President's "program" by "deceptive appeals for the protection of the right to jury trial."

Regardless of the intentions of Senator EASTLAND, Senator THURMOND, and myself, it is charged—and I might add the innuendo is that our intention is subtle, devious, and evil—"this is a dangerously deceptive proposal." It is said to be "a clever device to nullify the proposed civil rights legislation."

On April 5 last, Mr. Warren Olney III, Assistant Attorney General of the United States, addressed the ninth annual conference of the National Civil Liberties Clearing House, the subject of which, it seems, was mainly a criticism of our bill and the reasons why he did not want or like jury trials.

His opening sentence stated that enactment of the President's program would give to the Government, for the first time, the authority necessary for effectual enforcement of federally guaranteed civil rights.

Mr. Olney believes that the existing legal tools available do not permit the Department effective action. He wants to abolish jury trial for speed and remove any uncertainty of conviction. Time and again the Department's attention has been called to the numerous existing civil rights statutes on the books, both civil and criminal, the existence of which the Department is well aware. Yet, these extraordinary remedies are demanded, without the safeguards in the Bill of Rights. The truth of the matter is this: As to the criminal statutes, the Department will have none of them because they are placed under the burden of proving their cases in conformance with proper criminal processes. Proof is too hard, they claim. The Department wants quick convictions through Federal judges—not juries which have always and historically stood between the prosecutor and the defendant.

Speed is the order of the day with no accountability.

Mr. Olney complains that juries do not convict, and that there are too many acquittals. What has happend to our great maxims of innocent until proved guilty?

The advocates of these civil-rights measures say that the injunction provides a quick, "tailormade" remedy in this area. It is true that constitutional safeguards provided in judy trials make the punishment of an act as a crime a slower process.

Constitutional guaranties do render action in the democratic process slower, more cumbersome than actions by totalitarian states. Yet, should any constitutional guaranty be surrendered for the sake of quickness and ease?

We should remember that the Founding Fathers established constitutional guaranties because they loathed bureaucratic and judicial tyranny.

The proponents of these measures also say that the injunctive remedy will be free of prejudice and bias, sometimes shown by local juries. But, they fail to take into account the situation and possible prejudice of the judge.

In plain words, the Attorney General and his aids are not willing to trust their so-called civil rights to jury trial and say that juries may be too prejudiced to render decisions in accordance with the oaths they take. They want to make Federal judges, appointed by recommendation of the Federal Attorney General, the judge and the prosecutor from whose decisions there can be no appeal in contempt proceedings.

I am reliably informed that a Federal judge stated from the bench before hearing evidence or arguments on an integration case that he was inclined "to throw the whole case out of the window." This he did by reading a decision prepared before the hearing.

This judge further said from the bench, "The integration problem will never be resolved in Virginia until we have a different political leadership." This remark evidently had reference to the coming campaign when the effort will be made to elect a Republican Governor of Virginia.

Had Judge Hoffman rendered his decision in an orderly and judicial fashion, I would have no word of criticism, but to decide before hearing arguments and make bombastic and political statements from the bench is not the way to conduct judicial procedure.

We vest great power in our judges and expect decisions to be rendered after due hearings and without prejudice or predetermination.

Judge Hoffman must have known that he was dealing with a very explosive subject and that such a display of arrogance and prejudice from the bench could not fail to cause bitter resentment and inflame public opinion.

This is the greatest democracy in the history of the world. It has grown to this position in the brief span of 160 years, and with only 6 percent of the world's population. This could not have been achieved without the form of government bequeathed us as a sacred heritage by our forefathers.

Strike down the power of States to control their own affairs, and concentrate all power in Washington, and you strike at the heart of what makes this Nation great.

To me the decision of the Supreme Court abolishing segregation and compelling integration in States and local public school systems was a vicious and destructive invasion of States rights.

It set aside all previous decisions by the Supreme Court on the subject, including the 1928 decision by Chief Justice Taft, a great and learned man and a former President of the United States, who held segregation was constitutional if separate equal facilities were provided. I don't want to say anything personal about the present Supreme Court, which repealed the Taft decision, but if I must choose between a decision rendered by the late Chief Justice Taft or by Chief Justice Warren, it doesn't take me long to make the decision.

Again, in 1896, the Supreme Court rendered a decision approving equal but separate public schools. So, we have over 100 years of approval of various Supreme Courts then existing of segregated schools. Has this present Supreme Court all the ability that our great Justices through the long years have lacked?

This vicious recent decision did violence to State constitutions and laws, and even to Federal laws which provided segregation in the District of Columbia schools. It influenced 101 Members of the United States Congress to take the unprecedented action of signing a solemn manifesto holding that the decision was an illegal usurpation of power.

It would strike down a way of life in the United States which has been developed over a period of 160 years and, if enforced, it will destroy our great public school system.

I have had the great privilege of representing Virginians in various capacities for 40 years. I think I know something about conditions in Virginia. In my judgment, integration cannot be enforced in a majority of Virginia communities, I do not believe it is favored in any of them. How can we operate a public school system in Virginia when a majority of the communities have withdrawn? A little deeper in the South no communities will participate in an integrated system.

Let's be sure we understand the situation. Virginia has been selected by the NAACP and the Federal Government for their first onslaught. There are several reasons for this choice. In Virginia we have some communities where integration offers little problem. They believe if Virginia can be forced to surrender, it would have great effect on the fighting spirit in the rest of the South. No Federal suits have been started in South Carolina, Georgia, Mississippi, Alabama, and other Southern States.

As in the War Between the States, Virginia will be the first battleground. It should be noted that these school suits have already been started in Virginia. They have chosen to wage war on Virginia because they think our communities are divided. I think they will learn their mistake.

But there is an ordeal ahead. In my judgment, we have the courage and the fortitude to meet the challenge. We are already fighting, and we shall continue to fight to preserve our public school system, and that is precisely the objective of the laws recently passed by the Virginia General Assembly.

We are fighting, too, to preserve States rights which the vicious Supreme Court decision would destroy. We are facing a situation which is not only more serious than anything we have known in our day, but more serious than anything since the War Between the States. Our cause is right, and I pray we will meet our great responsibilities with calm but strong determination—but we must not let one act of personal violence mar our record for law and order.

I wish to make another observation. We hear it said that a Supreme Court decision, illegal and vicious or not, should be obeyed without question. To those who say we must, without protest, obey this Supreme Court decision, let me name just a few great Americans of the past who commented on this same subject:

Lincoln said at Chicago, July 10, 1858, speaking of the Supreme Court decision in the Dred-Scott case:

"Somebody has to reverse that decision, since it is made, and we mean to reverse it, and we mean to do it peaceably."

Thomas Jefferson said in a letter to Spencer Roane, 1824:

"The great object of my fear is the Federal Judiciary. That body, like gravity, ever acting, with noiseless foot, and unalarming advance, gaining ground step by step, and holding what it gains, is engulfing insidiously the special governments into the jaws of that which feeds them."

Remark attributed to Andrew Jackson, July 10, 1832:

(After the Supreme Court had rendered a decision relative to missionaries and the Cherokee Indians whom they had incited to resist the policy of the State of Georgia, difficulty was encountered in enforcing the decision.) President Jackson commented, "Well, John Marshall (who had pronounced the decision) has made his decision: Now let him enforce it."

Remark attributed to President Grant:

He was asked the question: "President Grant, they have struck down the Legal Tender Act giving character to the greenbacks with which you won the war. Do you acquiesce?" "Acquiesce? Never. I will reconstitute that Court." And he did.

President Franklin D. Roosevelt, in a radio fireside chat March 9, 1937, said:

"The Court, in addition to the proper use of its judicial functions, has improperly set itself up as a third House of the Congress—a superlegislature, as one of the Justices has called it—reading into the Constitution words and implications which are not there, and which were never intended to be there. We have reached the point as a nation where

we must take action to save the Constitution from the Court and the Court from itself. We must find a way to take an appeal from the Supreme Court to the Constitution itself. We want a Supreme Court which will do justice under the Constitution, not over it. In our courts we want a government of laws, and not of men."

We are not demanding that the Justices be thrown out and the Court packed, as Mr. Roosevelt did. We are simply asking the Court to consider the damage it has done, reverse itself, and go back to the Taft decision of 1928.

Meanwhile, we reserve the right to criticize the Supreme Court, just as we do the President of the United States and Members of Congress. In fact, we reserve the right to defy the Supreme Court, so long as we do so without violence or attempt to overthrow the Government. That is inherent in our Constitution.

The Taft decision was as much of a Supreme Court decision as the Warren decision. I choose to follow the Taft decision. The Court has reversed itself before. I trust that, in view of the massive resistance throughout the South where its decision does most injury, this Court may see the error of its ways and reverse itself again. This would be in keeping with the freedoms of our great constitutional democracy.

Following the pattern of the May 1954 public-school decision, the Supreme Court has just rendered a startling and shocking decision.

A man by the name of Girard died in Philadelphia and left a large sum for the establishment of a school for "poor male white orphans."

The Girard College operated for 125 years as the donor directed. In 1954 two Negro boys asked for admittance. The Supreme Court of Pennsylvania denied the petition, stating that Girard "had the undoubted right to dispose of his property by will." Not one dollar of public funds was used in the operation of this school. Yet the Supreme Court of the United States has just reversed the decision of Pennsylvania's Supreme Court and ordered the admission of Negro students in contradiction of the will of Girard, who gave all the money for the school's operation. How far will the Supreme Court go? To deny the right of a citizen to will his property to be used for a specific purpose makes one wonder what will come next.

A Norfolk newspaper, the Journal and Guide, on March 30, said I had made an appeal to race hatred. I feel I cannot permit this unfair statement to go unchallenged. The editor of this Norfolk paper was not fair enough to say that as Governor of Virginia I recommended, and the general assembly enacted, the strongest antilynching bill of any State. This was in 1926. In the 31 years intervening not a single lynching has occurred in Virginia.

As Governor, I attempted to serve the Negro citizens of Virginia with the same courtesy and consideration as I did the white. I recall that as Governor, taking a particular interest in the Virginia State College, a Negro institution at Petersburg, as I was convinced this institution was being neglected in appropriations. A Negro president named a building there after me. I have always believed that the Negro had an honorable and most useful position in our Nation. In fact, in my own business operations I employ more Negroes than whites and pay them exactly the same.

We are faced with three Federal actions which, if successful, would destroy the last remnants of local self-government:

First, the Supreme Court decision providing for enforced integration in our local schools.

Second, a companion measure to take away the right of trial by jury in civil-rights litigation and vest tyrannical power in the hands of Federal judges appointed upon the recommendation of the Attorney General of the United States.

Third, a vast Federal-aid local school-construction program which will give still further control to the Federal Government of our local schools.

The South is faced with great decisions and ominous difficulties in meeting these trials. I pray that we will have the same courage and fortitude that lived in the hearts of our forefathers whose sacrifices made possible the freedoms of this, the greatest form of free government ever conceived in the mind of man.

Spending and Taxation

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. SMITH of Kansas. Mr. Speaker, in these days of much controversy over cutting or trimming the budget, we are accustomed to having many organizations say, "We must have economy, but our project is different, ours should not be cut."

We as Members of Congress full well realize that much of the spending program developed in the past has been due to "pressures from home" for more services on behalf of the Federal Government.

I wish to point out that appended letter is certainly a new approach. It is the first time in my legislative experience that a letter contains this phrase, "We believe the time has come when we should be more grateful to our chosen representatives for what they save us than for what they get for us. Inflation must be curbed."

To me, that statement is most significant because it proves that the people back home are fully aware of the dangerous road we travel—spend, spend—with no thought of tomorrow.

I am proud that the Plainville, Kans., Chamber of Commerce, a rural town on the high plains of Kansas, so forcibly states their position:

[From the Plainville (Kans.) Times of May 9, 1957]

OPEN LETTER

MAY 9, 1957.

Senator ANDREW H. SCHOEPPEL,
Senator FRANK CARLSON,
Congressman WINT SMITH,
Washington, D. C.

GENTLEMEN: You represent us in the Federal Government and we look to you to protect our interests in the matter of spending and taxation.

We are alarmed because of the trend toward constantly increasing Government expenditures.

The purchasing power of the dollar continues on its downward plunge which has already brought the highest cost of living on record.

Authorities tell us that much waste and duplication in Government operations can be eliminated. We ask that extreme efforts be made to encourage economy and efficiency in government.

The Federal budget as proposed calls for too much spending and must be cut to reason. Unless this is done it will not only drain too much tax money from the people but it will also encourage the habit of undue dependence on the Federal Treasury.

We feel it is our duty to petition you as our representatives in Congress to do your utmost to check excessive Government spending. At the same time we believe the people, also, should restrain themselves from exerting pressures that tend to force higher living costs. We believe the time has come when we should be more grateful to our chosen representatives for what they save us than for what they get for us. Inflation must be curbed.

Respectfully,
PLAINVILLE CHAMBER OF COMMERCE.

Who Are Our Friends in the Middle East?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, the following articles, which appeared in the New York Herald Tribune on April 10, 11, and 12 written by Tom Lambert, give a very fine indication of who our friends are in the Middle East:

[From the New York Herald Tribune of April 10, 1957]

SOVIET IS SENDING EGYPT BETTER JETS, REPLACING ARMS SEIZED BY ISRAEL—SYRIANS AND YEMENIS BOLSTERED BY RED AID—MORE RUSSIAN TECHNICIANS MADE AVAILABLE TO TRAIN ARAB FORCES

(By Tom Lambert)

(EDITOR'S NOTE.—This is the first in a series of articles by Tom Lambert, Washington correspondent of the New York Herald Tribune, specializing in military affairs.)

WASHINGTON, April 9.—The Soviet Union again is on the verge of supplying Egypt—if it has not done so already—with late-model, high-performance jet fighters, the Herald Tribune was informed today.

Further, with Czechoslovakia and possibly Poland, Russia is replacing some of the Communist-made arms which Egypt lost to Israel in the brief Middle East war last autumn. It is not known for certain, however, if the Communists have replaced all of the tanks, guns, and other military equipment which Israel captured from Egypt, an impressive list which will be detailed later. Reliable sources say that Soviet, Czech, and Polish ships calling at the Egyptian port of Alexandria or the Syrian port of Latakia have brought in war materiel in recent months, as well as more Communist military technicians to reinforce others already in those countries. The Communists, either Soviet or Czech, or both, also are known to have delivered some arms and assigned some technicians recently to the little Arab kingdom of Yemen.

EGYPT BELIEVED WEAK

The essence of these reports is that the Communists are helping Egypt rebuild her armed forces, which were battered heavily in last year's war; helping to expand the armies of Syria and Yemen, and to train the soldiers of all three nations. But the fact that Egypt has Communist arms and is receiving more does not mean her armed forces are capable of using them or that she has a force militarily capable of going to war. The best military judgment here is that Egypt

is no closer now to military proficiency than she was last year.

Continued instruction, however, might improve Egyptian soldiers and airmen, and the Communists seem willing to supply the instructors. Egypt is host now to an unknown number of both Soviet and Czech technicians remarkably skillful with guns and aircraft.

Authoritative informants say Egypt "probably" is receiving some of a "large number" of Mig-17, possibly Mig-19 and Yak-25 jet fighters ordered late in 1956 or early this year from the Soviet Union to replace the serious aircraft losses it suffered last year. All three are much better aircraft than the Mig-15's supplied earlier by the Soviets to Cairo.

Egypt had about 90 Soviet Mig-15's and 45 IL-28 twin-jet light bombers when she was attacked last year by Great Britain, France, and Israel. Reliable sources estimated Egypt lost one-third to one-half of her aircraft in British-French attacks on Egyptian airfields and in a few aerial skirmishes with the Israelis.

The Egyptians flew most of their remaining aircraft to Syria and Saudi Arabia. These have returned. Most of the bomb-damaged airfields have been repaired and some runways have been extended, probably for use by higher performance aircraft.

Syria, which received by mid-January this year a dozen of 60 Mig-17's ordered earlier from the Soviet Union, reportedly lent 6 of those aircraft to Egypt for pilot training and has accepted 6, Egyptians for Mig-17 pilot training in Syria.

The Syrians are not heralded widely as jet pilot instructors, but at least 10 of approximately 60 Soviet officers, including a general, now in Syria, are said to be highly qualified in this respect.

EQUIPMENT LISTED

Both Syria and Egypt, pledging their cotton and agricultural produce as payment, negotiated large arms agreements with the Communists in the autumn of 1955. The Egyptian deal, which President Gamal Abdel Nasser later admitted was with the Soviets, was bigger than Syria's. Egypt was to obtain 100 Mig-15's and 50 IL-28's, 50 Josef Stalin and 275 T-34 tanks, 150 SU-100 self-propelled guns, 56 rocket launchers, 140 guns of 152 and 122 millimeter and 240 smaller caliber antitank guns, plus some antiaircraft pieces. For its navy, Egypt was to get 2, or possibly 3 submarines (2 of 1,200 tons with 6 torpedo tubes and capable of 16 knots on the surface), 2 destroyers, 4 minesweepers and probably a dozen motor torpedo boats.

ISRAEL'S BOOTY

Precisely how much of this equipment was delivered is unknown, but a steady stream of Soviet and Czech ships unloaded arms at Alexandria until the Middle East war broke out last October. Shipments were halted, understandbly, but since have been resumed.

But it is known that a great quantity of Communist arms were delivered to Egypt by the Soviets and Czechs, as proved by the amount of war materiel captured by Israeli forces in the Sinai Desert.

The Israelis are said to have bagged the following: Twenty-five T-34 tanks, 6 SU-100 self-propelled guns, 70 armored cars, 6 reconnaissance cars, 10 freight cars, thirty-seven 57-millimeter antitank guns, eighty-five 82-millimeter recoilless rifles, four 20-millimeter antiaircraft guns, 1,350 semiautomatic rifles, 650 light machineguns, 75 radio sets, 1,000 vehicles such as trucks and jeeps, plus more than 200,000 rifle and machinegun cartridges and 45,000 rounds of ammunition for tanks, self-propelled and other artillery guns.

ARMS FOR FEDAYEEN

The recoilless rifles, 20-millimeter antiaircraft guns, some rifles and light machineguns and communications equipment were Czech produced. The balance of the captured equipment came from the Soviets.

The Egyptian arms deal with the Communists was just one phase, however, of Cairo's traffic with Moscow and other Red nations, as will be shown in a later résumé of commercial and cultural exchanges.

And the arms were intended not only for regular Egyptian forces, but for the fedayeen guerrillas, whose murderous activities now are known to be linked firmly with Cairo's continuing determination to drive Israel into the sea.

[From the New York Herald Tribune of April 11, 1957]

PROOF LINKS EGYPT TO FEDAYEEN RAIDS—DOCUMENTS SHOW ARMY OFFICERS TRAIN, ORDER, PRAISE GUERRILLAS

(By Tom Lambert)

(EDITOR'S NOTE.—This is the second in a series of articles by Tom Lambert, Washington correspondent of the New York Herald Tribune specializing in military affairs.)

WASHINGTON, April 10.—Documents made available to the New York Herald Tribune establish conclusively the official connection between the Egyptian Government and the Arab fedayeen guerrillas whose raids into Israel, now being resumed, sparked the Middle East war last year.

The documents, some of them captured by Israeli forces in their Sinai desert campaign against Egypt, show that Egyptian Army officers trained, paid and gave orders to the fedayeen to slay Israelis and recommended them officially for their depredations.

One document proves that the Egyptian Embassy in Jordan acted as a receiving point for arms turned in by fedayeen who had slipped into that country after an incursion into Israel from the Egyptian-held Gaza strip.

Another document details Egyptian Army intervention in the case of a fedayeen who was being tried in an Egyptian civil court for murder. An Egyptian major asked Egyptian civil authorities, in effect, to turn the man loose because he had been such a proficient killer of Israelis and could be used again for such work.

Egyptian President Gamal Abdel Nasser has agreed to work with the United Nations emergency force to halt inflation across the Egyptian-Israeli demarcation line into Israel, it was announced by U. N. Secretary General Dag Hammarskjold after he returned in March from his most recent trip to Cairo.

But Israeli sources told the Herald Tribune that in the latter part of March and early this month there have been at least a dozen such raids by fedayeen operating from the Gaza strip and Jordan.

An Israeli spokesman here said today if the fedayeen raids increase in volume, his government, as stated March 5 by Premier David Ben-Gurion, "reserves its freedom to act to defend its rights."

These guerrilla operations have left more than 450 Israelis killed and an additional 1,000 wounded in the past several years.

DWINDLED AFTER INVASION

Fedayeen activities dwindled sharply immediately after Egypt's defeat last year and occupation of the Gaza strip by Israeli forces, but Egypt did not abandon the concept of a shadow army trained to kill and pillage on Egyptian command.

On Christmas Eve, nearly 2 months after the end of the Middle East war, the Cairo radio announced bluntly "the Government of Egypt is organizing fedayeen and instilling them with readiness to fight." Despite a purported Egyptian agreement with Mr. Hammarskjold to work with the U. N. emergency force to prevent raiding the Gaza demarcation line, the fedayeen are renewing their incursions into Israel.

The fedayeen, known also in Egypt as the Palestine army, are recruited by Egyptian officials principally among Palestine Arab refugees in the Gaza strip, bitter men who can look across the border into Israel to land or homes they once owned and are easy prey to Egyptian suggestions of vengeance, murder, and pillage.

Egypt not only recruits Palestine Arab adults for such murderous tasks but instructs Palestine Arab schoolchildren in the most efficient ways to kill Israelis.

According to Egyptian documents captured by Israeli forces in Sinai Desert and Gaza strip Egyptian Army headquarters, the fedayeen are paid up to 9 Egyptian pounds a month ($25.83) while they are being trained and 4 Egyptian pounds monthly ($11.48) when they are in action, plus a bonus of 1 or 2 pounds for successful forays against Israel.

Abdullah Hassan Abu Sardani, a fedayeen captured by Israeli forces in early 1956, told his captors he had been trained for 15 days by Egyptian officers in a camp near the Pyramids on how to use rifles, machineguns, and grenades. He said he was returned to a fedayeen base in the Gaza strip, then dispatched into Israel by an Egyptian Army major who told him and his compatriots their job was to "shoot up vehicles and kill everyone in sight."

GUERRILLA FIGHTERS

Egyptian instructions to the fedayeen do not echo precisely the orders given by Soviet and Communist Chinese officials to the partisans and guerrillas who operated in the Soviet Union and China during World War II and the Chinese civil war. But the instructions are similar to those given Communist and all other guerrillas, stressing brutality, hit-and-run tactics, stealth, and attacks on small groups.

Egyptian encouraged and directed, the fedayeen raids into Israel have been going on since the 1949 Arab-Israeli armistice agreement. Egypt is known to have participated officially in such operations since December 1953.

In that month, the Egyptian Minister of Defense ordered the commander of Egypt's Sinai army to cultivate by good will and fear the Sinai Bedouin tribes, arm them, promise them food and infiltrate them into the demilitarized area near Aja. This order did not suggest openly that the Bedouins kill Israeli, a pastime for which fedayeen later were highly praised and commended officially by the Egyptian army.

HOLY MISSION

Thus, a fedayeen named Ay Sayed Hasan Dahasmah received an official commendation from the commander of the Egyptian Army post at Aref for a holy mission executed in Israel on May 28, 1956.

Fedayeen activities went into high gear in autumn of the previous year as President Nasser was negotiating his arms deal with the Communists.

On August 28, 1955, the operations section of Egyptian Army headquarters ordered the commander of the Sinai-based Egyptian 3d division to send fedayeen patrols for action into Israel. On the same day, Mohamed Tewfik Abden Fatah of the Egyptian Army chief of staff's office formally instructed the 3d division commander to increase the number of fedayeen in the Gaza strip so they could carry out guerrilla activities in Israel. The fedayeen were ordered to molest the enemy, kill every patrol or soldier encountered in Israel and to mine Israeli roads.

An effective fedayeen was certain of Egyptian Army backing if he ran afoul of Egyptian civil law. On September 17, 1955, Maj. Mustafa Mohamed Hafez of Egyptian Army intelligence intervened in the civil trial of a fedayeen accused of murder.

WORTHWHILE JOBS

The Fedayeen, Yunes Mubarak Hassan el-Abid, had performed such worthwhile and praiseworthy jobs as helping kill at least eight Israelis, ambushing convoys and blowing up houses. Major Hafex wrote to the civilian governor of the Gaza strip, that because of these wonderful acts we would ask you to have mercy on him and not endanger his life, for there will be an opportunity to use him in the future.

Egyptian officials from President Nasser down have lauded the fedayeen. President Nasser said in May 1956 that he believed in the strength, ability, loyalty, and courage of the guerrillas, whose task was taking revenge for their homeland and people against Israel. Hassen el Bakouri, Egyptian Minister of Religious Properties, suggested the previous month the fedayeen should penetrate into Israel and transform the lives of its citizens into a hell.

FROM OTHER NATIONS

Although Egypt played the principal role in recruiting, training and employing the fedayeen, other Arab nations took part in these missions of murder and destruction. In an official Egyptian Army memorandum of August 15, 1956, the director of the army's intelligence office in Palestine was advised that a group of fedayeen, after leaving Gaza and staging a 1-week campaign of acts of revenge in Israel had turned in their remaining arms and equipment at the Egyptian Embassy in 'Ammān, Jordan.

And in December last year the Cairo radio declared, "If Israel prevented the use of Gaza bases (for fedayeen raids) there are many other places which could be used for that purpose." The broadcast said other Arab nations were training fedayeen and instructing them in warfare. In that month, there were 30 fedayeen raids into Israel from bases in Jordan and Lebanon.

Continued fedayeen raids into Israel post the danger that the Israelis may retaliate in force. The present uneasy truce in the Middle East hinges greatly on future operations by these Egyptian-organized murder and plunder units.

[From the New York Herald Tribune of April 12, 1957]

EGYPT IS MOVING INTO RED ORBIT—TRADE, CULTURAL PACTS STRENGHTEN TIES RESULTING FROM ARMS DEAL

(By Tom Lambert)

(EDITOR'S NOTE.—This is the final article of a series by Tom Lambert, Washington correspondent of the New York Herald Tribune specializing in military affairs.)

WASHINGTON, April 11.—A New York Herald Tribune digest and summation of confidential intelligence, political and economic reports about Egypt since 1955 leads to this conclusion: Egypt, linked with communism through agreemets which mean she will have a red-armed army, navy and air force, has been moving steadily closer toward the Communist orbit through a series of commercial and cultural pacts and exchanges with Moscow and her satellites. Cairo's arms deal with the Communists in September, 1955, tied up nearly 18 percent of Egypt's income from exports in 1955; 21 percent in 1956, and a similar amount in the first half of this year, according to foreign intelligence estimates made available to this newspaper.

GROWING TIES CITED

Reported singly, the impact of Egypt's treaties and exchanges with Communist nations does not seem great. But a compilation of such pacts and agreements, and of visits and tours by Egyptians to Communist countries and by Soviet and satellite groups to Cairo, illustrates Egypt's growing ties with the East.

Since signing a major arms agreement with the Communists in September, 1955, Egypt has initialed or renewed trade pacts with the Soviet Union, Rumania, Communist China, Czechoslovakia and Bulgaria, according to reliable sources here. Egypt now is obtaining from Communist countries an increasing part of her imports of grain, oil, iron ore and manufactured equipment. And a growing portion of Egyptian produce, particularly cotton, is going to the Soviet bloc.

In the same period, Egypt has established a commercial office in Communist East Berlin, entertained an East German trade delegation and authorized East German and Soviet trade fairs in Cairo.

WINDING UP WITH DEFICIT

Statistics from foreign intelligence reports here indicate the value of nonmilitary goods (mostly cotton) shipped by Egypt to Communist nations is lower than the value of such goods she is receiving from them, and that Egypt is winding up with a deficit in such exchanges.

One such report says that in the first half of 1956, Egypt's trade deficit with Communist nations totaled more than $50 million. The latter may have balanced off this shortage with shipments of military goods, which contribute little to Egypt's shaky economy.

In the cultural field since 1955, Egypt has sent delegations of doctors, newspaper men, tourist directors and others to the U. S. S. R. and signed a cultural agreement with the Soviet Union, sources here say. She has entertained cultural groups from Communist China and Poland. She has been host to a committee of Soviet nuclear and sun energy specialists, and has signed a pact with the Soviet Union for cooperation in the peaceful uses of atomic energy.

PRESS MIRRORS RED LINE

These moves signaling closer relations with communism are having noticeable effects in Egypt, informants say. One embassy here has a report that the Russian language will be taught in some Egyptian schools which formerly featured French and English as foreign languages.

Observers here and abroad have commented that the controlled Egyptian newspapers increasingly mirror the Communist line on international issues.

While Egypt was establishing closer relations with Communist nations, she also was continuing her campaign against Western influence in the Middle East, and pursuing her drive to become the leader of the Arab world and a major voice in Africa. Cairo radio has been used extensively in the latter attempt, which dovetails neatly with President Gamal Abdel Nasser's reported ambition to become the head man in Islam and spokesman for Arabia and Africa.

Efforts in that direction have not been fruitless. American reporters who toured North Africa recently with Vice President RICHARD M. NIXON commented on Cairo radio's influence in the area. They also noted numbers of publicly displayed pictures in market places of President Nasser, whom the natives call Gamal.

But there have been some backfires.

DISENCHANTMENT NOTED

Information here now indicates that while the natives of most Arab and some North African states look kindly on Colonel Nasser, their rulers are becoming disenchanted with him.

Functions of Louisiana Department of Public Works

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present copy of speech given by Hon. Lorris M. Wimberly, director, Department of Public Works, State of Louisiana, before the police jury at Shreveport, La., on Tuesday, May 7, 1957. This speech graphically outlines the functions of this Department with particular reference to such important matters as flood control, drainage, navigation, water supply, and planning and aeronautics.

The address follows:

FUNCTIONS OF THE LOUISIANA DEPARTMENT OF PUBLIC WORKS

It is indeed a pleasure for me to be here, and especially to have the opportunity to describe to you the functions of the Louisiana Department of Public Works. I could speak at great length because of my interest in the subject, and because the field of public works, as defined by the legislature, is an extremely broad one affecting in many ways all of the State, its cities, towns, and poitical subdivisions.

For a long time, in common with many people, I had considered the work of the department limited mostly to providing farm drainage, and perhaps building a lake or reservoir whenever the money or a location was available. But my experience as director, and before that as a member of the legislature, has impressed upon me the tremendous scope of the work and the wide variety of engineering services that the department is required to perform. We do practically everything in the field of public works engineering except that reserved to the highway department and the State board of health. At one time even highways came under our jurisdiction.

There are many legislative acts which specifically define the responsibilities of the department of public works. Most of its duties, however, comprise all of the administrative functions of the State with respect to planning, design, survey, and construction of flood control, drainage, irrigation, water conservation and navigation projects; aeronautical facilities, public housing projects, and other public works.

The department is primarily an engineering and planning agency. We not only represent Louisiana on nearly all engineering projects of national or local scope affecting the State, but we are the consulting engineers for most State agencies including levee boards, navigation and port districts, water districts, etc. Our planning duties require us to constantly look ahead and provide for full development of all of Louisiana's resources, and our facilities in this respect are available to all parishes and municipalities. Since we are concerned mostly with engineering and planning, we have no maintenance crews, and no construction equipment to operate.

The department of public works is not as large as some other State agencies insofar as operating funds are concerned, but it is an extremely important one in the volume and type of public improvements which it is instrumental in securing for Louisiana, and in promoting and influencing the location on

these improvements for the greatest benefit of all the people. We do exert an influence throughout the State far out of proportion to our size.

A little reflection by each of you and it becomes apparent that Louisiana is in direct competition with 47 other States—and at the rate we are spending money abroad, with the rest of the world—for Federal funds for projects benefiting our State. The hundreds of millions of dollars in Federal funds which have been spent in Louisiana on flood control, navigation, and other public improvements did not just happen—they are largely the results of the facts and studies presented by the department to Congress, and to members of our congressional delegation.

In order for our Congressmen and Senators to be successful in securing authorization and funds for Federal projects in Louisiana, they must have facts on the feasibility and need for the work, and it is one of our most important duties to secure this information. Most of our work is concerned with water—for water has been and will continue to be the most important factor in the development of Louisiana.

Louisiana stands alone among all the 48 States in the magnitude and variety of its water problems. Foremost among these problems is that of flood control, for the drainage from 31 States or 41 percent of the United States passes through our State and reaches the sea within its borders. Heavy rainfall on the extensive areas of low, flat lands creates many local drainage problems, and periodic droughts bring severe water deficiencies, particularly in those sections dependent upon irrigation. Added to these are the problems of beach erosion, salt water intrusion into the coastal streams, stream pollution, and the development and maintenance of navigable waterways. Other States may have some of these problems to a greater or lesser degree, but none have all of them except Louisiana. All of these problems come under the jurisdiction of the Department of Public Works for solution and remedial action.

FLOOD CONTROL

Flood control is our most important contribution to the people of Louisiana. It is essential to the economic life of the State, for we cannot develop our agricultural and industrial potential unless protected against overflow from the Mississippi, Red, Atchafalaya, Ouachita, and other rivers. Hence, most phases of our work are closely associated with and dependent upon flood control.

Nearly one-half of the entire flood plain of the Mississippi River lies in Louisiana, and one-third of the State or about 11,500,000 acres is subject to overflow without levees. Most of the industry, half of the population, over one-third of the farms, and many of our important cities and towns, including the port city of New Orleans, occupy this area, which is protected by 2,033 miles of levees. All of the principal highways and railroads, and most of the transcontinental oil and gas pipelines traverse it. Further, due to the magnitude of the floods and the low elevation of the extensive areas requiring protection, the problem of controlling floods is much greater in Louisiana than elsewhere in the United States. Thus the Department has a tremendous responsibility to the people of Louisiana for flood control.

In all of our flood-control work we maintain close liaison between the levee boards, for which we are the consulting engineers, and the police juries and local interests on the one hand, and the Federal Government through the Corps of Engineers and our congressional delegation on the other. In this way we are able to effectively present the desires and needs of the people who would be affected by proposed flood-control improvements. In order to do this we must have a comprehensive knowledge of the entire flood-control program in all of the 31 States in the Mississippi River Basin.

We must know what flood-control works are being constructed, and what are proposed, not only in Louisiana, but in the Missouri River Basin, the Ohio River Basin, the upper Mississippi, the White, the Red, and the Arkansas. And we must be able to correctly evaluate what effect they will have upon flood heights in Louisiana.

Only a few short weeks ago we were in one of the most severe extended droughts we have ever experienced. I am sure that many of you were thinking like most people of Louisiana that our flood-control problems were over. However, the results of heavy rains in Louisiana and Texas the past few days very well show that our flood-control activities will never end, and will continue to be one of our major functions as long as our rivers exist. At a matter of fact, our responsibilities in this field are increasing, because presently Louisiana is growing faster industrially than any other area in the United States, and with this growth each day more people and lives, more property and values become dependent upon flood control. In keeping with our responsibilities, the Department is exerting every effort to expand the Federal flood-control program, and to incorporate into it water supply, navigation, and other beneficial features wherever practical.

DRAINAGE

Drainage ranks next to flood control in importance to Louisiana, and most of you are familiar with our activities in this field. The parishwide-drainage program was evolved in 1941 as a result of studies by the department of public works to determine what should be done to improve and extend drainage throughout the State. Prior to that time drainage had been haphazardly performed by small districts without coordination or engineering. On the basis of these studies the present drainage program was worked out whereby the Federal Government, with the State contributing part of the cost, improves the major outfall channels in a drainage basin; the State and parishes jointly improve the lesser streams and construct the main laterals; and the drainage of individual farms is done by the farmers with engineering and financial assistance from the Soil Conservation Service.

This arrangement has proven very satisfactory, and 46 parishes and 10 levee boards have participated in the program. Nearly 160 million cubic feet of earth have been removed in the course of the work, excluding the major streams improved by the Corps of Engineers.

Some of the larger streams improved by the Department, either with local or Federal participation, are the Amite River in East Baton Rouge, Livingston and Ascension Parishes; Big and Colewa Creeks in Franklin and Richland Parishes; Bayou Choupique in Calcasieu Parish; Bayou Chevereuil in Lafourche and St. James Parishes; Bayou Lacassine in Jefferson Davis; Bayou Serpent in Calcasieu and Jefferson Davis Parishes; Bayou Pierre in Caddo and Red River Parishes; and many others.

NAVIGATION

Waterborne commerce, both domestic and foreign plays a very important part in the economic life of the State, and we are continually striving to improve our waterways, and extend them to new areas.

Louisiana has about 7,500 miles of navigable streams—far more than any other State. Over 2,200 miles are maintained as major arteries of commerce, and three of the largest ports in the United States are situated on these streams—the port cities of Lake Charles, New Orleans and Baton Rouge.

As in other fields great changes are occurring in navigation, and it is the duty of the Department to keep abreast of these changes. Inland waterway traffic has grown, not only in volume, but in size of tows and equipment, and we can foresee the time when the intracoastal and other important waterways will have to be deepened and widened to meet the requirements of future commerce. The rapid industrial growth of the State indicates that navigation facilities may now be feasible in many areas presently without water transportation.

The advent of the supertankers with deeper drafts and greater lengths is affecting all of our ports, and here again we enter the picture by sponsoring and supporting legislation to provide port facilities and channels adequate for the new vessels. Forty-foot channels at Lake Charles and Baton Rouge, and the Mississippi River-Gulf outlet at New Orleans are examples of large navigation projects which we are now supporting in Congress. Atchafalaya River navigation and the Port Allen-Morgan City alternate route of the intracoastal waterway are others which we were successful in obtaining for the State. Unless we keep pace with the changes in navigation, our ports and industries will suffer, and commerce will seek other areas where it can be served more efficiently. Some of the larger navigation projects which we have constructed entirely with State funds are the Mississippi River locks below New Orleans at Ostrica and Empire. These locks have been of tremendous value to commercial fishermen and to the oil industry, eliminating many miles of travel across the open Gulf waters. In 1955 over 40,000 vessels passed through Ostrica lock and 22,000 used the Empire lock.

We would like to see adequate navigation channels extended to other areas in Louisiana, and we constantly work toward this end with local interests. In this connection it is worth noting that as we extend our navigation system further inland, the problems and costs become greater, because locks and flood control are involved.

WATER SUPPLY

Water supply is another very important field in which the Department is constantly occupied. It may be surprising to many that Louisiana, a State literally overflowing with water, should suffer because of deficiencies in its water supplies. Yet it is true that in many parts of Louisiana water supply problems are becoming more prominent, and there is no doubt that they will continue to increase in number and magnitude with the economic growth of the State.

Many areas with abundant supplies of water for today's needs will not have enough for tomorrow's industry and population. It's the job of the department of public works to look ahead, and make provisions for tomorrow's water needs all over the State.

The problem of supplying the future water requirements of the State will be of monumental proportions. Fortunately, we have the Mississippi and Atchafalaya Rivers, but many of the problems associated with distributing their waters to deficient areas remain to be solved. The department has made a notable start on the Mississippi River at Donaldsonville where, in cooperation with the Bayou LaFourche Freshwater District, pumping facilities costing nearly $1.5 million have recently been completed to divert large volumes of water from the river into Bayou LaFourche. This water after being pumped from the river flows down the bayou to the gulf and furnishes a supply for agricultural, municipal, and industrial uses along its banks. We are now studying the feasibility of similar plants for increasing fresh water flows of Bayou Teche, Vermilion River, and other streams throughout the State.

At the same time we are continuing to plan and build multipurpose lakes and reservoirs for flood control, recreation, and

the conservation of fish and wildlife, all in addition to water supply.

Lake Bistineau, in Bienville, Bossier, and Webster Parishes, is one of the larger recreational lakes which we have constructed. Other lakes which are either in the construction or planning stage, or have recently been completed are Iatt Lake in Grant Parish, Kepler Creek in Bienville Parish, Bayou D'Arbonne in Union Parish, Spanish Lake in Iberia and St. Martin, Lake Martin in St. Martin, Anacoco in Vernon, Bundick Creek in Beauregard, Bear Lake in Madison and Castor Creek in Caldwell and La Salle Parishes. Many of these reservoir projects are quite large—for instance, Bayou D'Arbonne Lake, now on the drawing board, will create a water conservation and recreation reservoir of over 15,000 acres.

The waters of intrastate streams are becoming more important, and the Department is actively engaged in safeguarding our interests in such streams as the Sabine, Red Ouachita, Pear, and Mississippi Rivers, particularly with respect to water supply and stream pollution. We have recently entered into the Sabine River compact with the State of Texas, which provides for the control and development of water of the Sabine River. We are now in the process of forming a similar compact on the Red River with the States of Oklahoma, Texas, and Arkansas.

A joint project now being studied by the States of Texas and Louisiana is a multipurpose power producing, water conservation, flood control, and recreation reservoir on the Sabine River at Toledo Bend just west of Leesville. An engineering study on this project is now underway and will be completed within about 15 months. This study will determine whether or not the project is a feasible one, that is whether it can be financed from revenues it will produce. If constructed this would create one of the largest manmade lakes in the United States, covering some 180,000 acres. It would furnish a much needed supply of fresh water to areas along its banks in southwest Louisiana and southeast Texas. During periods of flood as we are experiencing at this time it would reduce flood stages below the dam and during periods of drought releases could be made to increase the flow in this reach of the stream.

In cooperation with the Groundwater Branch of the United States Geological Survey, we are now studying the ground-water resources of 10 parishes—De Soto, Calcasieu, Red River, Sabine, East Carroll, West Carroll, Caddo, Bossier, Natchitoches, and Rapides. Some of these parish studies will be published in a few months, while others have just been started. We are also making a very intensive study of ground water in the Mississippi alluvial valley area between Baton Rouge and New Orleans. This study will require several years to complete because of the rapid growth of the area and changing ground-water conditions. At the same time we are continuing our statewide program of water level observations, and special studies such as those completed at Clarks, Clarence, Grosse Tete, and Tallulah. At some of these locations the Department has aided in the development of municipal and irrigation water supplies by drilling test wells to determine yields and proper spacing.

Our surface-water studies are just as extensive as our ground-water investigations. In cooperation with the Surface Water Branch of the United States Geological Survey we are currently measuring daily discharges of streams at 96 different points, and measuring stages on as many more. From time to time, as sufficient data is collected at one station, we move on to another, and eventually we will have reliable runoff data on all of our watersheds. Water samples are collected from about 60 streams and analyzed for quality. Quality of water is of paramount importance to many industries, and is also necessary to control stream pollution.

Other water supply and water resource studies underway, or which have been completed are the Vermilion Bay model study; the feasibility of a water supply and deep-water industrial channel connecting the Calcasieu and Atchafalaya Rivers; the Calcasieu River low sill dam; Freshwater Bayou Navigation Canal; Overton-Red River waterway; Atchafalaya Bay ship channel, and many others. We are also studying the feasibility of forming fresh water districts and pumping or otherwise diverting water from the Mississippi and Atchafalaya Rivers to supply areas plagued with water shortages, stream pollution, and salt water intrusion.

We are continually supporting Federal legislation to improve our water supplies, such as Federal aid for hyacinth control, stream pollution, etc. And we have taken the lead in insisting that water supply and navigation be considered in the Federal flood-control program.

PLANNING AND AERONAUTICS

Among our other important duties are those associated with the planning and aeronautics divisions. Under the Department's guidance, parish planning boards have been created in 48 parishes. These boards have brought a broader understanding of development problems in Louisiana and are working steadily to accomplish the economic improvement of the State.

The department is actively supporting and participating in the urban planning assistance program. Under this program the Federal Government matches funds for planning in cities and towns of up to 25,000 population. One-half of the local cost is contributed by the department, so the total cost of planning is shared one-fourth by the State, one-fourth by the city or town, and one-half by the Federal Government.

Ten cities started planning studies in 1956 under this program, including Bogalusa, Ruston, Natchitoches, and Jennings. Four more cities are about to start their programs, and we hope to add 17 more this year, including Arcadia, Haynesville, Tallulah, Lutcher, Slidell, Bunkie, and Bastrop, all of which have submitted applications for planning aid.

Through the aeronautics division the department is sponsoring the development of aviation facilities in all areas of the State. We are frequently required to provide plans and engineering assistance to many municipal airports—just recently we designed a modern steel hangar for the Jennings Airport. The department also owns and operates the Harry P. Williams Memorial Airport at Paterson. Through activities of the aeronautics division the department was able to secure $1.25 million in Federal funds for airport improvement in the State during this year and approximately $2.5 million during the coming year.

CONCLUSION

Basically, the department of public works is a factfinding organization. In the course of our work we are daily in contact with farmers, businessmen, industries, civic leaders, police juries, levee boards, State and Federal agencies, Members of Congress, and many others. We are often confronted with conflicting interests in the solution of a problem, but somehow, after a lot of hard work, we always manage to come up with a satisfactory answer.

Our most important function is to get the facts impartially on all public works improvements projects affecting the State, so that our leaders in the legislature and in Congress can be successful in their efforts to procure funds and legislation beneficial to Louisiana. In carrying out this function the department in a very real sense lays the foundation upon which much of Louisiana's economic progress is based. Where would we be today without flood control, without drainage, without navigation or the many other public works which we take for granted? Much of our success in these fields has been due to the support and confidence given us by the citizens and officials of all our parishes and governmental organizations. I am looking forward to a continuance of the fine and productive relationship which has been enjoyed in the past.

Strong Pressure for Budget Cuts

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. GAVIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of May 13, 1957:

STRONG PRESSURE FOR BUDGET CUTS—VOICE OF THE PEOPLE WANTS DEBT CUT; LAVISH FOREIGN AID SPENDING SCORED

(By Constantine Brown)

The pressure of the American people on their elected representatives in Congress for substantial cuts in the budget continues unabated.

This is causing surprise and chagrin to the encrusted Washington bureaucracy which for years has witnessed raids on the taxpayers' pocketbooks without their owners registering any loud complaints.

When the citizens did protest occasionally they were shut up with clichés by the theoreticians and ideologists of the New Deal, Fair Deal, and modern Republicanism.

Stereotyped expressions such as "social progress" and indiscriminate "foreign aid," without which the American people were warned this country could not survive, and many other such tugs on our expenditures stilled the voices of those who were concerned over where the country was going.

There has been an awakening in the last few months. Judging by the unbelievable volume of mail received by Senators and Representatives, appeals by the President himself are not likely to make much of a dent in the mood of the American people.

An analysis of the communications received on the Hill indicates that most citizens are not really interested in Federal tax reductions. Under present conditions, the individual's outlay would not be affected much. What the great majority of Americans seeks is a reduction in the national debt. The loudest protests are registered against continued indiscriminate foreign-aid programs.

The previous administrations did not have any trouble in selling the people projects such as the UNRRA because our citizenry agreed after World War II that starving people must be helped.

There was not much trouble in convincing Americans to indorse the Marshall plan, especially when they were told that it was only a temporary measure to put our allies and foes back on their feet and thus prevent the spread of deadly communism among the destitute free peoples of Europe.

That fantastic extravaganza called the Voice of America and its associated projects cost the taxpayers more than $600 million. But there was no opposition to it.

The American people were told that we had to sell our way of life to allies, friends,

neutralists and enemies. Hence, expenditures which started with some $40 million a year and then increased in the usual bureaucratic manner to close to $150 million yearly were approved by the representatives of the American people.

The average individual does not go into the details of Government expenditures, particularly when he is under the spell of convincing propaganda.

In international matters, in particular, he leaves it to Washington bureaucrats who are far more successful in propagandizing their own people than those for whom vast appropriations are voted.

We are a nation which loves slogans and seldom analyzes what is behind them. And the peoples of this country have been sloganized into a $280 billion national debt.

Belatedly the rank and file of our people awoke to the dangers of this lavish expenditure abroad and at home and began to protest.

Administration actions to which John Q. Citizen paid no attention in the past became issues. For instance, there is a lack of understanding by the average American as to why the Washington bureaucrats decided—despite adverse opinion by the Senate—to continue to give economic and especially military assistance to Marshal Tito. Only a very few swallow the gobbledygook that Tito is pulling away from Moscow.

There are many communications sent to Senators and Representatives asking whether lending about $100 million to the Communist regime in Warsaw (which plays so closely with Moscow) serves the true interests of this country.

Spokesmen of the executive branch have asserted repeatedly and loudly that we have the moral obligation to help whichever satellite nation attempts to break away from the Kremlin. But for the first time in many years these tales seem to have made little impact on the American people, who are asking their representatives in Congress: "Is this true?"

In the past, Congress has adopted the line of least resistance. Its members spoke enthusiastically for economy, budget cuts, and so forth, but when it came to casting their votes they went along with the executive branch which kindly padded the budget sufficiently to permit Congressmen to save face by claiming that they had brought about reductions in expenditures.

This, judging by off-the-record statements by Senators and Representatives who attended President Eisenhower's conference with leaders of both parties, seems to be a thing of the past.

An Agricultural Program

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. LESINSKI. Mr. Speaker, recognizing the need for some kind of a farm program, I think it is about time we took steps to eliminate subsidies and put the farmers back to managing their own farms and allowing them to make a livelihood through a farm program based along the following lines.

I have introduced a bill, H. R. 6157, which would impose limitations on agricultural products rather than on farm acreage. I believe that the solution to the farm problem lies in the control of actual production of a commodity, not in the acreage under cultivation. Acreage control, it is true, does cut down the amount of land upon which crops can be grown, but it does not limit the total production because with improved fertilizers a farmer can produce more on less land.

The bill I have introduced provides that the Secretary of Agriculture shall establish yearly marketing quotas for corn, cotton, peanuts, rice, tobacco, and wheat—the basic agricultural commodities—and the quotas shall be apportioned among the several States on the basis of production of a commodity during a given period of time. The bill does not support any group or size of farm but sets a floor on the sale of commodities which is low enough so that the demand will regulate the supply and cost. My intent is to put the farmer back into competition.

Under the program a farmer will be guaranteed an annual income which will increase his purchasing power and contribute to the economy of our Nation.

At this time when we are considering appropriations for the Department of Agriculture, and looking for means to cut the Federal budget, I believe it is appropriate to give serious consideration to my proposal.

A Salute to the Wine Industry

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks, I desire to include an editorial from the Sonoma, Calif., Index-Tribune of May 9, 1957, entitled "Wine Industry Sets Example for Agriculture."

Several years ago the wine industry was at a low ebb. In true American tradition they banded together to do something about it. Through effective advertising and by stressing quality, the wine people lifted themselves up by their own bootstraps. Today the industry is in a healthy condition, and it was brought about through their own efforts.

What these people have accomplished is truly an example of self-help in agriculture. As the Representative from an area which is a leader in the production of high quality wines, I am pleased to call to your attention the following editorial as an example of what can be accomplished through private initiative:

WINE INDUSTRY SETS EXAMPLE FOR AGRICULTURE

The Wine Institute, the wine industry's capable trade association, will hold its 23d annual meeting in San Francisco next week (May 13–14) and it couldn't have chosen a better time.

Statistics just released reveal that consumption of wines of all types hit an all-time high in the United States last year. Most of that wine—82.7 percent—came from California.

California's wine industry is in a healthy condition. Demand is brisk; supply is barely equal to it; prices are satisfactory in general; quality continues to rise.

The whole industry is a splendid example of self-help in agriculture and the Wine Institute is one of the valuable agencies which has helped it achieve this end.

The Nation as a whole has only begun to appreciate California wine. When its annual per capita consumption, now only nine-tenths of a gallon, attains California's per capita consumption of more than 2 gallons, the United States will still have a long way to go to approach the 20 or 30 gallons per capita consumption of some European countries.

The future of California's wine industry is bright and, with the fine leadership the industry has in its Wine Institute, we may be sure the industry will attain its goals.

The Defense Department Has Not Yet Learned To Properly Utilize Its Manpower

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, we are hearing a great deal these days about the necessity of increasing the military pay of various branches of the Armed Forces in order to attract and to keep in the service of our country professional men and skilled technicians.

There is no doubt that such men, if worth their salt, will leave for private practice or private industry if the pay and working conditions are not sufficiently attractive to keep them in Government service. I favor paying these men fair compensation, the fairness thereof to be determined by the competitive demand for these men.

At the same time, it should be pointed out that the Defense Department traditionally has not utilized these men to the best advantage either of the Government or of the men.

We are constantly told that it costs as much as $25,000 to train a recruit to deal with complicated matters requiring the attention of skilled men. The fact of the matter is that the complaints still pour in to Members of Congress from men who are called up to serve their country, as well as from men who have enlisted for that purpose. Thousands of these men have specialized college and university training. All too frequently such education and training is completely ignored and the men are assigned to training programs entirely foreign to what they have been equipped for. Thousands of dollars are spent by the Defense Department for such training, more properly called retraining. The training is hardly completed when the men leave the service.

Sergeants, good drillmasters, despite their lack of formal education, still delight in assigning college-trained men to the garbage dump.

Thousands of dollars can be saved by the Defense Department by properly

screening men and assigning them to work that they are already fitted to perform instead of trying to train them to do things in which they have no interest and which will only drive them out of the service instead of keeping them in.

Our whole concept of military training still reflects the methods of the last century. It has not caught up with World War I, not to mention World War II, or the nuclear age.

United States Collaboration in Euratom Plans Should Stir Our Lagging Interest and Enthusiasm in Development of Nuclear Power

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. PRICE. Mr. Speaker, I was greatly interested in an editorial which appeared in the Washington Post of Monday, May 13, 1957, commenting on the ambitious plan announced to develop 15 million kilowatts of atomic-power capacity on the European Continent in the next 10 years.

Success of these plans is in a measure tied to our success in America in the development of atomic power. I have felt for a long time that the Atomic Energy Commission has been remiss in fulfilling its responsibility in this regard. Whether the Commission admits it or not, America is lagging in nuclear-power development.

The Congress missed an opportunity to do something about this last year when it failed to approve the Gore-Holifield bill, but that is water over the dam. Congress still has an opportunity to point out to the Commission what the American policy should be in this matter.

Our policy should be that we maintain world leadership in the development of atomic power. The primary responsibility to implement this policy should be on the Government itself. To fulfill this responsibility, we should supplement the present private development program by greater Government activity.

Congress should act wisely in promoting the private development program. In a short time I hope Congress will approve the indemnity legislation which is so vital to the success of this program.

The indemnity legislation is now on the House and Senate Calendars. It is my hope that it will be approved before the end of this session of Congress.

The editorial, entitled "America and Euratom," follows:

AMERICA AND EURATOM

Nothing less than the future of Europe's economic growth and perhaps even its political security are at stake in the ambitious plans just announced to develop 15 million kilowatts of atomic power capacity on the Continent in the next 10 years. This is the goal selected by representatives of Belgium, France, West Germany, Italy, Luxembourg and the Netherlands after what seems to be a careful and realistic appraisal of economic and industrial potentials. These are the six nations that have agreed this past year, subject to ratifications now being considered, to set up Euratom—the European Atomic Energy Community—and, in addition, a customs union to foster freer trade among them.

It is almost frightening to consider what Europe's outlook would be without the prospect that nuclear power plants will be feasible for large-scale commercial development. For nearly a century, until World War II, Europe was first the world's greatest producer of energy and later at least self-sufficient in this regard. As recently as 1950 it appeared that postwar recovery efforts had restored the Continent's energy production to levels that required only nominal fuel imports for power production. But in the past 7 years, as the Euratom investigating committee notes, Europe has lost its independence in energy. It must now import nearly a fourth of its fuel (mostly oil), in 10 years it would depend upon foreign sources for a third and in 20 years it would have to look abroad for upwards of half of its energy requirements—if coal and oil remained the only fuels.

Britain faced up to a similar, though not quite as acute, situation in 1955. By putting some 6 million kilowatts of atomic power stations on her lines by 1965, the United Kingdom will stabilize its imports of conventional fuels from about 1960 onward. The hope for Euratom is that it can achieve a leveling off of continental fuel imports by 1963. This will involve considerably higher investments in plant and equipment in the first years, although nuclear fuel costs will approximate the cost of oil. But both the British and Euratom programs will forestall an unbearably heavy long-range drain on foreign exchange earnings and lessen the political temptations, tensions and dangers inherent in Europe's present dependency on Middle East oil.

All of this will be possible, although it is not yet assured, by reason of the realism which the European governments are showing in subordinating national concerns to this common effort. Progress toward the 10-year goal also will depend upon cooperation from the United States, Canada, and Great Britain, which can supply the uranium, the first reactors and the technical knowledge and training with Europe will need in the early stages. All three of these countries already have pledged such help, for which they will be paid not only in cash but in the invaluable experience which the continental program can provide.

We hope that American collaboration in the Euratom program will stir the lagging interest and enthusiasm of this Government in nuclear power development. While it is true that the lower cost and ample supply of conventional fuels in this country do not require an immediate all-out atomic power effort, the failure of Congress to deal adequately with the insurance and other problems of private atomic development (such as the authorization of demonstration reactors for atomic energy plant power requirements) has retarded progress. One immediate effect could be the selection by Euratom of the proved British natural uranium reactor in preference to the American model being tested at Shippingport, which though apparently well suited as a submarine powerplant is still unproved for other uses. It would be unfortunate if American firms were denied an opportunity for the fullest participation in Europe's atomic power development, for the experience could be of immense benefit to this country later on.

Italian Opera Star Sings United States Anthem at Democratic Party Dinner

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. ANFUSO. Mr. Speaker, we often hear it said that truth is stranger than fiction. This was demonstrated once again recently at the Democratic Party's $100-a-plate fund-raising dinner held at the National Guard Armory in Washington.

At this dinner were assembled several thousand Democratic Party leaders and members from various parts of the country, headed by former President Harry S. Truman, Adlai E. Stevenson, and literally dozens of Democratic governors, Senators, Congressmen, and other party leaders. The person who opened this event with the singing of the Star-Spangled Banner was an Italian-born basso, Italo Tajo, who is still studying to become an American citizen.

Tajo, who is a well-known international opera star, was elated that a foreign-born singer was asked to sing the national anthem to the assembled leadership of the Democratic Party. When informed that he was chosen for this honor, he observed:

It is truly an honor for a man who is still working toward his citizenship papers to have the privilege of singing for so many leaders of this great country.

While the huge audience at the armory heard Tajo's booming voice singing our national anthem, he did not have the opportunity to hear the speeches of the Democratic leaders. Tajo was appearing that evening with the road company of Fanny at a downtown Washington theater, and had to be rushed from the armory to the theater by police escort to make his curtain time for the show. He and his wife are seeing America on the nationwide tour of the musical comedy.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

The Historic Capitol Building

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. JOHNSON of Texas. Mr. President, one of the most enjoyable and instructive meetings I have attended in the past few weeks took place yesterday. I had the honor of serving as host to a group of Texas architects attending the American Institute of Architects convention.

Upon that occasion, Mr. J. George Stewart, Architect of the Capitol, delivered an informative address about this historic building. I believe it will be of interest to every Member of this body.

I ask unanimous consent that Mr. Stewart's address, together with a list of guests at the breakfast, be printed in the Appendix of the RECORD.

There being no objection, the address and list of guests were ordered to be printed in the RECORD, as follows:

SPEECH BY J. GEORGE STEWART, ARCHITECT OF THE CAPITOL, BEFORE TEXAS DELEGATES TO NATIONAL CONVENTION OF THE AMERICAN INSTITUTE OF ARCHITECTS, MAY 14, 1957

Senator Johnson, Mr. Speaker, ladies, and gentlemen, this is really an eventful time in my life. As you see, I wear the cuff links of the Lone Star State, a symbol of my having been accepted as an honorary citizen of the great State of Texas. I feel very honored.

I would like to take this opportunity to thank the delegates and members of the Texas chapters of the American Institute of Architects for their assistance in my recent election as an honorary member of the American Institute of Architects. I particularly want to thank the members of the Dallas Chapter who initiated this movement.

I want to recall this morning some highlights in the early history of how this Government in the District of Columbia came about.

EARLY HISTORY

From 1776 until 1800, the national seat of government was located, at various times, in 8 different cities. In 1783, the issue of a permanent seat of government was under discussion and October of that year was set to consider the offers of New York and Maryland for sites for the proposed National Capital. During June of that year, mutinous soldiers of the Revolutionary War marched on the State House in Philadelphia to demand payment from the Congress of claims long overdue. The Congress, unable to meet these demands, petitioned the State of Pennsylvania for protection. Requests for protection were twice denied by Pennsylvania and the Congress was forced to change its seat to Princeton, N. Y. This was one of the experiences which convinced the Congress that its permanent seat should be independent of any other authority.

The place where I was born and raised is within 28 miles of Philadelphia, and, naturally, its history is closely allied with that of southern Pennsylvania. I can remember being told of the trouble caused by the Revolutionary War veterans in their marches on the Congress in Philadelphia and their destruction of facilities such as water supply, transportation, etc.

In 1790 Philadelphia was named as the temporary seat of Government and the land on the Potomac River ceded by the States of Maryland and Virginia for the Federal city was ordered to be prepared and ready for the Congress by the first Monday in December of 1800.

The site selected for the Capitol was then known as Jenkins Hill. Major L'Enfant, who was greatly impressed by the location chosen for the building, described this hill as a pedestal waiting for a monument.

According to the early history of the Free State of Maryland in 1663, the hill had been given the name of "Rome" by its owner. This owner, it is said, predicted that a greater capital than Rome would someday occupy this hill and that later generations would command a great and flourishing country in the New World.

Earlier than that a subtribe of the Algonquin Indians—known as the Powhatans—occupied the original grounds and met in council at the foot of the hill where our Capitol now stands.

GROWTH OF THE CAPITOL

The north wing of what is now the central portion of the Capitol was completed in 1800 and the 2d session of the 6th Congress met there in November of that year.

The south wing, under construction from 1800 to 1811, was first occupied in 1807 by the 10th Congress.

After the burning of the Capitol by the British in 1814, Benjamin Latrobe, second Architect of the Capitol, was recalled to repair the damage done to the north and south wings. This reconstruction work took approximately 3½ years to complete.

Charles Bulfinch, third Architect of the Capitol, continued the work of restoration and erected the central section of the building connecting the original north and south wings.

The need for additional space in the Capitol increased as the Nation grew, and in 1851 the construction of the Senate and House wings was commenced. These wings were planned by Thomas U. Walter, fourth Architect of the Capitol, and the work was prosecuted under his direction. The present House Chamber was first occupied in December of 1857; the Senate Chamber in January of 1859.

Walter also replaced the old wooden dome with the present structure. This dome is of cast iron and weighs 4,455 tons. Fabricating the dome in metal was quite a revolutionary approach in 1856, since most domes throughout the world had been made of marble, or wood covered with metal.

In 1865, a civil engineer and a professor at the Smithsonian Institution, conducted vibratory experiments to see what influence the sun had upon this vast structure. It was found that the dome oscillated a distance of between 3 and 4 inches. The motion is like that of the sunflower—south, southwest, then west—and, as the retiring sun declines and finally disappears—north, northeast, and east, returning to its original position.

The figure surmounting the dome is officially known as the Statue of Freedom. This statue, designed by Thomas Crawford, is 19 feet 6 inches high, and weighs 14,985 pounds.

As a protection from lightning, 10 bronze points tipped with platinum are placed as follows on the figure: 1 on the head, 6 on the feathers in the headdress; 1 on each shoulder, and 1 on the shield. Every 4 years, when the dome is being painted, these bronze points are inspected for injury by lightning. Last fall, when the dome was painted, it was necessary to replace 6 of the points which showed evidence of having fulfilled their function as lightning arresters.

After the turn of the century, it became evident that additional working space was necessary for the legislators. As a result of efforts spearheaded by the late Joe Cannon when he was Speaker of the House, in March of 1903 the Old House Office Building was authorized to be constructed. Later, in 1904, Congress authorized the construction of three sides of the present Senate Office Building. The House Office Building was completed and occupied in January of 1908; the Senate Office Building was occupied in March of 1909.

Uncle Joe Cannon, in 1903, called the attention of the Congress to the need for more working space in the Capitol and the necessity for better circulation within the building. Then, as now, Members of Congress and the employees who must work in the Capitol, close to the legislative halls, battled a constant flow of tourists in going through the building.

Although his efforts to enlarge the Capitol were futile at that time, they did bring about the so-called Scheme B plan of extending the Capitol, proposed by Carrere and Hastings of New York in 1904. This Scheme B is the basis of our present studies for the extension of the Capitol.

The Scheme B presented in 1904 was a reasonable solution then to the needs of the Congress. At that time, however, there were only 389 Members of the House and just 45 States were represented in the Senate. The staff of clerical assistants to the legislators was approximately one-eighth of the number of employees they now have. The total population of the United States in 1900 was approximately 76,000,000. When the last census was taken in 1950, our population was over 150,000,000.

During the last 57 years, our population has more than doubled and our country has grown enormously in world importance. The need for more working space in the Capitol is more acute now than at any time in our history.

This building is very aptly described by Dr. Charles Moore in the introduction of the first volume of Glenn Brown's History of the United States Capitol:

"Historically the Capitol at Washington is the most important structure in the United States. Other buildings, such as the Old South Church in Boston and Independence Hall in Philadelphia, are connected with important episodes in the history of this country. The Capitol is unique in that it both typifies the beginning and also marks the growth of the Nation. Like the great Gothic cathedrals of Europe, its surpassing merit is not its completeness, but its aspirations. Like them, too, the Capitol is not a creation, but a growth, and its highest value lies in the fact that it never was, and it never will be, finished."

I subscribe to his statement entirely.

The project for the extension of the United States Capitol was authorized by Public Law 242 of the 84th Congress, approved August 5, 1955. The work is being carried forward

under the direction of the Commission for Extension of the United States Capitol, composed of the Honorable SAM RAYBURN, chairman; the Honorable RICHARD M. NIXON, the Honorable WILLIAM F. KNOWLAND, the Honorable JOSEPH W. MARTIN, Jr., and the Architect of the Capitol.

A consulting and advisory group is assisting me in determining the proper architectural treatment of the east front of the Capitol and the necessary changes to be made on the interior of the building. This group is composed of: John P. Harbeson of Philadelphia, Henry R. Shepley of Boston, and Arthur Brown, Jr., of San Francisco.

The executant architects are Roscoe DeWitt and Fred Hardison of Dallas, Tex., Alfred Poor and Albert Swanke of New York City, and Jesse Shelton and Alan Stanford of Atlanta.

Since no building is better than its setting, my associate architects and I have taken L'Enfant's plan for the development of the Capitol to the east as a basis for studying future expansion of the building and its grounds.

The associate architects have made exhaustive studies of the present physical condition of the building and what expansion is necessary now to provide for the smooth functioning of the offices which operate in the Capitol. They are also considering a long-range plan to meet future needs as our country continues to grow. I have asked that they include in their report suggestions for future additions and alterations in order that my successors might have the benefit of their thinking. Many times, the reports, studies, and private letters of Thomas U. Walter have been of assistance to us.

The general scope of the extension of the Capitol project falls into three categories:

1. Replacement of the exterior stone work.
2. Gradual expansion of the Capitol.
3. Landscaping and development of the properties to the east.

I shall advocate and plead for all of these, and fight for the preservation of this building, to the best of my ability.

SUPREME COURT ROOM

I think a brief description of this room might be of interest to you.

The room was used by the Supreme Court in 1860. Prior to that time, except for brief periods, this chamber was occupied by the United States Senate.

The Senate sat here on December 2, 1823, when Monroe sent to Congress his historic message formulating the Monroe Doctrine. Here, in 1830, Webster gave utterance to his famous phrase, "Liberty and Union, now and forever, one and inseparable." It was in this room that Calhoun, Clay, and Webster, in their old age, made their farewell speeches.

The small gallery to the east, which was the only one preserved after the removal of the Senate, is supported by Ionic columns of dark variegated Potomac marble, whose caps were copied after those of the Temple of Minerva in Athens. The beautiful dome ceiling is enriched with square caissons of stucco, and terminates in the skylights above. The same gilded eagle that used to look down from over the Vice President's chair when this room was the Senate chamber, still spreads his wings over the old Supreme Court bench.

Around the semicircular wall are 10 busts of Chief Justices of the Supreme Court. On the north side of the western entrance, we have the bust of first Chief Justice John Jay, and to the south of the door, the second, John Rutledge. The other busts are arranged alternately around the walls according to the appointment of the Justices. Represented here, in addition to the two already mentioned, are: Ellsworth, Marshall, Taney, Chase, Waite, Fuller, White, and Taft.

The painting we see on the east wall of the gallery is "The First Reading of the Emancipation Proclamation," painted by Francis B. Carpenter during a 6-month stay in the White House. For 63 years, it hung over the east staircase of the House wing of the Capitol, and in September 1941 was moved to the Supreme Court room.

My job as Architect of the Capitol is a busy and interesting one. I have many rewards and compensations—I have a like amount of frustrations. I receive a great many criticisms and complaints, and I find comfort in these words attributed to Abraham Lincoln (slightly paraphrased):

"If I were to attempt to answer all the criticisms and complaints I receive, I would have no time for any other business. From day to day I do the best I can and will continue to do so to the end. If in the end I come out alright, then the complaints and criticisms and what is said against me will make no difference. But if the end brings me out wrong, then 10 angels coming down from heaven to swear that I was right, would still make no difference."

Before I close, I want to extend a cordial invitation to all of you to visit my office. You might be interested in seeing the portraits of the seven former Architects of the Capitol which are in my office. I would also like to show you a spot in the Capitol, close to my office, which is not included in the guided tours through the building. It is the space in the subbasement of the central portion of the building, directly beneath the Crypt where the old drawings of the Capitol are now on exhibit, which was intended to serve as a tomb for the remains of George Washington and his wife, Martha.

We who have the privilege of taking care of this building sometimes affectionately refer to it as The Grand Old Lady of Jenkins Hill. To know this building is to love it—and everything for which it stands.

The Capitol seems almost a living thing with its echoes of the past. One can imagine the excitement of the fires which threatened to destroy it—when the British burned it in 1814, the irreparable loss in the Library fire of 1851, and the disastrous gas explosion of 1898. Tragic events have occurred within its walls—the death of John Quincy Adams, the assault on Sumner on the Senate floor, and the recent shots of the Puerto Ricans in the House Chamber. The walls might echo the bitterness from sectional differences, from impeachments and censures, as well as the greatest oratory of history from the debates on the floors of the two Chambers. There are prayerful moments too, when we have paused to pay homage to our honored dear who have lain in state in the Capitol.

These echoes of the past all go to make this a living thing, a symbol of the unity of your nation.
Nation.

The building belongs to you—it is just my privilege to have it under my care.

Thank you.

GUESTS AT BREAKFAST FOR TEXAS ARCHITECTS, MAY 14, 1957, IN THE OLD SUPREME COURT CHAMBER AT THE CAPITOL, SENATOR AND MRS. LYNDON B. JOHNSON, HOSTS, HONORING MR. AND MRS. R. MAX BROOKS, OF AUSTIN, TEX., AND MR. AND MRS. ALBERT S. GOLEMON, OF HOUSTON, TEX.

Mr. and Mrs. R. Max Brooks, Austin; Mr. and Mrs. Albert S. Golemon, Houston; Mrs. Leon Chatelain, Jr., Bethesda, Md.; Mr. and Mrs. Alfred P. Finn, Jr., Houston; Mr. Sam B. Zisman, San Antonio; Mr. A. B. Swank, Jr. Dallas; Mr. and Mrs. Abel B. Pierce, Jr., Houston; Mr. and Mrs. Harold Calhoun, Houston; Mr. Hubert H. Crane, Fort Worth; Mr. William M. Collier, Abilene; Mr. Arthur E. Nutter, Houston; Mr. Max Barth, Washington, D. C. (Department of Defense); Mr. O. L. Puckett, Big Spring; Mr. John G. Flowers, Austin; Mr. Robert Biering, Houston; Mr. and Mrs. Milton B. McGinty, Houston; Mr. Irving D. Porter, Dallas; Mr. B. Burke McGinty, Houston; Mr. Paul H. Elliott, Houston; Mr. and Mrs. Herman Lloyd, Houston; Mr. and Mrs. P. D. Creer, Austin; Mr. Roscoe P. DeWitt, Dallas; Mr. and Mrs. George F. Pierce, Jr., Houston; Mr. and Mrs. Edward L. Wilson, Fort Worth; Congressman and Mrs. John Dowdy, Athens, Tex.; Mr. and Mrs. Raymond S. Kastendieck, Gary, Ind.; Senator and Mrs. Ralph Yarborough, Washington (Austin, Tex.); Mrs. Ann M. Yarborough (daughter-in-law), Austin; Mr. and Mrs. J. J. Patterson, Ft. Worth, Tex.; Mr. and Mrs. R. E. Huckes, Amarillo; Mr. and Mrs. John S. Ward, Jr., Amarillo; Mr. and Mrs. Mace Tungate, Jr., Houston; Mr. and Mrs. C. Herbert Cowell, Houston; Mr. Karl Kamrath, Houston; Mr. Harris A. Kemp, Dallas; Mr. and Mrs. Fred Mackie, Jr., Houston; Mr. Russell Phelps, Beaumont, Tex.; Mr. and Mrs. L. W. Pitts, Beaumont, Tex.; Mr. and Mrs. Edwin W. Carroll, El Paso, Tex.; Mr. David C. Baer, Houston; Mr. and Mrs. Keith Langford, Bellaire, Tex.; Mr. and Mrs. Reginald Roberts, San Antonio, Tex.; Mr. and Mrs. Louis Daeuble, El Paso; Harry Provence, Waco News Tribune and Times Herald, Waco; Congressman and Mrs. Wright Patman, Texarkana; Congressman and Mrs. Bob Poage, Waco; Mr. William M. Peak, Byran, Tex.; Mr. Franklin D. L. Langer, Bryan, Tex.; Mr. and Mrs. Lee R. Buttrill, Beaumont, Tex.; Congressman and Mrs. Joe M. Kilgore, McAllen; Congressman and Mrs. Frank Ikard, Wichita Falls; Mr. and Mrs. Maurice J. Sullivan, Houston; Congressman and Mrs. Jim Wright, Weatherford; Hon. J. George Stewart, Architect of the Capitol; Mr. and Mrs. Harry W. Golemon, Beaumont; Congressman and Mrs. Omar Burleson, Ansonffi Mr. and Mrs. John N. Richards, Toledo, Ohio; Mr. R. Turner Kimmel, Lubbock, Tex.; Congressman and Mrs. George Mahon; Congressman and Mrs. Walter Rogers; Congressman Jack Brooks; Congressman J. T. Rutherford; Congressman and Mrs. Clark W. Thompson; Congressman and Mrs. Homer Thornberry; Congressman and Mrs. John Young; Congressman and Mrs. O. C. Fisher; Mrs. Philip Will, Jr., Chicago, Ill.; Hon. Sam Rayburn, the Speaker; Mr. James T. Swanson; Mr. and Mrs. Herbert Tatum, Texas; Mr. Martin S. Kermacy, Austin; Mrs. Rebekah Johnson, Austin (Senator Lyndon's mother); Mr. Arthur Fehr, Austin; Mr. Nolen E. Banick, Lubbock; Mrs. Juanita Roberts, Port Arthur.

Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. POTTER. Mr. President, our distinguished minority leader has a talent for summing up dramatically what is going on in the Congress. I believe his address at Grand Rapids, Mich., of Monday, May 6, will be of particular interest to all of us. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF UNITED STATES SENATOR WILLIAM F. KNOWLAND, GRAND RAPIDS, MICH., MAY 6, 1957

Michigan has made many contributions in peace and war to our Nation and has contributed outstanding leadership over the years to the Republican Party.

Your senior Senator, CHARLIE POTTER, is carrying on in the finest traditions of your State and of our party. With 6 years of experience in the House of Representatives and with his Senate experience dating from 1952, when he succeeded the late Arthur Vandenberg, CHARLIE POTTER has, with ability and integrity, done an outstanding job.

He is a member of two of the most important committees of the Senate. The Committee on Interstate and Foreign Commerce and the Committee on Appropriations. As a member of the latter committee, I can personally testify as to his effectiveness as a valued member of that committee.

It is also pleasant to once again be in the Fifth Congressional District and in the city of Grand Rapids. Your Congressman, GERALD R. FORD, JR., has seen service in the House since his election on November 2, 1948, and serves on the powerful Appropriations Committee of that body.

I know of no Member of the House who commands more respect on both sides of the aisle than does your own Congressman JERRY FORD.

It is good to be here to discuss some problems of concern to us as citizens of the United States.

I bring you personal greeting from President Eisenhower and Vice President NIXON.

DICK NIXON has done an outstanding job as representative of the President on his recent trip to Africa and in the other assignments that have ben given him during the past 4 years and 4 months.

Let us never forget that in his 4 years of office the Republican administration of President Eisenhower:

1. Brought the Korean war to an end.
2. Has preserved peace with honor.
3. Presented three consecutive balanced budgets.
4. Taken off wage, price, and commodity controls of our economy.
5. Provided a seven billion tax reduction.
6. Stabilized the dollar with only a limited devaluation compared with the previous 5-year period.
7. Employment rose to a new level in March to 63,900,000. The Nation now has the highest peacetime employment in our history.
8. The administration has extended social-security to over 10 million additional Americans and increased social-security benefits to 605,000 additional Americans.
9. Our national-defense forces have more striking power than ever before.
10. Under the Republican administration unemployment compensation has been extended to 4 million additional workers bringing the total now covered by unemployment compensation in the country to 41 million.
11. The administration has been free of corruption.

These are but a few of a long list of accomplishments. We have had some liabilities, to be sure. I believe the budget presented this year is too high. It should and will be cut by Congress. But the American people should continue to remember these outstanding accomplishments.

We must as a Nation build on principles rather than personalities. Individuals come and go but fundamental principles endure.

What are some of these basic principles that we should stand for?

1. Constitutional government with the division of power between the legislative, executive, and judicial branches of the Federal Government and the reservation of all power not granted to the Federal Government, under the Constitution, to the States and to the people.

2. Maintenance of our free-enterprise system under which we have grown from a small colony of 3 million people to a great world power of 170 million with the most productive economic system the world has ever known.

3. Protection by the Federal Government and the States of the people from the concentrated and arbitrary use of power by business or labor organizations against individuals and small-business enterprises. The right to earn a living as an employee or as a proprietor of a small business is a "civil right" of the first magnitude.

4. Maintenance of a soundly growing economy based on free enterprise and full employment. No business or labor organization should have the power to strangle the economic life of 170 million Americans and by so doing endanger free men everywhere. With power must also go responsibility.

5. Support of a sound fiscal structure for our Federal, State, and local governments. This requires all of them to live within their means and to stop trespassing on the tax resources of the others.

Without a sound dollar and a solvent government our whole structure of local, State, and National Governments, of public and private educational facilities, of wage earners, of public social security, and private pensions and retirement systems will be jeopardized.

Without a sound dollar every employee, every housewife, and our people living on retirement income or social-security payments will be penalized. Inflation and debt repudiation is but another form of confiscatory taxation in the Marxist Socialist pattern.

It is time for use to rededicate ourselves to a renewed faith in our free way of life.

We must not take our constitutional form of government or our free enterprise system for granted. Neither fall into the category of something that can be locked in a safe-deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that our Founding Fathers were prepared to make in the first instance.

Other nations have been or now are larger in land area, in population and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of free men. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems or its variety of natural resources as important as these are.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there is a higher moral law to which governments are also accountable. We have humbly acknowledged the divine inspiration which made and preserved us as a Nation.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge and of Lincoln doing the same during his lonely vigil in the White House during the darkest days of the Civil War.

The priceless ingredient for our people has been our constitutional form of government which guarantees our religious, personal and economic freedom.

We must not dilute our constitutional guaranties whereby human freedom would be compromised with totalitarian tyranny in any form of world government.

The incentives furnished under our system have constantly opened new horizons.

In this atmosphere, Americans of each generation have sought to leave to their children a better land than they themselves found, not just better in a material way but in the educational and cultural developments that make for better family and community life.

New inventions in various industrial fields and the tremendous potentials of the peacetime developments of atomic power are bound to challenge us for many years into the future.

The economic and fiscal record of our Republican administration has been without parallel in modern times. Total output of goods and services has increased from $345 billion in 1952 to $412 billion in 1956—a gain of more than 15 percent.

Five million dwelling units have been constructed during the 4-year period from 1953 through 1956. This greatly exceeds the number built during any other similar period in the Nation's history. Homeownership is at an alltime high.

Homeownership and construction should be encouraged. It contributes to our durable goods industries and contributes to good citizenship and an expanding standard of living.

Of even greater importance is the improvement in the spiritual base of American society. Participation in and support of religious, cultural, educational and civic activities is more extensive than ever before. Church membership has increased markedly and recent years have witnessed a sharp rise in the construction of churches.

Greatly increased amounts of resources are being devoted to education at all levels. Public and private outlays on construction of educational buildings totaled $3.1 billion in 1956—the fourth year in a row in which a new record has been set.

When the Federal Administration returned to Republican control, expenditures totaled almost $75 billion and the deficit was $10 billion. Taxes were cut by some $7 billion, the largest single tax cut in the Nation's history and by 1956 the budget was back in balance.

Lately, however, Federal expenditures have been increasing once again. There has been deep and widespread concern about this throughout the country and rightly so.

A tax system under which the Federal Government taxes personal incomes at rates varying from 20 to 91 percent and corporate income at a 52-percent rate is simply too burdensome. It will ultimately destroy our free enterprise system.

For fiscal year 1958 President Eisenhower estimates that the Federal Government will spend almost $72 billion—an increase of more than $5 billion over the 1956 spending rate.

The budget continues in balance only because of a continuous increase in the level of our prosperity which has brought forth a steady rise in tax revenues with no increase in rates.

Few people realize that all we need to do at the present time in order to be able both to reduce our towering national debt and cut taxes is to stop increasing Federal expenditures. Had Federal outlays been held at their 1955 level we would now face the pleasant prospect of a budget surplus of almost $9 billion in the coming fiscal year. This would be sufficient for a sizable reduction both in the national debt and in taxes.

In order to have a budget surplus of almost $5 billion in the forthcoming fiscal year, all we need to do is to keep Federal expenditures from rising above their already high current level. This reduction of $3 billion can and must be achieved as a minimum. I pledge my efforts to this end.

This must not be any single shot effort. In future years we must continue to keep Federal expenditures from increasing and wherever possible, to reduce them. Only this way can our burdensome taxes and national debt be steadily reduced.

There is a prevalent school of thought which maintains that Federal expenditures must keep pace with the growth of our economy. This is a dangerous and unnecessary philosophy. For one thing, it is the economy that maintains the Federal Government and not vice versa. Further, unless we are able to reduce our tax burden, we may end up by destroying or seriously crippling that which is the source of our strength—our free enterprise economy.

We live in a perilous age. Unless, we are able to reduce Federal expenditures and taxes, we will have no margin available for emergencies. Should we be faced with the necessity of fighting another war to preserve our liberties, we may end up having lost them through internal breakdown even though we decisively defeat our foreign foe.

I do not deny that as the country grows, some increase in Government expenditures is necessary and even desirable. However, of one thing I am certain. During a time of peace it is not necessary for Federal expenditures to increase as fast or faster than the increase in the national income or as fast as an overburdened tax system can produce increased revenues.

The founders of this Republic knew well the history of the world up to their time. They knew that where there was a concentration of power in a single agency of National Government that the freedom they sought to guarantee could easily be lost.

Those of us who continue to believe firmly in this wise political philosophy instinctively know that the Federal Government cannot give anything to the States unless it first takes it away from their citizens.

Throughout the major part of the last 30 years, the Federal Government has had to use a constantly increasing portion of the Nation's taxable capacity to meet its expending obligations. Only by calling a halt to this process can the weakened sovereignty of our States be shored up and revitalized. If the Federal system is worth retaining our aim has to be less Federal spending and less taking on of new obligations accompanied by a reduction in Federal taxes and debt. In this way and solely through these means the States and localities will have the wherewithal to undertake the many necessary programs as society grows and becomes more complex.

America is still the authentic revolution. The flame of freedom which was struck at Concord and Lexington still is an inspiration to the enslaved behind the Iron Curtain.

But it is also an ageless lesson that no outsiders can win independence for a people. They must be willing to pay the price in blood and resources to gain their own freedom.

We do recognize, however, that when freedom is destroyed anywhere a bit of freedom is destroyed everywhere.

Nations can die while delegates talk. Last year the General Assembly of the United Nations passed 10 resolutions in 76 days of debate. All that while freedom was being strangled to death in Hungary. With callous indifference the Soviet Union placed itself above the higher moral law of God as well as above its obligations under the United Nations Charter.

No international organization can long endure with a double standard of international morality.

Are the obligations and the mandates of the United Nations to be applicable to the democratic nations but not to the totalitarian powers? To the law-abiding but not to the outlaw nations? To the small and weak countries but not to the big and strong? What kind of justice is this? Are we building on quicksand? What kind of a foundation is this for constructing a system of international law and order based on justice?

We serve no useful purpose if we hide the facts. To the contrary by ignoring them and failing to seek remedies we may endanger the safety of this Republic and freemen everywhere.

For many decades the men in the Kremlin have preached the doctrine that the free world contains the seeds of its own destruction. It is far more likely, I believe, that the Communist world contains the seeds of its own destruction.

Hungary was but the latest in the indications that, even under totalitarian police rule and the brainwashing of a whole generation, the spark of freedom still lived and was capable of lighting a fire that endangered the whole monolithic structure of Communist tyranny.

After the Hungarian experience how much reliance can the Soviet Union place in the armed forces of the other captive nations if freedom is ever within their reach? How can they have faith in Communist indoctrination when young students were the leaders of the Hungarian rebellion?

Within the past several weeks the rules in the Kremlin have sought to intimidate Norway, Denmark, Greece, and Iceland.

The Soviet Union has not changed its long-term strategic objective: the destruction of human freedom everywhere.

They will be relentless in seeking to destroy our institutions. Fortified by our faith in God, we must be determined that our way of life will be preserved.

Hungary has also taught the world that unless an independent government or revolutionary movement can function for several weeks or months it is difficult for outside friends to assist.

Had the British Red Coats crushed the first American rebellion in a week and captured the leader (as happened in Budapest) there would have been no time for France and our other friends abroad to come to our aid.

Sooner or later there will be another Hungary. Will the free world be better prepared to strike a blow for freedom? Will the United Nations be prepared to do more than talk and pass 10 resolutions?

It may come this year or next in Bulgaria, Rumania, Czechoslavakia, Eastern Germany, Albania, North Korea, China, Poland, or in Hungary again.

Indeed it may even come in the Soviet Union where the people of Russia were the first victims of the godless Communist tyranny.

During the week Nagy was the legal head of the Hungarian Government; what a difference it would have made if the United Nations had sent in observers: If based on the first United Nations resolution the friends of freedom abroad had sent the freedom fighters, bazookas, and grenades rather than more resolutions of sympathy.

Or is the policy of the United Nations and the free world now to be that we will throw water on the embers of freedom and revolt against tyranny and that we will finance Communist economic and political systems so that the slaves will be more content with their masters?

I do not favor taxing the American people to support Communist economic or political systems abroad.

For several years the United Nations has discussed the freedom of colonial people in Asia and in Africa. These are and will continue to be important questions until equitable solutions have been reached.

Why, however, has there a strange silence in the United Nations to bring to a head the destruction of freedom in Latvia, Lithuania, and Estonia? Here is a clearcut prima facie case of the violation of its international treaties of friendship and nonaggression by the Soviet Union. Here is a clear case of the unilateral incorporation of three independent nations as provinces within the U. S. S. R.

Will the General Assembly take further action in the Hungarian case to back up its 10 resolutions or will an effort be made to create a zone of silence so that relations with the Soviet Union will not be embarrassed? Is justice for Hungary to be blinded and gagged as well? Is the conscience of the world that was so thoroughly aroused in October and November to be complacent and satisfied in May and June? While the Security Council meets on the Mideast question this month will the Hungarian issue be raised or be forgotten?

These are questions which free men will be asking and enslaved people who want to be free will be waiting for the answers.

It was Lincoln who said: "Fellow citizens, we cannot escape history * * * the fiery trial through which we pass will light us down to the latest generation * * * we, yes even we here, have the power and bear the responsibility * * * in giving freedom to the slave we assure freedom to the free * * * we shall nobly save or meanly lose this last best hope on earth."

The Responsibilities of Citizenship

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered to the Pennsylvania State Chamber of Commerce Tuesday evening, April 30, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE ANNUAL CONGRESSIONAL DINNER OF THE PENNSYLVANIA STATE CHAMBER OF COMMERCE IN THE WILLARD HOTEL, WASHINGTON, D. C., APRIL 30, 1957

Mr. Chairman and my fellow Americans, one of the most profound truths that have come down to us from the wisdom of Benjamin Franklin was expressed by that great citizen of Pennsylvania in 1787 when the writing of the Constitution of the United States had been completed.

You will recall that he was asked: "What kind of government have you given us?" and he replied: "A Republic—if you can keep it."

In that simple statement Dr. Franklin asserted his firm belief that a republic recognizing freedom of the individual and deriving its just powers from the consent of the governed, is the most difficult of all types of government to maintain.

It is difficult to maintain because the people are the Government and they have the responsibility for its successful operation. The difficulties are increased when so few people really take a part in their government.

Many of our people seem to feel that they have performed their full duty as citizens when they vote. Some are so indifferent that they even neglect that fundamental obligation of American citizenship.

That tragic situation points out very clearly that to keep our Republic—to perpetuate its strength and power as the bulwark of freedom in the world—we need more

militant groups who will take an active, aggressive, and unselfish part in government.

Our country needs more dedicated men and women who will help choose able and courageous public officials to represent us, and then will support those representatives in carrying out the ideals of patriotic Americanism.

As we look back across the record of history we find that great nations have gone down to defeat when the people lost interest in their government. We find that wherever people depended upon government and not upon themselves, their moral fiber was undermined while initiative and self-reliance disappeared. The result has always been excessive government spending, oppressive taxation, and burdensome debt—and let me impress upon you that more great nations have been destroyed by debt and taxes than by invading armies.

Let us look at the situation in our own country as disclosed by some figures. These figures are interesting but to my mind they are most alarming.

In the decade following the expensive Civil War, the cost per capita of Government was $3.82 per person. At the turn of the century the cost was $2.17 per person. Following World War I the cost rose to $3.53 per person. During World War II the cost was $136.46 per person.

The lowest Federal tax take was in 1885, when it was only $1.98 per person, but in 1956 it had increased to the astounding figure of $446.86 per person.

We usually complain that the Federal Government is costing us so much, but the cost of Federal Government is not advancing as rapidly as State and local government.

Twenty-five years ago the overall total of Government debt—State, local and Federal—was $30 billion as against $318 billion now, or an increase of more than 700 percent, while the population has increased only 35 percent.

In 1932 the total cost of all government—local, tSate, and Federal—was $13½ billion and is now more than $100 billion, or an increase of 700 percent, while the population has increased but 35 percent.

In 1942, State and local taxes were about $9½ billion. In 1956, State and local taxes had increased to more than $26½ billion, or about 3 times.

Too many local governments now feel that if they get help from the State, it does not cost them anything. The States seem to feel that if they get a grant from the Federal Government that does not cost anything. We must never forget, however, that no government has ever created wealth, that all taxes come from the same pocket and are paid for by the consumer of goods produced by labor and industry.

The Federal Government has expanded its grants-in-aid to the extent that it covers practically every function of State and local government. There are now more than 50 activities of this kind. The cost of these grants in the twenties was about $100 million a year. This has increased steadily, year after year, to more than $4 billion at the present time.

In Pennsylvania, not including Federal expenditures for rivers and harbor improvements and flood control, we received $156 million in so-called Federal aid while in the same period we paid $242 million in Federal taxes.

In 1956, we actually spent in the United States $534 million on rivers and harbors and flood control. Of this, Pennsylvania received $7 million at a cost to Pennsylvania taxpayers of $37,293,000 for their share of the total.

These figures are warning signals and it has become imperative in Pennsylvania that we take a hard look at the situation confronting us.

We are not increasing in population as rapidly as our neighboring States, which are heavily industrialized. We have already lost 6 Congressmen since 1930 and because we are falling behind in population increase, we may lose 2 more by the 1960 census.

More alarming is the fact that we are falling behind in industrial progress. In order to retain and increase our population we must have more gainful jobs for our skilled workmen.

I know you have given a great deal of attention to the relationship between taxes and industrial expansion. The figures tell the story. In 1956 direct taxes on business called for 39 percent of the total State tax collections while in our neighboring State of New Jersey it was 19 percent and 18 percent in Ohio.

Let us all take a look at Pennsylvania's budget and also Uncle Sam's budget. Let us keep in mind that there is only one way to keep down taxes and that is to cut expenditures.

If we fail to do so we bring on the destructive force of inflation. Excessive spending by government and big debt are the heaviest inflationary pressures and the most serious threat to our national and economic welfare. Inflation is more deadly than war—more dangerous than any bomb that can be hurled against us.

We are living in a great age. We do not want to turn the clock back. But our ancestors had the virtues of thrift, prudence, and self-reliance. They had pride in local responsibility.

Those are still great virtues. Our local communities and the States should think of this when they go to the Federal Government for help.

Address by Hon. A. Willis Robertson, of Virginia

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. ERVIN. Mr. President, on May 10, 1957, my able and distinguished colleague, the junior Senator from Virginia [Mr. ROBERTSON] delivered an excellent and eloquent address before the North Carolina Bankers Association, at Pinehurst, N. C. The able and distinguished junior Senator from Virginia is undoubtedly one of the foremost experts in the field of banking in the United States, by reason of his diligent study of banking problems. I ask unanimous consent that his excellent and eloquent address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR A. WILLIS ROBERTSON AT THE 61ST ANNUAL CONVENTION OF THE NORTH CAROLINA BANKERS ASSOCIATION AT PINEHURST, N. C., MAY 10, 1957

Nothing has contributed more to the pleasure of my service in Washington than the friendships I have enjoyed with the splendid members of the North Carolina congressional delegation.

Some of you may recall that I served for 10 years on the Ways and Means Committee with Robert Lee Doughton—the noblest Roman of them all. I smile when I recall the confidential sessions in his private office when the President was urging more and more taxes to keep pace with more and more spending. Old man Bob used to say: "Unless we can stop that program it is going to wreck the country." The fact that it has not done so is mute evidence of how rich and strong our country was.

During my 10 years of service on the Ways and Means Committee, I helped to write 12 tax bills, each larger than the preceding one. So, I have a very clear idea of the present burden of taxation and the extent to which the ignoring of economy views of statesmen like Robert Lee Doughton has contributed to that burden.

Ever since I have been in the Senate the North Carolina representation in that body also has been outstanding. Never in recent years has more heartfelt sympathy been expressed on the floor of the Senate than on the occasion of the sudden death of the able and beloved Clyde Hoey. Since I am by profession a lawyer and had taken some interest in the Constitution even before it was amended by Court action in the school cases, I have been able to appreciate the outstanding legal ability of such Senators as Willis Smith an SAM ERVIN. Nothing could have been more pleasing to the farmers of Virginia than when North Carolina sent to the Senate a practical farmer who also was well versed in the science of farming, Senator SCOTT.

While Virginia was more of a battleground of the Confederacy than North Carolina, the flower of North Carolina manhood perished in the unfortunate and unnecessary conflict and no State was left more prostrate in the spring of 1865 than North Carolina. And yet no State of the Confederacy made a more rapid and successful recovery. We boast in Virginia of having at Danville the largest single cotton textile mill in the world, and yet, the total of cotton goods produced in North Carolina far exceeds those produced in Virginia. We boast about having at Suffolk the largest single peanut-processing plant in the world but the production of edible peanuts in North Carolina exceeds that of Virginia. Virginia boasts of its production and processing of tobacco and yet the fact remains that North Carolina raises more Virgina tobacco than Virginia and its tobacco-processing plants turn out more varieties than Heinz does pickles.

This year, we are celebrating the 350th anniversary of a settlement at Jamestown which we claim, of course, as the first permanent English settlement on the North American Continent. But all who know their history must admit that the home of the first English settlement would have been in North Carolina but for some tragedy never yet explained that wiped out Sir Walter Raliegh's settlement at Roanoke Island.

I mention these facts as evidence first, of a friendly rivalry in various endeavors that has marked the history of our two States, and second, as evidence of the firm ties that have bound us together.

It has been interesting to me to learn that while Virginia has nearly 100 more banks than North Carolina, the assets of the 312 Virginia banks are not very much larger than those of the 214 North Carolina banks. The principal reason, I believe, that there are more individual banks in Virginia than in North Carolina is the North Carolina law which permits statewide branch banking which we do not have in Virginia and I assume that the reason there are nearly four times as many State banks in North Carolina as national banks, as against a nearly even division in Virginia, is the rather liberal State banking law. For instance, a State bank can lend up to 20 percent of the first $250,000 of capital and surplus and 10 percent of the capital and surplus in excess of $250,000 to a single individual or interest, whereas national banks are restricted to 10 percent of capital and surplus.

Since the population of North Carolina is considerably larger than that of Virginia and the total of manufactured goods larger, one reason that the assets of Virginia banks are larger than those of North Carolina may be due to the fact that some of the largest corporations that are doing business in North Carolina carry substantial deposits in other States including Virginia. Of course, North Carolina banks have lost some deposits in the past year under the law that requires the State treasurer to get on State deposits a rate of interest equal to the average of short term United States Treasury bills. When the rate on Treasury bills went beyond the rate the banks were authorized to pay, your State treasurer invested about $93 million of State funds in United States Treasury bills.

It was my lack of knowledge of how the banking business had developed in the South that caused me to insert in the formulation of a tentative bill to codify the banking and credit laws a provision that I later learned was highly objectionable to many southern bankers. As I have indicated, most of the banks in Virginia are either national banks or State member banks and there was only one bank in Virginia that did not clear at par. Consequently, I inserted in my tentative bill a provision to require the Federal Reserve Board and the FDIC to adopt the same definition of what was interest on demand deposits with a view to ultimately wiping out absorption of exchange. I soon found that the Virginia viewpoint on that proposal was not shared by the majority of bankers from North Carolina to Florida. Therefore, when the full Committee was considering a bill to be reported to the Senate, I recommended to the full Committee that the provision in the tentative bill relative to the absorption of exchange be dropped. After that action was taken I received many fine letters from North Carolina bankers endorsing the bill that was reported to the Senate.

Although the bill, as passed by the Senate, contains well over 200 substantive amendments to the law, most of the discussion has been centered on the so-called controversial provisions. The regulation of bank mergers by the banking agencies rather than the Justice Department; the elimination of mandatory cumulative voting in the election of national bank directors; the requirement for disclosure of the actual owners of bank stock; and the restrictions on political contributions by banks—all are examples of important issues raised in the bill.

I assume you all are familiar with the arguments on both sides of these controversial questions. Therefore, I would like to review with you briefly some of the sections of the bill which have been overshadowed by the more publicized amendments. These are what I call bread-and-butter provisions, and they are designed to enable bankers to better meet their present-day problems.

I am sure you will agree that two of your principal problems are attracting capable men to the banking profession and obtaining adequate capital for growing banks. Our proposal to permit national banks to have stock option plans for their employees will place banks in a better competitive position with all industry in attracting and keeping personnel. To assist banks in raising needed capital, we have proposed that national banks be authorized to issue preferred stock. The present law does permit the issuance of preferred stock, but this has been construed as an emergency measure only and has not been used since the days of the RFC. We believe that national banks, with the approval of the Comptroller, should be permitted to strengthen their capital structure in the same manner as other corporations.

Limitations on lending authority of national banks would be liberalized in recognition of modern day business needs. Thus, the bill specifically authorizes loans on the security of dairy cattle, frozen foods, and consumer installment paper. National banks would be permitted to make loans to finance the construction of public buildings in connection with the Government's lease-purchase program. Similarly, 18-month industrial and commercial construction loans are authorized by the bill and the aggregate loan limitation on all construction loans is increased to 100 percent of capital and surplus. The bill also provides that loans for working capital purposes shall be considered ordinary business loans, even though the banker takes a mortgage on the property for additional protection.

During the course of my work on this bill many bankers complained to me about competition from savings and loan associations and charged that the Congress has given savings and loan associations an unfair advantage. Due to the nature and purpose of savings and loan associations, their laws in many respects must differ from the statutes governing banks. However, I do believe that to the greatest extent possible these institutions should operate under the same general ground rules as banks, so that the Congress cannot be unfairly charged with favoring one type of institution over the other. This is the philosophy we followed in drawing up the bill.

For the first time, we have provided for the removal of officers and directors of Federal savings and loan associations on the same grounds that are applicable to officers and directors of national banks and member banks. The present law governing the conduct of officers and directors of member banks in their business operations is also applied to officers and directors of Federal savings and loan associations.

Mergers and holding companies of savings and loan associations are made subject to regulation. The House companion bill, H. R. 7026, by Representative PAUL BROWN, of Georgia, carries a more liberal provision on savings and loan branches than the Senate bill, and the House bill also omitted the restrictions carried in the Senate bill on advertising by uninsured members of the Federal Home Loan Bank system.

Needless to say, witnesses for commercial banks called our attention to the fact that the tax rate for savings and loan associations was more favorable than that for commercial banks. Our advisory committee made a specific recommendation that the permissible bad-debt reserves under the Internal Revenue Code be increased, but the Senate Banking and Currency Committee does not have jurisdiction over the tax laws. The committee voted unanimously, however, to refer this question to the House Ways and Means Committee and the Senate Finance Committee for due consideration.

I have outlined only some of the many provisions which are of immediate importance to every financial institution in our country. All of those provisions are in the House bill by Representative BROWN except the two provisions noted above relating to savings and loan associations. Naturally, therefore, I hope that North Carolina bankers will indicate to their Representatives in the House their interest in the Brown bill.

You will understand, of course, that my bill to codify the banking and credit laws was never intended to take the place of a comprehensive study of general fiscal policies as recommended by many economists, the ABA, and by the President of the United States.

We cannot overlook the fact that, contrary to the experience after every other major war, when prices soon fell from their wartime peaks, prices have continued to rise since the end of World War II, and in March of this year the Consumer Price Index stood at 118.9 percent of the 1947–49 average.

Our gross national product increased 6 percent during the last year and reached the record annual rate of $427 billion in the first quarter of 1957. Personal incomes and consumer spending also reached new highs this year. Although some soft spots have developed in our economy, we cannot yet say that the threat of an inflation that would be damaging to small as well as to large business has passed.

It must be recognized, too, that inflation is inefficient as well as unjust. When people cannot rely on the purchasing power of the dollar, money loses a considerable part of its usefulness. In the scramble to avoid the penalties of inflation, saving is discouraged and investments are planned with a view to dollar profits unrelated to efficient production.

In considering the inflation problem it is obvious that the full burden of price restraint cannot be borne by the Federal Reserve System. Government expenditures and financing must be determined with regard to effects on prices. Labor and business must restrict increases of wages to those consistent with generally increasing productivity. Bankers can be helpful also in creating a climate of opinion which will encourage stability of the general price level.

All of these groups should be interested in the kind of study of fiscal policies to which I have referred, but everyone should frankly recognize the fact that throughout the history of the Nation the control of money has never been separated from politics.

Alexander Hamilton, who did not object to George Washington being made king, wanted the new Nation to have a bank comparable to the Bank of England, owned and controlled by the Government. He partially got his wish in the Bank of the United States. That bank, though privately owned, so dominated credit and placed the control of money so firmly in the hands of a few rich men that the abolishment of the Bank of the United States became a major issue with Andrew Jackson.

Jackson succeeded in abolishing the Bank of the United States and for a while State banks flourished. But State banks issued script that passed for money and had no firm value. In order to get money of firm value with which to finance the War Between the States the Congress passed the National Bank Act of 1863 which placed a tax of 10 percent on the money issued by State banks and that, of course, put most of the State banks out of the note-issuing business. During and immediately after the War Between the States the Government put out paper money legally titled "United States notes" and called greenbacks. We still have some of this outstanding in the form of United States notes, totaling $346 million. A gold reserve of $156 million has for many years been held against these notes. The United States notes, or greenbacks, depreciated severely (to about 45 cents on the dollar) in relation to gold but returned slowly to par. A Silver Purchase Act in 1890 and issuance of Treasury notes of 1890 based on this silver again caused a depreciation in the quality of our money and had much to do with the 1893 panic and depression. President Grover Cleveland brought about the repeal of this law.

The issue over the retirement from circulation of greenbacks and what would be called today a tight-money policy reached a climax in the campaign of 1896 between William McKinley and William Jennings Bryan, when Bryan in an effort to end a farm depression, advocated the monetization of silver at the ratio of 16 to 1 for gold as a means of producing plenty of cheap money.

The depression of 1907, during which many southern banks had to resort to scrip because of currency shortages, resulted in the ap-

pointment of the Aldrich Commission to study the problem of tight money. Republican bankers liked tight money and killed the Federal Reserve bill in the Senate in 1912. The next year the Democrats under Woodrow Wilson passed the bill. In the Senate only 3 Republicans and 1 Progressive joined with the Democrats in the passage of that bill.

The biggest depression in history started another drive in 1934 for easy money. A Democratic Congress abandoned the gold standard and ever since we have had a managed currency. Under that program, the dollar has lost one-half of its purchasing power. A managed currency can be kept sound if new money be issued solely with respect to the money work to be done. But when the Federal Government resorted to deficit financing it hurt the soundness of the managed currency in two ways:

1. By purchasing Government bonds Federal Reserve Banks provided the banking system with additional reserves which made it possible for them to increase the money supply without relation to the money work to be done.

2. When the Government sold bonds to commercial banks new deposit money was created for each dollar of bond so bought. And more business is done with bank check money than with currency.

The net result is an alltime high supply of currency, an alltime high of credit (including consumer and mortgage), and an alltime high of prices.

These factors need to be investigated. Edmund Burke said: "Nations do not learn by experience," but if our Nation hasn't learned that the consideration of sound money, so essential to successful banking, must be free from politics we may live to see currency and credit increased to the point of ruinous inflation.

Address by Hon. John O. Pastore, of Rhode Island, at Brotherhood Banquet of the National Conference of Christians and Jews

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by my distinguished colleague, the junior Senator from Rhode Island [Mr. PASTORE], at the annual brotherhood banquet of the Rhode Island Council of the National Conference of Christians and Jews, held in Providence, R. I., on May 13, 1957. This excellent address will, I know, be of interest to the Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR JOHN O. PASTORE AT THE ANNUAL BROTHERHOOD BANQUET OF THE RHODE ISLAND COUNCIL OF THE NATIONAL CONFERENCE OF CHRISTIANS AND JEWS, AT THE SHERATON-BILTMORE HOTEL, PROVIDENCE, R. I., MONDAY, MAY 13, 1957

I deeply appreciate the honor of the invitation to share in this occasion. "Occasion" seems too casual a word to define the drama that lies behind this happy gathering of men and women—friends, neighbors, and Americans. For here is something of the unfolding of the story that is America. Here is something of the greatness of the America that we possess—the America that possesses us. Here is something of the promise of the glory of America that is yet to be—in a world that is hungry for this kind of fellowship—hungry for the brand of brotherhood exemplified tonight.

Take a boy born of English parents in industrial England; take a lad born of Jewish parents in storied Ireland; take a youngster born of Italian parents under the sunny skies of that romantic land.

Where but in a land like ours could the 3 come together in this 1 golden hour to testify to the opportunities of our precious freedoms. It is a partnership in our common patriotism. Where else would gather so many races and so many religions as we represent to record our appreciation of individual, human, and humble men—not for their material successes—but for those qualities of mind and heart which make life an experience of justice, equality, happiness. Where but here could we demonstrate a fellowship that is more than tolerance.

I say this is the story of America though it reaches even beyond those English craftsmen who brought their plans for spinning wheels to dot the rivers of our valleys with industrial wealth.

It reaches beyond the Jews who 300 years ago founded their first synagogue in America, at Newport, to which they brought their ancient culture and their historic loyalties.

It reaches even beyond the dreams of the boy of Genoa—the daring Columbus who gave this New World to the Old World—and a new horizon to mankind for all time.

It reaches back as long as man has existed—since first man perceived he had a dignity beyond all other living creatures—and recognized the Creator who had made him so.

Through many ages and many lands man's culture multiplied—and thousands of years ago it flowered in the Judaeo-Christian precepts we respect tonight—personal freedom and moral responsibility—the sacredness of human life and the sanctity of the home.

These were the concepts of our Founding Fathers as they ordained this to be a government with the promise of life, liberty, and opportunity for all. These are the concepts that have molded the cultures of the many peoples who have poured their gifts into the common treasury of our America—building it to be the hope and inspiration of the world.

If this sounds like majestic language, we see it expressed in the simplicity of the lives of these three men we honor tonight. We understand it through their characters and their acceptance of responsibility which have made our lives a little better because they have passed this way.

If we have the right understanding, the significance of this night will not be lost upon us. This is a time of responsibility for us, too. If our America has received the gifts of the peoples of the world, we must realize that the world of freemen looks to America for leadership today.

This is an age that leads to destiny or disaster. Men's minds have wrested the secrets of nature with their promise of limitless good—or infinite evil.

We can lift impoverished peoples to a new happiness or we can blot entire cities and countries from the face of the earth. We have it in our power to annihilate all the cultures that have been centuries in the building. We can destroy all civilization.

I do not believe that the world can continue to live for all time in a state of balance of terror. Nor do I believe that permanent peace will come from massive retaliation. The answer is here—in the lesson of this night—in the spirit of tolerance and truth—of fellowship—of brotherhood—expressed in the dimensions of the destiny of the world.

These are heroic dimensions, if you will, but we have seen that this is a world more hungry for equality even than for food. We have seen men die in their determination to possess human dignity.

If others can die for this dignity—certainly we can live and work for it with all the genius and generosity we possess.

We know that we must live with other peoples in mutual respect—in a common freedom—and in universal peace.

The world looks to us for leadership and we shall rise to our responsibilities in the spirit and example of this night. We shall explore every path that may lead to peace and partnership.

And we shall be ready to share life in the true pattern of brotherhood. In that spirit we can lift the world out of hunger—out of horror—and out of hate.

Communism Versus Democracy

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. POTTER. Mr. President, Jesse W. Bollinger, a prominent attorney in Dearborn, Mich., has written an outstanding article entitled "Communism Versus Democracy." With pride in my constituent and my State, I present his remarks and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNISM VERSUS DEMOCRACY

(By Jesse W. Bollinger)

I venture to say that most people who might read the above title would see nothing irregular, unreasonable or improper about it. To most of us it is merely the statement of a current world struggle, of which we are all quite well aware, in which the United States and Russia stand as the opposing principals. This popular belief, however, is completely in error, and the error has resulted virtually in a state of national confusion regarding the subject of communism.

In discussing any controversial topic, it is always helpful if we can agree on the meaning of our terms, and upon definitions for our subject matter.

Democracy, I think we agree, is a form of government, the form of government which employs the principle of majority rule in arriving at political decisions.

As to communism there is considerable difference of opinion and uncertainty as to whether it is a form of government or a social and economic theory, or both. The uncertainty is quite understandable because Karl Marx himself apparently did not know what it really was and so did not classify it. We do know that his writings disclose the naive assumption on his part, that if the existing government is deposed, and if there is established in its stead, a new government comprised of a certain class of the people, that then, his social and economic theories would, unquestionably, immediately, and ipso facto, be an integral part of that new government, and the thought that other persons in that class might have other and different ideas, is blithely disregarded.

Communism, according to Marx, was the welding or fusing together of his proposed policy of public ownership and operation of

property, with a government established by the proletariat. In other words he proposed a government with a built-in legislative or governmental policy. It is here that he departs completely from reality

The only "built-in" policy, or the only principle concerning legislation, that a country is born with, so to speak, is that the will of the sovereign authority is the law of the land.

Marx overlooked entirely, the vitally important fact that governments and ideologies are completely separate and different things. A government is one thing, and any policy it may adopt, quite another.

Marx's followers might conceivably be successful in overthrowing their government, but once the government is overthrown, they are no longer crusaders for a cause, they are then supreme, they are the government. When this happens a vast change takes place. First, there is the scramble among the crusaders for the positions of power in the government. When this has been settled, those who have come off victorious now represent the sovereign power of the government. They are now vested with a new and strange authority which has its own claims and demands upon them. One of these is that their crusading ideal shall no longer be their first and prime consideration. Henceforth their only absolute allegiance shall be to that fundamental law of sovereignty which says that a government's first duty is to maintain its sovereignty at whatever cost. To this principle, all other ideas and ideals are necessarily relegated to the status of secondary considerations.

Since it is impossible to consider at one and the same time, communism as being both a governmental policy and a government, the best we can do is consider it first as being one, and then the other.

If communism is a form of government, it is either a majority rule government or a minority rule government. If it is majority ruled it is a democracy. But if we accept the claim of Russia's rulers that theirs is a Communist government, then communism, obviously is a minority rule government. The difference between the two we shall consider later.

If we consider communism as not being a form of government, but strictly a social and economic theory pertaining to the common ownership of property, it becomes necessary to find a government willing to adopt this theory and put it into practice. Since, however, this theory insists on there being a common ownership of property, the government selected must unquestionably and unequivocally provide for this common ownership. But common ownership, or public property as we call it, can exist only under governments which have a public control over the property. Majority rule, through the votes of the people, provides such control. Minority rule does not. Which means that the social and economic theory of communism can exist only under a majority rule government, or, in other words in a democracy. It is, however, the Russian Government which claims to be, and shouts to the world, that it is a Communist government, notwithstanding that property in Russia for all practical purposes, is owned and controlled by a very powerful few, who constitute a political aristocracy, more powerful, more privileged, and more exclusive than any ruling class the world has ever known.

It makes literally a world of difference whether the sovereign authority of a country is vested in a majority of the people or in a minority, because all governmental policies, and all government action, in all countries, is necessarily directed first to the well-being and preservation of the sovereign.

Where the will of the majority is the sovereign, all government action is necessarily designed to benefit the majority. Where the will of a minority of the people is sovereign, all governmental activity is aimed first to benefit that minority.

Therefore, if Karl Marx or anyone else advocates a theory or policy of government which he believes would benefit all the people, it will never be adopted by a minority-rule government unless it is of at least equal benefit to the sovereign minority, and if it would be of great benefit to the majority of the people, but detrimental to the interests of the sovereign minority, it could never become a law of the land.

From the above, I think we can see that, politically, the difference between the United States and Russia, is the difference, that exists between majority-rule governments and minority-rule governments, which, as exemplified by the United States and Russia respectively, we now consider.

We know that under our majority-rule government the will of the majority is our sole sovereign authority. Under this rule, our people have established our Constitution, our charter of government and human rights, which no one, either in the Government or out, may violate. We also know that under majority rule any or all people in Government can be removed or replaced, and that this is done peaceably, by the considered judgment of men, instead of by violence and revolution.

Now let us look at this same government under minority rule. Let us imagine that the principle of majority rule is somehow completely eliminated as a controlling principle in the operation of our Government. Would our President then quietly step down from his position as head of the Government? If he should choose not to, he would still be faced, as he is now, with the first duty and primary obligation of every government—the duty of maintaining its existence, the obligation of insuring that it shall not be overthrown. This is a natural and legal incident of sovereignty, and it is as immutable as the law of gravitation. The vote of the people having been eliminated, the President, as head of the Government, could no longer look to the ballot box for his authority to continue in office. He alone would be that authority, the sovereign, with the necessity thrust upon him of maintaining that sovereignty.

In such an unhappy event, any citizen who might advocate replacing the president would be guilty of treason in the broad meaning of that term, since he would be advocating the overthrow of the sovereign; and the president would be obliged to deal severely with any such person since, above all, he must see to it that his country's government is not overthrown. Under these conditions, anyone who openly opposed the president would have to expect that either he or the president must go, and it probably would not be the president. Also, it is possible under these circumstances that the suppression of free speech, the press, and even public assembly might become necessary, to prevent incitement of the people to revolution. And, if such drastic steps should become necessary, they would of course, be entirely legal. It would be pointly to call them wrong, or sinful, or cruel. They would have to be recognized for what they would be: Necessary measures, decreed by the country's sovereign authority, to prevent an overthrow of the established government. This is our country, as it would be under minority rule. This is dictatorship government, whether it be a dictatorship of the proletariat, or any other exclusive groups. This is the government of Russia.

In deciding upon a government for ones country, there is not a very wide selection of basic forms. All of the world's governments are either majority rule or minority rule. This does not mean that people necessarily have a choice, because a choice implies majority rule. It would be more correct to say that the country in which the people have a controlling voice in government has majority rule, and the country wherein the people do not have a controlling voice has minority rule. It is one of the great tragedies of our age that this difference, the only real difference between the United States and Russia, is sidetracked and forgotten, to the great power and glory of the Russian rulers. From what is incessantly drummed into our heads by our schools, our press, the radio, and every other medium for the dissemination of knowledge, Russia has a "Communist government," whatever that may be. Whatever it is, it is what we believe. The belief, however, is wrong because there is no such thing as a Communist government, but so long as we hold to this belief, it will preclude our ever reaching an understanding, much less a solution, of our greatest world problem.

The Russian Government was established by force, and it has been maintained through necessary measures, decreed by the country's sovereign authority, to prevent an overthrow of the established government. Stalin was not elevated to the position of Russian dictator because of communism. Nor did communism assist him in the purging of his political enemies, or in ruthlessly suppressing all opposition to his rule. In short, communism had nothing to do with establishing the existing Russian Government, and it has nothing to do with keeping it in power. In view of this we are forced to concede that the propagandists of this country and Russia have accomplished the seemingly impossible, in thoroughly identifying communism with Russia's Government. A government which in truth and in fact is nothing more nor less than minority rule in all its stark and bloody reality, irrevocably pledged to preserve, protect, and defend nothing—but itself. Nevertheless, to all our schoolchildren, and to most of us, that little gang of Russian usurpers, dedicated only to self-preservation, is a Communist government.

All this is not by way of attempting to deny that a great struggle is going on in the world, because there definitely is such a struggle, and it is of more importance to us than we know. I merely wish to point out that communism is no more involved in that struggle than it was involved in purging Stalin's enemies. The Russian Government is committed to but one policy, and that policy is not communism. It is committed only to maintaining itself in power, or, in other words, to purging its enemies. Consequently, it has a continuous fight on its hands, but the fight is solely to maintain and preserve the power and position of the Russian rulers, not—as they so loudly protest—for dear old communism.

Today's world conflict is not between ideologies, nor is it between an ideology (communism) and a form of government (democracy), as we have so long been telling ourselves. It is simply the conflict that necessarily results when majority-rule government, democracy, in the course of its slow but inexorable advance, is challenged by the entrenched forces of minority rule.

Uneasy lies the head that wears a crown, even if it is entitled to the crown, and doubly uneasy lies the head of the usurper whose authority derives neither from a crown nor from the will of the people. To the rulers of Russia, the continuing advance and progress of majority rule portends their inevitable downfall, and they see no alternative but to fight. This they do and will continue to do by every conceivable means, from conducting a propaganda campaign of hate and falsehood, to waging war. One interesting maneuver employed in their fight, a sort of delaying action, is to pull down the blinds (or Iron Curtain), so those inside cannot see out, and those outside may not see in. In any event, under the circumstances we should not be too surprised that Moscow

finds it impossible to concede us anything, or to agree with us about anything.

The immediate problem, however, is how to rescue the misguided souls in our own country, who, being lured by the bait of communism, have swallowed the hook of minority rule. The fact tht our own national propaganda and educational programs have not been more effective in curbing these defections is no credit to the rest of us. In fact one wonders if some of the declamations on the subject of communism made by many of our editors, educators, public officials, and just plain citizens, are not actually a contributing factor in these derelictions. For example, we know that the Russian Government is a primitive type of government, operating virtually according to the code of the wild—the strongest having the right to rule the herd. Why, then, do we gratuitously accord it, what the Russians consider is the highest distinction within our power to confer, by following their line in calling it a "Communist government"?

It is an amazing tribute to the power of propaganda that we have come to think of Russia and communism as being a sort of political Damon and Pythias. Lately another word has been coming between these two, but not really to separate them. On the contrary, the purpose is to expand and broaden the scope of their influence. The bigger and better phrase is: "Russian world communism." Thus, the single word, "communism," provides that little Moscow minority with a completely sufficient and adequate raison d'etre, volumes of publicity, and an eager world press, notwithstanding the fact that communism itself, by any known definition of the word, is as foreign to Russia as the Australian ballot.

The Budget

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is much discussion concerning the cutting of the budget. Since I have been a Member of Congress there has never been as careful study of appropriations as during this session. There has been much talk relative to statements made by our great Secretary of the Treasury, George Humphrey. The Nation is very fortunate to have a man of Mr. Humphrey's ability and patriotism in the service. His statement relative to a hair-curling depression has been very much misunderstood.

David Lawrence, under date of May 12, has given, to my mind, a very fair statement concerning Mr. Humphrey, and I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"HAIR CURLING" REMARK TONES DOWN IN CONTEXT

(By David Lawrence)

WASHINGTON, May 12.—Secretary of the Treasury George Humphrey has been bearing the brunt of a good deal of criticism lately throughout the country. Some accuse him of "attacking the President's budget." Others say he predicted a depression that "will curl your hair" unless the 1958 budget recommended by the President is cut by many billions of dollars. Partisans on Capitol Hill have been twitting the administration and seeking to exploit the alleged contradictions.

But, if ever a man in public life was misquoted or quoted out of context, misunderstood, and misrepresented, it is the present Secretary of the Treasury in relation to his comments at a press conference of January 16 last.

Fortunately, a stenographic record was kept and was issued to the press that same day.

This correspondent has just completed a study of what was distributed by the various wire services and what was printed in most of the newspapers immediately after the press conference of January 16. The only conclusion that can be reached is that the text of what the Secretary really said and the impression conveyed by some of the wire services is considerably different. Here is the exact text of the question that drew the response about "hair curling":

"Mr. Secretary, isn't nearly all the talk here today about cutting spending and cutting taxes largely academic, as long as the world situation remains what it is? Looking at this budget, I find that the lion's share of the increased expenditures is for mutual security and defense. Is there any hope anywhere in the world situation that you can do any cutting in defense spending in the next few years?"

It is to be noted that the questioner inquired about any hope anywhere in the world situation and referred specifically to the increased expenditures for mutual security and defense. Here is the exact text of Mr. Humphrey's answer:

"I think there is, yes I do. I think there is some hope you can reduce expenditures all along the line. I would certainly deplore the day that we thought we couldn't ever reduce expenditures of this terrific amount, the terrific tax take we are taking out of this country. If we don't over a long period of time, I will predict that you will have a depression that will curl your hair, because we are just taking too much money out of this economy that we need to make the jobs that you have to have as time goes on."

Mr. Humphrey spoke not of this year's budget but of what has to be done over a long period of time. He was talking directly about reducing expenses for armament. So are Prime Minister Macmillan and Premier Mollet and Chancellor Adenauer. All over the world statesmen are talking of the backbreaking burdens of armament.

None of the dispatches written on January 16 that this correspondent saw emphasized sufficiently the difference between Mr. Humphrey's comments on the long-range prospect due to the armament burden arising out of the world situation and the particular budget submitted that week by the President.

The public didn't get the impression at all that Mr. Humphrey was really supporting the existing budget but that he was differing with the President. Yet in the text of the transcript occurs the following comment by the Secretary:

"I think this budget as now drawn has been prepared with the very greatest care, and I think it is the best that we can possibly do right now. Now, my whole point is this: that it is 18 months before we get through living under this budget, and I think there are a lot of economies and a lot of savings that we ought to be able to make if we pay strict attention to our business and work at them hard enough during the next 18 months. I don't think there is anything in sight at the moment that can be done better than is now proposed in this budget, but I think we ought to improve it as time goes on."

Asked whether the Secretary and the President differed about the budget, Mr. Humphrey said in that same press conference:

"There is no division or difficulty in the administration at all on this subject. This is a thing that we all are in accord on. This budget was made up, as I say, with the very greatest care and a great deal of time spent on it, and this is apparently the best we can do at the present time. But I just believe that over 18 months we ought to keep doing better."

Addresses at the First General Conference of American - Sponsored Binational Schools in Latin America

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. GREEN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by His Excellence Senor Dr. Don Francisco Urrutia, Ambassador of Colombia, and an address delivered by His Excellence Senor Dr. Don Victor Andrade, Ambassador of Bolivia, at the opening session of the First General Conference of American-Sponsored Binational Schools in Latin America, held at the Burlington Hotel, Washington, D. C., April 10, 1957.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

SPEECH BY HIS EXCELLENCY, SEÑOR DR. DON FRANCISCO URRUTIA, AMBASSADOR OF COLOMBIA, AT THE OPENING LUNCHEON SESSION OF THE FIRST GENERAL CONFERENCE OF AMERICAN SPONSORED BINATIONAL SCHOOLS IN LATIN AMERICA, HELD AT THE BURLINGTON HOTEL, WASHINGTON, D. C., APRIL 10–12, 1957

Mr. Chairman, ladies, and gentlemen, as you know, we have in most of our Latin American countries systems of education quite different from those of the United States. Our systems are consistent with traditions inherited from France and Spain, while your educational system follows more the British pattern.

Hundreds of books have been written both in France and in England aiming to prove that one system is better than the other and the discussion is still going strong.

In Latin America our grandfathers and fathers used to go to Spain and France for their education. After the First World War many of us were sent to Switzerland.

Today most of our Colombian families keep their sons at home where we have very good schools for general education, but, as in the past, we like to send our girls and boys abroad for a few years for specialized studies and to give them a broader and more complete picture of the world.

The binational schools provide several benefits. First of all, for all the families who cannot afford to send their boys abroad, they definitely find in these schools what other people find when they can travel. But there are two aspects of the benefits that we find in binational schools that I would like to point out.

Today most of our boys travel to the United States and come to the United States for

schooling. Very few still go to Europe, mainly to study architecture or liberal arts. But those who travel to Europe find little difficulty in following their studies. Those who come to the United States face problems that only the establishment of binational schools has been able to solve.

You are all aware of how difficult it is to get admitted to college and the high average of grades required to remain there.

I have had many painful experiences with Colombian boys who were admitted on the basis of very good records in their Colombian schools, but could not keep up with their studies because of serious language difficulties. As a result, they had to leave college after the first year and return to Colombia to start again, having lost 1 or 2 college years. Many of them became discouraged and stopped their education altogether.

Last year, according to the records we have in the Embassy, we had almost 3,000 students in the United States. And I don't want to tell you the figure of the number of students who could not stay here.

With the Binational Schools this problem has disappeared, because the families who plan to send their children to the United States have been able to have them learn English before they come to the United States, and follow there the same courses required to enter college here.

I don't know exactly the number of children who have attended Binational Schools who are here in the United States, but I checked on 20 that I knew of—friends, boys, sons of my friends—and of these 20 only 1 did not finish college. The other 19 were admitted here and were able to have their 4 years in college.

There is another aspect of the benefits that we are receiving from Binational Schools which, in my opinion, is perhaps the most important insofar as understanding and solidarity of the peoples of this continent are concerned. In the past your United States diplomats, foreign officers, and businessmen, because of educational factors, had to leave their wives and children at home whenever they were required to live abroad. As a result of this, neither they nor we could acquire the knowledge and understanding of our respective countries which only family relations permit.

With the establishment of Binational Schools, today any United States citizen with a position in Latin America may take his family with him. This has strengthened the many bonds that family friendship contributes to international relations.

I myself some years ago faced a situation that could have brought about many difficulties without binational schools. When I was appointed Ambassador to Caracas, I had been living in the United States for several years as my country's Ambassador to the United Nations. Therefore my boys had been attending schools in New York and I faced the dilemma of leaving them in the United States or having them go through a complete change in their educational system by attending a Venesuelan school. Fortunately, the Campo Alegre School in Caracas admitted my boys, and upon their return to the United States two years later they were admitted to Greenvale School—the same one they had attended before—without any interruption whatsoever and to the same courses they would have followed if they had not left New York.

The problem I faced at that time is the same one that many United States citizens had to face a few years ago and definitely for those of us who have families this is a vital problem that can prevent accepting a position if a solution is not found.

In my opinion, I think that this program has helped in the most successful way to advance hemispheric good will and understanding.

So far as we are concerned in my country we want to support those schools. We believe they have been the answer for many of our problems.

The only thing we hope is that you are going to support them, too, as much as you can, because, definitely, I think that of all the programs that have been set up in the last years, this binational schools program is certainly one of the most important and one where the most effective results have been achieved in a very few years.

Thank you.

SPEECH BY HIS EXCELLENCY, SENOR DR. DON VICTOR ANDRADE, AMBASSADOR OF BOLIVIA, AT THE OPEKING SESSION OF THE FIRST GENERAL CONFERENCE OF AMERICAN-SPONSORED BINATIONAL SCHOOLS IN LATIN AMERICA, HELD IN WASHINGTON, D. C., APRIL 10–12, 1957

Mr. Chairman, ladies, and gentlemen of the Conference of American-Sponsored Binational Schools in Latin America, I have to apologize, first, for having requested that this program be altered a little bit so as to allow me to bring a very humble and small message. The rhythm at which we live in America is different from that in our countries, subject to the time clock, to the ime element, as we are, which makes it necessary for me to speak first, and to have begged for this tolerance. But I couldn't miss the opportunity of saying something in this meeting.

It is not the first time that I have been interested in these American schools in Latin America, and when I see that this project is advancing and progressing, I feel myself profoundly encouraged, and I can foresee very, very important results and implications in our future.

There is always among the American people a sense of frustation as to what are the results of the contributions of the American people in regard to aid, grants, cooperative programs, and all kinds of enterprises abroad. It is very difficult sometimes to bring actually to the American people tangible results, and periodically we see bcing discussed either in the papers or in the Congress that idea—are we getting anywhere? Is it worthwhile to use our hard-to-get taxpayers' money in some of these joint enterprises? Are we being loved, thanked, or respected on account of these efforts? Are we regarded as a little naive by not using the classical methods of growing empires in the past and trying to do something else?

I see these questions very often in my trips around the United States, and I have been asked about them in some of my lectures. I, therefore, thought it my duty to say something about a tangible result of this cooperation of the United States with other countries, in this case in the field of education.

Excuse my vanity, but I regard myself as a sort of pioneer in this question of getting the United States to sponsor programs of education in Latin America. I remember about 12 or 13 years ago coming to the State Department and having a very interesting conversation with the Assistant Secretary of State for Cultural Affairs at that time, Archibald McLeish, on this subject, of how important it was for the United States to enter into this type of activity.

Since I, myself, have intervened in this project from a different angle from that which you are doing, I thought that I should write a statement that will go into the record of this meeting as it was written. In that statement I more or less summarize my intervention in this type of project, and how I came to be active in getting some funds especially for one of the first projects that was undertaken. That was in Bolivia.

The statement follows:

"During the first years of the Second World War, the officials of the American Institute of La Paz announced that it was the intention of the Board of Missions of the Methodist Church of the United States to close the institute and sell the property. The reason given was that financial difficulties would prevent the continuation of the permanent subsidy for the school, and also the fact that the war itself had created new obligations in other areas. The board stated that this step was decided upon in order to maintain the school located in the city of Cochabamba.

"Upon investigating the possibility of obtaining a subsidy from the United States Government, the board learned that the Government was not allowed by law to subsidize institutions of religious denominations. Therefore, it was decided that a group of seven former students, alumni, and friends of the American Institute would band together and form an association that would take over the property of the school through a token rent from the Board of Foreign Missions. In this way, a subsidy was obtained and the institute was saved for my country. After the war, the Board of Foreign Missions again took possession of the institute and today it is functioning under its auspices.

"Why did my friends and I take the step to help save the institute? It was that we were convinced of the importance of the American Institute of La Paz, not only for the education of an important fraction of the Bolivian youth, but also for the social influence that it exerts on a large part of the community. It must be remembered that one of the instruments that Nazi Germany used in order to establish a stronghold in South America was to organize well-financed primary and secondary schools which in addition to a very good education, also taught the worship of the person of Hitler and his totalitarian methods. For persons who realized the tremendous threat that this constituted against the freedom of the country and the damage it could inflict upon the mentality of the new generations, the closing of the American Institute meant the strengthening of the objectives of Nazi Germany among Bolivian youth.

"Education in private schools during the Spanish colony and the first period of the Republic had been restricted to a very small minority through the private schools attached to monasteries and convents of some Catholic religious orders. Liberal movements at the turn of the century tried to separate education from the church through public schools. Unfortunately, the poverty of Bolivia did not permit the creation of a good public-school system. Under such conditions the American Institute of La Paz, which was founded in 1907, fulfilled a very important role. The results which are apparent after approximately half of a century of the school's life are particularly interesting.

"Not only did the institute bring to the country new methods of education and a new spirit in the shaping of the younger minds, but it also played an important part in our cultural development. As I have mentioned before, its mere existence constituted a counteracting force against the Nazi infiltration. Furthermore, when Communist influence started to spread its activities among the teachers in the public schools, the American Institute of La Paz became the source of a new concept, namely that Communist ideas and propaganda can be defeated more successfully by democratic ideals in the field of human thinking. The fact that the new progressive movements in Bolivia, which defeated communism entirely, have had as their leaders former students and graduates of the American Institute, is not just a coincidence but is largely the result of the influence of the school. The President of Bolivia, several cabinet ministers, and the most important labor leaders in the country were all educated at the American Institute.

"These men realized that the country needed reforms very badly. They were also

aware that such reforms should be carried out on the basis of a national ideology and not as a part of an international subversive machinery that would make such issues a stepping stone for Communist imperialism. It was on the basis of the ideas transmitted by young North Americans who had seen the development of the homestead system and the advantages of the family-sized farm, and the rejection of slavery, that the ideas of economic and land reform were originated.

"Bolivia today has changed its medieval agrarian structure to a modern one that tends to create a stable society based on the ownership of the land. Bolivia's reforms in the economic field tend to erase privileges and monopolies and open opportunities for everyone. The new Bolivia is based on the idea that only a competitive society in which work and capacity get their fair reward is the way to abundance, prosperity, and peace. In the formation of these ideals the American Institute of La Paz has had one of the most important roles. I, as one of its former students, am glad to acknowledge this and I wish to state further that I can think of nothing more constructive than other educational institutions in countries like Bolivia which will parallel the work of the American Institute."

Let me add now a few concepts, which will further supplement this statement.

Why is it that I believe that there is nothing as important as this cooperation in establishing a mutual effort of education between the United States and Latin American countries? And in this case I speak as a man who has devoted a lot of his time to the study of political science as a stateman in my own country, and as a diplomat here in the United States.

I believe that the world that we face and the times that come, carry a tremendous challenge. How are we going to stabilize a democratic society and defend it against the attacks in the minds and in the military field of totalitarian ideas and methods that one day will take the name of nazism, fascism, communism, and, or maybe something else in the future?

I believe that our tremendous strength in the Western World lies in America. I think that God has separated this continent and protected it by 2 oceans to become a sort of haven of the ideals and the methods that eventually will go to the rescue of humanity and the rest of the world.

But for that purpose, if America—and I am speaking of America of this continent, from Alaska to Patagonia—is to accomplish this mission, we have to integrate our cultures. If we do not integrate them, we must make them more comprehensive and understandable to the peoples all over the continent.

I come from a country that is in the heart of South America and which, by reason of its geographical characteristics, is one of the most provincial countries on the continent. I am aware of the tremendous threat that the separation of our cultures means for this ideological unity.

What is the way to reform, to remedy that? There are several methods. One is a continuous interchange of the students, of advisers. That is superficial. The only thing that stays—and I am telling you this as one of the results of such type of activity—is the one that has been gotten through the schools, through the teachers, through exchange of educational programs, of educational methods, and through the exchange of that very clean effort that nobody can contest and accuse, and that is to help other people to raise their standards of instruction and education.

Bolivia today has probably the smallest rate of Communist threat in the continent, regardless of the tremendous poverty of our masses, our workers, and our peasants. Why is it, since communism usually breeds on destitution and poverty, why is it in Bolivia it has never been able to do anything?

The explanation is that our country was fortunate enough to have an institution that for 50 years had been teaching a certain type of liberal conception of life that meant an opening of new horizons for the people and protected them from the confusion of those alien ideas that today serve as an instrument of that tremendous threat that we have in this communistic international.

With these words, Mr. Chairman, I will finish my statement, and I want to tell you only that I wish you and the conference all the success in your exchange of professional and technical ideas. More than anything, I wish you a tremendous success if you can raise the interest of your Government and your Department of State in this project of cooperation with the countries south of the Rio Grande.

The Goodwill Award for 1957

EXTENSION OF REMARKS
OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. POTTER. Mr. President, on May 3 I received an honor for which I am deeply grateful—the Goodwill Award for 1957. Following the dinner celebrating the occasion several of the speakers voiced remarks which I believe should be given a permanent place in the RECORD of our proceedings.

Mr. Philip M. Talbott, president of the Chamber of Commerce of the United States; Mr. George Meany, president of the American Federation of Labor and Congress of Industrial Organizations; and Miss Mary E. Switzer, Director of the Office of Vocational Rehabilitation, spoke effectively and movingly on the work of the Goodwill Industries.

I ask unanimous consent to have their comments printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS OF PHILIP M. TALBOTT, PRESIDENT, CHAMBER OF COMMERCE OF THE UNITED STATES, GOODWILL INDUSTRIES AWARDS DINNER, MAY 3, 1957

We are meeting almost on the eve of National Goodwill Week, and this brings into focus the increasingly important place of such organizations as Goodwill Industries in the social and economic framework of our society.

We are confronted with the addition of about 250,000 handicapped persons to our population ranks each year. There are more than 25 million Americans who are handicapped in some degree.

Most of them are able to earn a living in spite of their disabilities, and more than 2 million of them who are now unemployed could work if they were trained and assisted.

These persons constitute a specialized problem which deserves more attention than it now receives from all segments of our society and our economy.

One important clue to the problem, however, can be found in the operations of the Goodwill Industries.

The 116 Goodwill Industries across the country constitute the largest group of workshops for all types of handicapped persons in the United States. They are providing employment and job training for more than 30,000 persons each year.

I believe that Goodwill Industries deserve our warmest commendations and congratulations for their leadership in helping the handicapped to help themselves. For a number of years, such organizations as Goodwill Industries were working pretty much alone in this field of service.

Workshops for handicapped persons have not been as widely recognized as other welfare causes, and their programs still are not too well known and understood.

This situation can only be described as unfortunate, because these workshop programs represent a concrete and practical way to provide not just help to the handicapped, but help with a goal of self-sufficiency. They should not only be better known, but better supported.

As I see it, there are three major needs for the handicapped. One need is to give equal economic opportunity immediately to all those whose disabilities are such that their work capacities are not limited or restricted.

There are many of the less severely handicapped who can work as well as any able-bodied person, especially if a little thought is given to fitting them for the job.

A second major need is to train the more seriously handicapped who lack work conditioning and work experience, so they can join the national labor force.

A third need is to provide special employment conditions for those whose disabilities are too severe to permit working under normal conditions in commerce and industry. We cannot just ignore these people. We cannot leave them to relief rolls. As a Goodwill Industries slogan so aptly puts it, they deserve a chance, not charity.

The first need—providing job opportunities for those whose capacity to work is not restricted—could be met without too much difficulty. Many business concerns could employ more handicapped persons than they do, and I was happy to notice on my first day as president of the national chamber, that the chamber staff includes a number of disabled men and women.

Experience has demonstrated that the handicapped make excellent workers. In many cases, they excel the able bodied. Those who are physically unable to find an emotional outlet in the diversions of the able bodied are apt to make their jobs their outlet. The job becomes the most absorbing interest in their lives.

The other two needs—training the more seriously handicapped, and providing special employment conditions—cannot be so easily met, and it is here that the role of organizations such as Goodwill Industries becomes tremendously important—not only to the handicapped individual, but to the prospective employer.

I am told that the term "sheltered employment" is frequently used to cover the service rendered in training the handicapped for normal jobs and providing special employment facilities for the more severely disabled.

As I understand the term, it means employment which provides the opportunity to acquire vocational skills and to acquire an adjustment to normal working conditions, as well as employment which is adjusted to the capability of the individual.

"Sheltered employment" has two purposes: to train those who are capable of being trained for normal work, and to employ on an indefinite basis those who are not capable of normal work.

A distinctive characteristic of sheltered employment is that its focus is on service to the individual rather than on profit. This type of employment is not, and need not be, a function of our business world.

On the other hand, the businessman can lend the heartiest kind of endorsement to the type of service performed by Goodwill Industries because it is a welfare service patterned by the standards, and within the spirit, of the free enterprise system.

Goodwill Industries is applying sound business principles to a welfare cause. Each Goodwill Industries is an autonomous community enterprise, administered by the board of directors composed of community leaders—and this again is within the spirit of our American way of life.

The purpose of business—to put it most simply—is to make goods and services available to the public. Business is naturally interested in the widest possible market.

Goodwill Industries is helping to expand the market for goods and services while, at the same time, achieving a most commendable humanitarian cause.

But it would be shortsighted to consider the needs of the handicapped from the humanitarian standpoint only. There is a critical economic angle involved which the National Chamber has recognized for some years.

The manpower resources of the United States are far from abundant. All through the postwar period, our population has been growing at both ends, and shrinking in the middle. Our cradle roll has witnessed a terrific expansion—and, as a result of advances in medical science, people are living longer.

If we add those two factors to the low birth rate during the depression of the 1930's, we discover that we have about the lowest percentage of persons in the productive age group of 18 to 64 than at any time in our history.

While I have no crystal ball to help me see the future, I am confident that our economy is going to continue to expand. Automation has already demonstrated that it creates jobs instead of eliminating jobs.

People are going to continue to retire at earlier ages, and as the science of geriatrics begins to rival the science of pediatrics, the ranks of the rocking-chair (or retirement-income) brigade will steadily increase, without a compensating increase in the productive age group.

Here then, is a long-term manpower problem, and Goodwill Industries is doing something about it.

While it seems to be true that all divisions of our society have been paying more attention to the needs of the handicapped during the past 10 years, a vast amount of work remains to be done. I think I can say that the business community, and such organizations as Goodwill Industries, have much in common which should make us even better acquainted than we are.

I most heartily salute you of Goodwill Industries on the occasion of 1957 Goodwill Week—and I am grateful for your invitation to be with you tonight.

STATEMENT OF GEORGE MEANY, PRESIDENT OF AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, AT THE ANNUAL AWARDS DINNER OF THE GOODWILL INDUSTRIES OF AMERICA, MAYFLOWER HOTEL, MAY 3, 1957

It is an honor and a distinct pleasure to extend the best wishes of the American Federation of Labor and Congress of Industrial Organizations to the officers and members of Goodwill Industries and all other public-spirited groups and citizens attending this annual awards dinner.

We of the AFL–CIO are glad to take part in launching the 1957 annual observance of National Goodwill Week.

The objectives and accomplishments of the Goodwill Industries of America in providing rehabilitation, training and employment of the handicapped have long been admired by the AFL–CIO. As firm believers in this humanitarian program, we are proud to join with the many other organizations commemorating the 55th year of Goodwill Industries service to handicapped workers. We are confident that the overall cause of the handicapped can be and will be much improved through our combined efforts and activities.

With the ever increasing number of handicapped persons in our country today, an adequate program to restore to the handicapped the dignity of a useful and self-reliant life is of vital importance. In no other field are the opportunities greater for constructive action to enlarge our productive resources and improve the welfare of our citizens.

The AFL–CIO is built on the trade-union tradition of working for the general welfare of all people—and that includes, of course, the handicapped. We are determined to do what we can to see that a person with an impairment is not denied the opportunity to earn a living. Let me assure you that this attitude is not only felt at the top level but reaches all the way down to the local unions throughout the country.

Under our program, organized labor is doing many things to aid the handicapped:

1. We urge the extension of rehabilitation services through the expansion of existing facilities and the creation of new facilities wherever needed.

2. We aim to extend the benefits of second injury legislation to all States and to improve the laws now enacted in order to extend second injury protection to a wider range of disabilities.

3. We strive to increase employment opportunities for the handicapped through collective-bargaining agreements and union-management cooperation.

4. We are working for the formation of more and more union-management committees for the handicapped at the plant level. Committees of this nature should consider all problems arising in employment, reemployment and transfer of impaired workers, whether the physical condition stems from on-the-job or off-the-job injuries.

5. We recognize the wisdom of active participation in community programs and encourage State and city local central bodies to take active part in State and local committees for employment of the handicapped. Community participation is, I believe, one of the most important objectives in the coming years. Obviously, the best place for the handicapped worker to earn a living is in his own community. We maintain that under most conditions any community can absorb its handicapped into its industrial and commercial life to great advantage.

A community committee including representatives of organized labor, management, the professions, civic and welfare organizations—in fact, a good cross-section of the life of that community—can do a particularly effective job. A program which would determine the number of unemployed handicapped workers in the local population together with a close-knit program of cooperation with local rehabilitation and placement agencies can make real progress when every body concerned is working as a team.

The program which the AFL–CIO has developed in this field has not been designed with any feeling that these handicapped need to be coddled by our society. On the contrary, the program is based on the principle that, if given adequate rehabilitation services and an opportunity for a decent job, the handicapped individual himself will eargerly utilize his own resources to become an active, productive worker.

Out of it, and out of a new awareness of the problem, we hope will come the kind of understanding and assistance which will result in the adoption of an enlightened rehabilitation, training, and employment of the handicapped program.

The doctors, the scientists, the technicians have made remarkable progress in this field. We have the tools and the know-how that are necessary. It is up to us—all of us—to translate this knowledge into practice for the benefit of the handicapped as individuals and for the ultimate benefit of all.

EXCERPT OF REMARKS OF MISS MARY E. SWITZER, DIRECTOR, OFFICE OF VOCATIONAL REHABILITATION, AWARDS DINNER OF GOODWILL INDUSTRIES OF AMERICA, MAYFLOWER HOTEL, WASHINGTON, D. C., MAY 3, 1957.

One of the most gratifying results of the new vocational rehabilitation law of 1954 has been the expansion of Goodwill Industries with the partial financial support of the Office of Vocational Rehabilitation.

Not only have your sheltered workshops been improved in many cities so as to offer employment and training to more of the disabled who cannot readily obtain competitive jobs without transitional training, but in some cities—as in Washington—actual rehabilitation facilities have been established to improve the work capacities of the disabled.

These developments are quite characteristic of the remarkable upsurge of interest in rehabilitation in communities throughout the country and have contributed significantly to the record number of rehabilitations achieved last year—66,273. They serve admirably to show that even a little stimulus from the State and Federal Governments can engender enthusiasm and cooperation in communities everywhere far out of proportion to the small investments of State and Federal funds which are so newly available.

There are some 40 joint projects in which Goodwill and the Office of Vocational Rehabilitation are taking part to expand and improve opportunities for the disabled. These have been financed by approximately $500,000 of Federal funds. This money has been matched many times over, however, with local dollars and hard work on the part of local people. That is the significant and constructive aspect of this partnership.

The rehabilitation center added to the Davis Memorial Goodwill Industries here in Washington, is a fine example of what we can accomplish by working together.

And, as another significant example, the Cincinnati Goodwill Industries Rehabilitation Center quite recently started a demonstration of the contribution that a mobile rehabilitation team can make in providing more effective and economical rehabilitative services to the handicapped in small communities of a three-State area—Ohio, Kentucky, and Indiana.

Patriotism Above Party

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Union League of Philadelphia is a unique organization. It could be rightfully termed a great political organization, but it has always put patriotism above party.

Ivan H. Peterman has written several articles relative to the league, and he has just written one on the subject Patriotism Above Party, in which he makes some very interesting statements relative to World War I, and what it

meant as it related to the President, Woodrow Wilson. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PATRIOTISM ABOVE PARTY

(By Ivan H. Peterman)

It was the evening of May 11, 1915. The war that was supposed to make the world safe for democracy, raged along two muddy fronts of Europe. The neutral United States with natural ties to Great Britain and France, was freshly appalled at the German submarine sinking of the Cunard liner *Lusitania*, 4 days earlier off the Irish coast. Of the 1,198 lives lost, 124 were American. A week before, the German Embassy had arrogantly published a warning in New York newspapers, advising all travelers under the British flag to take the consequences.

The Union League of Philadelphia pondered these fresh atrocities as its members met to mark the 50th anniversary of the League House. There were 10 distinguished guests at the reception and banquet, and the professor from Yale University was center of attraction. His name was William Howard Taft, lately President of the United States, and a Republican well qualified to survey the international crisis. Mr. Taft had also been Secretary of War.

A great many were therefore surprised, but their faith in American political honesty and patriotism fired anew, when former President Taft took note of President Wilson's famous declaration at Philadelphia the night before. Said Wilson, with the cries for Lusitania reprisal in his ears: "There is such a thing as a man being too proud to fight. There is such a thing as a nation being so right, that it does not need to convince others by force that it is right * * *."

The man whom Democrat Wilson had defeated made a remarkable speech. He urged the politically conscious labor leaders not to aspire to special privilege, not to abuse the strike, or to resort to the compound boycott. He urged better use of the primary, more attention by the voters to their duty. Then he came to the war crisis and Germany's repeated violations of Geneva conventions, and the rights of the United States as a neutral.

Many citizens expected Mr. Taft to take issue with the President's caution. Popular feeling invited a grandstand play. But he did nothing of the kind. He stoutly approved Wilson's judgment, reminding of the President's responsibilities, his duty to conduct foreign policy until and as Congress felt it necessary to declare war. No indignation of the moment, however high, should be permitted to plunge a nation into hostilities that would cost tens of thousands of lives, and billions of dollars in resources, he said.

"With the present condition of the war in Europe, our action, if it is to be extreme, will not lose efficacy by giving time to the people, whose war it will be, to know what they are facing."

Then Mr. Taft, a member of the Union League, raised its banner above the realm of partisanship by saying:

"The task of the President is a heavy one. He is our President. He is acting for the whole country. He is anxious to find a way out of the present difficulty, without war. Before party, before ourselves, we of this league, are for our country. * * * Shall we not stand by him in this work? ('We shall,' they shouted.)

"It is the peoples' cause, not his alone, and he does well when quick action is of no critical importance, to allay excitement and to await the regular and studied action of the peoples' representatives. Our honor is safe with him. I give you a toast: The President of the United States."

Mr. Taft's advice and Mr. Wilson's caution postponed the entry of the United States into World War I for nearly 2 more years. Wilson continued sending notes, the Kaiser's henchmen plotted and were caught in sabotage, including an offer to help Mexico regain the Southwest States if she would side with Germany. General Pershing went after Pancho Villa, Henry Ford's "peace ship" provided a preview of League of Nations and United Nations wrangling, but it could not stop the war. The United States kicked out German envoys Franz von Papen and Karl Boy-Ed. The War Department gradually established officers' and National Guard training camps, just in case. Wilson toured the country talking preparedness. Big munitions plant explosions interpolated an increasing list of submarine sinkings. And in November of 1916, "He Kept Us Out of War" sloganed Wilson to reelection over Charles Evans Hughes, in a photo finish count.

Now it was February 8, of 1917, and the mood of the country had hardened. Germany had announced unrestricted sub warfare, nobody's life was safe. American ships like the *Housatonic* were sunk. Theodore Roosevelt was asking permission to raise volunteers. We had lent hundreds of millions to the Western Powers; the World War I loans to our allies would eventually total $7 billions. Ambassador Page urged the Government to prevent economic collapse in France and England. The Union League called a special meeting "to consider its attitude toward the President of the United States in the international crisis."

With Mr. John Gribbel presiding, Mr. C. Stuart Patterson, president of the Union League in 1897–98 and a compelling orator, offered a resolution. Germany had broken its pledge by resuming sub warfare on neutral shipping, he said. "National dishonor is worse than war; it is worse than war if a country is unable to protect the citizens whose allegiance it claims. We want peace, but peace with honor and not without victory." The resolution pledged to President Wilson the Union League's "loyal support to whatever action may be necessary to defend the United States, and to maintain the rights of its citizens on land and sea." It was unanimously passed by a standing vote.

It was a memorable meeting, reminiscent of the action behind Lincoln, without regard to political choice or partisan fealty. Mr. Isaac H. Clothier, who as a youth helped organize the Republican Invincibles and twice voted for Lincoln, represented the oldest of the membership when he declared: "I need hardly mention that I am an ingrained Republican who differs widely and fundamentally with the present administration, but no matter who carriers it, I follow the flag."

The war years were not easy for the Union League. There are 215 names on the bronze tablet in League House, those who served in the fighting forces and associated branches. The Red Cross and YMCA drew a number. Four Liberty Loan campaigns totaled from League members alone, $28,878,600 subscribed. Over 200 members asked exemption from dues while away in uniforms; receipts fell off so in that December 1918 the annual report showed an accumulated deficit of $33,000. In an effort to economize, after a proposal to raise dues 25 a year was defeated, the League officers eliminated most of an annual outlay of around $40,000 for entertainment. The years 1917–18 were rather subdued in League House, most activity centering about the Soldiers and Sailors Annex in the old Beth Eden Church, Broad and Spruce Streets. On a comparatively modest first year's budget of $22,000, a daily average of 700 servicemen used the Annex. During November 1918, there were still 22,161 guests in uniform. The funds raised for this worthy operation by then had reached $43,000. Over 140,000 servicemen made use of this facility during the war years, as it became the forerunner of USO and Red Cross clubs of World War II, to come later.

One of the most mourned in the battle casualties of the war was Patsy Egan, a Union League waiter, killed in action. A bronze tablet was placed to his memory in the house by members of the open table he long had served. As the war came to an end with the Armistice Day celebrations, the Union League's membership stood at 2,550.

In retrospect, it is noteworthy that during the course of the First World War, costs, prices, and values generally seemed to remain in hand. A faded league menu for "porkless Saturday," February 23, 1918, provides a mirror: The roast prime ribs luncheon was 55 cents, mashed potatoes included. A seafood dinner complete, 65 cents. Supreme breast of guinea hen with mushrooms (a real treat), was $1.10; the finest oysters ran from 20 to 30 cents a dozen. Sandwiches weren't listed. One can understand why the members resisted a boost of $25 in dues. That was money, even in wartime, 40 years ago. It had not yet been strewn about the globe, like negotiable confetti.

Yet, desipte the strictures of the period, the Lincoln Memorial Room was completed during 1917. Thus were kept alive the concepts of primary loyalty, as noted by John W. Hamer, secretary, in his report for 1919:

In this later conflict, as shown, the energies of your institution and its membership have been earnestly devoted to the object of its organization—the support and maintenance of the national administration—notwithstanding that the administration has been of an opposing political faith.

Opening Wider the Doors of Opportunity

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. MORTON. Mr. President, on Monday last, May 13, a regional work conference was held on the rural development program. The States included were Kentucky, Tennessee, and West Virginia. On that occasion, Mr. True D. Morse, the Under Secretary of the Interior, and the president of the Commodity Credit Corporation, delivered an address entitled "Opening Wider the Doors of Opportunity." The address was delivered at Lexington, Ky. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OPENING WIDER THE DOORS OF OPPORTUNITY

(Address by True D. Morse, Under Secretary of Agriculture, and President, Commodity Credit Corporation, before Regional Work Conference (Kentucky, Tennessee, West Virginia) on rural development program, May 13, 1957, Lexington, Ky.)

You are engaged in the vital task of opening wider the doors of opportunity for the rural people who are most in need of more income and a better living. This, President Eisenhower said, we must do—when in January 1954 he called for a program for vigorous action on the difficult and too-much neglected low-income problem.

The welfare of people is in your hands. The future of youth is your responsibility. You are tackling the tough but vital problem of bringing new vision, hope, and progress to the millions of our people who need a chance to share in the prosperity of our Nation. You are builders of communities; a stronger United States, and a better world.

The rural development program, now moving forward in over 25 States, is an action program. It is paying off—it is producing results.

The areas are rich in human resources. Low-income counties have produced many governors and ambassadors. Some of our strongest State and national leaders have come from homes and areas where incomes are meager and the doors of opportunity are only slightly open. At least five of our Presidents were born on small farms in these areas. The people are capable—are among our most solid citizens—the kind that have made America great. The doors must be opened wider for them.

That is why the basic report was given the title "Development of Agriculture's Human Resources" (Apr. 27, 1955, USDA), and special attention has been focused on the young people.

President Eisenhower has a special commission working on education beyond the high school. It has said: "Many more individuals may have to be aided in meeting the costs." There is discussion of the need for more scholarships and grants. As we plan for and make it possible for the boys and girls who have such great potentials to get a higher education we will be helping fill the shortage of scientists, engineers, teachers, doctors, and nurses that retards our progress.

We will insure that these boys and girls will not live out a life in slums or under the handicaps of low incomes or poverty.

We will be building stronger citizens for tomorrow.

We are not here to deal in abstract theories or generalities. This is a how-to-do-it work conference.

Here are examples of what is being done—and how:

Vocational training is an open door to opportunity. Grainger County, Tenn., Rural Development Committee found 8 young men 20 years of age for every potential farmer replacement. That means 7 of every 8 boys must find their future in other than farming in that county. They will be helping run our great industrial America.

What to do—and how. Here are answers from local people.

In Macon County, Tenn.: "A new trades class was started at the high school. Since the school was crowded, and there was no money for a new building, the school board gave 5 vacant 1-room school buildings and the materials from these were either used, or sold to buy other materials, for a building for the trades classes."

Hardin County, in the same State, reports: "Placement of two trades teachers in county high schools."

The Wichita, Kans., meeting on drought and other natural disasters recommended "that at both the local and State level provision be made for vocational training for commerce and industry in addition to agricultural eduction."

There are nearly 200 young lads on farms in low-income areas to take the place of every 100 farmers who retire or die. About 50 percent of the young men who grow up on our farms must be employed elsewhere. Most of the girls will not become wives of farmers. Vocational and other education must be adjusted to the needs of young people today and for tomorrow.

Here in Kentucky a cooperative study between the University and the Agricultural Marketing Service is under way to determine the extent of need for expanded educational facilities, both general and vocation, in three rural development countries: Butler, Elliott, and Metcalfe.

Dr. John A. Perkins, on leave as President of Delaware University and now Under Secretary of the Department of Health, Education, and Welfare, will speak to us with authority on "Education and Rural Development," the last day of this conference.

New industries are being dispersed in rural areas. Now farm families can live at home—on their farms—out in the wholesome country—and have full- or part-time off-farm employment where additional income is needed. Observe the new and modern homes and improved farms that are replacing the cabins and dilapidated homes and eroded land—where mere survival formerly depended alone upon thin land and too few acres.

In Macon County, a labor survey was conducted by volunteers, and a factory secured which employs 500 women and 100 men.

Watauga County, N. C., reports a new plant that will manufacture clothing and will employ about 100 persons, mostly women. The need for these job opportunities is shown by the news article which goes on to say, "Some 568 women between the ages of 18 and 40 registered at the courthouse for employment in the new plant in a survey made by the chamber of commerce and the Rural Development Corporation.

Monroe County, Ohio, has had a rural planning and improvement committee since 1954. It found 4,000 people of the county available for work. Some were traveling up to 80 miles a day to get extra income through off-farm jobs. A $90 million aluminum plant is now under construction in the county and will provide work for 2,000 people. This county with average incomes of about $1,200 is experiencing a major upsurge in income. As a pilot county Monroe is working on how to adjust to the coming of industry and much greater income for the farm and rural families.

Choctaw County, Okla., in 1954 built a factory which was leased rent-free to a glovemaking company. Laborers contributed work on the building and local businessmen raised the needed cash. This pilot county is pushing further industrialization as part of its rural-development program.

Tippah County, Miss., has a new clothing factory employing 250 people. Local people remodeled a building to provide the quarters.

Cherokee County, Tex., now has a coat manufacturing industry employing 75 people.

Indiana's pilot county, Perry, reports 4 new industries—at least 1 was influenced by the stepped-up information and promotion by the rural-development committee.

Washington County, Maine, has planned and directed a labor survey.

The Wichita meeting, January 13–15, 1957, of representatives from 15 States, on drought and other natural disasters, devoted a section of its report to total resources development. It said in part:

"It is the consensus of those present that in developing long-range programs designed to cushion the impact of recurring natural disasters, action should be taken to strengthen the allied fields of commercial and industrial development as part of the program.

"Off-the-farm employment is an important source of income to many farmers and ranchers in the drought areas and is making it possible for them to maintain their families, farms, and livestock during this disaster period. Any program which leads to an expansion of employment opportunities in disaster areas * * * will make an important contribution toward maintaining the economy of the area."

The rural development program was discussed as a type of approach. Examples were given of how industry expansion had furnished profitable employment to thousands of drought-stricken farmers and ranchers—for families on small farms. Many were commuting 30 to 50 miles or more to such jobs.

Timber is "green gold"—and offers golden opportunity doors. In much of the low-income areas—one-half of the land is in timber. Most of the small farms are one-half or more in neglected forests.

The Kentucky Bankers' Association, State Department of Economic Development and Conservation, and the United States Forest Service have issued a "green gold" report on timber resources of the Cumberland Plateau of eastern Kentucky. It invites business to look into the wood industry possibilities.

Another report is being prepared on forest resources where Virginia, West Virginia, and Kentucky meet.

What are the potentials? Here is just one example. The Champion Paper & Fiber Co., at Canton, N. C., employs 2,800 local workers and provides indirect employment for an additional 6,000 families through purchases of pulpwood. Woodlot owners average $1,300 a year from wood sales to the company.

There are thousands of examples of smaller wood industries—many can be expanded to employ more people and produce greater income. For example, I visited in the Appalachian Mountains a successful shop out in the country in a small unpainted building employing 6 to 12 people making furniture.

More income will be had as forests, streams, lakes, and parks attract more and more people to enjoy the recreation and renewed vitality of the out-of-doors. Tourists and those who maintain country homes will be an increasingly important cash crop for rural areas that offer attractive facilities and services.

Selling farm products for more dollars is opening doors to new opportunities. Garrett County, Md., rural women's marketing committee has opened a new market.

Tippah County has raised money by local subscription to finance a new milk-receiving plant.

In one pilot county a new grade-A egg route from farms to a nearby city will bring more dollars.

Covington County, Miss., Negro farmers are joining a nearby farmers' cooperative market to get a more profitable outlet for truck crops.

Van Buren County, Ark., is going into increased berry production combined with improved, systematic marketing of all fruit and vegetables.

Dispersal of industry with more local income—and the attraction of tourists and country homes—is increasing the market for local poultry, eggs, fruits, vegetables, and other produce—at much higher prices.

New sources of income are being promoted—opportunity doors. Lewis County (W. Va.) Rural Development Committee has sparked a whole series of practical projects. Among them—over 100 ewes have been brought in to demonstrate how sheep can increase incomes on small farms. They are aware that Congress wants more wool production—a strategic fiber—and the incentive gives a return of 101 percent of parity.

Tippah County has placed 19 registered jerseys with farmers through its trade day awards program.

Macon County has on a campaign to get small farmers to grow strawberries—a local processor will buy them—a possible $300,000 increase in income per year. Butler County, Ky., has actively expanded strawberries for commercial and home use.

Better health is among the first objectives of most pilot counties and areas. This is spurred by such facts as—infant mortality

rates that are 13 percent higher than in other counties in the Nation.

Local spending for public health services is only 21 cents per capita compared with 93 cents in other counties and there are almost 50 percent fewer health department doctors.

Hardin County has doubled the rates of inoculations for all kinds of diseases. The county health department made more than 1,100 X-rays during the year.

Grainger County has made a substantial contribution to the cost of building a health clinic and the county seat passed a bond issue for a safe and adequate water supply.

Monroe County now has regulations governing water supplies, sewage and septic tanks.

In Texas, the State commission for the blind, and the division of vocational rehabilitation have pledged assistance on health problems.

Santa Fe County, N. Mex., has held health seminars in 19 communities—to explain health services and urge the importance of good diets.

Butler County is sponsoring a new health building.

The American Medical Association's Council on Rural Health advised its associations regarding the rural development program, on March 28, 1957: "We feel that inasmuch as planning is done on a very broad basis in designated counties, including considerations for health and medical care, the rural health committees and the county medical societies would want to contact * * * this program, and explore what might be done in the way of organized medicine's participation in the program."

There is growing vision of the unlimited opportunities to open wider old doors—and to open new doors to greater accelerated progress.

From all directions come such expressions from the pilot areas as "the door of opportunity is open."

The county's leadership "accepted the challenge of the rural development program enthusiastically."

An outstanding achievement, "the development of a strong cooperative spirit on the part of all local agency representatives and local leaders."

Assures "a continued better way of life for generations yet unborn."

Florida has a new rural development State committee and has named two pilot counties even though there are no Federal funds available as yet for this expansion.

Tennessee has responded to requests from the local people and has added two new pilot counties.

Twiggs County, Ga., has a 5-year plan for unified farm, industry, and community improvement. They say: "Change is an inevitable part of our lives—we must take advantage of every opportunity—this necessitates planning and a vision of the future."

Banks, the chamber of commerce, the electric company, a doctor, and the villages and towns of Avoyelles Parish carried a full page advertisement in the North-Central Louisiana Register to tell the people about the Rural Development Program. As a pilot parish they said,

"It is the biggest opportunity you will ever have of making Avoyelles a better, richer, fuller, healthier, more convenient place in which to live.

"It is the once in a lifetime knock on the door. Be sure you answer it."

A national radio program has featured the pilot work of Choctaw County.

Kentucky, the host State for this conference, is using a trade area approach in its pilot program. It illustrates the type of variation that is desirable in the early demonstration work.

Counties and trade areas are making a sound approach by careful advance planning. By the first of this year, 22 States had reported a total of 47 surveys under way or completed and 30 more being projected ahead. Invariably they bring forth such expressions as, "They are showing us things we suspected but never knew about conditions in the county, and things we never even suspected."

Even before studies are completed the counties are moving into action.

Leaders and organizations representing all parts of our Nation approve of the objective of the new program.

The American Farm Bureau Federation, through its President Charles B. Shuman, says the "program is providing a pattern which can help, improve the opportunities for low-income families either within or outside agriculture. * * * County and State Farm Bureau organizations can do much to speed up this program."

The National Grange, in its legislation policies and programs for 1957, states, "We support the rural development program. We favor voluntary participation by farm people and rural communities, and urge that local direction be encouraged."

National church leaders and organizations are extending help and are suggesting that local pastors at the grassroots can be much more active in helping solve the problems of low-income farm families of their areas.

Chairman HAROLD D. COOLEY, of the House of Representatives Committee on Agriculture appointed a Subcommittee on Family Farms with Congressman CLARK W. THOMPSON, of Texas, as the head. The committee, after hearings and a tour through low income farming areas, in its report of August 1, 1956, said in part:

"Local initiative and cooperation are imperative in programs directed at improving the economic position of the family farm. * * *

"Programs for economic improvement can be put into effect far more quickly and beneficially in organized rural communities. * * *

"Vocational instruction should be available, both in formal schooling and on the farm—industrial subjects as well as agriculture. * * * Since 2 or 3 out of 4 rural youngsters are destined to settle into urban and industrial employment, the vocational education of rural schools definitely should embrace elementary training in urban pursuits. This applies to areas of small farms since these are the sources of the largest youth migrations to urban employment.

"Establishment of a national policy on the widest possible dispersal in the location of industry—in rural areas will find a wealth of sturdy manpower * * *. The social conditions under which people live and raise their children in rural or community areas are far superior. * * *

"A substantial part of the answer to the family farm problem lies in cooperative marketing * * * provide small farmers with credit to acquire adequate farms and equipment."

The Senate Joint Committee on the Economic Report set up a Subcommittee on Low-Income Families, under the leadership of Senator JOHN SPARKMAN. Its findings and recommendations state in part:

"It is apparent that a threefold approach is required to meet other aspects of the problem of chronic labor underemployment in low-income farm areas:

"(1) Encouragement of off-farm employment by development of new industrial location within the area.

"(2) Assistance of farm families willing to migrate to other areas and who possess definite job opportunities in the new location.

"(3) Provision for greater opportunity for rural people to obtain training for nonfarm occupations."

It is with such approval of the methods and objectives that we gather here to determine how rural areas can more rapidly open the doors of opportunities to underemployed, of which our President spoke.

This is a "How to do it" regional conference and meeting. The results are eagerly awaited by the hundreds of leaders and workers in more than 57 pilot counties and areas—in over 25 States in which the rural development program is moving forward.

Tribute to the Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Love Outlives Hate; You Can Feel Joe's Triumph," which appeared in the May 4, 1957, issue of the Chicago Daily Tribune. The article was written by Mrs. Ruth McCormick Tankersley, who was formerly editor of the Washington Times-Herald, and who is a very able person and an extremely talented writer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOVE OUTLIVES HATE; YOU CAN FEEL JOE'S TRIUMPH—THINK WHAT THIS MAN HAS DONE IN 48 YEARS

(By Ruth McCormick Tankersley)

(Mrs. Ruth McCormick Tankersley, a niece of the late Col. Robert R. McCormick, has been a close student of Washington affairs and personalities in recent years. The following is her appraisal and tribute to the character and deeds of the late Senator Joseph McCarthy.)

WASHINGTON, May 3.—Joe McCarthy is lying in a casket waiting for a requiem Mass, waiting for a service in the Senate Chamber, waiting to be flown to his home, Appleton, Wis., to be laid finally to rest with his mother and father. These days symbolize his life—he belonged to his church, to his country, and finally and constantly to his family.

But Joe McCarthy was always a restless man, impetuous, impatient with formality. His friends, sitting in his home with his family, can already feel his restless spirit stirring. The spirit, the soul that was Joe McCarthy was a white hot spirit of terrible intensity and it caught on fire every soul who came in contact with it.

He inspired hundreds, he infuriated some, he aggravated many. He aggravated those who knew he was right but did not have the courage to follow him, he infuriated the enemies of our Republic and he inspired all those kindred spirits who line the byways of America and populate its crowded cities and feed the Nation from their farms.

LOVE OUTLIVES HATRED

Love and courage have always outlived hatred and cowardice and already you can feel Joe McCarthy's coming triumph. How many people can die and leave behind them what he has left? You have only to sit in his house at this moment to see a tremendous inheritance. Over the desk, where I am writing, is a picture of the Pope with his personal blessing to Joe McCarthy and his family.

His worthiness of this blessing can be seen in every statue in his house, in the rosary hanging on his baby's crib, in the humanity

which made him seem like a personal friend to a million people in this country. I can hear him struggling to control his voice, knuckling an unwonted dampness from his eyes as he spoke before 10,000 people of the American boys abandoned in Red China.

Every McCarthy partisan in public life already feels a surge of determination to carry on the fight which Joe McCarthy sometimes fought singlehandedly. His few friends in the Senate who stood by him against all odds are grim and militant such as I have never seen them. It is as if they were taking up arms to avenge a friend cut down in battle. That is the way they feel about it and that is the way it is.

JOE IS LAUGHING

Also, in front of me on this little desk is a picture of Joe McCarthy and Jeannie, his wife. They are looking into each other's eyes and Joe is saying something and Joe is laughing. It was ever thus. Joe loved to talk, to tell stories and anecdotes and tell about people. He seldom let Jeannie finish a story and she seldom cared. Poked in the frame is a snap of Joe looking into the laughing face of one of the dearest persons in his life, Elizabeth Kerr, his mother-in-law.

You can tell that he just said something outrageous to her and that he loved to see this picture because he loved to see her laugh. In the 24 hours since sadness pervaded the McCarthy house we haven't heard a baby cry. The McCarthys' little adopted daughter, Tierny, in the knowing way of a 5-month-old baby, has eaten all her meals without a word and done more for her mother with her smiles and gurgles than an army of well-meaning friends.

Forty-eight is very young to die. Think what this man has done in 48 years. The intensity of his convictions made him appear tough. Actually, he was the biggest softie in the world, as any child that ever knew him will tell you. It says in the report that he died of a liver ailment but it's an ailment that seldom kills anyone. I think we all know of what Joe McCarthy died.

ENEMIES DIDN'T KILL HIM

One cause was a greater brainwashing than any of those boys in China, for whom he has fought so valiantly. A big cause was the formal censorship by so many of his colleagues in the Senate. His enemies never let up on him. It is a terrible thing. But don't ever think that his enemies have killed Joe McCarthy. They will find that as long as they live Joe McCarthy will become more potent every day, that he may well be a more invincible enemy in his grave than he was alive.

We won't say "Goodby" to Joe McCarthy because his is not a spirit that would seek rest until the enemies of his country, the godless hypocrites among us, and those who endanger the future of Tierny McCarthy are driven out of all influence and power. Joe will be with those who carry on his fight, his courage and constant comfort, and his name will prick the conscience of men in public life for centuries to come.

The Battle of Gettysburg

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Know Them," which appeared in the May 14, 1957, issue of the News and Courier of Charleston, S. C. This is a daily newspaper which supported President Eisenhower in his race for the Presidency of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE KNOW THEM

If Eisenhower and Montgomery had been in command at Gettysburg, instead of Lee and Meade, both would have messaged their supreme headquarters that they could not move, against such overwhelmingly superior forces, until they had more men, more guns, more swords, more horses, a USO—and a WAC driver. Don't tell us.

What Industry Means to Alabama

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. SPARKMAN. Mr. President, recently there was held in Alabama an essay contest.

One of the participants, a high-school senior, won a 2-year scholarship to one of the outstanding schools in our State. The subject of his essay was "What Industry Means to Alabama."

I refer to Thomas W. McCutchen, a senior of the Decatur High School, Decatur, Ala. His essay is one of great interest. It contains much helpful information.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHAT INDUSTRY MEANS TO ALABAMA

(By Thomas W. McCutchen, Decatur High School, Decatur, Ala.)

Just what does industry mean to Alabama? First of all it means utilization of many of our natural resources, and the development of the South. The utilization of natural resources has made this possible. Birmingham is noted for its coal and iron; the South contains one-fifth of the country's total coal supply, and 40 percent of the country's iron supply. The developments from the iron and steel industry include structural steel and fabrication plants, and plants that manufacture special machinery and castings, stoves, railroad cars, and other products. One of the most notable developments has been the production of cast-iron pipes and fittings. Nearly half the total national output is from the Birmingham and Anniston areas, with value of production reaching a prewar figure of $30,662,000.

Coal deposits are estimated to underlie an area of 8,000 square miles. The output in 1942 was 19,301,254 long tons.

The State's great hydroelectric resources have been extensively developed on the Tennessee River by the Federal Government through TVA, and elsewhere in the State, by private capital. On January 1, 1944, the State had 13 hydrogenerating plants with an installed capacity of 959,603 kilowatts, besides 17 steam electric generating plants with 370,360 kilowatts. These figures have almost doubled in the past 10 years. Recent years have witnessed a great development in rural electrification, with thousands of miles of rural electric lines now in service and numerous extensions planned.

Industry means to Alabama the utilization of our farm products, as is shown by the various types of industry using farm products, such as local flour and cotton mills, in our State. If it were not for this type of industry in Alabama, our people would pay higher prices for their own farm products in manufactured form.

The manufacture of textiles is a major industry, with more than 125 mills operating in the State and an annual output in excess of $130,000,000. Knitting mills, hosiery mills and garment plants are among the State's successful manufacturing operations.

The rapid growth of manufacturing in Alabama is particularly advantageous to the State's economy at a time when agriculture is declining in importance as a source of employment. In 1940, for example, 40 percent of all employed persons in Alabama were in agriculture, whereas by 1950 only 25 percent were so employed. By absorbing workers who are leaving agriculture, manufacturing growth is aiding in the adjustment toward a more profitable agricultural economy characterized by large-scale, mechanized farming which yields higher returns to those who remain in it.

Alabama's 19 million acres of forest land are supporting 2,000 sawmills, 368 planing mills, 40 veneer mills, 26 crate and box mills, 47 specialty mills and 6 pulp and paper mills, all help to increase our economy.

There has been a great development in industrial chemistry. Material often hitherto classed as waste has become the source of valuable products. Alabama is rich in raw materials in this field, and the future of industrial chemistry has been described as almost unlimited.

Alabama is an important producer of building stone, marble, cement, lime, brick, and tile. Cement production amounts to $10 million per year. The largest deposit of white marble in the world is found in Talladega County and is extensively used in construction and decorative work. The State has numerous deposits of silica suitable for manufacture of glass and glassware of best grades, huge deposits of flake graphite, and commercially usable quantities of bauxite. Oil production, though small at present, may be increased considerably, in the future, according to geologists.

More aluminum is refined in Alabama today than was produced in the entire Nation prior to the war.

Industry has definitely meant to Alabama increased wealth. In 1940 to 1950 the cash receipts of farmers rose from $88 million to $350 million. This was an increase of almost 300 percent. During this same period wages and salaries increased from $109 million to $888 million which was an increase of 700 percent.

These funds help materially to provide police protection, public health, forest-fire prevention and control, public welfare, schools and many other vital services.

Industry means the establishment of better educational systems. With increased wealth from industry, which means more tax money for education, we are able to build better school buildings and are able to secure better equipment, and better trained teachers. With better schools, the children of Alabama will be trained to take their places in industry at home.

Millions of dollars are currently being spent by industries in Alabama on community improvements and other contributions to the overall economy of the State. Industries have engaged in activities ranging from the building and donation to their

communities of schools and hospitals to the presentation of electric and water systems.

The management of these different industries has built attractive and commodious temples of worship for their people.

The mills' executives have caused to be organized, and they support the Boy and Girl Scout troops, junior league baseball teams and midget football elevens, which are a positive and forceful deterrent of juvenile delinquency.

These and countless other beneficial things they do for their own people. In addition, they go above and beyond the call of duty to be good neighbors to our entire body politic.

Industry means to Alabama higher standards of living. Increased wages and wage earners increase the standards of living of our people. They demand better churches, better libraries, better stores, better homes, and many other important facilities.

Many of our industries have a lending agency which finances those of its employees who are desirous of becoming homeowners and farmowners. The recipient of this assistance becomes a real estate taxpayer and adds dignity to his own stature.

Industry has also necessitated the development of more efficient health services. This is true within the industries themselves and within the various cities. For example, one large industry refused to build in a particular city because its hospital facilities were so inadequate. Now that particular city is engaged in a program of enlarging its hospital services.

Alabama today is fast becoming the industrial giant of the South: Therefore, to study and become a part of this growth is a goal each individual should work to achieve.

Aid to Communist Poland

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Will We Aid United States Communists?" from the April 24, 1957, issue of the Chattanooga (Tenn.) News-Free Press.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL WE AID UNITED STATES COMMUNISTS?

Those Communist murderers who are running captive Poland are going to be big about the thing. They aren't going to say "No" to America. They have decided to go ahead and accept the $95 million of the American taxpayers' money that our diplomats are trying to force on them.

The Polish Reds aren't so good mannered that they are forgetting to tell the world that what they really want from the American people is $300 million (that's nearly a third of a billion). But they are going to accept the $95 million just the same.

This Polish Government we will give the money to is headed by a Communist named Gomulka, who has a record that is bad even when compared with those of many other Communists. He is hard and brutal and bestial. And there is no doubt about the fact he is a Communist.

We wonder what the freedom-loving Poles who rose up in the Poznan riots for freedom think of the United States gift of $95 million to the Communist government that rules them. We wonder what the freedom fighters of Hungary, who were able to get no United States aid in their fight, think about our aid to the Communists in neighboring Poland.

Many of our foreign aid handouts, even to Britain and France, are indefensible. But aid to Communists is so much worse it is unthinkable. But be assured, money from your earnings will provide the $95 million to bolster up the Communist government in Poland.

We wonder when our diplomats will suggest an appropriation of taxpayers' money to the Communist Party in America.

Hartwell Dam Project

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from The Independent, of Anderson, S. C., of May 5, 1957, which I believe to contain information of interest to everyone regarding the Hartwell Dam project, located on the Savannah River between Georgia and South Carolina.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD in order that all Senators may have the benefit of the information it contains.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECONOMY?—WHAT ABOUT THOSE BILLIONS IN TAX SUBSIDIES TO THE UTILITIES?

The power trust press in Greenville and Charleston is yapping again about Hartwell Dam.

The fresh attack is based on two claims:

1. That the project should be eliminated in the sacred name of economy.

2. That hydroelectric projects are outmoded and pretty soon those nice, benevolent commercial power companies will be furnishing everybody with just oodles of atomic power.

What about the first point?

The Hartwell project has received White House approval as being necessary and work already is underway. The project has successfully met every qualification as a useful, economical, and necessary undertaking.

The estimated cost is $94 million. This will be repaid through electric power generation. To abandon the project now would be false economy, indeed, and such a course is advocated only by the power trust press puppets.

If Congress would save some real money, it could act to halt the rich flow of subsidies in the form of fast tax writeoffs and tax computation methods which are costing not mere millions but billions of dollars.

For example, the power trust press isn't shouting from the house tops that in a 5-year period beginning in June 1951 private electric utilities have received interest-free loans of $1.4 billion.

Over the given period of 33 years this will amount to a total subsidy to private electric utilities of $4.7 billion, or nearly twice as much as the $2.8 billion borrowed under the REA co-op program since the founding of REA.

Senator BYRD, of Virginia, the budget watchdog, has issued a report which declares:

"A striking thing about the tax amortization program in the electric power field is that it is an incentive that operates only for private taxable utilities, and not for publicly owned companies."

But the tax writeoffs don't begin to tell the story of the bonanza being enjoyed by the privately owned utilities.

There is a new depreciation provision in the new tax law which so fixes the accounting period that the commercial concerns may force the consumers to foot their tax bill while the companies pocket the Government subsidy.

Under this tax gimmick, commercial power companies in the United States stand to receive an estimated $18 billion over the next 20 years.

Let those subsidies be removed before talking about the economy of halting a project deemed necessary to national defense.

Enough for the hypocritical economy yapping.

Consider the second point—that hydroelectric projects are outmoded.

If hydroelectric projects are outmoded, why are so many business-managed private power concerns engaged in or planning hydroelectric projects?

The Alabama Power Co. is planning to build 4 new dams on the Coosa River with total new capacity of 395,000 kilowatts at a cost of $121 million.

The Georgia Power Co. is preparing to build the James Oliver Dam on the Chattahoochee River. This same company only a year or so ago completed the Sinclair development on the Oconee River in Georgia.

In North Carolina, the Carolina Aluminum Co. applied for license to build the Tuckertown project on the Yadkin River with 40,000 kilowatts at $14 million.

This is just to mention a few such projects in this region. Others are being constructed or planned in many other parts of the United States.

Insofar as atomic power is concerned, it is true that the job has been entrusted to commercial concerns—they having been handed on a silver platter all the know-how bought for AEC by the taxpayers of the United States at cost of untold billions of dollars.

Yet, although England and Russia are reported far advanced in the atomic field, in the United States there is only one small pilot plant actually nearing the production stage.

Unless the Federal Government takes over the program, it appears atomic power for general use is still many years in the future.

If the economy and outmoded claims—both clearly false—are the best the power monopolist press can come up with, they'd best tell the whole story or else keep their peace. Hartwell Dam will be built.

The Moral Rearmament Movement

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "One Chance To Stop Down Drift," by George Todt, and published in the San Fernando Valley (Calif.) Times of April 15, 1957; also an article by the same writer entitled "MRA Message Through Film," and published in the same newspaper of February 15, 1957.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Fernando Valley Times of February 15, 1957]

MRA's MESSAGE THROUGH FILM

(By George Todt)

"Those who deny freedom to others deserve it not for themselves and under a just God cannot long retain it."—Abraham Lincoln.

"Africa today has sent its men to the West to show the true meaning of freedom for mankind," said Dr. Frank N. D. Buchman, the august founder and patron saint of Moral Rearmament. "They speak in a play and film called Freedom. The voice of this Africa can speak to every humble heart everywhere. Today Africa may be the unexpected source that gives the answer to chaos. It is the moment for a miracle."

On Lincoln's Birthday evening I attended the world premier of Freedom in Grauman's Egyptian Theater in Hollywood. Every seat was filled and hundreds had to be turned away at the ticket box. This superlative film is in color, with an all-African cast. Needless to write, it contains a message, both bold and audacious.

The play, Freedom, deals with the fundamental problems of mankind—personal, domestic, social and national—that transcend race, class, nation and religion.

Freedom is bold because it challenges the conscience of mankind at the point where tensions in human relations are greatest—on the level of race and color.

Freedom is audacious because its message comes from the most unexpected quarter, from Africa and the black man, appealing to the best impulses of the human heart in the interests of all mankind.

Briefly, the picture concerns how seemingly irreconcilable elements in a mythical African kingdom and its colonial masters from "Imperia"—the prototype of Great Britain—were able to solve their differences through a change of heart which started in one man. But this change—which was prompted by a desire to listen to the will of God and employ it unselfishly in practical action thereafter—spread to the hearts of other key officials of all divergent groups at odds with each other. It reached up to the king, himself. It conquered the bitterness and hatred of the people for their colonial masters—and it reformed the latter in the process.

In its own way, Freedom portrayed the fundamental thesis of MRA, which in any or all of its forms of interpretation I have heard seems to amount to this: The necessary change in the world—the understanding of our differences in the human family—must come voluntarily from the human heart attuned to God; it will not come from government edict, or force; it is the philosophy of voluntarism over compulsion. I would say that extremists of all races, creeds and colors who advocate the use of force, compulsion, or any other form of duress to solve our differences, and the tensions which spring from them, are definitely "out of season" with the MRA people.

As one who has long advocated the substitution of the positive word "respect" for the intolerant word "tolerance"—which at least implies inferiority for someone—I think freedom is a tremendous challenge for thinkers everywhere. And on both sides of the Iron Curtain. In the battle going on for men's minds today, this picture—written, staged, and directed by the Africans themselves—is destined to play a very important role in the future.

Present plans call for it to be shown to hundreds of millions of people around the globe in the time ahead of us—and this amounts to a tremendous impact of ideological significance.

"It is the moment for a miracle," said Dr. Buchman. "A Moor came to worship the Babe; Egypt sheltered the child Jesus and an African carried the cross to Calvary. The voice of this African can speak to every humble heart everywhere. Where meek souls will receive Him still, the dear Christ enters in."

[From the San Fernando Valley Times of April 15, 1957]

ONE CHANCE TO STOP DOWNDRIFT

(By George Todt)

"We are in a global effort to win the world to our Lord and Saviour, Jesus Christ. There is your ideology. It is the whole message of the Gospel of our Lord and Saviour, Jesus Christ. The message in its entirety is the only last hope that will save the world."

Dr. Frank N. D. Buchman
(Aim of Moral Rearmament).

What is behind the moral rearmament movement? Of what is it composed? Is it worth investigating? Questions like these come from many sides. I am interested in MRA because it advocates absolute moral standards in the conduct of our lives. Not only in our personal lives, but also in public life as well.

The fundamental premise of MRA is that you and I should change our lives so that we adhere to the four cardinal virtues of absolute, honesty, absolute purity, absolute unselfishness, and absolute love. When enough of us have so changed, it will effect a better national climate. Then statesmen will change. The fear of war and chaos will lift. Then we will see new statesmanship—a life commitment adequate to change the thinking, living, and daring of the whole world. This concept elevates man, the individual. It is not collectivist—the doctrine of the mass man, or common man.

A religious journal, in an article on moral rearmament, put it this way:

"The problem is now to redirect the thinking of all people, to inspire them again with the conviction that God is a living and active force in the midst of us, to persuade them that machinery, technical knowledge, organization, excellent in themselves are incapable of solving our problems."

In reply, MRA founder, Frank Buchman, had this to say:

"This is the battle of moral rearmament. Without the conquest of materialism, our nations will decay from within while we prepare to defend ourselves against attack from without. Materialism and atheism are breeding grounds for corruption, anarchy, and revolution. These have their allies in the selfishness that rules our homes, the bitterness that separates class from class, and the spirit of faction that divides a nation.

"Here lies our instant danger. If we are fully to understand where our true security lies, we must look to our moral and spiritual defenses. Then we must act, resolutely, and intelligently to establish those defenses. America must be prepared. But America's security lies not only in planes and ships and tanks, but in men prepared morally and spiritually to make the Nation strong. This is our first and foremost need.

"True preparedness—the result of a nation morally rearmed—is the responsibility of every citizen. Everyone must take a part in the moral defense of the country. That is our privilege in America—every man bearing his part, every man an essential link in an impregnable line of defense, every home a fort, every worker employed in producing the moral armaments without which democracy must perish from within."

Frankly, I am convinced that our Nation stands closer to actual peril today than at any previous time in her history. She is in the greatest danger, both at home and abroad. We are confused on issues. The picture is not so clear as it should be. We are supposed to be richer than every before. But our political fortunes are at their lowest ebb.

There are wars, and rumors of wars. The world is divided into hostile camps, with America increasingly placed unhappily in the middle of things. We seem to be fast becoming the target of everybody outside our borders, friend and foe alike. Where are our friends? Who is helping us with our troubles? What does the future hold for the American people?

I possess no crystal ball, but I can see that we do not seem to have the correct answers for our country. If we propose to win on the world stage in the time ahead of us, then there is actually going to have to be some considerable changes made in our national ideological fabric—and soon! If this Nation is to survive, we are going to have to do extensive battle with corruption, disloyalty, and greed. But definitely.

What is needed is not so much a crusade in Europe or anywhere else in the world—but one right here in the United States of America. Perhaps MRA can show us the way.

Schools Are Local Institutions

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 15, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "The Schools Are Local Institutions," published in the Greenville (S. C.) News of May 10, 1957. The editorial is in opposition to Federal aid to education.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SCHOOLS ARE LOCAL INSTITUTIONS

It is becoming increasingly apparent that the often revived proposal for Federal aid to education, which the Eisenhower Administration is still pushing with the aid of liberal Democrats, probably will be done to death by issues that have little or nothing to do with the basic premise of the bills before Congress.

And it is just as well, for the proposal is basically unsound.

Two factors appear to be most likely to result in the more or less permanent shelving of the bill, if not its actual rejection on the floor of either the House or the Senate.

One is the economy drive to which many Members of Congress, like many groups outside, are paying at least lip service. Many Members of Congress, like many special interest groups among the public, seem to think economy a good thing until it touches them. But with so many other elements of controversy involved, the school aid proposal may become a likely point at which to cut spending.

The second factor is the insistence of extreme advocates of civil rights and integration on tacking onto the bill a rider which would withhold from any State refusing to integrate the races in its schools its just share of the Federal aid. (These people are foolish, really, for there is no doubt that in a short time they could get their way by executive or court ruling, regardless of what Congress might write into the bill or omit from it.) Many

sincere advocates of Federal aid to education will refuse to accept such a rider.

It is significant in both of these respects that within the last few days congressional committees considering the Federal aid bill have (1) rejected the integration rider and (2) have reduced the amount of money that would be provided.

This action lends substance to our analysis of the trend.

But there is more to it than that. Even from former advocates of Federal aid there are coming expressions of doubt as to the wisdom of the proposal. Some are taking note of the fact that the sale of municipal and local school bonds indicates a boom in school construction financed by local funds.

Senator KNOWLAND, of California, for another instance, voiced the fear that once started the Federal school program probably would never stop. We can be sure it wouldn't. Two factors would operate to perpetuate it.

One would be the gradual entrenchment of the bureaucracy created to administer the Federal school program. From year to year, after the program was supposed to expire, the officials concerned would confront Congress with arguments indicating that more Federal aid was needed.

Another would be the gradual diminishing of local effort. All too easily the public comes to depend on Federal programs and to let up on local programs designed to meet the same need.

Eventually State and local efforts to build and maintain adequate schools would cease, and we'd have a Federal school program—and nothing more.

This would be a tragic development, for schools are traditionally local institutions, and should continue to be such.

State aid to local districts has become necessary and has been accepted, but the State has been recognized as the largest economical administrative unit which will permit the retention of local control. And even with that, county and district participation in the financing is desirable.

The sum and substance of it is that the States and counties can do a better job on their schools than can Uncle Sam—and they can do it at less cost.

Some Questions About Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Don't You See Their Importance?" from the April 24, 1957, issue of the Chattanooga (Tenn.) News-Free Press.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T YOU SEE THEIR IMPORTANCE?

Think of your favorite local undertaker. Perhaps he is a friend of yours. Would you like to see your tax money spent to buy him a dress suit to wear in going about his business? We doubt it.

But some of your tax money labeled "foreign aid" has gone to buy dress suits for Greek undertakers. (How does that help the "recovery" of the country, we wonder?)

You've heard about the acid test for salesmen—selling iceboxes to Eskimos. It would be even harder to do that today, because Eskimos don't have to buy iceboxes—some of your tax money has gone to buy iceboxes for them.

Cleanliness is next to godliness, it is said. But do you approve the spending of some of your tax money to build public baths for Egyptian camel drivers?

There's nothing like recreation. It's good for you. But is it good for us to meet the State Department's request for $260,000 to build a tennis court at Basra, India, a dance hall at Rangoon, Burma, and a mountain retreat in Indonesia?

In this modern age, everybody ought to have the experience of riding in an airplane. Perhaps that's why some of your tax money has been spent to provide thousands of free airplane rides for Arabs visiting their Moslem shrine at Mecca. (Have your own children had airplane rides?)

The Federal Government has received justified criticism for spending tax money to go into competition with private enterprise and build TVA plants for the production of subsidized electricity. But that's not the half of it. Our tax money has been used to build a TVA for the Jordan River in the Middle East.

South Korea is our friend and received our assistance in throwing back Communist aggression. But we have done more than that for South Korea—with your tax money. The United States has built 410 plants, including 2 $45 million fertilizer plants, 4 flour mills, 4 starch plants, and a marble polishing plant.

We will all agree that education is important. Does that make you feel better about the expenditure of your tax money to pay the tuition and living expenses of the sons of hundreds of wealthy Iranians attending American colleges?

Why, of course the proposed Federal budget can't be cut. Every bit of it is vital to security and world peace, right down to the fancy pants of the Greek undertakers' dress suits.

Willcox, Ariz., and Road Construction

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. GOLDWATER. Mr. President, the recently enacted road-construction bill contains provisions which would enable the transcontinental highways to bypass the small communities of the country. The small towns of Arizona and of other western States are vitally concerned with this aspect of the road-building program.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Arizona Range News which displays the concern of one community in my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GREAT, COURAGEOUS HEART OF WILLCOX

Since attending the meeting of the chamber of commerce last Thursday evening the thought has come to us again and again of the great, courageous heart of Willcox for time and again this town has had to fight for its very life blood and after each struggle has emerged a better town. Thursday night's meeting had to do with the moving of the highway and many feel that if the highway is moved that the town will regress severely. In that group who were at the meeting were men and women who volunteered to give freely of both time and money just as men and women have given of their time and money in the past.

And as I listened to the men and women present their side of the story, I thought of the essay that had been written by Eddie Rickenbacker who although had done many brave stunts as both a test pilot and a test car driver, it was because of his survival on a raft in the South Pacific ocean during World War II that he became the most famous. Out of those experiences came a book which was often quoted and often read over the radio in the late 1940's, We Heard the Angels Sing. In the essay to which I refer are these words:

"Once I almost died from a throat hemorrhage.

" 'Here,' I said, 'is death.'

"It dawned upon me in a flash that the easiest thing in the world is to die, the hardest is to live. Dying was sensuous pleasure; living was a grim task. In that moment I chose to live. * * * I was quitting. I had work to do, others to serve."

The easiest thing in the world for Willcox to do at the present time would be to just sit and let the road go where it will. According to the thinking of many this road would be the ruination of the town, but Willcox has never sat and let things pass it by and they are not going to do so this time. That old pioneering spirit that settled the town in the early 1880's is just as much here now as it was then, for it took men and women of courage to settle the West.

Because of the place Willcox is located the road through here has meant more to it than it would to a town that was less isolated. This road has been the cause of more hard work and more meetings than any other one thing.

Back in the days when it was only a cow trail and men were turning from their buggies and wagons to cars for transportation, it was the pioneer spirit that sent men forth to build a new and better road with their primitive tools of rakes, hoes, and shovels. But they built well for it was the foundation of the road which came and which brings so much traffic through this section.

Back some 20 years ago when the road was not going to be taken into the State system, it took a great deal of courage for the talk of dividing the county to be put far enough into action that many public meetings were held. The county was never divided but the road did come.

This courage has always been tempered with good judgment just as it will be today. A point will have to be given here in order to gain a point there but as one man said: "We have always got what we went after. Why can't we get what we need now?"

The hard thing for Willcox right now is to choose to live but like Eddie Rickenbacker Willcox still has work to do, others to serve which it shall.

The Supreme Court

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk a column from the Washington Star of

May 14, written by the distinguished columnist, David Lawrence. I ask unanimous consent that it be printed in the Appendix of the RECORD, in order that everyone may have an opportunity to read this splendid item regarding the Supreme Court.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MASS MEETINGS AND THE COURT—WISDOM OF INTEGRATION DEMONSTRATION IN WASHINGTON THIS WEEK IS QUESTIONED

(By David Lawrence)

Groups which were among the beneficiaries of the decision of the Supreme Court of the United States of May 17, 1954, upholding integration—or forced association in the schools, as it sometimes is called—are planning to celebrate it on the third anniversary Friday.

But the public demonstration, which is to be staged at the Lincoln Memorial, may have effects opposite from those intended. It may start a series of annual demonstrations on the other side of the issue. For if approval of Supreme Court decisions is to be made the basis for emotional displays, then those who disapprove have an equal right to express their emotions.

What form might such disapproval take? It could result in annual meetings to pay tribute to the memory of those Supreme Court justices who for 58 years—from 1896 to 1954—upheld the long-established right of the States to conduct their educational process under what was known from 1849 on as "separate but equal" school facilities.

Many of the greatest of the justices of the past—including Holmes, Brandeis, Stone, Hughes—upheld the "separate but equal" concept, and they respected what had been decided many years before. Eulogies of these and other justices today would no doubt center on the homage these men paid to the famous principle of "stare decisis." This Latin phrase means, in effect, that what has been decided shall stay decided. There have occasionally been reversals by the Supreme Court of previous decisions, but only when the fallacy or mistake in the original decision in a matter of law was plainly presented.

In the segregation case, however, the nine justices did not point to any fallacy or mistake in the legal reasoning of the justices who wrote the 1896 decision but merely said, in effect, that sociological considerations now justify a reversal. The controlling argument presented was that colored children feel psychologically inferior when separated from whites in the school years.

Unfortunately, this is not too firm ground, even for the beneficiaries of the decision. They cannot be too sure that they have won something permanently. For, some day in the future, another set of Supreme Court justices may be persuaded to believe that "forced association" or the mixture of the two races in the schools has an injurious effect psychologically on the children of both races, and hence it would be proper to revert to the "separate but equal" arrangement. This is one of the risks involved in decisions based solely on sociological grounds.

Why should there be, however, public demonstrations about Supreme Court decisions? Perhaps it is because of a widespread belief today that the courts are really influenced by public opinion more than by the letter of the law.

Ever since 1937, when the late President Franklin D. Roosevelt publicly denounced the mapority of the justices of the Supreme Court for their decisions and requested Congress to enact a law enlarging the court by five justices—whom he would have the power to appoint—there has been a controversy over public opinion's effect on the courts.

While public demonstrations in the hope of affecting Supreme Court decisions on national or international issues are lawful, it remains yet to be determined whether or not these are wise methods of attempting to exert pressure. For the Supreme Court still has the whole question of "integration" under its jurisdiction and particularly many problems of local enforcement which have by no means been solved.

Incidentally, the so-called American branch of the Communist Party, through the Daily Worker in New York, has been issuing exhortations to its members and fellow travelers to join in next Friday's affair in Washington. This has been properly denounced by the leaders of the National Association for the Advancement of Colored People, which has been organizing the celebration.

As for what constitutes true liberalism nowadays, there is food for thought in a dissenting opinion written in May 1930, by Justice Holmes and concurred in by two other great liberals—Justices Brandeis and Stone. He said:

"I have not yet adequately expressed the more than anxiety that I feel at the ever-increasing scope given the 14th amendment in cutting down what I believe to be the constitutional rights of the States. As the decisions now stand, I see hardly any limit but the sky to the invalidating of those rights if they happen to strike a majority of this court as for any reason undesirable. I cannot believe that the amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions."

High Court Ruling on Hells Canyon Fine Victory for Private Enterprise

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. GOLDWATER. Mr. President, the Congress created the Federal Power Commission and vested in that body the authority to license electric-power development in this country on the basis of economic and engineering fact. The Commission determined, after the longest and most exhaustive hearing in its history, that the public interest would be best served by having the Idaho Power Co., rather than the Federal Government, build the hydroelectric facilities in the Snake River. By refusing to reverse the decision of the Federal Power Commission, the Supreme Court of the United States obviously decided that the Commission had acted properly.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "High Court Ruling on Hells Canyon Fine Victory for Private Enterprise," published in the Houston (Tex.) Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Houston Chronicle of April 3, 1957]

HIGH COURT RULING ON HELLS CANYON FINE VICTORY FOR PRIVATE ENTERPRISE

Last October, the Federal circuit court of appeals in Washington, D. C., refused to reverse the decision of the Federal Power Commission in granting a license to the Idaho Power Co. for construction of three dams on the Snake River between Idaho and Oregon. Advocates of public power, organized as the National Hells Canyon Association, at once appealed to the Supreme Court, asking that the circuit court be reversed. They were joined by other public power groups such as the National Rural Electric Cooperative Association, and eight public utility districts in the State of Washington.

The High Court has now refused to review the lower court's ruling and a significant setback has been handed advocates of public power as opposed to private enterprise. In view of the Supreme Court's predilection for greater concentration of power in the Federal Government, as evinced in many previous decisions, the Court's action comes as a reassuring surprise.

Arguments opposing the private construction of these dams—at Hells Canyon, Oxbow, and Brownell—were based on the claim they would interfere with somewhat nebulous plans for erection of a single high dam by the Federal Government higher up the river. The FPC held, however, that the public welfare would better be served by granting the Idaho Power Co. a license for which private capital amounting to $175 million was immediately available so that construction could begin at once. The proposal for a single dam would have been dependent on action of Congress and would have required expenditure of $400 million in tax money yet to be appropriated.

A great deal of misinformation and extravagant claims were circulated by the public power groups in their attack on the FPC ruling but the fact remains clear that the people of the Northwest and the taxpayers of the United States will profit from construction of the Snake River project with private capital. Completed, these dams will be a source of new tax revenues as well as new power for the affected area. Furthermore, the Federal project would not only require more millions from the public treasury, it would never yield taxes and it would probably cost additional Federal funds to maintain and operate. Worst of all, it would operate in competition with private industry, and therein lies the real significance of the Supreme Court's decision in this instance. It is a victory for private enterprise.

Trinity County Board of Supervisors Endorses Trinity River Partnership Plan

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. SCUDDER. Mr. Speaker, a highly significant resolution has been passed by the Trinity County, Calif., board of supervisors, endorsing the Trinity River partnership plan.

This is the county in which the integral works of the Trinity River project will be located. The resolution passed by the county board of supervisors on March 19, 1957, reaffirming their previous position taken on April 12, 1955, is an especially important expression of local opinion because of geographical factors surrounding development of the project.

The Trinity county board of supervisors officially favors the partnership plan,

which would permit construction and operation of the power facilities of the project by a private utility. The board has taken this position "in the public interest," and in a letter transmitting the resolution to me the county clerk states:

The board will appreciate anything you can do to bring about this power partnership between the United States Government and the Pacific Gas & Electric Co.

For the information of Congress, I desire to include the following resolution with my remarks as a grassroots public position from the very area in which the project originates:

RESOLUTION No. 29–57

Whereas the Board of Supervisors of the County of Trinity, State of California, on April 12, 1955, resolved its position regarding the private power partnership with the United States Government, Trinity River project and the Pacific Gas & Electric Company of California, approving said proposed partnership; and

Whereas in view of recent developments and public pronouncements concerning said proposed partnership: It is therefore

Resolved by the Board of Supervisors, County of Trinity, State of California, in regular session assembled this 19th day of March 1957, That they do hereby reaffirm their position previously taken approving, as in the public interest, the power partnership of the United States Government, Trinity River project, and the Pacific Gas & Electric Company of California; be it further

Resolved by this board, That the clerk of the Board of Supervisors of the County of Trinity, State of California, be requested, and she is hereby instructed, to forward a copy of this resolution to the Honorable William F. Knowland, United States Senator from California; to the Honorable Thomas H. Kuchel, United States Senator from California; to the Secretary of the United States Department of Interior, Mr. Frederick Seaton; and the Pacific Gas & Electric Company of California.

In witness whereof we have hereunto set our hands this 19th day of March 1957.

GEORGE K. LOOMIS,
Supervisor, Second District.
JOHN D. ROURKE,
Supervisor, Third District.
LLOYD L. MCKNIGHT,
Supervisor, Fourth District.
ROY H. GALLAGHER,
Supervisor, Fifth District.

Noes: None.
Absent: Supervisor John K. McDonald.
Attest:

MARGARET BAILEY,
County Clerk and Ex-Officio Clerk of the Board of Supervisors, County of Trinity, State of California.

Attempt To Weaken National Banking System

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. ROOSEVELT. Mr. Speaker, from Mr. Maurice S. Brody, director of the Denver National Bank, has come a penetrating analysis of the proposed new banking law, S. 1451.

While I am not a member of the Committee on Banking and Currency, I feel that many Members will be interested, as I am, in Mr. Brody's opinion and the conclusion which he reaches, that this bill, both indirectly and directly, removes many of the basic safeguards written into our banking philosophy in 1933, and returns too large a share of the control to the professional bankers of our national banking system.

The analysis follows:

PROPOSED NEW BANKING LAW (S. 1451) CONCENTRATES FINANCIAL CONTROL AND POWER IN HANDS OF THE FEW BY DESTROYING PRESENT SAFEGUARDS OF THE MANY

(By Maurice S. Brody)

The heart and chief purpose of S. 1451 is to concentrate control of our national banks in the hands of a few persons by removing certain basic safeguards built into our National Banking Act by a Democratic Congress in 1933. These built-in safeguards permitted our national banks to grow in great strength and to prosper since 1933.

Numerous technical changes abound in the bill but these changes for the most part are used as camouflage to cover up the basic intent and purpose of this bill which is to concentrate the financial control of our national banks in the hands of a few professional bankers.

It is my purpose to deal concisely with the provisions of the bill which result in concentrating financial control by removing the basic safeguards presently existing in our national banks.

THE ELIMINATION OF MANDATORY CUMULATIVE VOTING

Title I (National Bank Act), chapter 5, section 26C embodies the most fundamental revision which has been made by uprooting the principle of mandatory cumulative voting in the election of directors of our national banks. Mandatory cumulative voting along with the insurance of bank deposits were the two basic fundamental principles introduced in 1933 to safeguard the national banking system against a continuance of the abuses which had characterized the management of many of our national banks during the 1920's and the early thirties.

Mandatory cumulative voting acts as a primary "check and balance" on bank managements not to engage in practices detrimental to the interest of stockholders and depositors of our national banks. This device permits representation by substantial stockholders and representatives of substantial stockholdings on the boards of directors of these national banks in order that these independent directors may supervise internally the activities of the bank managements at firsthand.

As the result of the wide distribution of bank stocks in the hands of public stockholders during the last 25 years, the situation has clearly arisen whereby it is very rare indeed where substantial stockholders own a majority of the stocks of national banks. And therefore, participation by substantial stockholders as directors can only come about by right through the device of mandatory cumulative voting. The elimination of mandatory cumulative voting permits these substantial stockholders to become directors only through the invitation of the bank managements and therefore these directors become beholden to the very people they are supposed to supervise.

The loss of independence by these bank directors therefore lowers their ability to independently supervise the activity of management because this very independence endangers their ability to remain bank directors once the right of mandatory cumulative voting is repealed. Being a director by sufferance of the bank management is not conducive to independence and in time this condition will tend to undermine the supervision which directors have over the activities of the bank managements. In a word, the tail will wag the dog instead of the dog wagging the tail.

The destruction of the mandatory cumulative voting principle therefore destroys a basic cornerstone of our national banking system which has served this country so well during the last 24 years and effectively removes a fundamental safeguard for our national bank depositors and stockholders.

The removal of this basic safeguard definitely concentrates the control of our national banks in the hands of the professional bankers by effectively eliminating the present right of representation by our 500,000 public national bank stockholders. They will not be able to elect a single bank director.

The Federal Reserve Board on pages 861, 862, and 863 of the Hearings before a Subcommittee of the Committee on Banking and Currency, United States Senate, 85th Congress, 1st session, strongly opposed the elimination of mandatory cumulative voting. Mr. J. L. Robertson, a governor of the Federal Reserve Board speaking in behalf of the Board, summed up his testimony as follows: [1] "I have seen a great number of these cases and I have never seen a case where there was real abuse of this. I have heard alegations of it, and maybe it is true, but I have also seen a number of cases where one who was not desired did get on the board of directors, and did make that board of directors consider problems which they should have considered, and as a result the bank was benefited by it."

Mr. Robertson's parting sentence in his testimony on this point reaches to the heart of the issue in these words: "It seems to me if you do (repeal mandatory cumulative voting) you might as well take away the power to vote with shares and give it solely to the directors. You make a club out of it instead of a business corporation."

THE ISSUANCE OF PREFERRED STOCK

Title I, chapter 4, section 20 permits national banks to issue preferred stock. This relieves the professional bankers from being dependent on the stockholders of our national banks for the raising of capital. The professional bankers will then be able to raise capital by securing this capital from other financial institutions such as insurance companies and investment trusts and thereby can bring about a great concentration of control between our national banks and the financial institutions that can and will furnish the capital to our national banks by way of preferred stock issues.

The 500,000 present public stockholders of our national banks will not only have become subordinated as a primary source of capital but will also find their present investment subordinated to preferred stock issues held by great sources of financial wealth such as the great insurance companies and investment trusts of our country.

Consequently, the risk element of the bank stocks held by a half million public stockholders will be greatly increased through the placing of preferred stocks ranking ahead of the present common stocks and can in the long run, by raising the element of risk in bank stocks, undermine the effective ability of our national banks to raise sufficient capital.

In the present operation of our national banks $5 to $10 of risk assets are involved for every dollar of capital. This means that for every dollar of the stockholder's investment in the bank, $5 to $10 has been invested by the bank's management in risk

[1] Study of Banking Laws, Financial Institutions Act of 1957, hearings before a subcommittee of the Committee on Banking and Currency, U. S. Senate, 85th Cong., 1st sess., on a proposed bill to amend and revise the statutes governing financial institutions and credit, pt. 2. Washington: U. S. Government Printing Office. 1957.

assets which can have considerable fluctuation in value. This requires bank managements of necessity to manage the bank very carefully in order to avoid serious loss. In the event of a depreciation in the value of the risk assets, losses incurred on the $5 to $10 of risk assets employed can have a deleterious effect on the common-stock ownership.

If, in addition to the present risk which the common stock already carries, a preferred stock issue is placed ahead of the common stock with the consequent effect of placing a preferred dividend ahead of the common dividend, it will mean that in the event of a serious decline in business, the stability of common dividends will be greatly endangered. This, of course, will result from the fact that the preferred dividend will rank ahead of the common and consequently will introduce a new speculative element as far as bank common stocks are concerned which will in time impede the effective financing of our national banking system.

It must be realized that bank stocks are held widely by persons and institutions who are concerned with the safety and stability of the dividends they receive as investors. And the erection of a speculative structure in national banks financing through the introduction of preferred stocks which will rank ahead of these common stocks will result in the withdrawal of many conservative investors from the bank-stock market and therefore will not be conducive to financing our national banks in the way they have been effectively financed during the last 24 years.

The National Banking Act of 1933 permitted preferred stock financing only on an emergency basis and the change in the law from an emergency basis to one of regular and normal financing will tend to make the common stocks of national banks much more speculative than they are at present. This therefore will remove a present safeguard of stability of investment in our national banks. Consequently, we are destroying a safeguard of stability which has permitted our national banking system to effectively grow and prosper during the last 24 years.

Once again a safeguard is removed and the stability of sound national bank investments is endangered in order to bring about a concentration of control of our national banks by a small number of professional bankers.

The Federal Reserve Board on pages 860 and 861 of the hearings strongly objected to the issuance of preferred stock by our national banks and Mr. Robertson speaking for the Board of Governors summed up their opposition in these words: "It is very probable, in my opinion, that it would find it difficult to issue more common capital. It would find it difficult to issue more preferred stock unless the new issue was made even more preferred. As a result I think it is very possible that the ease with which banks can raise new capital in order to meet the growth of their communities would be diminished through that method. The ease would diminish."

STOCK-PURCHASE OPTIONS BY MANAGEMENT

A third element of dubious value has been introduced in S. 1451 by permitting the use of stock-purchase options to management in order to increase the return which management presently receives as the result of their administering the affairs of national banks. Bank executives will consequently increase their remuneration by having the stocks of their banks sell at very high prices and this opens up a whole field of manipulation to these bank executives which by its very nature is not likely to be conducive to the sound and orderly development of our national banks.

Bank managers will be tempted to engage in practices which well may bring them fast money but is hardly likely to advance the safeguarding and good administration of our national banks. The granting of stock options is a dubious device to reward bank executives by methods which well may be harmful to the effective and careful management of our national banks.

Here again more power and privilege is granted the professional banker by concentrating control over his remuneration in his own hands unrestricted by checks by the stockholders. On pages 863 and 864 of the hearings the Federal Reserve Board goes on record opposing the granting of stock options. Even the Senate Banking and Currency Committee opposed stock options. Mr. Robertson, speaking for the Reserve Board, said in part as follows: "The Board suggests that, at least with respect to some banks, the application of the proposed authority would not be compatible with the public interest. Some banks might be encouraged by this authority to develop unduly profit-minded, expansion-minded managements. Even though employees' stock-option authorizations may be appropriate for other types of corporations, the Board questions whether they are appropriate in the case of commercial banks which are quasi-public institutions entrusted with other peoples' money."

Here again we have a provision that sacrifices an established safeguard in our national banks in order to concentrate greater wealth and control of our national banks by the professional bankers at the expense of the stockholders and depositors who own and have their money in the bank.

SHARP INCREASE IN BANK BORROWING LIMITS

Title I, chapter 6, section 37 increases the legal indebtedness of a national bank from the present requirement of 100 percent of its capital stock to a new criterion of 100 percent of its capital stock plus 100 percent of its surplus fund.

This will permit the banks to borrow from each other aproximately 2½ times as much as they can borrow at present and will relieve them to a considerable extent from borrowing from the Federal Reserve bank. This new provision will tend to increase borrowing of one bank from another and through this borrowing device will facilitate a greater concentration of control between our national banks.

Here again a basic safeguard protecting depositors and stockholders against unusual borrowing is removed and consequently brings about a greater dependence of one national bank upon another bank with the result that a greater concentration of control can be brought about. The necessity of reliance upon the independent Federal Reserve bank for additional funds when needed is lowered in favor of reliance upon another commercial bank.

The Federal Reserve Board did not mince any words in condemning this provision which nevertheless was passed by the United States Senate contrary to the strongly expressed desire of the Federal Reserve Board. On pages 667 and 668 of the hearings, the Federal Reserve Board representative, Mr. Robertson, speaking in behalf of the Federal Reserve Board, strongly opposed this provision as follows:

"In the Board's opinion, such a considerable expansion in the borrowing ability of national banks would be both unnecessary and undesirable.

"Borrowing by banks occasionally is necsary and desirable in limited amounts and for limited periods in order to avoid asset liquidation that might otherwise be necessary. It is not, however, a practice that should be encouraged, because it tends to dilute the cushion of protection provided depositors by bank capital and surplus.

"Banks should follow a practice of maintaining holdings of liquid assets adequate to meet ordinary needs. Enlargement of borrowing limits as proposed in this bill might encourage banks to hold smaller amounts of liquid assets and rely upon borrowing for needed adjustments. In an emergency requiring large-scale and extended borrowing the discount facilities of the Reserve banks are readily available. To enlarge the ability of national banks to borrow outside the Reserve banks would diminish the restraining influence that the Reserve banks are directed by law to exert upon borrowing banks which are making undue use of bank credit for speculative purposes."

Here again a revision is made in the National Banking Act which purposely removes a valuable safeguard and tends to bring about a greater concentration of control of our national banks between themselves unfettered by the restraining hand of the district Federal Reserve Bank. The purpose of this provision is quite clear as the Federal Reserve Board which is the chief authority on the needs of our banks considers this expansion in borrowing ability both "unnecessary and undesirable."

The above four basic revisions in our National Banking Act form a pattern by dovetailing together a set of changes which will permit concentration of control of our national banking system in the hands of a relatively few men and thereby through this concentration of financial control will permit a greater degree of industrial control to be accomplished.

The irony of this concentration of control of our national banks in the hands of a few professional bank managers is that this control is accomplished at the expense of the basic safeguards incorporated in our National Banking Act as a result of the experience of bad bank management in the 1920's and the early 1930's. For the dubious purpose of concentrating financial control in the hands of a few persons, vital basic established safeguards are sacrificed.

The Federal Reserve Board, one of the few independent and nonpartisan boards in this country, in its criticism of the above four fundamental revisions confirms this position right down the line.

The Democratic Party as the father of these safeguards incorporated in our National Banking Act in 1933 should examine these revisions very carefully—particularly since these revisions are made in order to transfer vital control to our national banking system out of the hands of the people and into the hands of a few professional bankers. This is a case where both the ends and the means are objectionable and contrary to the public interest.

MERGER PROVISION—AMBIGUOUS AND WEAK

Finally S. 1451 adds insult to injury by incorporating a weak and wobbly merger provision in the bill. Title III, chapter 6, section 23 on mergers and consolidations introduces the ambiguous words of "the effect thereof may be to lessen competition unduly or to tend unduly to create a monopoly" and is contrary to the standards established by the courts of "substantially to lessen competition" and therefore is unlikely to have any effect in slowing the present strong trend of mergers and consolidations of our national banks presently occurring.

It is further significant to note that this provision does not permit the Department of Justice to act against the formation of vast banking mergers but throws the enforcement of this provision, as far as national banks are concerned, into the lap of the Comptroller of the Currency, who has indicated no resolve whatsoever to even attempt to check the present vast concentration of control and power presently occurring among our national banks.

CONCLUSION

The main purpose in revising our National Banking Act is quite clear. Its aim is to

concentrate financial control and power in the country in the hands of the few by destroying the safeguards presently existing in our national banks set up by a Democratic Congress to protect the many. It is a major change in our banking policy of national significance and the Democratic Party as the "party of the people" should stoutly resist this attack on the integrity of our national banks by the present Republican administration.

The basic philosophy established by the Democratic Congress of 1933 of widening the basis of control of our national banks by permitting the public stockholders to be represented on national bank boards along with the other basic safeguards enumerated above has stood the test of time and has become deeply imbedded in the life of our people.

Our national banks set up as an instrumentality of Congress to serve all of the people presently vests the ultimate financial control of these banks in the hands of the people.

The Democratic Party in solid control of the House of Representatives should never permit a few professional bankers to take control of our national banks away from the people.

U. S. S. "Arizona" Memorial at Pearl Harbor, T. H.

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on March 11, 1957, I introduced H. R. 5809, a bill to provide for a U. S. S. *Arizona* memorial at Pearl Harbor, T. H. The gentleman from Tennessee [Mr. LOSER], the gentleman from Oregon [Mr. PORTER], and the gentlemen from Arizona [Mr. UDALL and Mr. RHODES], have introduced similar bills. Committee action awaits a departmental report.

Strong support for the bill has been expressed in a number of areas of our national life. I am honored to present herewith for the information of the Members of the Congress a copy of House Concurrent Resolution No. 56 which was adopted by the 29th Legislature of Hawaii.

Whereas Act 288 of the Legislature of the Territory of Hawaii in 1949 established the Pacific War Memorial Commission to create and maintain a living war memorial in Hawaii, and Joint Resolution 21 of the 27th Legislature adopted and approved the commission's "Pacific memorial system," which included, among other things, a memorial or memorials at the National Cemetery of the Pacific—Puowaina, the Hill of Sacrifice; and

Whereas the American Battle Monuments Commission has successfully implemented major aspects of this project to the point where the architectural plans have been approved in general by the appropriate bodies, and authorization granted to proceed with that part of the memorial that pertains to the Gardens of the Missing: Now, therefore, be it

Resolved by the House of Representatives of the 29th Legislature of the Territory of Hawaii (the Senate concurring), That this legislature reiterate oft-expressed appreciation and gratitude to the American Battle Monuments Commission and all of its members for that Commission's continuous and continuing Aloha for Hawaii, and for its unrelenting efforts, which are rapidly taking form, to create in Hawaii a living war memorial; and be it further

Resolved, That the 29th legislature renew the previously expressed approval of the Pacific memorial system of the Pacific War Memorial Commission; and be it further

Resolved, That authenticated copies of this concurrent resolution be transmitted to the President of the United States, to the Secretaries of Defense, the Army, the Navy, the Air Force, to Hawaii's Delegate to Congress, to the American Battle Monuments Commission, and to the Pacific War Memorial Commission.

THE HOUSE OF REPRESENTATIVES
OF THE TERRITORY OF HAWAII,
Honolulu, T. H., May 2, 1957.

We hereby certify that the foregoing concurrent resolution was this day adopted by the house of representatives of the 29th Legislature of the Territory of Hawaii.

O. VINCENT ESPOSITO,
Speaker, House of Representatives.
HERMAN T. F. LUM,
Clerk, House of Representatives.
THE SENATE OF THE
TERRITORY OF HAWAII,
Honolulu, T. H., May 3, 1957.

We hereby certify that the foregoing concurrent resolution was this day adopted by the senate of the 29th Legislature of the Territory of Hawaii.

WILLIAM H. HEEN,
President of the Senate.
WILLIAM S. RICHARDSON,
Clerk of the Senate.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. ABBITT. Mr. Speaker, I believe that at long last the American people are gradually becoming aware of the fallacies of the so-called Federal aid programs to the several States. They are fast realizing that there is no such thing as Federal handouts.

We must realize that the Federal Government has no money, except that which it extracts from the taxpayers. We hear much these days about Federal aid to the States for school construction. Not only is this Federal aid not needed, but it will cost the taxpayers of this country far more to construct the necessary schools with Federal aid than if the States went it alone and built their own schools without the assistance of the Federal Government.

And not only will it cost the taxpayers more if Federal aid is approved, but Federal control invariably follows Federal aid. The present so-called school construction Federal aid would be the first real step in turning our schools over to the Federal Government. The States and localities in this great Nation are today in a far better condition to meet the costs of school construction and education generally than is the Federal Government with its enormous public debt.

We need but look at the groups that are sponsoring this legislation to realize that the vast majority of them are not only pressure groups but are believers in the welfare state.

There appeared on Friday, May 10, 1957, in the Richmond Times-Dispatch, an editorial entitled "United States Aid to Schools Slipping," and in the Lynchburg News an editorial entitled "Cuts Won't Do." These two editorials point out cogently the dangers of enacting the Federal aid to school legislation, as well as other reasons why the legislation is not needed. The editorials are as follows:

[From the Richmond Times-Dispatch of May 10, 1957]

UNITED STATES AID TO SCHOOLS SLIPPING

There is no hope of a real slash in Federal spending unless a great easing of world tensions makes it possible to cut the present stupendous expenditures for defense, President Eisenhower told his news conference on Wednesday.

This declaration presupposes that there is no substantial waste in the outlays for defense—a supposition which we are far from accepting. The President's statement also ignores the possibility of a large reduction in domestic expenditures—which in his budget total nearly 10 billion, or 51 percent, more than those in the last Truman budget.

Let's take one proposed domestic outlay from the Eisenhower budget—the program of Federal aid to education. It calls for 325 million a year for 4 years, plus 750 million more over the 4-year period for Federal purchase of local school construction bonds.

There is a huge lobby in Washington for this program, and Mr. Eisenhower has been spearheading the fight. Yet there are many reasons for believing that the program is not only unnecessary, but dangerous.

The latest strong reason for regarding it as unnecessary appears in Time magazine for May 13. Time publishes a State-by-State report, and reaches the following conclusion:

Of all the items in President Eisenhower's domestic program, few seem less likely to succeed than Federal aid for school construction. But would the defeat of this proposal be as great a calamity as its backers insist? Last week Time surveyed the 48 States to find out. The answer: no. Though the Nation as a whole must keep building classrooms, faster than ever before, a surprisingly big proportion of the States do not need—or do not want—any help from the Government.

Only 7 States seem to qualify for the critical list, according to this survey, and some of the 7 are in dubious class, as we see it. California, for example, is spending wholly ridiculous sums on its old people. If these outlays were brought down to reasonable levels, many more millions would be available for schools.

Virginia—where not a single county or city has exhausted its bonding capacity—is 1 of 23 States listed in Time as not only confident they can take care of themselves; a good many just don't want outside help.

Bearing out the argument that Federal aid is not needed is the statement in the Investment Bankers Association's Statistical Bulletin that school bonds sold by States and localities for the 9 months ended March 31 totaled $1.5 billion, an alltime record.

For this and other reasons, there is mounting opposition to Federal aid, as people awaken to the fact that it would not only be an extravagance on the part of the National Government but a means whereby that Government would get its clutches on the schools of every State.

If Mr. Eisenhower is really interested in economy—which seems highly doubtful—

we suggest that he might begin by eliminating this whole plan of Federal aid to schools.

[From the Lynchburg (Va.) News of May 10, 1957]

CUTS WON'T DO

The House Education Committee has voted to cut the proposed huge appropriation for Federal construction of school buildings from $2 billion to a billion and a half.

The reason given is that passage of the larger appropriation through the Congress is doubtful and advocates feel that a somewhat smaller sum might get approval.

The cut is not sufficient. The only thing that would be sufficient would be the withdrawal of the measure or, that failing, its defeat in the Congress. This, we think, is true for good reasons, including:

1. The bill is wrong in principle.

It means Federal control of the public schools. That, despite efforts to conceal it, is axiomatic, and if proof were needed the effort just made to slap on Federal regulations as to the distribution of the handout, and stopped temporarily and for expediency's sake, supplies the proof.

2. It is an expenditure that the Nation cannot afford at any time, especially when every effort is being made to reduce a budget that is a heavy burden upon the Nation's economy and is growing heavier year by year.

3. There has not yet been any clear demonstration of the need for the appropriation, of a desperate scarcity of classrooms. Indeed, there has been a series of confused statements, the number supposedly needed varying widely with each table of statistics. The only thing agreed upon by everybody advocating the expenditure is that for the last several years the number claimed needed has shrunk annually 50 percent. Give another year or 2 of the present rate of construction by the States and virtually everybody but those bent on increasing the power of the central government and those who just dote on spending money will admit there's no need at all for so-called Federal aid.

Let's kill the bill now, no matter if the appropriation provided is for only 2 cents, and it will be beyond hope of resurrection.

Is Ike's Staff Coming Apart at the Seams?

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article which appeared in the Boston Sunday Globe by their able Washington correspondent, Thomas Winship, regarding the second term of the Eisenhower administration, and the Federal regulatory agencies. I feel that its contents will be of great interest to my colleagues in the House.

The article follows:

[From the Boston Sunday Globe of May 12, 1957]

BOSTON LAWYER GETS LAME DUCK RUNAROUND—IS IKE'S STAFF COMING APART AT THE SEAMS?

(By Thomas Winship)

WASHINGTON, May 11.—The performance record of the White House staff this week in trying to strengthen two important Federal regulatory agencies typifies the Eisenhower administration's second-term growing pains.

It is a clinical report on the Ike administration in action on the personnel front, pieced together by the writer from interviews with a dozen informed officials here.

It concerns a respected Boston corporation lawyer and a popular former mayor of Morristown, N. J., and the administration's faltering efforts to ease them into key jobs.

The administration has one upcoming vacancy in the Federal Communications Commission and at least one in the Securities and Exchange Commission.

Both of these quasi-judicial agencies are under mounting attack by Congress. The agencies are being charged with failing to carry out the will of Congress in protecting the public interest in the regulation of the increasingly lucrative TV-radio industry and the investment business.

A special House subcommittee recently was created and given $250,000 to investigate these and other regulatory agencies in the executive branch.

In the case of FCC, the White House flunked out completely in putting across its first choice. It was Edward Mills, former Civil Aeronautics Board official, former mayor of Morristown, and now deputy general services administrator.

On Friday Mills asked that his name be withdrawn from further consideration. Robert L. King, administrative assistant to Vice President NIXON and former general manager of Southern Comfort Distilleries, currently is the front runner, according to industry reports.

BOSTON LAWYER FACES STORMY GOING AHEAD

In the case of the SEC, Boston Attorney Charles O. Pengra, 66, of the Choate, Hall, and Stewart law firm appears headed for stormy weather in winning Senate confirmation if the White House goes through with its tentative offer of the SEC chairmanship to the Bostonian last week.

Trouble surrounding Mills and Pengra were different, but both were innocent victims of the same shortcomings—sloppy White House staff work and poor liaison with the Republican Senate leadership.

On the FCC, Chairman George C. McConnaughey, political protege of Senator JOHN BRICKER, Republican, Ohio, has failed in his drive to win reappointment when his term expires this June 30.

Complaints from the industry have mounted to the point where the White House finally has decided that McConnaughey must go. McConnaughey refers all queries on his future to the White House.

First choice as successor was Mills. His name was cleared 10 days ago with his 2 home State Senators—CLIFFORD CASE, Republican, and H. ALEXANDER SMITH, Republican.

Mills turned down the offer on two counts. First, the White House, in offering him the FCC post, said he should go in with "a mission to clean it up," but never made clear whether it were offering him the chairmanship or just 1 of the 7 commissionerships.

The White House hedged on the FCC chairmanship because there was division within the White House staff over whether it would be wise to give Mills the top job.

Two of the present FCC Commissioners, John C. Doerfer and Robert E. Lee, each have backing for the chairmanship from influential Senators, and the doubting White House staffers question whether it was worth risking a row at the Hill by naming Mills to head FCC.

Mills, on the other hand, decided a person would not get far on a "reform mission" unless he went to the FCC armed with the chairmanship.

Mills also pulled out of the FCC picture because he has a good chance of succeeding his present boss, Franklin G. Floete, as GSA Administrator. This is as good a job on the Government table of organization and is subject to less political and industry pressure.

SENATOR SALTONSTALL IS BYPASSED

What's happened in the Pengra case illustrates anew these other administration facts of life:

The immense power of Treasury Secretary George M. Humphrey outside of his own Department and the realm of fiscal policymaking.

The immense power and skillful follow-through of the Senate's ranking Republican and senior GOP member of Senate appropriations, STYLES BRIDGES, of New Hampshire.

And the administration's frequent failure to touch base with Senator LEVERETT SALTONSTALL, Republican, Massachusetts, though chairman of the Republican Conference of GOP Senators, during the initial stages of White House negotiation with Bay Staters on important Washington jobs.

(The White House forgot to check in with SALTONSTALL, the State's senior Republican, until after it had signed up Bay Stater Christopher Phillips for United States Civil Service Commissioner and Elliott Richardson for Assistant Secretary of Health, Education, and Welfare. This always has been a matter of elementary courtesy in the patronage game here.)

Pengra received a call from the Treasury Department to come here last Friday to talk to Humphrey and others on the possibility of his taking the Securities and Exchange Commission chairmanship. He conferred with Humphrey. He also spent more than an hour with J. Sinclair Armstrong, present SEC Chairman, about the duties of the job.

He called at the White House, too. He was informally offered the SEC chairmanship and asked to decide whether he wanted the job. The offer always was the chairmanship, not mere membership on the SEC.

Humphrey was for Pengra because he thought the Government board policing the Nation's investment community should be someone older than Armstrong, who is 40. Armstrong is being shifted to the Navy as an Assistant Secretary. Humphrey also wanted a new face, a man of stature in the business world. Pengra answered these Humphrey requisites.

GLOBE BROKE STORY ON SEC APPOINTMENT

But few people can make the rounds on this level in this town without word leaking out. It leaked last Tuesday.

The Globe first printed the story. The Wall Street Journal picked it up the next day.

Only trouble so far as Pengra was concerned is that his summons to Washington and offer of the SEC chairmanship was a complete surprise to Senator BRIDGES, Senator SALTONSTALL, and several other Senators who had other ideas on this particular job.

SEC Commissioner James C. Sargent, a 39-year-old New York lawyer and scion of a New Haven locksmith business, had his eye on the chairmanship, and had been working on it long before Pengra was tapped.

The day the story first appeared in the press, Sargent skipped up to the Hill and lunched privately with BRIDGES. The Senator had been in Sargent's corner for some time. So was Senator IRVING IVES, Republican, New York. Sargent even asked the support of his friend, Under Secretary of State Christian Herter, that same day.

The Republican Senators figured they should have been let in on the Pengra development from the start.

Yesterday BRIDGES told reporters: "I have no objection to Pengra being named to the SEC as a member, but I do think it is tough on present members if a complete outsider is promoted over them. I know Sargent has done an excellent job on the Commission

and I am for him. I shall tell the President of my feelings when I see him text Tuesday. Pengra's name was news to me," said BRIDGES.

Pengra, an innocent bystander, has not commented publicly about anything. But friends feel certain the SEC chairmanship, the original proposition, might still interest him, but nothing else.

The big question now is: Will the White House want to buck BRIDGES and other Republican Senators and push Pengra over Sargent, or will they just forget about that call last week to Boston?

The 1912 Harvard graduate apparently is a philosophical man.

Only a few weeks before the Eisenhower administration asked him to join "the team," Pengra wrote in his 45th class reunion report this spring:

"After 42 years of corporation law, mostly financial work, nothing I could do could be of any interest.

"I am too reactionary to hold public office, too busy to write a book, too old to play golf and too young to retire."

Getting good men to come to Washington for the last 3 years of the Eisenhower administration is a major problem.

Want a job?

Los Angeles Board of Water and Power Commissioners Oppose Trinity Partnership Proposal

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. ENGLE. Mr. Speaker, the Board of Water and Power Commissioners of the City of Los Angeles has just adopted a resolution urging Congress to reject the plan of the Secretary of the Interior for development of the Trinity power resources by the Pacific Gas & Electric Co. This action by the board in stepping forward to oppose the P. G. & E. partnership proposal is especially significant because this board represents the interests and attitudes of so many people.

The Department of Water and Power of the City of Los Angeles is the largest single public agency distributing water and power in the State of California and one of the largest in the Nation. The Department distributes water and power from the Colorado River and Hoover Dam. It has been in the electric power business a long time and knows its way around in the power field just as well as the P. G. & E. Co.

In addition to the fact that the Board of Water and Power Commissioners of Los Angeles represents a great number of people, the board's resolution is significant because it represents the thinking of some of the finest engineers in the water and power business.

For the information of Members of Congress the resolution follows:

Resolution 926

Whereas the Secretary of the Interior has recommended the development of the power resources of the proposed Trinity River division by a private utility, which action is contrary to the long-established public preference provisions of Federal reclamation laws; and

Whereas the State of California, through its department of water resources, as a preference customer would have need for large quantities of low-cost hydroelectric power for pumping requirements of the Feather River project that already has been authorized by the California Legislature; and

Whereas other public agencies are by tradition and existing law also entitled to share on a priority basis in the power that would be available under Federal development: Now, therefore, be it

Resolved, That the Congress of the United States is hereby urged to reject the plan of the Secretary of the Interior for private development of the power resources of the Trinity division and that the construction and operation of that project be undertaken by the Federal Government under reclamation law with fair and proper provisions for serving preference customers, including the State of California, and that the State be granted the same terms and conditions for purchase of power for pumping water to serve the State's Feather River project as would be given a Federal project; be it further

Resolved, That copies of this resolution be sent to United States Senators KUCHEL and KNOWLAND, Congressman CLAIR ENGLE, and other Members of the California congressional delegation, Secretary of the Interior Fred A. Seaton, and Gov. Goodwin J. Knight.

I hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the Board of Water and Power Commissioners of the City of Los Angeles at its meeting held May 7, 1957.

[SEAL] JOSEPH L. WILLIAMS,
Secretary.

Address by Dean Katherine Oettinger of the Boston University School of Social Work, Recently Appointed Chief of the Children's Bureau

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, a distinguished citizen of Greater Boston, Dean Katherine Oettinger of the Boston University School of Social Work, has been appointed Chief of the Children's Bureau, Department of Health, Education and Welfare. Her friends believe that she will be a worthy successor to Dr. Martha Eliot, who had such a long and outstanding career in that office.

Dean Oettinger recently gave the Phi Beta Kappa address at Boston University entitled, "The Scholar Lives in Contemporary Society." Believing that this address will be of interest to many, I am asking that it be included as part of my remarks. Her address follows:

Every society has ceremonies marking the coming of age of its members. The Phi Beta Kappa initiation is such a ceremony for it marks your entry into the fellowship of scholars. The memory of the joy I experienced in this sense of belonging at my own initiation into this society encouraged me to accept the honor of having a part in this important benchmark in your lives. For me initiation into Phi Beta Kappa was such a deep experience that I can only compare it to that described in the story of Helen Keller. "* * * the most dramatic phase of the learning process, the phenomenon of what might be called dawning, that great moment when one realizes the purpose and meaning of what he is being taught to do." With Helen Keller this came when she was not quite 7 years old—"this event appeared in its greatest significance when water was poured over one hand while Miss Sullivan manually spelled water into the other hand. In that instant, it dawned upon Helen that 'everything has a name' and that the manual alphabet is the key to everything she wants to know. On this one day, April 5, 1887, she added 30 words to a vocabulary which up to that time had incorporated 21 words that it had taken her the whole of the previous month to acquire." Perhaps "dawning" for you may be now, or at some later time of contemplation, since every awakening is essentially a personal experience.

You have already faced the question that Longfellow posed many years ago:

"Where shall the scholar live?
In solitude or in society?
In the green stillness of the country,
Where he can hear the heart of nature beat,
Or in the dark gray town,
Where he can hear and feel the throbbing
Heart of man?
I will make answer for him and say,
In the dark gray town."

You have in a sense answered this question by choosing Boston University "in the dark gray town where he can hear and feel the throbbing heart of man." But for you this choice is only the beginning. As a scholar, you live in contemporary society and share in this exciting world. This is a world not for timid people, but for the bold, the imaginative, the inventive. We have already come to live with the realistic knowledge that this is an age of problems and of change—a time of awesome responsibility. We cannot hope to see the end. We can just hope for progress.

What are the answers scholars are preparing individually, or as professional groups, toward enriching human life in this contemporary society of rapid technological progress? The swift pace and complexity of changes are clearly revealed as I look back to the time of my own initiation into the Phi Beta Kappa Society. Two years after this date Charles A. Lindbergh flew from New York to Paris, a distance of 3,600 miles, in the then remarkable short time of 33 hours and 30 minutes. We all know how men and science have combined to attain today's jet-propelled speed. That this foreshortening of time and distance came over so few years, still shocks and amazes me. Your generation has accepted it as a matter of course.

If we use this familiar development in air travel as a measure, we can perhaps look at the less tangible but equally amazing evolution during the same period in man's concern for human needs. We have moved from the philanthropic, charitable approach to needy individuals to the concept that man has a right to a reasonable degree of freedom from fear of lack of food or shelter. The rapid increase in the scope of social responsibility over the past years has reached a vast, but still incomplete, perception of our obligation for direct service to people. I am asking you to stretch your imagination far enough to encompass the vast welfare structure for implementing these broad changes in social philosophy that we are beginning to accept as casually as we do concrete evidences of our tremendous progress in other fields. The character of the social standard as it passes from personal to broader responsibility and thence to general social measures which anticipate, and hence

prevent need, is well illustrated by what has happened in our own time with respect to the economic needs of older people; the old standard of exclusive personal and family responsibility has given way to the broader-based social responsibility represented by relief and assistance. Now this, in turn, is being largely supplanted by the preventive measure of social insurance. But now that we are no longer faced with some of these basic fears, new problems confront us. We need new voices to help us create ways of making our prolonged span of life a blessing.

It seems only yesterday we first heard the word "automation" and learned its definition. Now we are beginning to experience more of its meaning in daily living. At first automation seemed remote—even such changes in New England paper and textile industries, for example, where the number of looms tended by 1 man was extended from 6 to 350. This trend altered industry but to most of us it seemed rather far removed from our own endeavors. Now all around us we find firsthand signs of automation. We experience them in huge elevators where pushbutton civilization sweeps unattended passengers to the 30th floor of a hotel, in the new processing machine that computes involved scientific data in our university; and in the newspaper accounts we read predicting tomorrow's wonders to include built-in electronic devices in homes, constantly on guard, assembling weather information, and sending this out to doors, windows, and awnings that adjust themselves accordingly. Members of your 1957 class may be invited to join such a team as the Nevada group seeking to develop hydrogen energy for peacetime use. This would release another source of power beyond our most apocryphal dreams.

What is this doing to the economic, social, and cultural structure of society as we know it? These developments can signify either threat or opportunity. The threat thrusts at our deepest satisfaction in the importance of work and purpose in life. The opportunity lies in freedom from excessive toil, longer vacations, shorter hours, and larger incomes for increasing numbers of people. What substitute are we to find for jobs, abolished by technical advances? Do we have the vision to achieve a cultural renaissance? This will require a creative approach, not only for the poets, novelists, and artists among you, but also for the philosophers and social policy leaders who can give stability to this transitional period. As the 4-day week becomes more than a news headline, scholars and humanists, on the other hand, must work longer and harder to reformulate our traditional aspirations so that the new-found leisure produces more creative living' Time is running out; it is urgent that you spark new sensibilities, new forms of communication, and spiritual commitment to high purposes to meet the challenge of what can become a new, wonderful age, just dawning.

In contemporary society we have not done enough if we treat and prevent forms of breakdown and misfortune precipitated by change. We must maintain a public health point of view in building a healthy climate in which people can grow and flourish. Specifically, for example, this includes mobilizing all new resources which enable us to protect and conserve human life, not only for our own but for all children. We cannot allow boys and girls in any part of this Nation or other nations to be diseased, handicapped, underprivileged, or uneducated. In our current mobile society children from any walk in life or from any nation may be our neighbors and fellow citizens tomorrow. To protect ourselves, we must protect our fellowmen everywhere. Two-thirds of the people of the present world, who now live in underdeveloped areas, are beginning to emerge into conditions of economic independence. Are you ready to take advantage of and to advance the inviting opportunities in the new world for social interdependence? Responsibility on an international level is imperative; we cannot isolate problems. It is quite conceivable that, within your lifetime, you may be expected to be dealing with such revelations as the social organization of Martian society. Even now a joint scientific endeavor among 50 nations will play a key role in preparing for man's first, tentative steps toward space travel into a limitless universe.

Society, now and in the future, must depend upon you and people like you for leadership in reorienting the social order in a civilization which, for the first time, aims to share new knowledge and benefits with all people. What does this require of each scholar in contemporary society? How can he make his greatest contribution to this vast new world? These are the questions you face as scholars.

You have committed yourself wholeheartedly to intellectual goals; you have already demonstrated that you are purposeful, that you have gained major satisfaction as a thinking person. Have you accomplished this without losing or denying yourself as a feeling person? It is only when thinking and feeling work in harmony that maturity results, and only mature people have the capacity to think of others in the community. We know this readiness to give of self demands a willingness to go beyond the simple dictates of duty. The sense of joining with others and caring for others all around the world is the true measure of human stature. It is too easy to do no more than meet the minimal requirements, to take the intellectual approach without giving of yourself or without obligations to others. Whatever else we may achieve, if we lack the quality of giving self, we are not living up to the highest potential of the scholar. In our common effort to preserve freedom and to improve the character of our democracy where men face ever-changing problems and seek to solve them, each person is expected to make some commitment to all human needs despite the engrossing demands of the particular specialization in which he is also engaged. Who speaks for human beings and for humanity if everyone concentrates only on doing his own job? This is quite as true of those entering the fields of technology and business as of more traditional helping professions. Certainly the human dimension is an integral part of the current learning in all professional education.

What further contributions does living in contemporary society require? Certainly one of the first essentials is character structure not just receptive but also initiating. The ability to mobilize our energies, to orchestrate our forces with others in order to effect chosen goals is another. Here is the chance to identify some of the real problems—how to make peace? How to make democracy work better? What to do with ourselves? I cannot agree with some pessimistic historians of society that the role of the individual in society has been completely altered. Has man really become dependent, the eternal suckling, the potential robot? Is the real danger in 1957 that we may someday be ruled by the progenies of Miss Universe and Mr. Univac?

The American conscience, whatever it is, however it has seemed, has frequently gone to sleep only to awaken with greater vigor. Roger Burlinghame is sure that it is asleep now, but even he does not deny the possibility of its reawakening. In his recent efforts to define American conscience he says, "We are prosperous, we are complacent, religion has become for many only a moral convention; skill is anonymous, thought is under pressure to conform. Security has replaced venture as a dominant aim. Intellect is in the discard and politics are dedicated by a cult of mediocrity." But hesitantly, in a wistful hopefulness, Mr. Burlinghame also adds, "hasn't the American conscience always reasserted itself in the past? Is it now possible to feel, in an hour of quiet darkness, when we have turned off the television, the old forces of conscience rallying around us?"

How does this grim self-examination apply to you who graduate with distinction from our university? Some lament that education, like youth, may be wasted upon the young. A personnel officer of one large university predicted that students of the future may think it silly to read books not on any list of requirements because there are no credits given for that stuff. Worse, others claim that college experience barely touches a student's fundamental values, quality of judgment, beliefs, and attitudes. Students only shadowbox without conviction in discussion courses that should demand tough-mindedness. Fashionable conformity at the midcentury permits only complacent assumption of conventional values, without testing with the diamond-pointed drill of doubt. I hope this rouses some challenge from you who have achieved a measure of self-fulfillment during your own brief years at college.

Do you care enough about the niche in society to which this relegates your college generation to answer these critics? At a Smith College mass meeting for Hungarian Freedom Fighters students were swept with sympathy for those who bravely carried on a hopeless struggle. A crisis so easily calls forth the open heart, a sympathy for others, that belies the charge of failure of personal involvement in the great issues of our time. During the meeting, recordings of the last Budapest radio news were rebroadcast. Plaintively the sender asked, "Send news, send news; give us a word." These young people and many of you are sending the answer now and in the future.

My own faith in your personal integrity, courage, and sense of responsibility, is confirmed as I interview men and women candidates for professional education in the social services.

It is heartening that we can balance harsh judgment of the present-day undergraduate with reassurance from such a keen observer as President John Sloan Dickey of Dartmouth. "Do not judge the college student of today by the standards of yesterday. Within the reality of his experience he is ready, willing, and able to come to grips with issues of conscience which in other days were largely left to his elders."

All about is evidence that man is beginning to think of himself as a part of the reciprocal, circular forces that change the social order. The social scientists call this transactional forces. This means that man is not only a part of the social order, but it is a part of him. He does not yield to it as to gravity or the weather, but he himself creates the social condition in which he believes. He determines under what conditions adjustment is a strength or a weakness of too easy compliance. All about us in this complex society people are helping each other reorient their attitudes toward themselves and others while engaging in common program for creating an ever-improving social climate. Many forces are now at work to free the individual from a sense of hopelessness and a feeling of remoteness from the center of power in government, in the corporation, in the union. This has been made feasible in public and private enterprises by a new partnership between government and the people as neighborhood organizations are activated for community advances. The American way of life encourages diverse volunteer activities. I am familiar, for example, with three totally different citizen approaches to mental health activities in the geographically close but

dissimilar communities which surround us—Brookline, Cambridge, and Wellesley.

We are recognizing that democracy will weaken unless ways and means are devised continuously to encourage the average citizen to have some sense of participation and control over his changing environment. It is clear that the citizen who does not grapple firsthand with change is subject to unhealthy apathy. We have no ruling class and planning cannot be left to the experts. New insights into the behavioral sciences indicate the importance not only to the democracy but to the mental health needs of the individual that he participate in achieving community goals for better living for all. This is a far cry from the concept of the "interchangeable man." Indeed, it stresses, perhaps as never before in world history, the uniqueness and the importance of the individual's contribution.

The scholar in contemporary society is moving toward a new philosophy inherent in the phrase "for whom the bell tolls." They know the answer "it tolls for every one of us." But at the same time he has no sense of being "alone and frightened in a world I never made." Who else but the participating citizen makes the world? This is not humanitarianism alone but also good economics, the only road to self-preservation.

Effectiveness, as an integral part of this community of freemen, depends upon cultural education which the individual citizen brings as a member of society living with himself and others. This high order of self-interest, added to social sympathy, embraces concern for the welfare of ourselves and others. The scholar, equipped to grow emotionally and psychologically, as well as mentally, recognizes that the age of compassion, has only just crossed the threshold. We can remember Goethe's dying words: "Light, more light." And the answer of the Spanish philosopher Unamuno; "Warmth, more warmth, for it is not the night that kills but the frost." The scholar can help our society make great strides forward in our time if his value judgments are geared to social responsibility for community living.

To be sure our world is growing wider and wider, but it can also grow closer and closer in neighborhood units. These units reach out for leadership. Where are they going to find it? Hopefully with the scholar who lives in contemporary society.

Unions—Why They Exist and What They Do

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following address I made to the pupils of St. Michael's, St. Adelbert, and St. Casimir Parochial Schools, Pittsburgh, Pa., on May 1, 1957:

UNIONS—WHY THEY EXIST AND WHAT THEY DO

There is nothing very lasting in the world. All things change—and sometimes it is hard for boys and girls of high-school age to realize what has brought about the conditions that prevail in the world in which they are growing up.

Everybody in the world—unless born to wealth—must work for a living, and education is the process which prepares us for work—be it an occupation or a profession.

We need hardly tell you because undoubtedly you have heard stories from your parents and have read that the labor struggle in the United States was not an easy one.

We live in western Pennsylvania, and, as you know, a good many years ago western Pennsylvania became the heart of the iron and steel industry in our great country. This happened because of the nearby abundance of soft coal, the excellent river transportation system, its proximity to the Great Lakes over which the ore from the Minnesota range country was easily, swiftly, and inexpensively transported to the Pittsburgh region.

Here the ore, and coal, and limestone were converted into steel and then shipped elsewhere to be fabricated and manufactured into those things which the people of our country were demanding—and the people of other parts of the world were needing.

The steel industry was founded in Pittsburgh by a group of small independent men who built fabulous empires for themselves—but who finally sold their interests to a Scotsman by the name of Andrew Carnegie, who formed the Carnegie Steel Co. Later on, in the year 1901, he sold his great holdings to the Morgan interests.

It was then that the first billion-dollar corporation in the United States was created, and it was known as the United States Steel Corp. At that time, it is interesting to note, labor in the mills was receiving the pay of 15 cents an hour.

In those hard days, the men who controlled the industry also controlled the vast coalfields that spread over western Pennsylvania.

These men were interested in producing steel and making large sums of money for themselves, but they were not too interested in the welfare of the people. In order to get people to man the mills and to dig the coal, agents were sent to Europe and hundreds of thousands of immigrants were brought into the country to sweat and toil and to produce wealth for the owners.

Many of you in this room know that your parents or your grandparents came from parts of Europe and settled here because of the inducements of finding freedom and earning enough money to support their families. And yet—America was not always the great land of promise that it seemed to be to the Europeans looking westward in our direction.

When they came here, although they did find work, they also found miserable towns built in the river valleys and black mills controlling these towns. There was little freedom—rather, there were long hours of work, small wages, and conditions that to us now seem appalling.

Many years ago there had been attempts made to form unions in these giant mills so that the working people would have some say about their own destinies, some control over their own lives, their wages and the working conditions.

You have all read about the historic Homestead steel strike in 1892, when the workers did attempt to organize unions but found that they were beset by the company and the State militia, and they were forced to give up many things they had been fighting for.

At the end of the First World War another attempt was made to organize the steel industry, and, although thousands of persons enrolled in the union, it all came to no avail. Once again the corporations broke the strike.

During the twenties in the United States, there was a period of great wealth, that is, it was for the people on the top.

America found millionaires blossoming by the thousands, but the people who worked in the mills and the shops and the mines were not given a part of the great profits which were being made and, as a result, the machines of industry, although they were pouring out tremendous quantities of goods, found that there were not sufficient buyers in the country with money enough to consume those things which were being produced.

And, finally, the wheels slowed down and a great depression set in.

Shortly before any of you were born, a great social revolution started in this country with the election of Franklin Delano Roosevelt as President of the United States. This was in 1932.

Franklin Roosevelt was a man who saw our country falling apart and who felt that unless ways were found to share this tremendous wealth, which was being produced or could be produced, that we could not survive in the world as a strong free nation.

Franklin Roosevelt did many things to save our country and particularly to save our capitalistic form of economy. He helped business by creating government agencies which poured countless millions of dollars into their treasuries to see that they could survive. He helped the farmers by having all sorts of agricultural laws passed so that they could weather the severe economic storms.

And Franklin Roosevelt also helped the working man by seeing to it that in the law called the "National Recovery Act" there was inserted a clause which gave the workers the right to organize into unions of their own choosing.

Immediately there was a great upsurge of union activity in the United States and shortly thereafter there was founded a Committee for Industrial Organizations which was determined to organize all the workers who toiled in great mass industries such as steel, aluminum, rubber, automobile, textiles, oil, mines, and others.

When the National Recovery Act was declared to be unconstitutional, there was a new Federal bill passed by our Congress known as the "Wagner Act," which was sponsored by Senator Wagner of the State of New York. This Wagner Act came to be known as labor's Magna Carta and it gave to the unions and the working people of the United States the right, under Federal auspices, to organize into unions and to fight for higher wages and better working conditions.

It is hard for us to realize today just how bad things were back in the early thirties. I would like to point out just a few facts for comparison to make it easier for you.

In 1934, the United States Steel Corp. (and their rates, of course, are sometimes even higher than those paid by other companies) was paying a minimum of 47 cents an hour in the North, and about 32 cents an hour in the South. In November of 1936, to forestall the great union surge which was sweeping the steel industry, the company did raise the common labor rate to 52½ cents an hour.

Compare that, if you will, with the rate now being earned by a common laborer in the United States Steel Corp., and also in many of the other steel plants in western Pennsylvania, which is $1.82 an hour. In the aluminum industry, it is now $1.84 an hour. This is a tremendous increase in buying power of the people who have to work in the mills.

Back in 1934 and 1936, vacations were unknown in the steel industry—except for the bosses. Today, everybody who works gets a vacation.

Pensions and insurance provisions were also unknown in the steel industry—although, of course, there were some people at the top who did receive princely pensions. Today, if a man works in the steel industry for the major part of his life, he can look forward to sufficient money upon retirement to take care of himself as long as he lives.

And today—if a worker or his family becomes ill or requires hospitalization, there are funds set aside by the company by the workers to take care of these health needs.

A few of the other things that unions have won over the years have to do with paid holidays—something nobody had 20 years ago; shift differentials, which means that if people work on the late afternoon shift or the night shift, they get a few cents more than the people who work the preferred daylight shift.

But probably the most important event that has happened in the steel industry, and which was brought about by the union, is the development of the individual worker—as a person of some importance and stature in his plant and in his community.

The worker is no longer considered just a number, somebody who can be hired by the boss at will—and fired, indiscriminately, without charges being preferred against him.

Today, a worker, when he goes to work in a plant, immediately begins to accumulate seniority and is protected by a contract which is negotiated between the company and the union. This contract spells out, in great detail, the working conditions, the rights of management, and the rights of the employees.

If there is a fight over some of these issues between the employer and the employees, the worker, today, may take a problem up through the grievance machinery, and, if necessary, even to an impartial arbitrator who—without fear and without pressure—will render a fair and equitable decision either for the worker or for the company in accordance with justice and right.

We know that there are many people in the United States today, and even here in western Pennsylvania, who still fear unions and sometimes even brand unions as being subversive or un-American or antidemocratic.

We know, too, that there are unions that sometimes are a bit undemocratic and arbitrary in the things they do, but, we are old enough to know that almost any institution, which is manmade, can deviate from the course which it should pursue. But, by and large, in spite of the errors that unions have made, unions have become a strong motivating force for freedom and democracy, particularly industrial democracy, in our society.

It is really too bad that more time is not spent in school learning about the contributions that unions have made, because unions are a potent factor and should be given credit for what they do.

Students should be taught about the American heritage in full, part of which is owed to the trade-union movement. Many students in high school, upon graduation, will go to work in shops and factories and mills, and many of those students will eventually become union members.

We think it is only right that in America, where man is free to advance himself and to earn sufficient money to move ahead and live comfortably, that the role of unions and companies should be more closely studied.

Unions in America are not opposed to business as such.

Unions want companies to be strong and to make money, because unions know that in the end, the income of union members is derived from the profits of the company. But unions feel that companies, when they earn large sums of money, have a moral right to see to it that the employees, who, by their sweat and brawn, produce the goods and services, should be rewarded sufficiently so that they in turn, can buy these goods and services; and they feel that an ever-expanding economy means even more productivity upon the part of the employees and the company, and an ever-greater share to which the employees are entitled.

Now, it's often said that there is only so much in the pie—and—if labor takes too much, then management and the stockholder will not have sufficient left. Over the years, labor's share in the pie has not risen appreciably, but what has happened is that labor and management, working together, have been able to take a bigger pie, so that all segments of our economy receive bigger slices, including the money return to those who work.

In a sense, a union is an economic and social prod to companies and to government. Naturally, unions are formed by people who are generally not satisfied—they want more.

Everybody wants more, and with our tremendous wealth and productive skill any right-thinking person knows that all men can get more, provided they are given the opportunity to produce more.

The big problem in America is how to share the product and how to make distribution of the consumers' goods an easy thing so that we will not have periods of recession and employment decline.

Unions believe in the strength and vitality of America—but, even more important than that, they believe that people are the important element, and that, no matter who a man is, where he originates, or what his personal beliefs are, he should be accorded the full right of every other American citizen to carve out his life the way he wants to.

Training Program for Midshipmen

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. SIKES. Mr. Speaker, I have previously called the attention of the House to the opportunity to save money without impairing essential defense functions by having air indoctrination and training for the Naval Academy midshipmen performed at the naval air station in Pensacola. By so doing, the requirement for the construction of an additional flying field with all its costly facilities near Annapolis can be eliminated—at least for the time being. The Navy has recognized the wisdom of this course and is now programing this training at the Annapolis of the Air at Pensacola. In my previous statements, I pointed to the effective work done by a well-known newspaper columnist and reporter, Mr. Frank Kennedy. His untiring efforts contributed materially to focusing proper emphasis on the desirability of the course which is now to be pursued. Therefore, I am again glad to place his writings in the RECORD.

I am pleased also to note the credit given to my distinguished colleague, Hon. CHARLES E. BENNETT, for his interest and his efforts in this important contribution to economy.

The articles follow:

BENNETT AIDS SIKES' BATTLE FOR NAS MIDSHIPMAN PLANS

(By Frank A. Kennedy)

WASHINGTON.—The Navy's admirals have gone about on a new tack—they even have chartered a new course—in their determination to obtain from Congress a master jet base near the Naval Academy at Annapolis.

Congressman SIKES, of Crestview, who is out to make midshipman air indoctrination a permanent feature of the Pensacola NAS, now is charting a new course, too. He mightily is encouraged in this maneuver because to his aid has come an eager and able consort in the person of Congressman BENNETT, of Jacksonville. Mr. BENNETT is a member of the House Armed Services Committee, so he is in a spot to cross-examine the admirals as they present to Congress their new arguments for the jet field in the Washington-Annapolis-Baltimore triangle. This privilege Mr. SIKES does not possess. He can appear before the committee, headed by the peppery Congressman VINSON, of Georgia, but committee rules give him the right to present direct testimony only—the privilege of cross-examination is reserved to the committee members and staff exclusively.

The admirals' new arguments are these, according to Adm. Austin K. Doyle, chief of naval air training at Pensacola NAS, and to his chief of staff, Capt. Robert E. Riera:

1. Reserve training for the Navy's weekend warriors who are skilled and ready pilots who can be kept in fighting trim at one-sixth of the cost of a regular unit of the Navy.

2. Air defense.

3. A motivation rather than training field for the midshipmen of the Naval Academy.

Superficially, they look imposing, but the two Florida Congressmen believe that they can be riddled. It will be noted that the air indoctrination of the midshipmen has been subordinated to the No. 3 spot, with the training of the naval air reservists stepped up to the No. 1 position.

Just a year ago, the Navy came before the Vinson committee, asking for an item of $4 million for land acquisition—about 5,000 acres—near Annapolis. The testimony of justification presented by the admirals to the Vinson committee dealt wholly with midshipman air indoctrination—not a single word was uttered about the need for a master jet base for the air reservists, or for the construction of the Annapolis facility for national defense.

Both Florida Congressmen are sympathetic to the proper treatment of the air reservists, but both of them are wondering why this need and this defense potential were not laid on the record before the Vinson committee last year. "This 11th-hour inclusion of these new factors leaves me cold," observed Congressman SIKES, "particularly as they are advanced by the Navy Department just a year after the Congress denied the $4 million land acquisition item for the Annapolis training field."

Congressman BENNETT equally is cool to these last-minute arguments. "I do not believe that the air indoctrination of the midshipmen should be conducted at the same field used by the air reservists," he said. "The midshipmen should get their training at Pensacola with the career pilots of the Navy. I intend to cross-examine the Navy people aggressively all down the line on their new approach to the thrice denied (by Congress) field at Annapolis," he declared emphatically, "and besides, I can do a lot of talking when we close the doors." The latter observation referred to the closed executive session which the Vinson committee will hold when it is ready to draft the military construction bill—"talk" which mostly is off the record.

Mr. SIKES now is assembling material for a formal answer to the Navy's new arguments in a speech, either on the House floor, or before the Vinson group—"preferably both," he said.

In the congressional cloakrooms, the Navy's altered course generally is accepted as a confession on the admirals' part that the Sikes' earlier effort permanently to indoctrinate the midshipmen at Pensacola NAS has blown right out of the water their old one-decker argument, spurned by Congress only a year ago.

THE WASHINGTON TREADMILL

(By Frank A. Kennedy)

NAVY ON A LEE SHORE

Congressman SIKES, of Crestview, believe it or not, actually was disappointed when the Navy Department recently omitted from the $1.5 billion military public works bill an item to start work on a master jet field in the Washington-Annapolis-Baltimore triangle, for air indoctrination of Academy midshipmen, for training of naval air reservists in the area, and for national defense.

The Crestview Congressman, who loves a Capitol Hill scrap, was confident that he had the admirals in rough water on a lee shore, and was anxious to drive them hard aground. The top Navy brass apparently deplored their own tactical position, too, because they asked Congress for not a dime to build the airbase, despite the fact that they had organized a junket to Pensacola as recently as March 19–23 to sell a sizable group of business and civic leaders hereabouts on the necessity for the new jet base. At Pensacola, the Navy brass reversed their arguments of a year ago, and subordinated midshipman air indoctrination to the need for a nearby local field for the naval air reservists.

Mr. SIKES has been contending for more than a year that the proper place to make the middies air-minded was Pensacola NAS, where nearly 4,000 Navy fliers are graduated annually and where the splendid history, tradition, and esprit de corps of the naval air command has been erected during the last forty-odd years. More recently, Congressman BENNETT, of Jacksonville, a member of the House Armed Services Committee, which now is considering the $1.5 billion military construction bill, also spoke out against the proposed jet base near Annapolis, contending that midshipman air indoctrination more properly should be handled at Pensacola NAS—not at a field dominated by air reservists who could not fire the middies with the same sort of zeal which career fliers exude.

The Sikes' intent to drive the admirals aground with further telling broadsides apparently was well conceived. Ready for him was extra ammunition assembled by this reporter. Here it is:

The Air Force—it now is beginning to appear—knew a deal more about Navy Department planning than did House and Senate Armed Services Committees after the admirals appeared before both groups last year in behalf of the Annapolis base. Their testimony included nothing about the use of the desired base for the continuing training of the Anacostia, D. C., naval air reservists, or for the basing of operational jets at the field in the cause of national defense.

There is a local group of citizens, called the Southern Maryland Improvement Council, Inc., opposed to the location of a Navy jet base near Annapolis. Its president is Benjamin Watkins 3d. After the House passed the 1956 military public works bill containing a $4 million land acquisition item for the Academy field, but before the Senate Armed Services Committee reported out the construction bill with the Academy item stricken, Watkins wrote a letter to the Baltimore Evening Sun, dated June 18, 1956. It was published June 29, 3 days after the Senate Committee reported the bill. Watkins, it now appears, had been tipped off to the Navy's undercover plans to shift the Anacostia Air Reservists to the new Annapolis base. His letter to the Baltimore newspaper propounded these questions:

"Could it possibly be that the approximately 2,500 to 3,000 naval flying officers in the Washington area have anything to do with the selection of southern Anne Arundel sites. And does the fact that the proposed sites can be reached from various points in the Washington area in a matter of 30 to 45 minutes by the new highways have anything to do with it? Can the fact that both the Anacostia and Bolling fields are slated to be closed have anything to do with the midshipmen's desperate need for a jet airfield between Washington and Annapolis?"

Under date of April 15, 1957, Watkins addressed the following solicited letter to this reporter:

"The questions posed in my letter dated June 18, 1956, were based entirely upon direct information furnished to me and my associates by a high ranking officer of the Air Force whose duties put him in close touch with Department of Defense planning.

"I consider it unnecessary to reveal his name because the accuracy of his information has been confirmed 100 percent in subsequent official announcements of the Navy Department, particularly the address of Adm. Arleigh A. Burke, Chief of Naval Operations, before the Anacostia, D. C., Naval Air Reserve Unit on September 7, 1956, and also by the remark of Adm. Austin K. Doyle, Chief of Naval Air Training Command, to a group of local business and civic leaders from Washington, Baltimore, and Annapolis, uttered at Pensacola during a Navy-sponsored trip, March 19 to 23 of this year."

TRAINING PROGRAM FOR MIDSHIPMEN FIRMED FOR NAS—REQUEST OF NAVY OMITS JET BASE PLAN AT ANNAPOLIS

(By Frank A. Kennedy)

Omission from the $1½ billion military public works bill of any funds for a Nevy jet base in the Washington-Annapolis-Baltimore triangle presumably has placed the air indoctrination course for Academy midshipmen at Pensacola at least on a semipermanent basis, provided the test run of such training works out satisfactorily this summer.

SIKES PLEASED

This is the considered judgment of Representative BOB SIKES, of Crestview, in commenting on the introduction of the bill Wednesday by Representative CARL VINSON, of Georgia, chairman of the House Armed Services Committee.

Last year the Navy sought an item of $4 million for land acquisition near the Academy. The funds were approved by the Vinson group and passed by the House but later deleted from the bill by the Senate Armed Services Committee.

"I consider this omission as a realistic reappraisal of the proposed Academy base by the Navy planners at the Pentagon," said SIKES. "I have little doubt that the interim indoctrination program slated to begin at Pensacola next month for the midshipmen will indeed meet the pressing need of the Navy for a closer tie-in of the Academy curriculum with the training of career pilots at Pensacola NAS.

"Indeed I have high hopes that the tentative plan will work out so well that the Navy Department will embrace the Pensacola-Annapolis 'marriage' as the best thing for the Navy after all. In any event the decision of the Navy not to ask for the Academy jet field this year puts its construction remotely in the future.

"As it has been admitted officially that Pensacola NAS is the only other existing Naval airbase where midshipmen training would be compatible with regular Navy operational functions, it looks to me that the middies will keep on coming to Pensacola year after year."

After it had been disclosed by the Journal's Washington News Bureau more than a year ago that midshipmen air indoctrination was incompatible with operational functions of the Naval Air Command at all other bases except Pensacola, SIKES advanced the claims of Pensacola in a speech on the floor of the House last February 27. Besides the obvious desirability of formalizing the "marriage" of Pensacola and Annapolis, SIKES made a further point which apparently had not been considered by the top Navy planners because recommendations of the Pensacola Naval Air Station administrative officers had not been reviewed. These recommendations call for a modern medical-psychological center at Pensacola Naval Air Station for a well considered program of psychoanalysis and aptitude tests estimated to save more than $20 million annually in pilot training by eliminating the unfit whose disqualifications could not be discovered otherwise until they graduated. SIKES pointed out that routing the midshipmen through this psychological mill early in their scholastic career instead of after their graduation at Annapolis as is now the case, would discover the relative fitness of the midshipmen at the most opportune period of their education.

Representative CHARLES E. BENNETT, of Jacksonville, a member of the Vinson committee, who has been critical of Navy plans to establish a jet base for midshipmen near Annapolis, apparently has been left with nothing to do about it.

Some weeks ago he said that he would cross-examine Navy witnesses when they appeared before the House Armed Service Committee to justify the proposed Academy base which figured officially in Navy Department's planning as recently as March 23 of this year. Omission of the request for funds in the public works bill now washes out such testimony and such cross-examination.

The Latest Word

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1957

Mr. BYRD. Mr. Speaker, permit me to direct to the attention of our colleagues the following editorial which appeared in the May 15, 1957, issue of the Wall Street Journal:

CURING A SLICE

According to the latest word from the first tee at the Gettysburg Country Club, Mr. Eisenhower is having as much trouble with golf as he is with Government.

With one exception. While President Eisenhower is pretty puzzled about the congressional sand traps his legislative program is bogged down in, Golfer Eisenhower knows pretty well why his golf game is rough.

"I keep pulling with my left hand," he says. "I don't finish my swing." This leads to slicing all over the place.

Don't know whether we can help get Ike's game back to what it was around 1955 or not. A lot has changed since then. For one thing, he's addressing the ball differently. But we'll try.

In our experience, too much left pressure is a sure way to ruin a golf game, good or just middling. Hardest thing in the world to stop, too, once you've started. What results is always a much bigger figure on the scorecard than the player himself likes to put down no matter how much he tries to explain it away.

This can be cured, though. Thing to do is change position some. In addressing the ball, shift the emphasis more to the right hand. Resist the inclination to favor the left.

That way a man can finish his swing exactly the way he started it and that gives him a much better chance of driving straight down the fairway's middle. The result is

that the figures on the scorecard will be considerably reduced. Spectators will cheer.

Not even Ben Hogan, though, could change up his game in the middle of an 18-hole round and expect to keep out of the rough and the sand traps. And what is true of golf is even more true of Government.

Direct to Farmer Payments for Full Parity: Key to Efficiency

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, a second editorial urging a sound farm program at this moment of hesitancy of the administration, provides some very interesting ideas, and comes from the grassroots where they really know and daily face the problems created by the present farm program. One idea seemed particularly good to me, the proposal for direct payment to the farmer which would eliminate the "cuts" or profits taken all along the line by the various middlemen, out of what should be "farm aid" and not "middleman aid."

Under leave to extend my remarks, I insert in the RECORD this editorial from the May 9 Perham Enterprise-Bulletin, Perham, Minn.:

NEW AGRICULTURAL PROPOSALS BASICALLY UNSOUND, MORE OF THE SAME

There is a concerted effort on the part of the Republican Party to force some major changes in the Eisenhower farm program through Congress. Both the President and Secretary of Agriculture Ezra Taft Benson have now stated that the present flexible price-support program is a failure. Farm leaders have concurred.

So far neither the President nor Mr. Benson has suggested an alternative although there are indications that the drive is preparing the way for further drastic cuts in support levels, and the elimination of requirements which increase support prices when surpluses are whittled down.

If this is what the shouting is all about, we are deeply disappointed. The President says he is seeking a program to aid the small farmer, admitting that the present one aids "the big farmers most." We are of the opinion that the changes suggested are purely and simply more of the same. They will encourage farmers to increase, rather than decrease production. History has proven that lower prices cause farmers to produce more to keep up their gross.

It is our belief that the theory of Government purchase-storage is a fundamental error. It cannot possibly function without rigid controls of production and rigid controls fall victim to governmental redtape and the ingenuity of farmers in getting around them. As a floor under the average farmer they are a colossal flop. They are costly to Mr. United States Citizen first as a taxpayer and then as a consumer.

We maintain that a direct subsidy floor under the individual farmer is a more sensible, economical, and humanitarian than anything this or other administrations have written into law. The subsidy should be scaled down as the individual's production increases, and no subsidy should be paid over the $25,000 gross mark. It should also be protected by merit clauses, such as are now used in making direct subsidy payments on wool. A merit clause pays more money to farmers who do a good job on quality of production and careful marketing to secure the highest price on the open market. We propose that with the adoption of this plan, all Government purchase and storage-loan programs be scrapped; that farm produce prices be allowed to seek their supply-and-demand level in the market place.

We believe this type of floor would be advantageous to the young farmer just getting started; to the ambitious established farmer; to the older farmer who should not now be uprooted and transplanted to other endeavor for which he is not suited.

The Postal System

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Robert C. Ruark on the postal system. Mr. Ruark's analysis of the entire postal system is a trenchant one and in my opinion merits being published in the RECORD.

The whole postal system foulup seems more than just a touch silly, especially on an international basis. The fact that the cost of sending letters created a crisis at all is the kind of stuff our malicious friends love—especially at a time when we are pouring money and considerable bad will all over the world.

Postmaster General Arthur E. Summerfield pulled a weekend strike because Congress hadn't given him the money to operate on, and thereby he demonstrated more respect for our coin than do our foreign spenders who blow dough everywhere—a billion here, a half billion there.

The postal service hasn't had a real raise since 1932, and since then everything has bounced 300-fold. We own the only major mail service in the world, I guess, that doesn't fetch a profit. We also own a service that suspends its major activities over the weekend, Saturady delivery or not, contrary to a great many other mail services round the globe.

There is no real reason why a mail operation should not be a 24-hour, 7-day facility the same as a telephone or subway. It should also be bought and paid for on the same terms. We have been singing the fickle nickel blues a long time, because prices have risen on the subways, on telephone calls, on publications, on milkshakes, cars, hotdogs, clothes, houses, and, for all I know, marriage licenses.

Call this a contribution to inflation if you will, but mail still remains the best communication since the invention of the cleft stick and the native runner. It should be paid for in the coin of its worth.

The magazines, for example, that have raised their prices still make as heavy a tote for the dog-bitten postman as 20 times their number in first-class letters. They get second-class privileges.

The unstuck throwaway circulars come at you at third-class rates. The begging mail, the sucker mail, the mail-order stuff is shot through the circuit at reduced rates and gets the same postal consideration as an urgent full rate note from a lawyer saying your rich aunt has just kicked off and left all the loot to you.

Our Government will send us off to die in wars and make us pay for the privilege, but some reason hiking the price of a stamp is politically untouchable. Its worst end result would be less abuse of the semifranking privileges enjoyed by the second- and third-class users and a great many less Christmas cards and similar notices you don't need.

There is only one sure cure. Raise the price of postage to where it will pay its own way and rearrange the equity of what is first, second, and third class in terms of what you have to pay the postman and the sorter. This way you eliminate nonsense. Any other approach is strictly third-class idiocy with the flap unstuck.

Trinity Joint Development Will Aid San Luis Project

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. GUBSER. Mr. Speaker, in February of this year Interior Secretary Fred A. Seaton recommended that Congress accept a contract for joint development of the Trinity River division of California's Central Valley project. This contract had been negotiated between the Bureau of Reclamation and the Pacific Gas & Electric Co.

The Trinity power facilities, if built by the United States—

Seaton said—

would require substantial assistance from other project revenues in order to meet repayment requirements. Joint development * * * would convert Trinity falling water into a substantial net asset of the project.

It appears clear—

Seaton concluded—

that joint development would provide substantially more funds for potential irrigation and multipurpose development in the Central Valley project area.

That statement is of tremendous interest to the people of my district and to the San Joaquin Valley because of the need for the San Luis project. The maximum possible contribution to construction of San Luis will be made by the cooperation of Pacific Gas & Electric Co. with the Federal Government in joint development of Trinity.

It has been claimed that joint development would result in insufficient low-cost power for the San Luis pumps. The truth is exactly the opposite. It will not diminish the energy available from existing Central Valley project plants. Project pumps have first call, as they should in a water project, on the power of these plants. Existing plants can supply about 2½ billion kilowatt-hours annually; Central Valley project pumps at ultimate operation will require about 400 million kilowatt-hours annually, leaving nearly three times the energy required by San Luis pumps under full operation.

Regardless of whether P. G. & E. participates in the Trinity River project or the Federal Government builds it entirely, the company has offered advantageous arrangements which will facilitate construction of the San Luis project.

As you may know, power generated as a by-product on multipurpose projects designed for flood control, irrigation, and water supply is not always produced at the time nor in the quantity required to fit the needs of the power consumer, because water releases for these other purposes have priority over the generation of power. When this power is incorporated into P. G. & E.'s large, regional electric system, however, it gains value from the great diversity of demands of the many customers they serve and the many generating sources they have to serve them. The company is able to use water project power when it is available, and at other times the company can provide the project with exchange power from its many other generating plants to supply project pumps and other purposes. This integration makes project power more useful and enables it to be sold at maximum price, providing the greatest revenue for project water development.

One advantageous arrangement the company has offered for the San Luis project is to provide off-peak power to the San Luis pumps in even exchange for project power. When no project power is available for pumping the company will provide power at times when demands on its system are not at their peak. In exchange the company will take an equivalent amount of project power when it becomes available.

The Central Valley project produces large amounts of energy in the summer months when large water releases must be made for irrigation. Except in wet years, the CVP produces only small amounts of energy during the winter months when water is being conserved in project reservoirs. The months of low project energy production are the very months when San Luis pumping requirements are high because that is the time when waste water in the Sacramento-San Joaquin River Delta must be diverted and pumped to storage in the San Luis Reservoir.

It is readily apparent that P. G. & E.'s offer of a seasonal power exchange will be of tremendous benefit to the San Luis project.

The company also has offered to make its transmission facilities available for transmission of power from the Tracy switchyard of CVP to the San Luis pumps and has guaranteed that the cost to the Government will be less than the cost of Federal construction of transmission lines for the purpose. Not only will the San Luis transmission costs be reduced, but also the Federal Government will save a capital outlay of at least $7 million. An amendment to the existing wheeling contract which would accomplish this result has been submitted to the Government and is contained in part 2 of House Document 94, 85th Congress, 1st session.

A direct beneficial effect of Trinity joint development on San Luis will be the amount of additional net revenue available from P. G. & E.'s Trinity falling water payments for other California water projects. The Bureau of Reclamation estimates there would be $124 million more net revenue to CVP from joint development, with the construction of San Luis. That money could be used to help pay for San Luis or to reduce the cost of San Luis water. All-Federal construction can make no financial contribution to San Luis. Instead, under CVP power rates, an all-Federal Trinity must have financial help from other project revenues. Simply that means that Federal Trinity powerplants would reduce the financial aid available for irrigation in the central valley.

Trinity power developed by the company as an asset to the project will make San Luis water cheaper. Trinity power developed by the Bureau as a project liability will make San Luis water more expensive—either in water cost or taxation. People with concern for the future of the San Joaquin Valley must recognize the merit of Trinity joint development.

I include herewith an editorial from the Coalinga (Calif.) Record which lends weight to the above-mentioned views:

[From the Coalinga (Calif.) Record of April 18, 1957]

HELP FOR SAN LUIS PROJECT

Coalingans and others on the west side ordinarily would have little direct interest in a water project so far to the north as the Trinity River. Ordinarily there would be nothing in it for us except cost. As Federal taxpayers we of course help foot the bill whenever Uncle Sam spends the public's money.

The Trinity project is being built with Federal tax funds for one reason—to make more water available in the Central Valley. Public interest requires that the project be built as economically as possible and that the water itself cost as little as possible.

Electric power can be developed on the Trinity as a byproduct of the water project. If the power can be developed economically—i. e. at a profit to the Government—it will be an asset to the project. As an assets it will help reduce the cost of the project and reduce the cost farmers must pay for Trinity water. Or the profit can be used to help finance other water developments in California, like the San Luis project.

If Trinity power is not developed economically it will be a liability to the Central Valley project instead of an asset. That would mean that power would cause a project loss and that taxpayers and water users would have to bear the burden of subsidizing an uneconomic operation.

The P. G. & E. partnership plan is the sound way to develop Trinity power. It will make the power an asset worth $310 million in public benefits. It also will save the taxpayers $56 million in capital outlay. Even the Bureau of Reclamation, which never could be accused of selling out to a private utility company, shows that the P. G. & E. plan is the better way to develop the power.

If the Government built and operated the powerplants, the $310 million asset and $56 million saving would be thrown out the window. The Bureau itself admits that the Central Valley project would have to subsidize the Trinity project if the Government developed the power. That financial burden on the CVP would mean less CVP help for San Luis.

The McClatchy Bees and other Government-ownership advocates want the Government to develop the Trinity power. They want to advance political encroachment on the utility industry. They don't care how much it costs the public. They try to hoodwink the public into seeing evil in the economic and thoroughly beneficial partnership plan. They ignore the economic facts of water development and concentrate on their power scheme. They have the tail wagging the dog, with ulterior motive.

The west side needs the San Luis project. We need water in Coalinga—but we need it at the powest price possible. We can't afford to be confused by the Bee and its sacred cow power policy, or by the folly of a few politicians whom the Bee frightens into advocating that electric power be a liability instead of an asset to water development.

It's high time that the west side take an active interest in the Trinity River project. The partnership plan is plain, good commonsense. The only opposition to it is hogwash from those who so ardently want Government in business that they are willing to saddle water projects with uneconomic power.

Economic Illness of the Textile Industry

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter sent to President Eisenhower by the general president, William Pollock, of the Textile Workers Union of America, AFL–CIO, under date of May 8, 1957:

DEAR MR. PRESIDENT: On a number of occasions we have called your attention to the economic illness of the textile industry. We are impelled to do so once more because it is now clear beyond a doubt that the illness is fundamental; more than palliatives are needed to cure it.

Events of the last few months have exploded a whole series of fallacies which, to our regret, have helped to prevent a basic attack upon the persistent textile depression. For example:

It was said that the textile industry was merely undergoing a "normal shakeout", induced by productivity increases and produce changes. Yet after a 6 year period during which at least 445 large mills have been liquidated and 350,000 jobs lost, the decline continues apace. Today the strongest units are curtailing employment and reducing their normal workweek, many to 4 days or less.

It was argued that the industry's difficulties were mostly regional—that the South had solved the problems which afflicted New England. Yet the current curtailments are without geographical limits, and the rate of southern mill liquidations is accelerating. Since December there have been two each in North and South Carolina, one each in Georgia and Alabama.

It was maintained that foreign imports were mostly to blame for textile troubles. We have long urged a reasonable degree of tariff protection for textile products but have insisted that imports were only a partial and highly selective factor in the general decline. Our position has now been confirmed, for the present recession is concurrent with the much-heralded limitation of Japanese exports and the long-awaited application of the 5 percent trigger point for higher duties on woolen and worsted imports. Important as these steps were, it is

obvious that something besides foreign goods is ailing the textile industry.

Since the palliatives, the "easy" answers, have proved unavailing, the obligation upon us is to offer a more effective program. That we propose to do in this letter. It is only fair to say, however, that it will not be a simple one. You are reputed to have a deep distaste for long and involved reports, and we sympathize with that attitude, but we respectfully submit that the complex and chronic distress of a highly complicated industry requires more than a three-paragraph prescription.

Let us begin by explaining why government intervention is necessary. We concede that ideally, the problems of private industry should be met by private initiative. But when a major industry is beset by so many fundamental ills, adversely affecting hundreds of thousands of citizens; and when the owners of the industry have for so long a time been unwilling or unable to bring about a cure, the Government must exercise its responsibility to protect the general welfare.

Perhaps we should also explain why we believe the textile industry's illness is worth curing. Such an explanation seems to be necessary because some representatives of your administration have suggested that, where textiles are concerned, it is better to replace than to preserve. Much as we do favor diversification of industry, we are not prepared to admit that the American textile industry is expendable.

One reason is that textiles simply are not suited for large-scale international trade. The raw materials are available in almost every country, and every country, as a practical matter, seeks a market for its own farm products. For example, the American cotton growers have lately acquired a lively concern for the economic welfare of cotton consumers here at home.

Another reason is the importance of textiles to national defense. We do not deprecate the resources of modern science, but we do suggest that woolen and worsted goods, for one, and hard fibers, for another, have an essential part in preserving the effectiveness of our Armed Forces. Your own Director of Defense Mobilization, while refusing to recommend a curb on imports, did urge your administration to seek other means of preserving the hard-fiber industry, which is fast disappearing.

On the assumption, then, that the textile industry is not to be considered expendable, we offer these specific proposals:

1. A full investigation of the textile industry's problems. This could be launched by a national conference of all interests, called by you. Such a conference could perfect and enlarge upon the program outlined below.

2. Immediate, short-range action to check the downward plunge of the textile economy. Recommended steps include:

(a) Purchase of surplus textiles for distribution to needy nations abroad, observing the same precautions as are used in the similar distribution of agricultural surpluses.

(b) Distribution of clothing to the needy in our own country, just as surplus food is now distributed.

(c) Reestablishment of textile stockpiles for our armed forces.

(d) Allocation of government contracts to mills in distressed areas as an actual practice, rather than, as now, an inoperative theory.

3. Abolition of the two-price system for raw cotton. The present arrangement unfairly handicaps domestic textile producers both at home and abroad by permitting foreign competitors to buy American cotton at a far lower price. To correct this inequity we urge:

(a) Adoption of a producer payment plan for raw cotton, similar to that now governing woolgrowers. This would liberate the price of cotton from artificial control without penalizing the farmers. A number of raw cotton interests, worried by their shrinking market, now support this change.

(b) Prompt hearings on the Smith bill, hitherto blocked by your Department of Agriculture. We see no reason why there should not be the widest possible discussion of all possible methods of assisting the American textile industry to regain its traditional export markets.

4. A Federal research program to stimulate the growth and progress of the textile industry, similar to that which has functioned for the benefit of the raw cotton industry. Such a program would study present and potential markets and thus point the way to new uses for textile products. It should also establish the long-needed fabric "library" of woolen and worsted goods.

5. Adoption of a consistent and sensible tariff policy that would prevent the industry's problems from being further aggravated. This involves the continuation of present tariffs, plus these additional measures:

(a) Portection by the Director of Defense Mobilization of woolen and worsted goods and hard fiber products against foreign imports.

(b) Repeal of the duty on raw wool, including carpet wool. The support program for domestic woolgrowers gives them adequate protection; the tariff simply raises prices.

(c) Establishment of quotas on imports of woolen carpets, and adequate protection for the nonwoven wool felt industry. Both these textile divisions are under severe pressure from imports.

6. The institution of a 35-hour basic workweek in the textile industry without reduction in pay. Some similar movement throughout American industry will be inevitable as automation increases. The textile industry is an appropriate starting point for these reasons:

(a) The rapid and continuing shrinkage in employment and in the working hours of the employed has created an emergency requiring prompt relief.

(b) Productivity in the textile industry has been rising at the rate of more than 5 percent a year, nearly twice the average for manufacturing as a whole. You yourself have urged that productivity increases be used as a guide to wage increases.

(c) Average hourly earnings in the textile industry as a whole are now $1.50, compared to the national industrial average of $2.05. There is no system of measurement—human or mechanical, social or economic—that justifies such a disparity.

The above six proposals involve the textile industry alone. There are three more essential points in our program which have wider application, and which we feel sure must have been brought to your attention by others as well. They are:

1. Establishment of a Federal agency with broad powers to assist localities in devising and carrying out industrial redevelopment programs. This and the next point have to do with the problem of distressed areas, which you noted in your economic report but which has been neglected since.

2. Special assistance to workers who have been victimized by the curtailment, liquidation or migration of industry. This assistance should include extended unemployment insurance benefits, occupational retraining, preferential hiring rights in new jobs created by their old employer and earlier retirement eligibility under social security. We also suggest that the principles of the Transportation Act of 1940 might be broadened to cover all abandoned properties. Under this act, employees receive displacement allowances, moving expenses, and other benefits.

3. Revision of the Federal tax laws which now encourage industrial piracy, enrich financial manipulators and place a premium upon the liquidation rather than the modernization of plants. Among the matters most needing correction are misuse of capital gains provisions and of carryover provisions, both of which encourage profiteers at the expense of legitimate enterprise.

Even though this has been a lengthy exposition, we have been able to cover only the bare outline of the textile industry's distress, and only outline the remedies that seem most promising to us. We stand ready to provide more details upon request.

We assure you, the peril of the textile industry is genuine. After 6 years of uninterrupted illness its strength has been sapped; the decline may become steeper as time goes on.

We believe the preservation of this great industry is essential to the Nation's safety and to the welfare of many thousands of its citizens. Government action—your action—is needed, and needed now.

Young Charlie Wilson Like Sturdy Anvil

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. BROYHILL. Mr. Speaker, I am pleased to herewith insert an article by John P. Cowan which appeared in the May 9 issue of the Fairfax County Sun Echo:

YOUNG CHARLIE WILSON LIKE STURDY ANVIL
(By John P. Cowan)

If anybody thinks that this column is laid out on a sort of budget plan he is very much mistaken. Being my wastebasket's biggest contributor, it is easy to toss aside a completed script and give immediate attention to a very interesting letter just received from the office of Charlie Wilson.

You will say that the world is full of Charlie Wilsons, which is true, but there is only one outspoken Secretary of the Department of Defense, who holds forth in the Pentagon.

When we think of him we revert to ideas of big business, big armaments and big things generally, but in this instance he speaks of a very modest personage—the American citizen soldier—whom we picture as a shirt sleeved patriot who leaves his plow in the furrow to answer the call to arms, or marches off with the militia to defend his home, or those chaps today who are enrolled in the Reserves. Of all of them, Secretary Wilson speaks eloquently and with the fervency we should expect.

Young Charlie Wilson won my admiration when he rushed over to Pittsburgh among the steel mills and enrolled as a student at Carnegie Tech to round out his education under Dr. Hamerschlag and Dean Conneily. Years before Charlie's matriculation, I had listened to "Uncle Andy" Carnegie expound on his plans to build a trade school for craftsmen out there in Schenley Park, and have watched it grow to a great technical institute whose alumni include many men who stand at the head of their respective professions.

Charlie Wilson is one of those who justified Mr. Carnegie's dreams back there when the century was young. Charlie didn't just juggle a slide rule and wallow in calculus. Ignoring thin, skinny ideas, he took a broad view of the world and progressed with the times. He understood the modern trend

because he familiarized himself with the prolog of the past.

All this bubbles up in Secretary Wilson's address April 30 at the Jamestown Festival Day at Fort Monroe where he was presented with a scroll inscribed with instructions for the first colonists in 1607. Characterizing the language of the instructions as a symbol of the reminder of the qualities of our forefathers—qualities that have made our country great, he quoted from the scroll:

"Vitality and energy to overcome hardships and privations;

"Courage, ability, and industry to build for a better future;

"And, above all, initiative to explore the unknown."

To this Secretary Wilson added: "These were the qualities of the settlers who came to Old Point Comfort 350 years ago. They were also those of the officers and men of the military units whose role in our history from colonial days to the present has been depicted in a pageant here. While we take the citizen soldier for granted—and properly so—he constitutes one of our major national achievements of which we can all be proud. • • • If we devote the same energy, ability, and initiative to the problems that we face today that our forefathers did in settling this vast land of ours, we will be equally successful in the present task of guarding the legacy that they have left to us."

All the world remembers the version of famous Wilsonian epigram, "What is good for General Motors is good for the United States."

It was his pertinent answer to entangling and irrelevant questions in a crossfire before a heavy-browed committee of the United States Senate charged with recommending his confirmation to be Secretary of Defense. His appointment was confirmed in due time, despite the innuendoes of dark political intent fired by his opponents.

That was 4 exciting years ago. Like a sturdy anvil, undented by persistent blows that resounds with ringing musical tones to every stroke of the hammer, Charlie Wilson, the dominating old Tech boy, carries on his job unmoved and undaunted.

Disrespect for Agreements

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial which appeared in the April 15 issue of the Chula Vista (Calif.) Star News. In view of my introduction of H. R. 6575, which proposes the repeal of the upper Colorado River project, I desire to give an opportunity to all the Members of this body to read this editorial:

DISRESPECT FOR AGREEMENTS

The recent bid opening for a major dam on the upper Colorado is an example showing that many within our Government structure do not have enough knowledge of the records already in the files. Contracts previously approved, making certain guaranties to the lower Basin States plus the International agreement, are being completely forgotten and disregarded.

But, thanks to the California's Colorado River Board and even the State of Arizona, in separate actions, filed written protests to the awarding of the contract, until recognition is given to previous commitments. Because of this protest, the bids have been opened, but as yet no contract has been awarded.

Again thanks for the leadership of the Colorado River Board headed by Chairman Fred Simpson of San Diego, California rights to Colorado River water is being ably guarded. Also it is a worthy observation that for once Arizona and California stand shoulder to shoulder on a Colorado River problem.

International Conference on Irrigation and Drainage Problems

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mr. ENGLE. Mr. Speaker, a few days ago I had the privilege of attending the third congress of the International Commission on Irrigation and Drainage in San Francisco. I attended this international meeting as an official United States delegate representing, along with my colleague Dr. A. L. MILLER, the United States Congress. This conference was attended by representatives of 41 nations including, I believe, most of the major nations of the world. The principal aim of this conference was the free exchange of knowledge and experience and there was intensive interest indicated in the many problems discussed. The conference in San Francisco was followed by tours covering the great Central Valley project and additional irrigation works in southern California.

In addition to the increased technical knowledge which the delegates acquired, I believe that this conference went a long way in promoting friendship and better understanding among the nations. The keynote address was given by the Commissioner of Reclamation, W. A. Dexheimer, and Mr. Dexheimer was later elected president of the International Commission on Irrigation and Drainage to serve for the next 3 years. I believe my colleagues will be interested in Commissioner's Dexheimer's keynote address which follows:

KEYNOTE ADDRESS BY COMMISSIONER OF RECLAMATION W. A. DEXHEIMER BEFORE THE THIRD CONGRESS OF THE INTERNATIONAL COMMISSION ON IRRIGATION AND DRAINAGE, SAN FRANCISCO, CALIF., MAY 1, 1957

KNOWLEDGE, THE KEY TO THE FUTURE

On behalf of the people of the United States, I welcome all our visitors. We are glad you have chosen this country and this city of San Francisco for the International Irrigation and Drainage Congress. It was here in San Franicsco that the United Nations organization was born. The objectives of the United Nations are to obtain the peaceful advancement of mankind. One of the first fundamentals for peaceful advancement is that men be adequately fed and clothed—for how can men advance if they must spend all their energy for a bare subsistence?

The next step after providing the essential food and clothing is to provide time and opportunity for knowledge, for improved health and diet and a better standard of living.

The International Commission on Irrigation and Drainage is an organization seeking to advance and improve the production of food and fibers of the world and to do it in an economical manner. While we are here to exchange ideas and knowledge largely in a technical field, let us not lose sight of the greater values to come from our technical accomplishments. Let us be ever mindful that people the world over want peace; they need adequate food and clothing; they want an opportunity to achieve better standards.

By economically providing water for irrigation and removing surplus waters by drainage, we make land more productive. We give the people more food and fibers—we take a long step to relieve want, and we provide the basis for the peaceful advancement of men. We should pause occasionally to look at the broad goals we strive to attain. Beyond our technical achievements are the great benefits to the people of the world.

In irrigation and drainage engineering—as in other professions based on technical knowledge, progress comes slowly.

We have a tendency to be conscious of our own knowledge and experience. This tendency, of course, is not restricted to engineering. It is a part of human nature. While we are willing to be venturesome and investigate new things, we instinctively distrust the unknown. We fall back upon the existing techniques, because they are like old friends—much more comfortable to be around and to rely on. Quite often, seemingly new techniques or ideas are found, then later we learn that they are new only to the individual—they have been used previously.

Engineering has a common language and common aims. It transcends political boundaries and the diverse spoken languages of the world. Engineering is a means of communication and exchange of knowledge and ideas which we can all use for the enrichment of mankind. The exchange of engineering knowledge and experience can help achieve our goals with substantial savings in time and cost.

The International Commission on Irrigation and Drainage is a fine vehicle for exchange of knowledge. This exchange is the justification for the existence of the organization and the promise of a better future for millions of people in all parts of the world.

In many of the most populous parts of the world the existing food shortage is serious. The need is so great, it is said half the people of the world go to bed hungry every night. Add to the existing need the more than 50,000 daily gain in population, and you will understand the necessity for utilizing our land and water efficiently.

At previous meetings of the Commission, emphasis was largely on the role of irrigation in developing new lands and methods to supply the ever-mounting needs for food. The study topics for the technical sessions of the Congress this year emphasize another approach in our never-ending struggle against the deficiency in foodstuffs.

Irrigation is generally considered the application of water on land which does not receive adequate amounts of precipitation during the plant-growing season. Drainage is the removal of water from areas which, for one reason or another, receive too much water, or are so located that a means of water disposal does not readily exist.

The program of the Congress this week emphasizes that irrigation and drainage are not entirely separate, but must be considered together in the same areas. The interrelation between irrigation and drainage needs further discussion. Other topics for the technical session have a close relationship to these.

Quite often we find that control, channelization, and conservation of floodwaters have an equally important role in the overall planning for irrigation and drainage and

the produtcion of food and fiber. Flood control is needed to diminish loss of life and property. It can often be accomplished by storage reservoirs combining flood control, irrigation and other benefits.

The agenda also will consider the tasks of retaining or increasing the productivity of existing farmland and of bringing new land into production. Both can be accomplished by more efficient management of the land and water available.

The problem of control, conservation, and use of water is one of the most pressing problems throughout the world today. Most of us here for this conference have dedicated our lives to this field of work.

There are many means of improving the management of the land and of the water. While water is one of the most common commodities, it is also the most essential and valuable. We go to great length to build storage and diversion works and yet we may lose more than half of the water en route to the farmland, because of inefficient canals and distribution systems. We need to find economical methods of reducing losses from the canals.

In the United States, the Bureau of Reclamation has been seeking new methods for lining canals at low cost as a water-conservation measure. In many areas we have put the water into pipes to avoid losses. However, cost is the one thing that controls most of the engineers' decisions. The initial cost as well as the operation and maintenance costs must be considered. Quite often we must accept large water losses as the cost of preventing the loss would be too great. In some areas, canal seepage provides a very effective means of getting the water into the underground for storage where it can be pumped out as needed later. This, however, sometimes results in too much seepage, and drainage problems are created. The exchange of data on different types of linings and the knowledge and experience gained in practice will be very valuable in planning and building irrigational works.

There needs to be a great deal of technical information obtained on the water requirements for certain types of soils and plant life—particularly, the actual application of the water to the soil to avoid waste of water needs to be examined and the results made available to the farmer who irrigates.

We have found, in many cases, a reduction of as much as 50 percent in what had previously been considered a normal water requirement would produce adequate and even better than usual crops. At the same time, reduction in the amount of water would minimize or avoid a drainage problem.

We find that, where a severe drought has necessarily curtailed water deliveries for irrigation, the farmers have been able to maintain productivity. In some crops, they have increased the yield with substantially less water than they previously thought was required. A great deal of education for the irrigator will be needed before he fully accepts this method and before he will be willing to use less water for his crops.

Man is dependent upon a comparatively thin sheet of soil which covers most of the earth's surface. His food production is dependent upon the soil, the climate, rainfall, temperature, and wind. We are making progress in conserving our soil by methods adaptable to the terrain and vegetation.

We have learned methods to protect land against wind and water erosion. The climate is, so far, uncontrollable by man. It is often unpredictable. However, we are working toward better and longer-range weather and precipitation predictions. If we can accurately forecast weather several months in advance, the land and crop planting can be adjusted to fit.

We have made great strides in domesticating plant and animal life for our use, although we are far from certain that insects may not destroy our production.

We have learned a great deal about soil and water, and about drainage and irrigation. We can maintain soil fertility artificially. Artificially induced precipitation is not yet assured nor economically feasible.

These accomplishments have been the result of many trials and failures throughout our history. There are very early evidences of the control and use of water in the "arid belt" which cradled our earliest civilization, and, through the thousands of years, we see man's attempts to store water and irrigate his crops. Some of these were very extensive and must have been, to the people of the time, major undertakings. They only confirm that water has been and will continue to be one of the major needs and problems of the world.

Usually the major works and progress in the subjugation of nature have occurred in the areas of greatest need. Thus we find evidence of well designed water supply systems in the Indus Valley of India. Egypt's early dams were built 5,000 years ago. Jacob's well was excavated through rock to a depth of 105 feet, a herculean task in those ancient days. About 950 B. C. Solomon directed the construction of sizable aqueducts to provide water for man, beast and the fields. Babylonia's King Hammurabi supervised the digging of an extensive network of irrigation canals.

I have seen irrigation works in China still in operation after 2,000 years.

These early beginnings add to the accumulation of the knowledge which the world now possesses in the technique and practice of water and land conservation and use. Great strides have also been made in the last half century.

The structures and distribution works you will see in the great Central Valley of California in the course of your study tours are good examples of present-day practices. Their magnitude and intricacy of planning and construction were a great challenge. Projects of this kind are not only necessary—they are practical and feasible. There are other great works in this country and many other countries, which require the application of the knowledge gathered throughout the centuries.

We are proud of the progress this country has made in land and water development. We are glad to share the technical knowledge with the rest of the world. We have borrowed from other countries to augment our knowledge, and we are grateful for the help they have given.

The Bureau of Reclamation has its engineering center and research laboratory at Denver, Colo. Engineers and students have traveled from the four corners of the world to visit and work with us for the further exchange of techniques and knowledge. Reclamation engineers and soil scientists have also traveled throughout the world in further exchange of information.

The free exchange of knowledge and experience is a principal aim of this conference. Let us also freely exchange friendship and understanding because these things are most essential to peace and good will on earth.

Taxpayers Gypped Again

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in my weekly report to my constituents on May 3 I pointed out the fight which Democratic Members of Congress were making to save the American taxpayers a stupendous amount of money by resisting a giveaway to the Idaho Power Co.

The Federal Power Commission recently authorized the Idaho Power Co. to build two private dams on the Snake River. Following this, the Office of Defense Mobilization issued tax writeoff certificates valued at $30.5 million to the power company. This means that Idaho Power has been given a tax-free loan which, over the 50-year license period, will be worth hundreds of millions of dollars. If this situation is allowed to stand unchanged, the Government has given the Idaho Power Co. a present from the people which is a better bargain for this private company that the Louisiana Purchase was for the people of the United States.

Those of us interested in real economy would like to stop this sort of thing and also the tax depletion presents given to the oil companies. Aramco, a combination of five oil companies operating in the Middle East, paid not 1 penny of income tax from $190 million in profit last year. This bonanza will end someday and then we will have some real economy.

I include here an editorial from the Trenton Evening Times and an article from the same newspaper for the information of my colleagues:

[From the Trenton Evening Times of May 14, 1957]

SHOCKING BETRAYAL

These will be 8 fat years for corporate interests if the policies of the first 4½ are continued. And they will be correspondingly disastrous years for the public, which is witnessing an almost unprecedented exploitation of natural resources by corporations that happen to enjoy the administration's favor.

The story of controversial Hells Canyon is illustrative of a widespread condition of the sacrifice of these priceless resources and of the part which the United States Government is playing as accessory in a major scandal. It is told in an adjoining column by Thomas L. Stokes. It is the story of a grab which is being carried out in defiance of public opinion, expressed so emphatically in Republican reverses at the polls in the States affected. And it is a story of the gross disregard of public interest and of ethics, if not of honesty.

This power development has been turned over to a company of professed financial responsibility. Actually, it is being financed by Government funds on terms tantamount to an interest-free loan. In principle, is this arrangement substantially different from that which Mr. Beck had with his teamsters' money?

[From the Trenton Evening Times of May 14, 1957]

TAXPAYERS GYPPED AGAIN

(By Thomas L. Stokes)

It is getting a little hard to watch the rape of our natural resources—and at the expense of us taxpayers.

Which is by way of revealing another hair-curling chapter in the famous Hells Canyon grab which, you may recall, played so much a part in a Democratic Party upsurge in the Pacific Northwest last November which still apparently has had no effect on the Eisenhower administration.

You are familiar with the first chapter—how the Eisenhower administration got the

valuable power site at Hells Canyon on the Snake River along the Idaho-Oregon border handed over to the Idaho Power Co. of Augusta, Maine. Fifty years ago this valuable site was set aside by President Theodore Roosevelt, a far-seeing conservationist, so that eventually it might be developed by the Government for all the people and to keep it out of the hands of private exploiters which he feared might happen. It has.

COMPANY GOT SUBSIDY

The second chapter has to do with approval by Gordon Gray, defense mobilizer, of a fast tax writeoff for the Idaho Power Co. under an emergency law originally enacted to encourage our industry to build war plants and expand capacity for World War II. How this law has been stretched to favor all sorts of business with no real reason in national defense, including utilities, has been explained here before. But this subsidy to a company which represented itself as financially responsible and able to get financing when it got its license from the Federal Power Commission is rather startling, except it is part of the pattern of favoritism to big business to which most of us at Washington have had to become accustomed.

Under terms of the rapid amortization granted to Idaho Power it will be permitted to write off in 5 years—at 20 percent a year—65 percent of the cost of the projected Brownlee Dam and 60 percent of the cost of the Oxbow Dam, 2 of the 3 low dams it has engaged to build, instead of the one high Federal dam which clearly was favored by a majority of people in the area. The two dams are to cost $103 million.

The effect of the "accelerated amortization" in this case will be to reduce very materially the income-tax liability of the Idaho Power Co. during the 5-year writeoff period. Its tax savings, which will run into many millions, represent an interest-free loan by the Government. The loss of revenue must be made up by the rest of us during the 5 years the company has the use of its tax saving for investment or whatever. While it is true that, at the end of the 5 years, the corporation's taxable income would be greater in the exact amount, there is a good chance that the corporation tax rate will be reduced by then. Anyhow, the company has the benefit of the tax-free loan.

How this subsidy affects the rest of us as taxpayers and consumers is explained in an analysis of how accelerated amortization works for the building of new plants to be found in the book Monopoly in America, written by two men who have served as advisers of Government agencies and congressional committees, Dr. Walter Adams, associate professor of economics at Michigan State University, and Dr. Horace M. Gray, professor of economics at the University of Illinois. Of it they say:

"The result is a two-directional subsidy. Nonprivileged taxpayers are required to make good the deficiency in the Federal revenue arising from such tax immunity. From this point of view, the subsidy takes the form of an interest-free loan from the Treasury in the amount of the tax reductions at compound interest over the normal life of the new plant. The excess depreciation charges over the 5-year period constitute a disguised capital levy against consumers to provide part of the capital for the new plant. Thus both taxpayers and consumers are penalized for the benefit of the private monopoly."

RAPPED BY MORSE

Members of Congress from the Pacific Northwest who are complaining bitterly about what Senator WAYNE MORSE (Oregon Democrat) called "another shocking betrayal of the public interest" suggest that the company was having difficulty getting its financing and was bailed out by the Government with this subsidy.

The accelerated amortization device, which was resorted to in World War II and in the Korean war to induce reluctant industry to expand plant capacity, has been constantly criticized as special privilege. It was called "legalized profiteering" by the Brewster Senate committee of the Republican 80th Congress, 1947–49, and "the biggest bonanza that ever came down the Government pike" by the House Government Operations Committee.

Just recently, an end to it was called for by Senator HARRY BYRD (Virginia Democrat), chairman of the Senate Finance Committee, also by Secretary of the Treasury George Humphrey, who termed it "an artificial stimulus of a dangerous type" that favored one group over another. He got it suspended for a time in certain areas of industry. But it is back again in full flower, as we see.

The Union's Side of the Kohler Story

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. DINGELL. Mr. Speaker, recently an article appeared in the CONGRESSIONAL RECORD by the Reverend Edward A. Keller, C. S. C., professor of economics at the University of Notre Dame. The subject of the article was the 3-year-old strike of local 833, UAW–CIO, against the Kohler Co. at Kohler, Wis. Since the article of Reverend Keller has appeared in the CONGRESSIONAL RECORD to state the company's side of the matter, it would appear to me, and to others who feel that both sides should be heard, that the union's side of the story should be heard in the CONGRESSIONAL RECORD. For that reason, I insert into the RECORD at this time a letter by Mr. Emil Mazey, secretary-treasurer of the UAW–CIO, stating clearly the union's side of the story. I hope all Members who read the article by Father Keller will read the answer by Mr. Mazey:

APRIL 24, 1957.

Rev. EDWARD A. KELLER, C. S. C.,
Professor of Economics,
University of Notre Dame,
South Bend, Ind.

DEAR REVEREND KELLER: I have before me a publication entitled "Human Events" dated February 23, 1957, in which an article entitled "Can Reuther's Boycott Bring Kohler to Its Knees?" appears over your name.

I am shocked at the misrepresentations, falsehoods, and complete distortions of the truth that appear in your evaluation of the Kohler strike.

Your thesis on the Kohler strike is biased against the union because you have drawn conclusions by getting only one side of the story. In reading your article, it is obvious that you have obtained all of your information from the Kohler Co. and from comments on the Kohler strike from the big-business antilabor press.

I have carefully checked with the leadership of Kohler local 833 and with members of my staff assisting the local in conducting the boycott program, and find that you did not consult, interview, or contact any representative of the union. We can, therefore, only conclude that you have either performed a sloppy and unscientific job in evaluating the Kohler strike or that you are in fact wittingly or unwittingly a tool of the Kohler Co. because hundreds of thousands of copies of your article in Human Events is being distributed all over the country by the company.

UNION SEEKS ECONOMIC JUSTICE

The objective of our union in conducting the boycott against the Kohler Co. is not as you have improperly concluded from misquotes and misstatements in the antilabor press, "to wreck the Kohler Co." The purpose of our boycott and the purpose of our strike is to create sufficient economic pressure on the Kohler Co. that will enable the Kohler workers to win economic justice.

CONTRACT DEMANDS NOT UNREASONABLE

In your article you state that the union's demands on the Kohler Co. are unreasonable. It is hard for me to understand how you can reach such a conclusion, if you carefully evaluated the facts. Our union is not seeking to pioneer at Kohler; we are merely trying to catch up with the economic and contractual conditions enjoyed by workers employed in the principal competitive plants of the Kohler Co., namely, the American Standard and Sanitary Co., the Crane Co., and the Briggs Manufacturing Co.

During the course of our negotiations we offered to work out the economic and collective-bargaining agreement within the framework of these three contracts. We offered to accept an exact copy of the contracts of any 1 of the 3 corporations, and we further agreed that the matters in dispute be arbitrated within the framework of the contracts of the Kohler Co.'s 3 principal competitors.

If we were seeking economic and contractual conditions that would place the Kohler Co. at a competitive disadvantage and would make it unprofitable for them to operate their firm, you might state our demands as unreasonable. However, it cannot be charged that our demands are unreasonable when we are not seeking more than the workers employed in competitive plants are already enjoying.

COMPANY BROUGHT ON STRIKE

The UAW did not seek a strike with the Kohler Co., but it has become quite obvious that the Kohler Co. was preparing for a strike because it notified the union in December of 1953 of its intention to terminate the contract, fully 3 months before the expiration date of the agreement and before the union had served notice on the company of its desire to modify the collective-bargaining agreement.

When the contract expired on February 28, 1954, the union unsuccessfully sought an extension of the agreement in order to give the parties more time to try to reach a settlement of the issues. The company refused our request for an extension of the contract, but nevertheless, the Kohler workers worked for a period of 5 weeks, from March 1 through April 5, without a collective-bargaining contract, in the hopes that the extended period of time would enable us to settle our differences.

The strike was brought on by the company's refusal to bargain in good faith. The union had 1 of 2 choices to make; either to unconditionally surrender to the ultimatum of the company which would have resulted in an inferior agreement, or to exercise their rights as free American citizens and refuse to allow the Kohler Co. to exploit their labor under substandard conditions.

I don't intend to dignify your misrepresentations by answering all of them point by point. I would like to suggest, however, that if you are interested in making an objective study of the Kohler strike, that you seek an audience with the representatives of the UAW so that a full explanation

of all of the issues and facts in the Kohler dispute can be thoroughly and properly aired.

Sincerely yours,

EMIL MAZEY,
Secretary-Treasurer.

"Dulles' Concept of the Function of the Political Reporter and Analyst Is Close to That of All Totalitarian States," Says Dorothy Thompson

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here an article by the political commentor Dorothy Thompson on a matter of considerable importance to our country. The article appeared in the conservative Washington Evening Star:

ON THE RECORD

(By Dorothy Thompson)

The exchange of letters between Arthur Hays Sulzberger, publisher of the New York Times, and Secretary of State John Foster Dulles is a dismaying relevation.

Superficially, the question at issue was whether American press correspondents should be permitted to visit and report on Communist China. The Secretary had suggested in a press conference that a limited number might be permitted to go, and their reports could be pooled for the news-gathering community. Sulzberger rejected this while admitting that "it would be necessary to guard the Department against frivolous journalistic adventures by people more interested in visiting China than in reporting what is going on there."

Dulles countered that "in our Far Eastern policies the United States would be gravely imperiled if there were a general influx of Americans into Communist China at this time," and listed reasons such as nonrecognition of the regime "so that we cannot issue a 'passport' to it; the existence of a quasi-state of war and the continued application of the Trading-With-the-Enemy Act; the illegal jailing of Americans already in China; the effect on the free countries of Asia, et cetera. * * *"

DULLES' ARGUMENT

In Dulles' whole argument the assumption prevails that the function of the writer and reporter is to support the foreign policy of the United States. He fears that the journalists might not all be "responsible"; asserts that foreign policy involves the "acceptance of certain restraints by the American people"; makes the extraordinary judgment that "constitutional freedom of the press relates to publication, not the gathering of news"; and says flatly that "foreign policy cannot succeed unless it channels the activities of our people, and in this respect newspapermen have also their * * * patriotic duty."

These arguments go far beyond the issue of whether or not the ban should be lifted on publications and correspondents wishing to report on Red China. They assert that the State Department must channel their activities, even to barring them from areas of vital public interest. If accepted, this doctrine would eventually turn every writer and reporter into a Government agent, which is what Dulles apparently means by "responsible men."

FUNCTION OF REPORTER

Far more strongly than Sulzberger says, it must be stated that Dulles is totally blind to the function of the reporter. He does not exist to serve the Government but to inform the American people, and to do so with the utmost objectivity of which he is capable. The line he must hew to is the line of truth, and no other. If he is frivolous and irresponsible, regarding the truth, he will be corrected by others. If his revelations do not support a Government policy, they may lead to a change in it. His value is that he is not the hired man of any government but a reporter and testifier of truth. He is responsible exactly to the extent that he seeks to fulfill this function. And its fulfillment is not only his professional duty. It is his patriotic duty.

The suggestion that freedom of reporting can exclude access to facts is extremely dangerous doctrine. The gleaning of facts is essential to knowledge, without which the right to publish is empty, and its exercise irresponsible.

Dulles' concept of the function of the political reporter and analyst is close to that of all totalitarian states, and logically carried out in practice would lead to identical results.

The Secretary's other arguments are smoke screens. But they must be taken up in the next column.

Address, Impact of the Jet Age Upon the Hotel Industry, Delivered by Mr. Peter Grimm at Cornell University

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. DOLLINGER. Mr. Speaker, one of the finest hotel training schools in the country is at Ithaca, N. Y.—the School of Hotel Administration, Cornell University.

This fact has long been recognized by Pan American World Airways and its 100 percent owned subsidiary, Intercontinental Hotels Corp. All of Pan American's and Intercontinental's hotel interests are outside the continental limits of the United States, which makes trained personnel a constantly recurring problem.

However, IHC is handling this problem most expeditiously, and in Cornell's School of Hotel Administration now are many young men and women being trained at IHC's expense, for a future in the hotel business.

On May 4, Mr. Peter Grimm, vice president, operations of IHC, delivered a talk at Cornell. Appropriately enough, because of Intercontinental's affiliation with Pan American Airways, Mr. Grimm's talk was entitled "Impact of the Jet Age Upon the Hotel Industry."

Under unanimous consent, Mr. Speaker, I insert in the RECORD Mr. Grimm's most interesting remarks:

The fact that Byron Calhoun (president of Intercontinental Hotels), my colleague, could not be with us this evening makes me doubly regretful because it was an incident that happened to him that illustrates the important topic I am going to discuss with you. A few weeks ago he had an interesting experience. Some of you, in fact, may have shared it with him because it happened at the opening of a new hotel which was well attended by members of the hotel industry. But whether you were there or not, whether you are a veteran in the hotel business or a student at Cornell on the threshold of your professional career, I believe this small event holds great meaning for you.

It was simple in itself. Mr. Calhoun and his friends were on their way up from the ground floor to the ballroom three flights above. They traveled up on the fine series of escalators that link the floors, each of the escalators packed tight with guests. At the top landing, the foyer of the ballroom was crowded with earlier arrivals, so much so that they had difficulty getting off the escalator and finding a place to stand. And right behind them were streams of later arrivals, all being delivered in an endless chain to the ballroom floor that scarcely had any room left.

As Byron Calhoun stood watching that moving stream of people being carried ceaselessly into the vanishing space that was supposed to hold them, it struck him that here was a symbol of our world in general and of our industry in particular. With him, I am convinced that changes in travel are carrying the hotel industry today into a new era. It is an era of excitement and opportunity, an era whose dimensions are so vast that they are almost impossible for us to grasp. It is an era beginning as the hotel opening I've just described, with an increasing stream of travelers arriving steadily to occupy rapidly diminishing space. And its tremendous problems and promise lie just ahead.

Since this new era is so important to our professional and personal lives, indeed, to the whole course of the world in future years, it deserves some close examination.

It is typical of this new era in hotelkeeping that it is being created by new advances in travel. The past eras in the hotel business have all been marked and made by new methods of getting from one place to another. Two centuries ago, when the stagecoach began to rumble along the roads of Europe and the New World, inns sprang up at post stops to serve the adventurous traveler. Before that time, inns had been found mostly in large cities. They were a social convenience that stagecoach travel soon made a social necessity. And the increasing numbers of travelers demanded standards of comfort and cleanliness that raised the status of inns from makeshift overnight accommodations to places of elegance equal to, or better than, those to be found at home.

In similar fashion, the coming of the steamship that could carry larger numbers of people at lower prices from one country to another had great influence on the location and nature of hotels in the 19th century. At that time, too, the age of the railroads made its effect upon the hotel business, particularly in the United States, hotels grew up wherever the railroads went. In fact, the railroad companies themselves found it necessary to put hotels at key stops or at places with scenic attraction. And, as all who have ever seen that delightful movie, The Harvey Girls, can testify, their contributions to growing communities added up to a lot more than just plain board and room.

During our own lifetimes, of course, we have the radical changes created in the hotel business by the automobile. Whole new concepts of hotel structure, service and location have been brought about by millions of motorists free to move on their own and visit the places they wish to see. And where both the railroad and the automobile particularly are concerned, a most intering axiom of

the hotel business has been revealed. We have found that travel can be more than the cause of hotels; travel can just as significantly be the effect of hotels. If a good hotel is built, travelers will find their way to it. This axiom is of prime importance to the new hotel era that we face with the advent of passenger jet transports.

This new jet era in the hotel business, of course, is the product of the air age. It is, literally, only a number of months away. Most of us do not realize what impact the jets will have upon us. We have not begun to comprehend the sudden and far-reaching changes that will be effected by these planes upon the world's society, economy, way of life, and upon the hotel industry.

There are good reasons for our lack of understanding. In the first place, the air age evolved quickly during World War II when business as usual was forgotten by all industries. After the war, hotel keeping was complicated by shortages and emergencies which meant staying on top of the immediate problems and consequently with little time or perspective to look at the long-range view. In the second place, the airplane is deceptively inconspicuous. Its speed, relatively small size, and its terminals which lie on the outskirts of metropolitan centers all combine to keep it out of public sight and, less understandably, out of the hotelkeeper's mind. The manager of a New York hotel is impressed by the guest potential represented by the arrival of the S. S. *Constitution* at her dock. Yet, a single jet aircraft has the annual passenger-carrying equivalent of the *Constitution*. The fleet of jet aircraft now on order by Intercontinental's parent company, Pan American, alone are equal to 44 *Constitutions*—and all of these will be in international service within 3 years' time.

I was struck recently by how little these implications are realized within our hotel industry. The manager of a leading hotel in Paris was complaining to me because the *Queen Mary's* arrival in Cherbourg had been delayed and, since he had to hold the reservations, his occupancy rate was low for the night.

"Why do you count so much on the ships?" I asked him. "You're getting more than 60 percent of your transatlantic business by air."

"It seems hard to believe," he answered, "the air travelers don't come in such big bunches."

In New York City most of the larger hotels have representatives meet the big transatlantic liners, but pay little attention to the 2,000 travelers who arrive from abroad every day by air.

Granted that the arrivals by air may appear to be a trickle, the fact is that it is a steady one today and today's trickle will be a continuous torrent by tomorrow. Moreover, the airborne guest represents double the occupancy potential compared to the seaborne traveler. Of 2 people going to Europe for a month's vacation, for example, the 1 who arrives by air needs a bed for 28 nights, while the 1 who comes by sea needs a bed ashore for only 14 nights.

Already the effect of the air-age pressure for hotel rooms can be seen in the hard-pressed hotel business abroad. Normal ports of entry to Europe, such as London, Paris, and Rome, for example, have had their hotel facilities saturated to the point where airlines have had to try to persuade travelers to choose other cities in which to land. This situation is aggravated by the fact that many European cities have less rooms available than was the case before the war. First-class accommodations in some areas of Latin America, the Middle East, and Far East are even fewer and farther between.

Meanwhile, American- and foreign-flag airlines—with a present investment of a billion dollars in modern piston-engine transports—have placed orders for more than a billion and a quarter dollars for jet airliners already entering the production line.

These jet fleets are required to cope with an international travel market increasing in leaps and bounds.

Obviously there is a lag between the international hotel business and the travel facilities that are serving it. And the escalator—that ever-moving ribbon of aircraft—is continuously delivering hotel guests, with space getting scarcer every day. Moreover experience shows the space that does remain is sometimes worse than no space at all. For today's traveler is not interested in magnificence where his lodgings are concerned. He wants comfort, convenience, and cleanliness. He wants plenty of hot water and good laundry service. He is not interested in enormous rooms and the sort of place described by Mark Twain when he wrote: "It used to be a good hotel, but that proves nothing—I used to be a good boy."

And if this is the situation today, what of tomorrow? Then the escalator will begin to move at twice its present speed. For that is exactly what is going to happen with the arrival of the jets. A jet aircraft will cut today's short travel time in half. It will carry twice as many passengers. When aircraft now on order go into service, present international passenger travel will more than double.

The jet age will also be felt here at home. A jet aircraft, which can make two round-trips across the Atlantic daily, will bring as many people to this country as it carries away. Jets will be using more cities in the Midwest, the South, and the Far West as ports of entry. This two-way exchange is going to have as great, or greater, effect upon American hotelmen as upon those who operate hotels overseas.

Here we are, then, in a new era of hotel keeping, facing on all sides an entirely new set of conditions. The question is: How can we best meet these conditions so as to realize the promise this new era holds?

One of the first answers, so far as the rest of the world is concerned, is that we must have more hotels. They must be modern hotels, geared to the streamlined age they will serve. Intercontinental has had a good deal of experience in this respect. The company actually came into being due to the postwar shortage of usable rooms. Pan American Airways, our founding company, was asked by the Government to help solve this problem in an effort to advance the economic welfare of friendly countries. It had the precedent of the railroad hotel building behind us—the Canadan Pacific, New York Central, Union Pacific, and the C. & O., to name a few examples. We needed space for the flood of air passengers who wanted, and were able to see the world. Starting from scratch, we now have 8 modern first-class hotels in operation, with 4 more under construction, and others in the planning stage. The bulk of these hotels is in the Latin American area, and many in cities, which, frankly, had little hotel business before the air age began a few short years ago.

Today their occupancy rate is phenomenally high. Many are in the process of being enlarged almost before they have been finished. Thus, they not only served the emergency purpose for which they were first planned. They have again proven the more important point that, with air travel cutting down the time and cost factors in travel, a good hotel will attract guests and be an economic asset to its community. One example ably demonstrates this truth. The building of the Tequendama Hotel in the city of Bogota, Colombia, more than doubled, in 2 years' time, the number of international travelers arriving there by air. And in 1955 new visitors to that city stayed 140,000 guest-days and spent more than $4 million, all of which represented entirely new dollar income for Colombia.

Building new hotels abroad, then, does more than merely solve the problem of space. It is a seedbed for economic growth and expansion. By providing income and opportunity for foreign lands it has the double value of making other countries more attractive for Americans to visit as well as helping to provide the means whereby other peoples can visit the United States. Peace, commerce and international understanding are the beneficial results of such exchange.

Of equal importance, and perhaps of greater interest to those who are graduating from Cornell, is the fact that hotel building abroad provides a showcase for American hotel management methods and techniques. Many of the young people here this evening will soon be staffing hotels in all parts of the world. Because the jets will bring Beirut tomorrow closer than Paris is today, London as close as Houston, Paris as close as Denver, you will find yourselves in many cultures and countries which are still off the beaten track. You will have the unique chance to demonstrate American friendliness and efficiency to peoples whose good will is essential to our own national welfare. And may I stress the fact that you will have the opportunity to gain from them many lessons in understanding and achievement which are well worth going halfway round the world to learn.

Both the physical building of hotels and the intangible building of confidence in America abroad are, of course, vitally important to the hotel business if it is going to catch up with, and stay abreast of, the jet age. Both goals require sizable investment of money, time, and talent; and these investments must be made today, for tomorrow will be too late. I am hopeful that American investors will see the attractive field for such investments and make them promptly. Only by so doing, I believe, can the full potential of the jet era which we are entering be realized. But beyond even the men, the time, and the money, I hope we will bring vision to this task. The rest of the world is closely tied to our business today. To take advantage of that fact calls for courage, imagination and skill of the highest possible order.

Just how international the hotel business has become should soon be evident here in the United States. For the jets will be servants of all free peoples and their convenience will be utilized by travelers coming here. In simple terms, this means that hotelmen all over the United States, in Kansas City and Cleveland, for example, will have to cope with the problems of currency conversion, passports, metric systems, different food habits, unfamiliar national customs, and the like. Not only will American hotelmen have to become as adept in language and understanding as their counterparts abroad, they also must become pioneers in their local communities. They will have to gain for their guests from overseas friendliness, tolerance, and acceptance from hometown neighbors and business associates.

The new conditions facing American hotelmen at home and abroad will undoubtedly bring many changes in studying how to operate and in actually operating hotels. Schools such as Cornell, for example, should perhaps be thinking of how best to modify and expand their courses. Greater knowledge of languages, for instance, will become essential to successful hotelkeeping here in the United States in the same manner as it now is abroad. A wider background of appreciation for other cultures, climates, and ways of getting things done will certainly be required of the many young Americans who will soon find themselves working in hotels abroad. Business habits which include mid-day siestas and late dining hours, national codes of law which differ from ours, social taboos in other countries, and dozens of other differences will have to be accepted.

Accepting them, of course, is really learning. And I have yet to meet the hotelman who could not improve his efficiency by learning something new, or whose real success could not be measured by his ability to change and grow with the times. Knowing this gives me real confidence that we will more than meet the demands the jet age will put upon our talents and resources. We hotelmen and women should never forget that the tools of travel and tourism are transportation and hotels, and that both tools are equally important.

So far we have been discussing the effects of this new era upon our business directly. But I believe we should also look at the broader picture if we are to do our job well. The new era in the hotel business, of course, is only a part of a whole new era in the world. Everywhere economies are expanding and peoples are anxious to better themselves. Nations wish to develop their human and natural resources, to grow, become strong and contribute as active members of the family of nations. Our own country has long known the benefit of such advantages and is officially committed to helping other nations achieve them. We do this not out of some fuzzy philanthropic sense but in the clear knowledge that our own economic strength and security depend upon peace and prosperity in the rest of the world. They depend, too, upon mutual understanding among the peoples of the world.

The jet age offers great hope in this direction. The exchange of people on a mass basis, which will become a reality with fast, low-fare jet travel, will help to quicken international economic growth. It will speed the adoption of modern industrial techniques. It will hasten the process of understanding among nations. As I see it, the jet age will not create one uniform world but, rather, a world whose many diverse strengths can be utilized by its different peoples. In such a world all nations will give. But they will be net gainers because so many other nations will be giving in return.

The threshold of this desirable exchange will be our hotels. The stranger in a country, whether he is a Pakistani in Washington or an American in Ankara, will have his impressions formed by what he experiences in the lobby, the public rooms and in his own room in his hotel. If he meets with courtesy, consideration, comfort—if he is genuinely helped by the hotel staff which is his host—he will carry and generate the good will which our world needs so much. His social and business dealings will be pleasant and constructive. A stranger no longer, he will want to travel to many places and will be anxious to come back soon. If, however, he encounters lack of understanding, neglected facilities, and discourteous treatment, the world is the loser. Its welfare and hopes have been set back.

To be a hotelman in this new era, then, demands from us more than conventional efficiency. We must be leaders on the frontiers of cooperation among peoples. We are going to have to be ready to see that our business is a matter of more than rooms and meals, and that the rates we charge cover many intangibles without which the world will find it hard to advance.

This is a big job for all of us—for those already in the hotel business and for you young people about to leave Cornell and join us in the critical area of advancing the world's hopes for a better life. The satisfactions in doing this job well are immeasurable. The need for us to begin is urgent. Peaceful armadas of jets are about to take to the skies, bringing our hotel industry—and our world—the greatest era it has ever known.

Looking Back at Some Sad Sacking

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News, of May 15, 1957:

LOOKING BACK AT SOME SAD SACKING: PERHAPS MONTY SHOULD REMEMBER AFRICA AND NORMANDY LAPSES

(By John M. Virden, colonel, USAF (retired), editor, American Weekend)

(NOTE.—Col. John M. Virden, United States Air Force (retired), is a former Regular officer, retired for physical disability in 1953. He served in the 14th Air Force in India, Burma, and China, in World War II. His last duty was with General Eisenhower's NATO staff in Europe in 1951–53. Colonel Virden has written extensively on the Battle of Gettysburg and lectured on the Civil War at the War College. He confesses "the Yankees shot my grandpa at Little Roundtop. I've spent half my life trying to find out why.")

"THE OLD MEN

"We shall peck out and discuss and dissect,
And evert and extrude to our mind,
The flaccid tissues of long-dead issues,
Offensive, to God and mankind
Precisely like vultures over an ox
That an Army has left behind."

—*Kipling.*

Two aged generals stood on a rocky hillside in Adams County, Pa., just south of the town of Gettysburg last week and rudely second-guessed two better generals who fought a battle on that spot 94 years earlier.

Reed-voiced Field Marshal the Viscount Montgomery, of Alamein, 69, and General of the Army Dwight D. Eisenhower, 66, agreed that they would have "sacked" both Gens. R. E. Lee and George Gordon Meade for what these two old soldiers regarded as Messrs. Lee and Meade's bumbling in that crucial battle in the American Civil War, fought on July 1, 2, 3, 1863.

Perhaps because of his more intimate knowledge of the South's low boiling point when "Marse Robert" is criticized, President Eisenhower tempered the bad mouthing Monty gave the two able generals who directed the most important battle ever fought on the North American Continent.

The supreme allied commander in Europe in World War II credited General Lee with "good troop handling." Most historians agree that this is exactly where General Lee's battle "broke into pieces," as the President put it.

FACTS RECALLED

It is still a fact that the amazingly awkward troop handling by Lt. Gen. Dick Ewell, commanding the Confederate 2d Corps, on the night of July 1, 1863, negated the smashing success the Confederates achieved at Gettysburg earlier on that fateful day.

By late afternoon of that first day General Ewell's corps had fought their way through the town and lapped around the base of a rocky, thickety little promentory known as Culps Hill (named for a Pennsylvania farmer who had sons in both the Union and Confederate Armies). From the top of Culps Hill, General Ewell's guns could rake the whole Union fishhook line along Cemetery Ridge. General Ewell knew this, so did General Lee. The gray Virginian rode over to General Ewell's headquarters, under a grape arbor in a farmhouse yard, and urged his newest corps commander to assault the key position while day's light still held.

The one-legged Dick Ewell smoked his pipe, thought it over, while the Federals poured troops onto Culp's Hill, regiment by regiment. When General Ewell finally jumped off in a confused night attack his men fired on each other in the dark thickets (so did the Union troopers) and at the end of this bloody assault General Ewell was right back in his trenches at the foot of the hill.

His troops had been anything but well handled. In the dark hot night disgusted rebel infantrymen lay around grumbling, "Oh, God. If only Old Jack was here . . . we'd be on top of that damn little hill in 10 minutes."

STONEWALL ABSENT

But their old corps commander, Stonewall Jackson, had been in his grave since the previous May, cut down by his own men as he rode in the rainy darkness at Chancellorsville. General Lee was still General Lee; he knew what to do and when to do it. He'd never needed to make more than a suggestion to Stonewall Jackson.

On the second day of this crucial battle General Lee tried to redeem General Ewell's tardy failure by sending Lieut. Gen. James "Old Pete" Longstreet's big first corps against the extreme left of the Union position. This assault was to hit almost 5 miles from where General Ewell's men had made their bloody stab.

An attack that was expected at first dawn didn't roll until the middle of that hot July afternoon. When the Arkansawyers, Alabamans, and Texans got the word to "Go git 'em," they went after Little Round Top, the Peach Orchard, the Wheat Field, and Devil's Den with a wild rebel yell rolling up and down their gray ranks. They fought like Pete Longstreet's men always fought. It was not their fault that their magnificent effort was 12 hours late.

DIDN'T GIVE QUARTER

But their disjointed assault broke down again when they hit the old Regular Army Infantry regiments around Devil's Den. These hard-faced old Indian fighters never asked any quarter and they didn't give any.

One lanky 3d Arkansas rifleman (every man a volunteer) yelled across at them, "Hey, Yanks, you ort to know you ain't fighting the conscripts this time."

"Yeah, bygod, you ain't up against the shoe clerks either, brother. Just keep comin,' we'll still be right here."

No men ever fought better than General Longstreet's men, unless it was the old Regulars who stopped them, but few would declare that these men were well handled by Pete Longstreet, nor that Pete carried out what General Lee had told him to do. Nor did he do it. He did not attack as early as possible, as General Lee, as was his gentle custom, suggested.

All in all, old soldier Eisenhower's remarks about Messrs. Lee and Meade's generalship were milder than the reedy criticism voiced by Viscount Montgomery, as he stood on this rocky hillside covered by reporters and photographers.

Our British cousins, twice removed, have a positive genius for "baiting the Americans" and Monty hit a high point in this studied art when he referred to General Lee as "that guy" and called General Lee's decision to make one last desperate lunge at the Union center (Pickett's charge) as "monstrous, just monstrous."

This kind of talk raises the hackles all up and down the creeks and the bayous south of Baltimore, west of Charleston.

A REAL SLUR

Yankees are generally slower burners than are the Unreconstructed Rebels of Dixieland, but the Yankees finally got the point, that Monty had laid a "monstrous" slur on General Meade, too. After all, they reasoned, General Meade was the only Federal General who had been able to stop General Lee up to July 1863, that General Meade had fought his Army of the Potomac better than anybody had ever fought it before. He stopped General Lee cold for 3 days in a row, and turned back the best army the South had ever, or could ever, put into the field.

Yet Field Marshal Montgomery declared repeatedly that he would have "sacked" General Meade, as well as General Lee, but for different reasons.

Monty is possibly the last battle captain who should criticize General Meade for allowing "that guy" (Lee) to escape. Memories of Erwin Rommel's little game of blind man's buff in the western desert of north Africa are still too green. Then there is the matter of the Falaise pocket in Normandy when, if Monty had taken a little less time to "tidy up my tail" (clean up the rear area of the battlefield) the trap would have been snapped shut on the best army the Germans ever fielded, and the war ended almost a year sooner. That road from Caen to the Remagen bridgehead was long and bloody. It put a lot of gold stars in the service flags across America.

Others may recall that Monty's jaw of the giant pincer seemed to move a little slower than General Patton's jaw and again a portion of Hitler's army slipped out of a trap in the Battle of the Bulge.

It seems to us that it ill behooves the field marshal to slur General Meade, who fought the undisputed champ and stopped him, but in so doing so weakened his own Army of the Potomac that to have fallen on General Lee would have been to invite disaster.

This reporter is, rather obviously, of Confederate origin. But the fact is that Ike and Monty's remarks sadden more than anger. We doubt that either would have voiced such remarks in the military prime of their lives.

"The Lamp of our Youth will be utterly out:
But we shall subsist on the smell of it,
And whatever we do we shall fold our hands,
And suck our gums and think well of it.
We shall be perfectly pleased with our work
And that is the perfectest Hell of it."

—*Kipling.*

Priest of Note Rates Salute

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Philadelphia Daily News on May 8, 1957, concerning Father John Positano, who is now a curate of the Holy Rosary Catholic Church, Lawrence, Mass., in my congressional district.

PRIEST OF NOTE RATES SALUTE: CLERGYMAN WITH A CLARINET

(By Jerry Gaghan)

Father John Positano was on the floor at Palumbo's giving out with the hot licks while the Jaye Brothers ran through their frenzied routine of Rag Mop in Italian. It made a smash finale for the 2-hour show, which the priest, incidentally, emceed. The affair was a homecoming for Father Positano, former pastor of St. Nicholas Church here, who was shifted to a new charge in Lawrence, Mass., 4 years ago.

A crowd of more than 400 parishioners and friends welcomed him and in the audience were some two score performers. Like the Jaye Brothers, all of these entertainers got their start with Father John's USO troupes. The clarinet-tooting cleric, whose full face and horn-rimmed glasses remind of Benny Goodman, has been taking acts to veterans hospitals and military installations for the last 14 years. National chaplain of the Italian War Veterans Association, the guest of honor received letters of commendation from the White House, the Governor of Massachuetts, and heads of veterans and civic organizations.

Loyalty Day Award to Vice President Richard M. Nixon

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. BROYHILL. Mr. Speaker, I am pleased to herewith insert an address by Rutherford Day, chairman, Loyalty Day Committee, Veterans of Foreign Wars, in presentation of the Loyalty Day award to Vice President RICHARD M. NIXON.

The address follows:

ADDRESS OF RUTHERFORD DAY, CHAIRMAN, LOYALTY DAY COMMITTEE, VETERANS OF FOREIGN WARS, DEPARTMENT OF DISTRICT OF COLUMBIA, IN PRESENTATION OF LOYALTY DAY AWARD, MAY 1, 1957, TO RICHARD M. NIXON, VICE PRESIDENT OF THE UNITED STATES

When we speak of loyalty, whereof do we speak?

Do we speak of loyalty to a few pretty bits of cloth that go to make up our flag? No; because colors fade and cloth will decay.

Do we speak of loyalty to a certain geographical area of the North American Continent? No; because many of our country's greatest achievements have been outside the then geographical area of the United States.

Do we speak of loyalty to a single people who happen, by accident of birth or conformity to immigration quotas, to be American citizens in our melting pot of nations and creeds? No; for obsession with ourselves is not consistent with the impact of America upon its friends and even its enemies throughout the world.

Nor do we speak of loyalty to a fixed and predetermined economic system, king cotton or empire preference or any immutable nostrum.

What then do we mean when we speak of loyalty?

It is more an idea and an ideal that creates an atmosphere in which the individual is nourished, that his capabilities may develop, that he may lead a life of dignity and worth. This ideal does not seek that men be kings or gods and neither does it allow them to be crushed and stifled into peonage and servility. We guarantee neither success nor failure, but only that man is free to walk the path of his own destiny.

Rather it is the dream and the ideal to say to mankind:

"Here is a society where all men may do their utmost if they will. Be there neither aspiration to godhead nor degeneration to bestiality, it is enough that here are men, who want to be no more, but who want to be the best of themselves."

So when we speak of loyalty, it is to be the promise and the chance in each of us to fulfill himself and in doing so to benefit not only himself and his neighbors, but the whole family of man.

Thus it is especially appropriate to honor a man who has made of a hitherto much ill-used office a strong power in our domestic and foreign affairs. A man who, even at a very high level, is capable of rising above what, in former times, were conceived to be the limitations of his office. This man has made an unprecedented record during his tenure of the Vice Presidency, with his vigor and capability. With his own achievements he has brought new dignity and scope to his position and, in turn, to the affairs of our country. No one could imagine that henceforth the Vice Presidency could be a sinecure or an easy job.

He has made us friends and spread understanding of our dreams and purpose.

He is a man in humanity's highest sense.

Need for District of Columbia Garnishee Law

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, there is presently legislation pending before the District of Columbia Committee the enactment of which is urgently needed here in the District. I refer to H. R. 7035 introduced by the chairman, Mr. MCMILLAN, on April 18, 1957.

The following articles, written by Emerson Beauchamp, appeared in the Washington Evening Star on April 7 and 8, 1957. I commend these articles to the attention of our colleagues.

PAY GARNISHEES HIT 800 A WEEK HERE

(By Emerson Beauchamp)

Every week some 800 District wage earners report for their pay, only to be told they can't get it without a municipal court order.

Their salaries have been garnisheed.

The court is glutted with nearly 3,500 garnishments every month, which adds up to more than 41,000 a year. An estimated 80 percent of them are filed by a small group of stores which do most of their business on a "dollar down, dollar a week" basis.

In small-claims court, where about one-fourth of the garnishments are filed, they account for an estimated 40 percent of all court business.

Every week business houses, large and small, whose employees are attached, are forced to spend time and money processing these garnishments. One firm, employing 5,000 persons, received 800 attachments last year—more than 15 a week. It cost an estimated $15 to process each one, for a total expense of $12,000.

When an employer receives a notice of garnishment, he must hold the employee's entire paycheck and, within 10 days, notify Municipal Court that he has done so. He may also claim an exemption if the employee is entitled to it.

The first $200 of the monthly salary of a head of a house is exempt from attachment, and a single person has a $60 exemption. But the exemption is not automatic. It must be claimed, and the court cannot grant it until the employer files his reply to the notice of garnishment.

Meanwhile, the employee goes without his salary.

If it's all he has to live on, he must put himself further into debt (if he can get a loan) or turn to private charity. He isn't eligible for public assistance, because he has a job.

FIRED BY SOME COMPANIES

He may not have a job for long, however. Some companies fire any employee who gets garnisheed three times.

Critics of garnishment do not question the right of a creditor to collect what's due him. But they raise two questions:

(1) Is it fair to take a man's entire salary away from him, even temporarily?

(2) Do easy-credit stores extend credit in the knowledge that they can attach a customer's wages when he misses a payment?

Many of the large business houses in Washington say the garnishments they receive are always against the lowest-paid and least-educated employes, who have bought more than they can pay for. If the credit stores had investigated, say these employers, they never would have allowed these people to buy so much "on time."

TELL OF FEW INQUIRIES

One firm, which received about 650 garnishments against its employees from credit stores last year, said not more than a dozen inquiries were received from the stores about prospective customers.

The same firm reported that one of its employees, a waitress who averaged between $30 and $45 a week in take-home pay, went into a credit store with her husband and three small daughters and bought $425 worth of clothes, agreeing to pay $5 a week. She later told her boss the store asked no questions about how much she and her husband made.

Her husband later abandened the family, and the wife was stuck with the debt. When she failed to meet a payment, the store attached her salary. Because she was not the head of a house, she couldn't qualify for the $200-a-month exemption from garnishment, and the store took her entire paycheck.

Further evidence of bad-faith credit, employers contend, is that the credit stores will continue selling to a customer whose wages they have garnisheed—sometimes letting him make another purchase before the first one is paid for.

STORES DENY BAD FAITH

One employer told of a man on his payroll who bought $150 worth of clothes from a credit store last fall. Just before Christmas the store garnisheed his wages. When he went to the store to ask for an extension of time, the salesman told him, "You need something new for Christmas," and persuaded him to buy an $80 overcoat.

The credit stores deny they extend bad-faith credit. Evidence of employment may be enough to establish credit, one manager said, but not necessarily. He denied that his store would sell to a man whose wages had been attached until the debt was cleared up, but he added: "Some people pay up after garnishment and become good customers."

Another manager said he didn't know of any stores which sell on time without a credit investigation. "But if a man shows you he is employed and wants to buy a piece of merchandise, what are you going to do—tell him he can't have it?" he said.

Several years ago, a campaign was waged against bad faith credit under the leadership of Municipal Court Judge Milton S. Kronheim, Jr.

In 1949, Judge Kronheim, sitting in small claims court where cases of $50 or less are tried, ruled against a store which tried to collect $12 from a nearly blind laborer who made $18 a week.

The man had bought a $15 pair of shoes from a street salesman, paying $3 down and agreeing to pay $1 a week. He never wore the shoes. A week after the sale, he phoned the store and tried to give them back. The company sued for the balance due.

CALLED SALE A GAMBLE

Judge Kronheim threw out the claim, calling the sale a gamble or a bad business mistake.

The municipal court of appeals reversed his decision, commenting: "Distressing cases of apparent overcharges and overselling are often encountered but we know of no remedy under existing law except that of education of the buying public."

At Judge Kronheim's request, Representative CELLER, Democrat of New York, introduced in 1950 legislation to authorize a small claims court judge to decide for a defendant if the court decided credit had been extended in bad faith.

The provision never became law, but Congress later enacted another section of the Celler bill, designed in part to discourage stores from extending easy credit in bad faith. This legislation established the present $200 monthly exemption from garnishment for a head of a house. Previously the figure had been $100. President Truman signed it on April 15, 1952.

MAN OWES MORE TO STORE AFTER EIGHT GARNISHMENTS

A Washington employee of a large firm owed a credit store $96.25.

The store got a judgment against him last November 1 and began attaching his wages on November 13.

By February 7, after 5 garnishments, the store had collected $23.87. In the meantime, the employee had paid $13 on his own.

On March 12, after 3 more garnishments, the employer was notified the man had been credited with $14.72 on his account. Court costs and interest had taken the rest. He now owed $81.53 plus $19 in new costs and interest.

Thus after 4 months, 8 garnishments, and payments by the debtor totaling $36.87, his original $96.25 debt stood at $100.53.

BAR ASKS CODE LIMIT IN PAY GARNISHMENTS

A wage earner who gets garnished would be assured of finding something in his pay envelope under a proposed amendment to the District Code.

The amendment, which was drafted by a subcommittee of the District Bar Association's municipal court committee, would provide that only 10 percent of the salary of the head of a house could be attached. For a single person, the figure would be 15 percent. Only that amount would be withheld from a pay check by the employer.

Patterned after the New York statutes, the amendment bears the indorsement of the full municipal court committee and the muncipal court judges.

Under present law, when an employer receives a garnishment notice, he must hold the entire pay check. Part of the debtor's salary is exempt from attachment—$200 a month if he is the head of a house, $60 if he is a single person—but the exemption is not automatic. It has to be claimed, and the employer is not permitted to release any part of the pay until municipal court has allowed the exemption. Meanwhile, the employee does without his pay. Unless he claims his exemption or his employer does it for him, he may never get any of his money back.

The proposed amendment would eliminate this squeeze on the debtor and relieve him of the responsibility for claiming an exemption he may not know he's entitled to.

The amendment also provides that one attachment would act as a lien against a debtor's pay—10 or 15 percent each pay period—until the debt is paid.

Backers say this would reduce the workload at Municipal Court, where nearly 3,500 garnishments are now filed every month. Under present law, a garnishment applies only to a single pay check; to attach a second one, the creditor must go to court again.

A third provision of the amendment is designed to eliminate the present dog-eat-dog aspect of the garnishment process. As it now stands, if creditor A garnishees a man's salary this week, creditor B is likely to be first in line next week to put in his claim. Creditor A, meanwhile, also will be back in court to get the next installment on his own account.

The new law would provide that, once a garnishment is issued, all other would-be collectors must wait. Thus a man who had incurred too many debts would be assured time to pay them off in installments he could afford.

Backers of the proposed amendment also point out that it would work to the benefit of creditors at the same time it eliminates the present hardship on debtors. Under present law, a creditor may find himself out in the cold if his customer makes less than the minimum exempt salary. The debtor suffers by losing his pay check temporarily, but if he claims his exemption, his creditor can't get a cent.

ASSURANCE TO CREDITOR

The amendment, by substituting a percentage exemption, would assure the creditor of collecting his money, though he might have to wait a while for it.

Another argument advanced in favor of the amendment is that it would solve a problem which crops up in juvenile court when a runaway father is unable to provide maintenance because his salary has been attached.

Meanwhile, at least one large Washington firm is taking steps of its own to cut down the number of garnishments among its employees through educating them about the evils of indiscriminate buying on credit.

Education of the buying public was the remedy recommended in 1950 by the municipal court of appeals when it refused to void the sale of a $15 pair of shoes to an $18-a-week laborer.

At least one large company in another city has made a sizable cut in the number of garnishments it receives through educating its employees. A farm-machinery manufacturer in Milwaukee reduced attachments against its workers from 1,406 to 383 in 3 years by counseling employees and insisting that credit stores check with the firm before garnisheeing.

The Washington firm, which received 800 garnishments among its 5,000 employees last year, began a systematic attack on the problem early this year.

Every week, the case history of an employee who overextended his credit is posted on all company bulletin boards. Employees are

urged to buy only what they can afford and to notify the company counselor immediately if they get too deep in debt.

"We've just begun," a company spokesman said, "but we have high hopes."

Another large firm here reported a substantial reduction in garnishments through initiating a more rigid firing policy. After three attachments, an employee is discharged.

Other firms are opposed to firing employees who get garnisheed, preferring to keep even the habitual victims on if they are good workers otherwise, and help them get out of debt.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Recovery, Inc.

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. POTTER. Mr. President, quietly, but very effectively, in 15 Michigan cities, and across the Nation, Recovery, Inc., has been working wonders with nervous and mental patients.

I have been most impressed with the work of Recovery, Inc. This is a self-help technique through which rehabilitated mental patients work individually and in groups to rehabilitate others. To me it seems as if we might be on the verge of a significant advance on the frontier of mental health. Mental illness has reached serious proportions in our country—serious, at least, in relation to the facilities we have to cope with the problem.

Last summer I asked the National Institute of Mental Health to study Recovery's work, and I am pleased to report that the study has just gotten underway. If the study team reports favorably, Recovery's pioneering methods will be brought within reach of additional thousands of people, for they will have been approved for use in hospitals and mental institutions.

Since 1937, when the late Dr. Abraham A. Low developed the self-help technique, Michigan has played a leading role in the work. Mrs. Treasure Rice, of Brighton, who has spearheaded Recovery, Inc. in our State, reports that 1,200 persons in 90 groups are meeting weekly in Michigan alone. Activity is well advanced throughout the rest of the Nation.

Mr. President, I ask unanimous consent to have printed in the RECORD articles which have appeared in three great Michigan dailies—the Detroit News, the Detroit Times, and the Detroit Free Press—about the work of Recovery, Inc.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Detroit Times of February 10, 1957]

UNITED STATES STUDYING SELF-HELP PLAN FOR NERVOUS PATIENTS

Senator POTTER announced here today that a study of Recovery, Inc., a self-help system for nervous and former mental patients, had been started on a national basis.

He said the chief purpose of the study was to determine whether the methods of Recovery, Inc., were suitable for use in mental hospitals.

POTTER directed the Institute of Mental Health to make the study. This division of United States Department of Health, Education, and Welfare has contracted with the Joint Committee on Mental Illness and Health to do the research. The joint committee, with headquarters at Cambridge, Mass., is a national private organization.

MEMBER OF COMMITTEE

POTTER, a member of the Mental Health Appropriation Subcommittee, said the success of Recovery, Inc., system among patients outside the hospitals was sufficient to warrant an investigation of its possibilities for use in such institutions. He said:

"I am impressed with the potential of Recovery, Inc., as a means of helping solve the problem of mental illness, one of the most devastating, expensive ailments of our times. I have seen Recovery in action and have talked with many people who have been helped.

"At a national meeting, I saw hundreds of former nervous and mental patients who, after being helped by Recovery, are now dedicating their lives to helping their less fortunate fellow human beings who might be in institutions at public expense for such assistance.

NO FUND APPEAL

"This national volunteer organization, operating without any public financing or appeals for funds, has demonstrated its worth by rehabilitating thousands of persons who can be used as case histories."

Recovery, Inc., was organized in 1937 by a small group of patients of the late Dr. Abraham A. Low, M. D., prominent Chicago psychiatrist, State alienist, and University of Illinois educator, who developed the recovery techniques to prevent chronic psychoneurotic disorders and to prevent relapse and possible recommitment of former mental patients.

When they join Recovery, nervous and former mental patients are in the grip of a wide variety of nervous symptoms and fears resulting from tenseness.

[From the Detroit Free Press of February 10, 1957]

FOR USE IN MENTAL HOSPITALS—UNITED STATES STUDIES RECOVERY, INC.

Can Recovery, Inc., the self-help system that has proved so effective in Michigan for nervous and former mental patients, benefit those still in mental hospitals?

Senator POTTER (Republican, of Michigan), a member of the Mental Health Appropriations Subcommittee, will seek to find out through a national study, he announced Saturday.

A contract for the research has been made with the Joint Committee on Mental Illness and Health, Cambridge, Mass., a private organization directed by Dr. Jack R. Ewalt.

The actual project, however, will come under supervision of Dr. Robert Felix, head of the Institute of Mental Health, a division of the United States Department of Health, Education, and Welfare.

"I am impressed with the potential of Recovery, Inc., as a means of helping solve the problem of mental illness, one of the most devastating, expensive ailments of our times," Senator POTTER said.

"I have seen Recovery in action and have talked with many persons who have been helped.

"At a national meeting I saw hundreds of former nervous and mental patients who, after being helped by Recovery, are now dedicating their lives to helping their less fortunate human beings who might be in institutions at public expense but for such assistance."

Senator POTTER stressed that "the opportunity Recovery offers may be too important to be ignored without thorough investigation.

"This national volunteer organization, operating without any public financing or appeals for funds, has demonstrated its worth by rehabilitating thousands of persons," he said.

He expressed the belief the principle can be applied on a broader base which would lead to a substantial reduction of mental-care expense.

Michigan has played a leading role in the history of Recovery, Inc. At present, there are more than 1,200 persons receiving help in 90 groups which meet each week in 15 Michigan cities.

The national organization was founded in 1937 by the late Dr. Abraham A. Low, M. D., Chicago psychiatrist, State alienist, and University of Illinois educator.

He developed the self-help technique to prevent chronic psychoneurotic disorders and to prevent relapse and possible recommitment of former mental patients.

Ten persons were meeting regularly in the Brighton home of Mrs. Theasure Rice in 1953 when the Free Press first reported the Michigan movement. After several articles in the Free Press Sunday magazine, hundreds successfully sought help.

Mrs. Rice, who had used Recovery, Inc., to help emerge from behind her own fears and anxieties, since has guided the steady expansion of the organization throughout the State.

Nervous and mental patients, when they join Recovery, Inc., are in the grip of a wide variety of nervous symptoms and fears resulting from tenseness.

Particularly distressing are the terrifying panics and depressions, fear of hamning oneself or others, fear of physical collapse or of losing one's mind, fear of being alone or of being with people.

Physical symptoms include dizziness, heart palpitations, tremors, feeling of unreality, nausea, diarrhea, constipation, sweats, throat "locking," sleeplessness and fatigue, headache, and miscellaneous aches and pains.

The Recovery, Inc., technique is to have a physician check for physical illness.

If none is found the person is shown how to control nervous tension through the realization that other persons face the same challenge.

Mrs. Rice, who is State chairman, has pointed out that there is no quick method to relieve tension but through application of Recovery, Inc., principles in meeting with others who have the same problem, normal living is attainable.

Recovery, Inc., groups are functioning in 23 of the 48 States.

[From the Detroit News]

POTTER LAUDS RECOVERY, INC.—STUDY SELF-HELP SYSTEM FOR EX-MENTAL PATIENTS

A national research organization has begun a study of Recovery, Inc., self-help system for nervous persons and former mental patients, Senator POTTER announced here Saturday.

He said the chief purpose of the study is to determine whether Recovery methods, highly successful among the general population, are suitable for use in mental hospitals.

Recovery, Inc., which is to nervous and former mental patients what Alcoholics Anonymous is to persons with drinking problems, has organized groups in 23 States, but is strongest in Michigan under the leader-

ship of Mrs. Treasure Rice, of Brighton, the Senator said.

POTTER, a member of the Mental Health Appropriations Subcommittee, said the Institute of Mental Health (IMH), a division of the Department of Health, Welfare, and Education, was directed to make the study.

The IMH, headed by Dr. Robert Felix, contracted with the Joint Committee on Mental Illness and Health to do the research. The joint committee is a national private organization with headquarters at Cambridge, Mass. Its director is Dr. Jack R. Ewalt.

In Michigan, Recovery is giving help to more than 1,200 persons in 15 cities. More than a score of such groups meet in Detroit.

Recovery referrals are made by family doctors, psychiatrists and clergymen. One woman arrived at a session carrying a prescription written by her doctor. It said: "Attend at least one Recovery meeting every week."

Recovery, Inc., operates with a small budget. Nominal dues ($3 a year) are accepted but not required. Inquiries can be sent to Recovery, Inc., Brighton, Mich.

Service of Rev. Rew Walz, Pastor of First Presbyterian Church of Rapid City, S. Dak.

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Sunday, May 12, issue of the Rapid City Journal of Rapid City, S. Dak.

The editorial which I am asking to have extended in the RECORD calls attention to the 30 years which the Reverend Rew Walz has served his God and his flock as a minister of the Presbyterian church.

Now the pastor of the First Presbyterian Church of Rapid City, S. Dak., Reverend Walz has been an inspiring and guiding influence in not only the affairs of his congregation but also the affairs of his community.

When he answered the call to his church in Rapid City in 1927, there were only 56 members of his little flock, and it must surely be a source of personal satisfaction to the Reverend Walz to have seen that number grow to over 2,500. His work has truly been the work of God.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIRTY YEARS OF SERVICE

Today one of the finest Christian gentlemen of any city or of any era marks his 30th year as a pastor in Rapid City. He is Rev. Rew Walz, pastor of the First Presbyterian Church.

Reverend Walz' years of service extend far beyond his congregation. He is an amazing man, a living example of Christ's teachings, a man whose boundless energy is matched only by his understanding of human beings and his devotion to them.

For more than 20 years, Reverend Walz has been in charge of distributing Christmas baskets to the needy of Rapid City. His generosity is infectious, the warmth of his heart spreads readily into the hearts of others. As the head of Christmas giving, Reverend Walz' work has been outstanding.

The Presbyterian pastor is a builder. When he came to Rapid City in 1927, there were only 56 members of his church. Today his congregation exceeds 2,500. The First Presbyterian Church has the largest membership of any Protestant church in Rapid City and is the largest in the South Dakota Synod.

In 1952 the splendid new Presbyterian Church opened its doors. Plans are completed for additional construction to accommodate the increasing numbers who worship in Reverend Walz' church.

During his service as pastor, Reverend Walz has united thousands of couples in matrimony. His visits to the sick, the troubled, and the bereaved are countless but always comforting.

More than 800 people sought his counsel last year for assistance in solving their problems.

Reverend Walz has been actively interested in community progress and has served on many committees for the betterment of Rapid City and the Black Hills.

One of his pet projects has been the Presbyterian camp, which he started with a humble structure 30 years ago. It expanded during the years and was recently moved from its location near Silver City—because of Pactola Dam—to a site near Big Bend in Rapid Canyon. The camp serves the young people of western South Dakota and Nebraska. This summer 4 conferences—each lasting 1 week—have been scheduled. Each conference attracts 100 people for religious meditation and recreation.

Reverend Walz is a trustee of both Yankton College and Huron College. He is past president of the Rapid City Lions Club, was dad of the local DeMolay.

Reverend Walz for many years was in charge of Reformation Sunday observances, bringing men of national repute to Rapid City to address these meetings.

A devoted and able assistant during all these years has been Mrs. Walz.

The people of the community join with the Presbyterians today in congratulating Reverend Walz for his many accomplishments and services and wish him many more years of achievement and helpfulness.

William L. McKnight

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the St. Paul Sunday Pioneer Press of May 12, 1957, which pays tribute to one of Minnesota's outstanding businessmen, William L. McKnight.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILLIAM L. MCKNIGHT, REALIST—50 YEARS AS PART OF MINNESOTA MINING & MANUFACTURING CO.

(By Carl Hennemann)

Multimillionaire William L. McKnight, a leading American industrialist who still likes hamburger steak better than any other dish, will complete 50 years of work with Minnesota Mining & Manufacturing Co. Monday.

And if you ask anybody in the big 3M office building about the company's board chairman, they will say that the hamburger steak is a symbol of how intelligent and realistic Mr. McKnight is, and that they hope he'll be around another 50 years.

At 69 he has enough dark hair to pass for 10 years fewer, works constantly, steps the progress of the company with his thinking and ideas, looks lean and healthy, and feels so good he has to remember to take his annual physical.

"He is an extreme realist," an employee said. "What is, is."

"You can't glamorize McKnight," said another and added: "W. L. McKnight—his first name is work and he has given 101 percent of his time to the company."

"McKnight has given his entire life to the company and has never lived or worked for anything else," he went on. "He is perfectly satisfied to work and do virtually nothing else."

Veteran employees say they never knew of his firing anyone because of a mistake which stemmed from hard work. They say Mr. McKnight never lost his temper, or was loudly or severely critical of anyone in public.

Of his even disposition, one employee says: "McKnight may have blown his top somewhere else, but we never heard him do it."

This is the man who gave to Minnesota one of its most profitable business institutions. 3M in 1956 sold less than 3 percent of its product in this State, or about $10 million worth. In contrast, it spent $65 million for goods and services and $42 on its payrolls within the State, a total of $107 million. Its Minnesota payroll is 8,125 of its national total, 18,800.

You decide to visit Mr. McKnight. He is down at the end of a long corridor, guarded by only one secretary. His white light is on, meaning that he knows you're coming and you're to step right in.

You hardly notice anything else in the board chairman's office except Mr. McKnight. It's easy to decide why. The office is one of least imposing in the building. Furnishings are comfortable and ordinary. The carpet is, perhaps, even a little threadbare. Mr. McKnight is so pleasantly at home and relaxed that you take to him. He is pleased to see you in a genuine sort of way and you forget all about his millions and power and inventiveness while you talk about hamburger steak, mashed potatoes, corn on the cob, and why he never bets more than $2 on a horse when he visits Florida. He tells you he likes to play gin rummy and seldom wins, but employees say this is a white lie.

You forget to ask him about his homes at 1855 Summit, another on a 5-acre tract at Dellwood, and still another near Miami Beach.

"Yes, I'm a light eater," he says, explaining why he's in good physical shape. "I don't play golf, not since 1936, when I had sacroiliac trouble. It bothered me until 1940. Then I had a bad fracture of my right leg. I had a cast that went from my neck to my knees. When the cast came off, my sacroiliac trouble was gone. The doctor thought the cast had taken care of it. He advised me to play safe, however, and not to play golf."

He credits some of his health to his parents, Mr. and Mrs. Joseph McKnight, former South Dakota farmers, later residents of Brookings. He brought them to St. Paul in 1930. His father lived to be 84 and his mother 76.

I'm of Scotch descent," he explained. "I spell 'McNight' the Irish way, but years ago it was spelled 'MacKnight,' which is the Scotch way."

He talked about "my stock in the 3M company, which is most of my wealth, and now split up among my family."

"From 1911 to 1912, I bought as much 3M stock as I could get at prices I could afford to pay," he explained. "These early purchases I bought from other stockholders when I could, paying 25 to 50 cents a share. The company had paid no dividends and was not making money."

In 1916 the board of directors voted Mr. McKnight a stock bonus of 5,000 shares. This was to make up for his low salary as sales manager and general manager from 1911 to 1916.

(Those 5,000 shares are 320,000 shares now, due to stock splits, and are worth between 20 million and 25 million dollars at today's market price—the McKnight holdings are estimated at considerably over $100 million altogether.)

While Mr. McKnight talks, you think: "He can't ever lose that kind of money at one-fourth cent a point at gin rummy and a 25-cent limit on side bets." He plays gin rummy under those limitations.

Later, walking back down the corridor, you wonder if a bookkeeper has ever been such good company as Mr. McKnight.

For that is what 3M's board chairman set out to be—a good bookkeeper.

He was born on a White, S. Dak., farm and didn't like farm work. He arrived in Duluth in 1906, a shy, slender lad, and enrolled in a business college. He was assured free room and board with relatives, but needed $65 for tuition. He applied to the recently opened 3M sandpaper plant for a job, but 3M wasn't hiring. Returning to White, he borrowed a team of horses from his father, raised $280 hauling water, and early in 1907 entered Duluth Business University, aged 19.

He was a good student, skipping pool rooms to practice penmanship and business correspondence. After the first 5 months of a 6-month course, he was recommended to 3M as a clerical worker. He became "rattled" while applying and made a poor impression. While waiting for 3M to decide, he snapped at a chance to take a job in Michigan with Oliver Mining Co. Then he had to turn down that job to go home because his mother was seriously ill.

He was ready to go when a telegram announced his mother was better. He returned to school. The 3M plant then called him. On May 13, 1907, he became assistant bookkeeper at $11.55 a week.

3M had existed 5 years with disappointments and failures. North Shore mineral deposits, wanted for grinding wheels and sandpaper, turned out to be worthless.

Continued heavy support of L. P. Ordway, vice president and general manager of Crane & Ordway, St. Paul, helped. Mr. Ordway had become a major stockholder in 1905. He poured a quarter of a million dollars into the company before 3M got on its feet. A son, John G. Ordway, has been a company director since 1918.

(The quarter of a million dollars was given for notes, and the notes paid off. Mr. Ordway did not take stock for the loan).

Young McKnight, the bookkeeper, rose rapidly. In 1909 he became 3M's first cost accountant. Then he was made office manager in Chicago. In 1911, the directors made him sales manager. He was alert, able to get to the core of a problem quickly, also dependable and loyal.

Sales Manager McKnight had never sold anything in his life. He revolutionized the company's selling techniques. He demanded of his plant uniformly high quality goods. He urged a general manager be set up to coordinate production and sales. In 1914, Mr. McKnight became the general manager, and in 1915, in addition, was made first vice president, continuing in this dual capacity until 1929, when he succeeded Edgar Ober as president.

It was from 1915 to 1929 that policies were shaped which slowly propelled 3M to a top money maker.

A quality crisis almost wiped out the company's gains during World War I. It had built prestige since 1910, when it moved to St. Paul, and that seemed lost.

The problem was traced to raw materials. Comprehensive tests ordered by Mr. McKnight initiated future tests of all raw materials at all stages of production, as well as the finished goods.

The general manager also inaugurated the laboratory system for the company, which was a foundation for its great success today—it seemed quite extravagant to allot $500 in those days for laboratory work.

(This year 3M's laboratory budget is $15 million.)

The laboratory helped impress 3M employees with the importance of consistent high quality. Products improved steadily.

About the same time as the quality crisis, 3M became involved in a price war of the sandpaper industry. Mr. McKnight made an equally important decision for 3M.

He urged the company to establish a diversity of products. This meant a diversity of competitors, but Mr. McKnight decided 3M would not find itself in a trade war with all competitors at the same time.

He also decided that quality had to be so high that customers would gladly pay for 3M goods, so the firm would not have to meet any competitor's lowest selling price.

With this policy, 3M had waterproof sandpaper on the market by 1920. This brought profits and prestige. Mr. McKnight was even more impressed with the value of product research and development.

He also became patent conscious because the results of research and development were not worth the investment if not protected.

Mr. McKnight's slogan by 1924 was "uninhibited research directed toward uninhabited markets." The first 3M research laboratory was formed that year. It produced pressure-sensitive tape. The tape was developed with great difficulty, but the company president supported the research when the project would have been abandoned.

Masking tape, the result, became the forerunner of more than 300 varieties of Scotch brand pressure-sensitive tapes now produced. It was the first real step toward the diversification Mr. McKnight wanted years before.

By the late 1920's 3M was a research-minded company. It was dedicated to a policy in which a substantial share of 3M earnings were used to develop products offering patent protection and profits commensurate with the investment required to develop them. The company emphasized quality and performance, not price. Diversification was limited only to 3M's ability to develop new products which would meet these requirements. The depression checked the concern's onward surge only temporarily.

Under Mr. McKnight's basic policies, 3M kept its product list growing. Sales climbed. Common stock increased 5 times in less than 5 years, while other firms were trying to keep their heads above water.

Sales rose from $4 million in 1932 to $21 million in 1940; $75 million in 1946; $170 million in 1951; and to $330 million last year.

Over the years, Mr. McKnight always insisted that diligence, ability, and loyalty to the company be rewarded. 3M is one of the few American firms which instituted unemployment compensation early in the depression. Mr. McKnight, never a table-pounding executive, is always a sympathetic listener to employees with problems. But often he has cut through violent arguments to get matters settled on a friendly basis.

The board chairman has a reputation for delegating authority and responsibility. This development in World War II when the concern had to choose between centralized management in St. Paul, or give authority to heads of each of 3M's operating divisions.

Mr. McKnight still spends about 9 months of each year in St. Paul—day to day operations are left strictly in the hands of the president and other officers. On a typical summer week end he will take a full brief case and scratch pad to his Dellwood home and appear Monday morning at his office for a full week of conferences and meetings.

(His Dellwood activities also include his corn patch—the gardener plants four separate crops of sweet corn to make sure there is always fresh corn on the cob for Mr. McKnight, who wants it from June through September.)

The board chairman keeps in touch with many veteran employees in the company. Not all of them collected 3M stock years ago the way Mr. McKnight did. The company, however, is believed to have more millionaires or near-millionaires on its payroll, per capita, than any other publicly held company. Many of these rich people continue to work at their jobs as secretaries, foremen, and in other capacities.

Having lived for his company, Mr. McKnight did not develop serious hobbies. His gin rummy game, even with the low stakes, helps quiet moments.

Sometimes he visits racetracks in Florida but he usually goes to the $2 window. A $10 bet is the limit. He admits he has to develop systems in playing the horses but none of them worked.

The 50-foot McKnight Florida yacht is sometimes used by its owner but he said he fishes because "I don't know what else to do down there—I would rather work." He once caught a 103-pound marlin, however, and his fishing enthusiasm then reached a point to where the marlin was mounted in the den of the Florida house.

He still travels a good deal but most of it is done for business reasons. It is not his idea of a pleasant pastime. In his early 3M days he spent a third of his time in railroad sleepers, he said.

And as to those four crops of sweet corn every year, he says he "goes out once a week and looks at it." The gardner, he intimated, knows how to grow fine sweet corn, and 3M's chairman of the board is willing to let him operate undisturbed.

His most pleasant evenings include his favorite dinner, broiled hamburger, mashed potatoes, corn on the cob, and ice cream. After the meal he and Mrs. McKnight may head for a neighborhood movie or visit their daughter, Virginia, their only child, Mrs. McKnight was Maude Gage before she was married to Mr. McKnight. He said she sold music in the Dyer Music Store as a girl. "She must have liked her job because she still plays the piano and becomes completely entranced by good music," he said.

James Binger is the McKnight son-in-law. He is a vice president of the Minneapolis-Honeywell Co. There are 3 Binger grandchildren—Judith, 10; Cynthia, 14; and James 15. James is one of his grandfather's favorite gin-rummy players and has his grandfather's nickname, "Mac."

Mr. and Mrs. McKnight have a fondness for each other's company. They go to occasional parties. The 3M board chairman is pleasant and congenial with everybody, but too reserved to be the life of any party.

On an average evening, Mr. McKnight will relax at home (whatever home he happens to be in) with a stack of newspapers and magazines. He can relax even more with company reports, especially those 3M reports which annually show sales skyrocketing. He enjoys television, especially prize fights and baseball. And he is ordinarily in bed as early as 10 p. m., rising comparably early.

The Agricultural Problem

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. DIRKSEN. Mr. President, one of the great unsolved problems today is the problem of agriculture. How it is to be solved is a question on which thoughtful men may disagree, but those who study the problem fully realize that we have not yet found the final, positive answer.

In an attempt to set out the plaguing problems that beset our farmers, Secretary of Agriculture Ezra Taft Benson recently sent Members of Congress an analysis of the legislative efforts and of various programs initiated to help agriculture. I believe that Members of Congress will be interested in the comments contained in an editorial in the Sunday Star, which is printed here in Washington, D. C., under date of May 12. This editorial praises the analysis and the forthrightness of Secretary Benson who has asked for a fresh beginning in finding a solution to the problems of agriculture. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN APPEAL TO REASON

Secretary of Agriculture Benson has introduced a refreshing note of frankness into political discussion of the farm problem. In his lengthy letter and supplementary statement to Chairman ELLENDER of the Senate Agriculture Committee the Secretary says, in substance, that a quarter of a century of experimenting with various legislative panaceas—most of them directed at creating scarcities—actually has failed to produce a practical or normal solution. He does not attempt to place the blame upon either political party. He does not advocate abandoning Government aid, or the legislative efforts by which some solution may be found. But he does suggest that this is a good time "to get the problem out in the open, to have a full discussion of it"—in effect, to take a fresh look and perhaps make a fresh start. He offers, for himself and other administration officials, to join with congressional leaders in such discussion. And he says frankly that he has "no doctrinaire solution" of his own.

As a starting point, however, Mr. Benson states some evident and challenging truths. Here are three of them:

1. Controls are not effective in reducing overall agricultural production.

2. Agricultural products are likely to continue to be abundant. Under such conditions they cannot be successfully priced as if they were scarce.

3. The present legal formulas, Government acreage allotments and price supports are proving obsolete. Perhaps more than on any other point Mr. Benson makes clear his personal antipathy for the philosophy of seeking solution through scarcity, and he comments as follows:

"We are in the midst of great scientific changes. Agriculture is able to produce abundantly, and appears amply capable of meeting our needs * * * as far into the future as we can see with confidence. No production controls acceptable to American farmers appear capable of choking off this abundant flow. Since we apparently cannot legislate scarcity, we must learn how to live with abundance. If any product is abundant, it cannot long be priced as if it were scarce. If farm products are abundant, the need and the challenge is to build markets so that this abundance can be used. We cannot build markets by pricing ourselves out of them."

Obviously, there is no easy answer to what has been a national dilemma for most of the past generation. But if there is an answer at all the best chance of finding it appears to lie in some such fresh beginning as Mr. Benson is proposing, and some acceptance of the realities he mentions.

Post Office Department Salary Scale

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an effective editorial from the Coos Bay (Oreg.) Times of May 2, 1957, entitled "Post Office Men Need Their Raise."

This editorial, written by Forest W. Amsden, managing editor of the Coos Bay Times, emphasizes the injustice presently being done to the loyal and worthy employees of our Post Office Department by the current salary scale, which is so far behind the cost of living in this country.

I regard this cogent presentation by the Coos Bay Times as particularly pertinent today, when we are on the eve of commencement of hearings by our Federal Employees Compensation Subcommittee, which are now scheduled to start on May 20. I have the honor to be chairman of this subcommittee. It is my firm opinion that, unless the Government has the discipline and methods of effectively controlling inflation, we cannot expect further sacrifice to be made by the families of the men and women employed by the Federal Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POST OFFICE MEN NEED THEIR RAISE

Tied up in the United States House Civil Service and Post Office Committee is a bill which would raise the dismally low wages you and I pay our mail carriers and clerks.

It's tied up in the committee, headed by Democrat TOM MURRAY, of Tennessee, and may never see light. Proponents of the measure fear that congressional anger with Postmaster General Summerfield over the lambasting he gave Congress because he ran out of money to run his Department, and the current economy-mindedness which is sweeping the Nation, will kill the bill.

These should not be allowed to kill wage hikes for our postal clerks and carriers.

Right now we are expecting our postal clerks and carriers to start for a pay of $3,660 a year. After 7 years service, we are paying them the princely sum of $4,410 a year.

Businesses cannot now find high-school girls in some areas of the Nation to work for $75 a week. But yet we expect mail clerks and carriers to support a family on as little as $70 a week. The Civil Service Commission has had to authorize some post offices to hire youngsters under 17-years of age as substitutes because adults cannot afford to work for the pittance we pay.

Several farsighted Senators and Representatives, including RICHARD NEUBERGER, of Oregon, decided this year to do something about it, introducing identical bills in the House and Senate to provide raises. The proposal is to raise starting pay to $5,500 a year with a $6,100 top after 4 years experience.

This reform is badly needed and certainly ns not extravagent. The University of California' Heller committee recently found that a family of four needs a minimum income of $5,798 in order to be buying its own home. It needs an income of $5,460 to be renting. The breadwinner in a family of four must make $105 a week in order to provide his loved ones with a decent life, the committee found in its studies of west coast conditions.

The pay bill is strongly backed by both Senators NEUBERGER and MORSE and Representatives PORTER, GREEN, and ULLMAN from Oregon. They are to be commended for their stand.

It is to be hoped that Congress' understandable pique with Mr. Summerfield's attitude will not deny a living wage to our postmen.—F. W. A.

The American West

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. MANSFIELD. Mr. President, as the Senate knows by this time, there has been published in the latest issue of Harper's magazine a lead article written by Walter Prescott Webb, a noted Texas historian. The title of the article is "The American West, Perpetual Mirage."

In the Billings Gazette, of Billings, Mont., under date of May 12, 1957, there appears an editorial written by the chief editorial writer of that paper, the Honorable Tom Stout, a former colleague of ours in the House of Representatives, which I think is worthy of consideration of Members of the Senate from both the East and the West.

Tom Stout has lived in Montana and the West in excess of 55 years, so I think he knows a good deal about us, and whereof he speaks.

I should like to call attention to a portion of the last paragraph of Tom Stout's editorial, which reads as follows:

We have no quarrel with the known facts and figures the writer presents, nor are we angered or discouraged by his downgrading of our homelands. But we know that one has to live here for more than just a few months or years to sense something of the awe that we older residents experience as we have become accustomed to gaze out over the wide expanse of plain that stretches out and out until the far horizon comes down to meet it; of the intimate friendliness of majestic mountains; of the music of rushing streams flowing out of foothills down through gemlike valleys. The occasional losses and hardships of drought years seem to bring us all together in a spirit of greater understanding and comradeship.

I ask unanimous consent that the entire editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed n the RECORD, as follows:

IS IT WORTH KEEPING?

The latest issue of Harper's magazine contains a lead article by Walter Prescott Webb, well known historian, entitled: "The American West, Perpetual Mirage." The "mirage" to which the title of the story refers is what the writer designates as the "American Desert." The "desert," as outlined on a map accompanying the article, comprises the States of Montana, Idaho, Wyoming, Colorado, Utah, Nevada, Arizona, and New Mexico, and portions of North and South Dakota, Nebraska, Kansas, Oklahoma, Texas, and California.

There are 8 States wholly within the desert area, as set forth by the writer, and 7 "rim" States that are in part or almost wholly influenced by unfavorable conditions in the desert 8. The writer compares this region, comprising one-half the total area of the entire country, with the other half, east and west. The comparisons, dealing with density of population, agricultural production, industrial development, financial resources, leadership, land ownership, and historical backgrounds, are all to the disadvantage of these Western, or so-called desert, States.

This disparity is attributed correctly to the one vital deficiency from which the less fortunate States, in the opinion of the author, suffer, the lack of a dependable supply of moisture. The average annual precipitation of the "desert," or semiarid States is 12 inches; of the eastern "rim" States 24.20 inches, and of the western "rim" States, 26.48 inches. The amount of average precipitation along the Pacific coast in the west and east of the eastern rim areas is, of course, still greater.

The existence of what was set forth on the school maps up to 1835 as the Great American Desert, but later, and up to the present, referred to as the Great Plains area, was well known from the days of the Spanish conquest of the far western country in the 16th century up to the time of the Civil War. Before that fraternal conflict, Daniel Webster and Jefferson Davis spoke of the region as the Great American Desert and Webster opposed any effort to open up that vast hinterland for settlement or attempted development.

Another writer described the migration of millions of people from the humid regions to this new land in the following words: "Following times of occasional rainy seasons, the line of social advance rose and fell with rain and drought, like a mighty tide beating against the wall of the Rockies. And every such wave left behind a mass of human wreckage in the shape of broken fortunes, deserted farms and ruined homes."

This is the picture painted, as painted by the author of Perpetual Mirage. Many of the facts presented will not be questioned even by the most loyal of the several million residents of this Great Plains region. Some of his other statements will and can be disputed. In truth, there is in addition to this decidedly derogatory and depressing story of this extensive region, another story filled with the deeds of great numbers of courageous men and women, of hardships endured and overcome, of victories snatched from the jaws of defeat, of devotion to home and country exemplified by thousands of incidents in the winning of the West and on the Nation's battlefields fought in every section of the globe.

It is entirely true that the settlement of this Great Plains region, stretching from western Kansas to and beyond the Rocky Mountains, has been accompanied by unnumbered human tragedies. The writer who has lived here for more than 55 years has witnessed the scenes of hundreds of these tragedies—deserted homestead shacks scattered throughout the plains of eastern Montana. These deserted sod and rude frame shacks were largely the dismal reminders of the misfortunes suffered by the first and, ofttimes, second, crop of homesteaders. But, after them came the third invasion the great majority of whose members remained to become permanent, successful settlers.

This story is not greatly different from that which tells of the manner in which practically the whole of the rest of America was settled—hardships, failures, retreats, and advances as the call came to the aspiring and adventurous to push out across prairie and rushing rivers and through dense forest and over wide-stretched plain and mighty mountains until the central portion of a continent was explored, inhabited and made productive by the white man.

Space will not permit a complete answer to all the mistaken impressions of this Great Plains, or great American desert, if he prefers, of central-western America, given by the story. We have no quarrel with the known facts and figures the writer presents, nor are we angered or discouraged by his downgrading of our homelands. But we know that one has to live here for more than just a few months or years to sense something of the awe that we older residents experience as we have become accustomed to gaze out over the wide expanse of plain that stretches out and out until the far horizon comes down to meet it; of the intimate friendliness of majestic mountains; of the music of rushing streams flowing out of foothills down through gemlike valleys. The occasional losses and hardships of drought years seem to bring us all together in a spirit of greater understanding and comradeship.

Retirement of Prof. Tom Barclay, of Stanford University

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. CHURCH. Mr. President, there is a story that a rich King of the East once upon a time launched a search for the wisest man in his kingdom. Finally, his attendants brought before him an imposing looking individual.

"Oh, great King," the attendants said, "here is the wisest man in all your kingdom."

The wise man bowed low.

"But who is that—that person standing behind you?" the King asked.

"He," the wise man answered, "is my teacher."

Mr. President, Prof. Tom Barclay, of Stanford University's department of political science, will retire in June and become an emeritus member of the department. A legion of outstanding Americans today can proudly say with the wise man: "He is my teacher."

Thomas Swain Barclay is one of the great teachers of our times. For nearly 30 years he has been affiliated with the Stanford department of political science and has inspired generations of students to take an active and productive interest in politics. I am proud to say that I am one of them.

Professor Barclay's former students have served and are serving their Nation in the top echelons of Government; in executive, legislative, and judicial capacities. Some of them are, in turn, teachers of government in leading American colleges and universities.

Since the announced plans for Professor Barclay's retirement, he has received a tremendous volume of letters indicating the high esteem and admiration of his colleagues, former students, and acquaintances. I ask unanimous consent for permission to have a few excerpts from these wonderful letters, together with my remarks, inserted in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Whether this should be a letter of thanks or not, I don't know. For you it was who stimulated my interest in politics, and from that has come my periods of greatest happiness and greatest disappointment.

But, in all honesty, now that I am of middle age and can look back on it, it has been a richer, fuller, and far more enjoyable life because of the political attention and knowledge and background that began in your classroom so very many years ago.

As I get older I am returning to the old cliches: The greatest art is teaching.

I hope it gives you some satisfaction to know that every now and then in some harassing, disappointment-filled Government job some person, such as myself, thinks back on your classes, takes a hitch on himself, and starts out again, refreshed.

BILL ROGERS, Jr.,
Former Member of Congress.

To me you are one of the real reliables of the profession, a scholar, teacher, gentleman, and, above all, a fine and genuine person.

Prof. WILLIAM ANDERSON,
University of Minnesota, Department of Political Science.

I have the pleasure to know of the generous character of Prof. Tom Barclay as well as to be acquainted with his scholarly attainments. I speak advisedly from personal experiencee.

JOSEPH A. BEEK,
Secretary of the Senate, State of California; President, American Association of Legislative Officers.

Few men have consistently left so imposing a mark upon their students as * * * [Tom Barclay]. From the beginning * * * [he] has been a teachers' teacher in the best and honored sense of that phrase. When it was my pleasure to teach at Stanford one quarter in * * * [his] absence, I had this experience the very first day: I met a faculty member on campus who sought to identify me. I replied, "I'm taking Tom Barclay's place this quarter." His answer, which came quickly, was, "No one can take Tom's place."

HUGH A. BONE,
Professor of Political Science, University of Washington.

We always took from our association with you, both in and out of the classroom, that knowledge and insight which only mature reflection and devoted labor and research can provide.

In addition, there are those of your former students, among whom I count myself, who reaped the immeasurable benefits of a more personal relationship with you as a wise and trusted counselor and friend.

AVARD W. BRINTON,
Graduate Student in Political Science at Harvard.

Your scholarly contributions in the field of politics have been landmarks in our field of study for many years.

WINSTON W. CROUCH,
Chairman, Department of Political Science, UCLA.

I don't want to sound maudlin on this occasion, but you surely must know by this time that you are one of the best loved and most highly respected members of the political science profession in this country.

ROBERT W. CUSHMAN,
Professor, Department of Government, Cornell University.

I reflect, too, on your secure position among scholars. At Columbia you laid a broad load-bearing foundation. Throughout your teaching you have shown a fine disdain for all academic jerry-building. Your judgments are rigorous and discriminating, and so your word is accepted at no discount. In the history of American politics you are the master of what, I fear, is becoming a lost art. How much longer will there be anyone who could recognize an allusion to, say, the "sage of Kinderhook" or the "tall sycamore of the Wabash"?

CHARLES FAIRMAN,
Professor, Law School of Harvard University.

I want to join in this tribute to a warm friend and esteemed fellow political scientist.

GEORGE B. GALLOWAY.

You have * * * made a great contribution to our country. Hundreds of youngsters who sat at your feet are better citizens and better persons because of the things you taught them and the example you set for them.

PHIL GIBSON,
Chief Justice, Supreme Court of California.

After almost 15 years of service in the Federal Government, I have come increasingly to value the fundamental knowledge about the realities of American Government and politics which I gained as one of your students.

PHILLIP J. HALLA.

In a world that seems to have in it a distressingly large number of trimmers, your rugged integrity has earned for you a special place in the esteem of our profession. Few men manage to gain the same combination of respect and affection.

V. O. KEY, JR.,
Professor of Government, Harvard University.

During the many years of your inspirational and wholehearted service at Stanford, you have written a record which I am sure is unsurpassed in our country. The encouragement you have brought to the countless thousands must be a source of satisfaction and reward.

ERNEST W. MCFARLAND,
Governor of Arizona.

Tom, in my considered judgment, is one of the great teachers in Stanford history.

GEORGE OSBORNE,
Wm. Nelson Cromwell Professor of Law, Stanford Law School, Stanford University, California.

I have never had an opportunity to sit at his feet as a student but would have prized the opportunity to do so, in view of his legendary reputation as a teacher and retailer of political stories.

E. E. SCHATTSCHNEIDER,
The John E. Andrus Center of Public Affairs, Wesleyan University.

Professor Barclay is one of the most widely known, respected and beloved teachers of political science in the United States.

J. WALLACE STERLING,
President of Stanford University.

Steel and Trenton, N. J.

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, this year our Nation's steel industry is observing its centennial and, I am glad to be able to point out, the city of Trenton, N. J., has a special place in this occasion because steel and Trenton "have traveled hand in hand down a long corridor of time."

I include here, for the information of my colleagues, a most interesting résumé of this history made by the Trentonian, a leading newspaper of New Jersey, in a recent editorial:

STEEL AND TRENTON

This year our Nation's steel industry is making its centennial, and we are pleased to note that it is an observance in which the city of Trenton can share fully.

We don't say that only because of Trenton's proximity to the huge Fairless Works of United States Steel across the river, or because of the other steel plants which are located in or close to the city, although the fact that the Trenton area is an important modern steel center gives added luster to the centennial here.

More important, however, is that steel and Trenton have traveled hand in hand down a long corridor of time.

John O. Raum's History of Trenton, N. J., says "Stacy Potts built the steel works in 1776." The Resources Survey of Mercer County says that "Isaac Harrow started operating a plating and blade mill on Petty's Run (near the old barracks) in 1734. * * * Eventually the mill was sold to Benjamin Yard who operated what is said to have been the first steel mill in New Jersey."

John T. Cunningham's Made in New Jersey tells us that "the full admiration and envy of the Nation's iron and steel industry centered on the Trenton Iron Co., established in 1845 by Peter Cooper and Abram S. Hewitt. * * * Phillipsburg pig iron nourished the 58 furnaces and 6 rolling machines at Trenton to an annual production of 14,000 tons of rails and wire. A representative of the British Government called the Trenton Works 'the leading establishment in the United States.'"

A direct tie between steel in the Trenton of yesterday and today goes back to 1905, when American Steel & Wire, a subsidiary of United States Steel, acquired the Trenton Iron Co. plant.

According to Ross L. Leffler of United States Steel, the first open hearth furnace in the United States was built and operated in Trenton. It was in Trenton that the first Bessemer furnace in America was tested. The first three-high universal rolling mill, forerunner of the modern Fairless Works, was built and operated in Trenton. The first structural steel rolled in the Nation was produced in Trenton and the first heavy rails for American railroads came from Trenton mills.

And the bridge building made possible by John A. Roebling is among the epics of American history.

Today the Nation calls for more and more steel, and on January 1 of this year production stood at a record 133,500,000 tons. As the mammoth industry celebrates 100 years of the steel age, it can look back with gratitude on the part that Trenton played in launching it.

Publicity for the "Butcher of the Caribbean"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I read before a press conference in Washington, D. C., this week:

Avoiding bad publicity in the United States has been the cardinal rule of Dictator Trujillo's foreign policy. I believe he deserves publicity commensurate with his activities, so I am glad to see so many distinguished journalists on hand here today and I am glad Coronet magazine published my article, The Butcher of the Caribbean, in its current issue.

I also very much appreciate the interest shown by my colleague, GEORGE LONG, of Louisiana. Although we are now far apart in our opinions about Trujillo, I feel Mr. LONG's interest may ultimately lead him to change his views once he has had an adequate opportunity to consider the facts.

In all our mail and personal interviews in connection with the Gerry Murphy case, no one has sought to excuse or defend Trujillo; no one, that is, except representatives of two anti-Communist organizations, self-proclaimed, in New York and New Orleans, and one New York editor, all of whom, we have good reason to believe, are subsidized by Trujillo.

On the other hand, it has been my experience that every expert on Trujillo, whether he is Herbert Matthews of the New York Times, a wire service reporter in Washington, or a researcher for the Library of Congress, is hotly anti-Trujillo.

Let me tell you the story of how I became involved. Gerry Murphy, 23-year-old pilot from my hometown, Eugene, Oreg., disappeared in the Dominican Republic December 3, last year. In cooperation with Senator MORSE's office we started an investigation. A State Department representative came to my office. He said, as later an FBI man said, that Gerry was mixed up in illegal activities and that an investigation was likely to cause his parents shame on top of their grief. I called his parents on the telephone and they asked me to go ahead. They had—and they have—faith in their boy and they wanted to know—and want to know—what happened to him.

After I read the Dominican explanation of Gerry's death I was convinced that it was intentionally false and that the Dominican Government itself was responsible for Gerry's disappearance. I expressed these opinions and set forth my supporting evidence in an hour's speech on the floor of the House of Representatives February 28. On March 12 I spoke along the same lines in New York. Shortly afterward the State Department sent a note to Trujillo's government stating that our investigation had proved the Dominican explanation false in three respects, the most important being that the alleged suicide note by Gerry's alleged killer was a forgery.

The current situation can be sketched under five headings:

1. Congressional investigation: Through Senator MORSE, who has been extremely helpful, I have asked the Senate Foreign Relations Committee to investigate the Gerry Murphy case and its implications for our foreign policy. I have about abandoned hope that this committee will find it possible to take on this task and within the next 2 weeks I shall make a similar request to the House Foreign Affairs Committee. If the policies which emboldened Trujillo to kidnap and probably kill Gerry Murphy are also identifying the United States with the oppressors in many South American countries, then it is high time for drastic changes.

2. Trust fund for investigation: Gerry's parents in Eugene, with whom I met during the Easter recess, are not using the $35,000 indemnity paid to them, supposedly by the De la Maza estate, but really, I am convinced, by Trujillo. They are considering whether it would help find Gerry if they devoted some of it toward the expense of a meeting of men like Ernest Gruening, Spruille Braden, Herbert Matthews, Norman Thomas, and others in Washington to consider possible courses of action to supplement the work being done by the FBI and State Department.

3. Action by the State Department: Except for their attitude at the outset, State Department officials have been cooperative and diligent in this matter. I have the highest esteem for Dick Rubottom, the Acting Assistant Secretary of State for Inter-American Affairs, whose confirmation by the Senate is expected any day. I have been pressing the State Department ever since it sent the note to follow through with action such as withdrawing our Ambassador, William T. Pheiffer, a man I believe to have been overfriendly with the dictator, and to eject Arturo Espaillat, the Consul General in New York, as persona non grata. It happens that both these gentlemen very recently announced they were leaving their posts. I applaud their departures and believe my efforts may have helped to speed them on their way. However, the circumstances are ambiguous and I believe the United States should follow up its note with action which will clearly show our opinion of a nation that, to say the least, attempts to deceive us as to the circumstances of the disappearance of one of our ctizens within its borders.

I certainly protest the approval by the Department of State of this man De Moya's credentials as Ambassador to the United States from the Dominican Republic. In a vicious speech delivered before the Commonwealth Club of San Francisco on April 5 of this year, De Moya referred to what he called "Operation Galindez" and "Operation Murphy" as Communist propaganda offensives. He implied that both myself and the United States Department of State are in the position of dupes of the Communist Party in the matter of the investigation into what happened to my constituent, Gerry Murphy.

For this unwarranted attack I expect from De Moya a retraction and an apology. I have already officially notified the proper officials of the Department of State that this is in my stand.

If this speech by De Moya is an indication of his diplomatic ability, then he is not qualified to present his credentials to the President of the United States.

4. No more financial aid: Our point 4 aid to Trujillo's well-heeled country has been amounting to about $250,000 a year for the last 4 years. Our military aid last year, according to the Washington Post, was about a million dollars. The actual figures are classified, mistakenly withheld, I believe, from American citizens who would be surprised to know the monetary value we have placed on this pipsqueak dictator and his terror-ridden administration. About 2 weeks ago Aidai Stevenson said that he thinks the most effective American exports to the underdeveloped parts of the world are not our military weapons and military pacts, but our economic methods, our technology, our ideas, and our ideals. My feeling is that we should drop all military and economic aid to the Dominican Republic and see what can be done about making our ideals available for their use.

5. Visits to Latin America: The wonderful mail I have had from most Latin American countries has convinced me that the cause of peace and freedom in the world can be furthered simply by affirmation of our basic beliefs. These letters, rich in praise, would embarrass me if I did not realize that they were a tribute to the kind of country we have, not to me personally. I hope to go to Puerto Rico early in June to reaffirm our belife in government by the consent of the governed and justice according to law. At that time I will make special reference to the Murphy-Galindez case and United States policy, which I believe does not accurately reflect the opinions of the American people about dictators such as Trujillo. In time I hope to visit other Latin American countries for the same purpose. The only promise I made in the campaign last fall was that I would spend at least one-third of my time working on the problems of war and peace. Certainly these endeavors are intimately entwined with America's necessary and crucial position as the most powerful nation in the world, the Nation to whom other nations should be able to look for moral leadership, the Nation whose ideals of government by the consent of the governed and justice according to law are on the side of the oppressed, not the oppressor.

I conclude by stating the two unanswered questions at the heart of the matter under discussion:

A. Where is Gerry Murphy?

B. Where is the foreign policy of the United States with respect to dictators like Rafael Trujillo, who dares to offer us intentionally false explanations of the disappearance of one of our citizens within his borders?

A Record Tax Payment

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. MARTIN of Pennsylvania. Mr. President, an editorial in the Washington (Pa.) Reporter of May 14 is headed, "A Record Tax Payment." I ask unanimouse consent that it may be printed in the Appendix of the RECORD, as it shows how much tax is taken from earnings.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Today almost everyone seems to be thinking about taxes—Federal, State, local. So a news item from California takes on a big significance.

A gas and electric company there has made final payments on its 1956–57 local property tax bills. These added up to more than $50 million—the largest payments of its kind ever made in the State. This same company's total taxes for 1956 reached a new high record of just under $126 million.

Finally, the item states that taxes continue as the company's largest single item of expense, absorbing 25.3 cents of each dollar of revenue received from all sources.

What is true of this California utility is true in every section of the country. The dollar figures very greatly, of course—but in each case utilities are among the biggest and most dependable taxpayers.

So here's the point. Think what would happen if the socializers had their way, and the power industry was taken over by Government on a tax-free, tax-subsidized basis. Then the taxes we all pay would rise again.

Judge Samuel Mellitz

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in tribute to Judge Samuel Mellitz.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUDGE SAMUEL MELLITZ

It seems that under the State regulations (or is it the constitution of Connecticut?) the Governor is obliged to make nominations during the session of the State legislature for any judicial appointments that are to come up during the biennium between the sitting legislature and its successor 2 years hence. Accordingly, taking cognizance of the statutory retirements in the several courts of the State, the common pleas, the superior court, and the supreme court of errors, Governor Ribicoff has made nominations to the legislature now in session, filling vacancies which will occur between now and the meeting of the general assembly in 1959.

One of these appointments concerns us of the Jewish community, especially in that the Governor has seen fit to elevate the Honorable Samuel Mellitz, now a distinguished and beloved judge of the Connecticut superior court, to the supreme court of errors, the date of such elevation to be May 6, 1958. This promotion has been approved by the State legislature.

We of the Jewish community of Connecticut are particularly delighted by this promotion, because Judge Mellitz, since his appointment to the bench by the late Governor Wilbur L. Cross, has become one of the great judges in Connecticut's history and one of the most honored, respected, and beloved members of our judicial system. We are especially delighted by reason of the fact that Judge Mellitz for all his professional distinction, is also a distinguished and deeply revered member of the Jewish community. A devout Jew and a well-informed one Jewishly, he has translated his religious ethics into everyday life and experience. He has borne himself with the dignity and the humility of a man of genuine and profound faith and has been not only an ornament of the courts but an ornament of his coreligionists.

We salute him upon this merited promotion not only with warmth but with affection. He will be the first Jew in the history of Connecticut to sit on the bench of the supreme court of errors, and we are delighted by the fact that it will be a Jew of the Jewishness and sincerity and character of Judge Mellitz who is to occupy this honored post. We wish for him many more years of distinguished service in health and with abundant happiness.

Remarks of Charles A. Halleck, Republican, of Indiana, at Dallas County GOP Fund-Raising Dinner, Dallas, Tex., May 9, 1957

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, It was my happy privilege to welcome our colleague, the gentleman from Indiana, CHARLES HALLECK, to the Fifth District of Texas, and to introduce him as our guest speaker at our annual fund-raising dinner in Dallas, May 9. As to be expected, he did an outstanding job. He recognizes and understands our struggle in Texas to establish what so many Americans take for granted—a two-party society. I am happy to be a part of that effort and to bring Mr. HALLECK's message to the attention of our colleagues—a statement that speaks for itself:

REMARKS OF CHARLES A. HALLECK, REPUBLICAN, OF INDIANA, AT DALLAS COUNTY GOP FUND-RAISING DINNER, DALLAS, TEX., MAY 9, 1957

Mr. Chairman, my good Republican friends and, if I might hope, some good Democrat friends, too—but at any rate, fellow Americans all of you, this is the third time this year it has been my pleasure to address a political meeting in the South.

To the extent of my time and energies, I will look forward to making many more in this continuing campaign to win the people of this vast region to the Republican cause—the cause of sound government.

I don't want to be accused of trying to curry favor with you, but I could mention, in passing, that your hopes and aspirations with respect to the Tidelands were understood by a Hoosier, even though I can't say the issue generates much interest among the folks along the banks of the Wabash.

By the same token, I was a member of the Interstate and Foreign Commerce Committee which wrote the original Natural Gas Act, and I have been among those who thought that when Congress said the production and gathering of natural gas shouldn't be regulated by the Federal Government, that was precisely what we meant.

But I want to talk to you tonight about some broad political facts of life and why it seems to me the people of the South should be coming along with us in greater and gerater numbers.

And it is gratifying for me to be welcomed by such an enthusiastic audience because it proves that we are making progress.

But it has been slow going.

As one who has served in the Congress of the United States for more than 20 years, I know what it is to labor under the handicap of heavy political odds.

When I came to the House of Representatives in 1935, after a special election in my district, Republicans were outnumbered 3 to to 1 in the House of Representatives.

Like my good friend, your able Congressman Bruce Alger, I was the only Republican in my State's delegation—and that's a lonesome situation, believe me.

I always said I could hold a caucus in a phone booth.

At the height of the New Deal tide, Republican membership in the House slipped to 89 and we got stepped on—plenty.

There were times, through the years, when a lot of folks—and that includes me—wondered whether we would ever elect another Republican President or Republican majority in the Congress.

But we never gave up. And during those long, lean years, it was Republicans—by and large—who, standing together for principle, held a beachhead of constitutional government against the onslaught of radicals who were so determined to change this great system of ours.

But the chickens finally came home to roost for the opposition in 1952 and we did get a change.

The people of this Nation were wised up, fed up and burned up.

They were sick of war and threats of more wars.

They were frightened by mounting inflation that cheapened the dollar, robbed people of their savings, their pensions, and their annuities.

They were disgusted by repeated disclosures of security risks in sensitive Government jobs and they were shamed by evidence of scandal in high public places.

Small wonder the citizens of America turned to the Republican Party for new leadership, and elected a Republican President and a Republican Congress.

Now we are moving into the second term of a man I am confident will go down in history as one of America's greatest Chief Executives—Dwight D. Eisenhower.

When I placed his name in nomination at the convention at San Francisco, I described him as "the most widely beloved, the most universally respected, the most profoundly dedicated man of our times * * *" and I meant every word of it.

During the recent campaign, I predicted that he would be overwhelmingly reelected—and it was the safest prediction I ever made.

But we didn't win the Congress, and there has been a lot of soul searching going on ever since.

I was not optimistic about our chances—and I don't think anyone who looked at the situation with real objectivity could have failed to realize that we had an uphill battle on our hands.

Long years in power have entrenched the opposition in our biggest metropolitan centers.

The solid South, in spite of the President's great popularity in this region, and the gains we have made organizationwise, is still pretty solid.

Just before I came down here I received an analysis of the 1956 election returns for the 5th, 8th, 14th and 16th Districts of Texas. Had the folks who supported President Eisenhower given their support to the Republican candidate for Congress in each of these districts, Texas would be represented in the House by 4 Republican Members instead of just 1.

And as one who has served as House majority leader in two Republican Congresses—the 80th and the 83d—I know something of what it means to have control of the legislative branch of the Government.

A lot of my good friends have been writing to me lately about the budget—and from the tone of some of the letters, I am beginning to wonder whether they still are my good friends.

I've been pointing out in my answers to them—among other things—that the only 2 times in a generation that the people of this country did see substantial budget cuts and substantial tax reductions were during those 2 Republican Congresses.

But what bothers me, folks, is that on each occasion, in spite of magnificent records for economy we got beaten when election time rolled around. You begin to wonder what our citizens really do want.

I have heard it said—and I'm afraid it's pretty true—that the public's memory—and that includes yours and mine—is notoriously short.

If that's the case, then one of the things we must never overlook in our continuing battle for the cause of sound Government is the necessity to hammer at the mess we were in when President Eisenhower and a Republican Congress took over the responsibilities of our Federal operation.

In 1952, the people of this country had called on Republicans to deliver them from war, from inflation, from bureaucratic control and regimentation, from corruption, from radicalism and from a lot of other things, including downright incompetence in high places.

Let's not let anyone forget that, because much of the difficulty we find ourselves in today can be traced directly to the mismanagement, the miscalculations, yes, and the misconduct of people who had held positions of high public trust under succeeeding New Deal-Fair Deal regimes.

I must say I am nothing short of amazed at the audacity of the opposition in their bare-faced attempts to pin the blame on Republicans for what they, themselves, did to the country. Just who was in control of this operation anyhow during the years following our victory in World War II when we had our golden opportunity to achieve a just and lasting peace for the world?

Who let us get into the position where today we find it necessary to spend upward of $50 billion a year just to defend ourselves from the threat of aggression?

Who was it that saddled the American people with nearly $300 billion of public debt, a debt so big it takes $7.4 billion a year now just to keep up the interest payments?

Who was it that plastered on the public 14 of the 15 income tax increases we have had since 1913?

Just exactly who was in control of the country's financial system during the years when the value of your dollar and mine was cut almost in half by inflation?

Yes, and who was doing the hiring and firing in the Federal workshop when the Alger Hisses and the Harry Dexter Whites were exposed as traitors on the public payroll?

And what party was it, my good friends, that refused, year after year, to come to grips with the problem of failing farm prices and mounting surpluses?

I could go on and on, but you know the answers to these questions as well as I do.

The important thing is that we not let the American people forget.

And that we not let the opposition get away with charges that somehow, since we now have a Republican in the White House, we are to blame for the difficulties on the international front, for high taxes and for the continuing necessity for spending billions of dollars for defense.

We didn't create these problems, we inherited them from the New Dealers and the Fair Dealers.

But when a Republican President took office and Republicans took over control of the Congress, we rolled up our sleeves and went to work.

The record of cooperation between Dwight Eisenhower and the Republican 83d Congress is on the books, and you know it well.

We laid solid foundations for a magnificent program of peace, progress, and prosperity.

We junked controls, cut public spending by billions, gave the Nation the greatest tax-reduction program in history and hammered out significant and far-reaching social gains for the American people.

It took some doing, my good friends, but we got the Reds out of Government and the Government out of the red.

You can make your own analysis of why we didn't win the Congress in 1954 or 1956.

Obviously from the figures, a lot of people who should have been in our corner didn't appreciate the importance of backing a Republican President with a Republican Congress.

But we did win the Congress in 1946 and we did win it in 1952.

And we can win it again in 1958—and that's our last chance to give the President a Congress that will put this sound and far-sighted Republican program back in high gear.

Of course, I'm a little selfish in this. I'd like to be majority leader again—with stalwart Republicans like Bruce Alger on my team—Republicans who will stand up and be counted when the chips are down.

The alternative is a complete wrecking job by the opposition on the progress we have already made.

As one who bears a few scars of battle in the Washington arena, I must say I get a bit impatient with some of my very dear friends when they suggest to me that there doesn't seem to be much difference today between Republican and Democrat policies.

I begin to wonder what I have been beating my brains out for all this time.

We've got an administration now that believes the value of the dollar ought to be protected—that money ought to be worth something.

I well recall sitting in on a meeting once at which a new program of Government loans at fantastically low interest rates was being discussed.

To his credit, the late Jesse Jones, then serving as chairman of the RFC, was resisting the pressures to further cheapen money.

"Maybe," he said, "the time has come to find out whether money is really worth anything or not."

Well, the rubber money advocates are still with us, believe me, and anyone who thinks there's no difference in policies is due for a shock if these people get control of the Federal Government's monetary operations.

One of the pledges made by Republicans to the American people was that we would get the Government out of competition with business wherever possible.

During the Republican 83d Congress, we really went to town on that one. We sold a barge line that had been losing taxpayers' money for years. We got rid of synthetic rubber plants and took the Government out of more than 250 other activities that could be handled better and cheaper by private enterprise.

We had to fight every step of the way to get these jobs done.

And then what did the opposition do when they took over the Congress?

They forced through a law requiring Government departments to get approval from Democrat-controlled Appropriation Committees in the House and Senate before any activity could be dropped.

This roadblock has proved mighty effective, as you may imagine. In less than a year, nearly 70 actions requested by the Defense Department alone were vetoed by these Democrat-controlled committees.

And let me pay my respects to your Congressman again right here. Bruce Alger has been in the forefront of this battle as a cosponsor of legislation which would bar Government competition with private enterprise.

Or take public power.

Republicans support a policy based on the partnership principle as against Federal monopoly.

We have a conviction that projects can, and rightly should, be handled in a cooperative venture, with Federal, State, and local interests—public and private—participating.

We do not believe the Federal Treasury is fair game, or that the taxpayers of one region should be saddled with the cost of a project that benefits another region.

Here again, the Nation's taxpayers can thank Republicans for turning back a Democrat drive to foist the half-billion-dollar Hells Canyon project on the Federal Government.

You know, there should be such a thing in our national life as self-reliance. Texans know something about that. You've been having your troubles lately, but there is plenty of evidence of a determination on the part of the people of your great State to see this thing through on your own.

One of my many interests in this area, over the years, has been in the fine work of the board of fundamental education at Jarvis College at Hawkins.

Actually, the board for fundamental education grew into the challenging national program it has become today because it employs the principle of self-help, encouraging the underprivileged to work out a better, more rewarding way of life.

We can stand at lot more of that spirit over the country.

I need not tell you that atomic energy is going to play an increasingly important role in our way of life.

The Republican 83d Congress enacted a far-reaching administration measure designed to maintain America's leadership in the development of atomic power, especially for peacetime use.

But here again it was a battle every step of the way against forces determined to create a huge new Federal bureaucracy in the atomic-energy field. These people wanted no part of a program that would utilize the genius, initiative, and resourcefulness of private industry.

Now what has happened?

The whole vast program—so tremendously important to the Nation's future—is being jeopardized by refusal of a Democrat-controlled Congress to enact insurance legislation that would signal a go-ahead on a broad front.

We do win once in a while, even though we're in the minority. With the help of a few of the more conservative members on the other side of the aisle, we succeed in blocking the more radical proposals offered by the opposition from time to time.

Unfortunately, however, lacking the power that goes with committee chairmanships and the privilege of programing legislation, Republicans can't take positive action to put across a continuing, affirmative Republican program.

Next year, we have another chance to get a Republican team back on the field to work with President Eisenhower.

The alternative is a return to what we had—and I just wish some of the folks who complain because more hasn't been done would take the time to consider this:

Instead of continuing Federal deficits and mounting public debt, Republicans have balanced the budget as we said we would.

Instead of war we are at peace—and may I say, as one who has been privileged to sit in high councils down here—there have been times in the last 4 years when men of lesser stature than President Eisenhower and those around him might well have gotten us into war.

We have kept the peace, as we said we would.

We have checked inflation, and last, but by no means least, the Nation is prospering and progressing as never before.

If this isn't a welcome contrast to what we had under the Democrats—and what we would get again—then I am ready to quit fighting.

And if anyone thinks I'm just indulging in a little scare campaign, let him get a copy of the CONGRESSIONAL RECORD of Wednesday, January 30, and turn to page 1198.

There he will find remarks entitled, "Proposed Program for the Democrats in the House of Representatives in the 85th Congress."

Among other things this enlightening document—endorsed by at least 80 House Democrats—calls for:

Bigger Federal payrolls.

More Federal Housing.

Expanded Federal aid for health services—that's Democrat talk for socialized medicine.

More public works.

A bigger Federal atomic energy program.

Outright repeal of the Taft-Hartley Act.

And so on and on—a blueprint straight out of ADA headquarters.

And as long as I've mentioned the ADA, I understand your Congressman scored a zero on his voting record as far as they are concerned.

In my book, that's a perfect record.

But to get back to this blueprint business:

With all these grandiose schemes for spending more and more public money, these folks have the audacity to claim they are also for tax reductions.

Now honestly, I can't believe the American people are gullible enough to fall for that.

Look, folks, I've been around this operation for a long, long time.

I've been around long enough to know that there is an awful big difference between talk and action.

And when I hear some of my colleagues on the other side of the aisle talking the economy line, I'm reminded of the old fellow who joined the church at 92 and lived an exemplary life thereafter.

They're just a little late in being converted—and what's more, I'm a bit suspicious of their sincerity.

No. The plain truth is, folks, that had it not been for President Eisenhower and Republicans in the Congress, the Federal budget would be bigger today by billions; the national debt would be bigger today by billions and the country's tax bill would be bigger by billions.

And what's more, your dollar would have been worth considerably less.

But we've got to fight harder than we've ever fought before to keep the spendthrifts, the radicals, the do-gooders, the bureaucrat-minded, big-government crowd from once again capturing control of Washington.

And I know this:

We aren't going to keep them out by sitting on our hands, or by glaring at each other, or by wasting our time and energies arguing over what kind of hyphenated Republican we think the other fellow is.

Let's understand that we're all Americans living in a changing world.

Let's understand that Republican principles are as sound today as they were a hundred years ago, and that like the great old foundation of our Republic—the Constitution—our party principles will always be adaptable to the needs of the times.

Republicans in the Congress of the United States have been waging stalwart battles to uphold these principles, to give life and meaning to policies that have served the Nation well through the years.

I urge you as citizens of a great State interested in sound government—help us in this fight.

To all of you who joined the revolt against radicalism in 1952, I say help the cause by working as never before to elect a Republican majority in the House and in the Senate in 1958.

I recall many years ago when I was a freshman member of the House I appeared in a debate with some Democrat members before a newspaper publishers meeting.

You know, Congress has always been fair game, and the country, encouraged by a late President whose name I won't mention, was having a field day chiding the legislative branch.

After this debate, as I recall it, we had questions from the floor and someone asked me: "What's wrong with Congress?"

The answer I gave then is still appropriate today: "Nothing that a good Republican victory wouldn't cure."

The Value of Today's Youth

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ROBERTS. Mr. Speaker, too many of us, I think, are prone to pass judgment on the young people of today in a disparaging manner. We tend to criticize the younger generation for any number of seeming shortcomings.

It was refreshing to me to read in one of the fine Alabama newspapers an editorial that should dispel any misgivings one might harbor concerning the value of today's youth. Upon reading this editorial, I think you will agree that "value" is the proper word.

Under leave to extend my remarks, I submit the editorial from the Tallassee (Ala.) Tribune of April 11, 1957:

TEEN-AGERS AND NEWSPAPERS

This newspaper never has been one to join the anvil chorus to the effect that the teen-agers are "going to the dogs." As a matter of fact, we believe the current crop of youngsters has more on the ball than many of their critics had when they were wearing raccoon coats and doing the Charleston, fortified with ample slugs of bathtub gin. And forget thee not the goldfish swallowers and flagpole sitters.

At any rate, merchants in business today would do well to recognize the economic importance of teen-age buying power of $9 million each year. And what cannot fail to endear them to us is a survey recently released by the bureau of advertising of ANPA which reveals that newspapers rate tops with these young citizens.

According to the survey, "In their own right and by their own influence on family buying, the youngsters of America represent a big and booming market. They have a lot of preferences and prejudices, but the medium of most practical value to them is the newspaper, which received a vote of 54 percent. Television got a vote of 17 percent, radio 16 percent, and magazines 13 percent."

There are more than 16 million boys and girls in the Nation today aged 13 through 19, with $9 billion earned, or in the form of allowances, or both, to spend each year, the presentation disclosed. And by 1965, this market is expected to expand to 24 million individuals with pocket money totaling $14 million a year (in terms of 1956 dollars).

These major facts, among others, about the big and lively and responsive teen-age market were revealed in the research findings:

1. Some 800,000 teen-agers, mostly those who have concluded their formal education, have steady, year-round, jobs.

2. More than 4,500,000 additional teen-agers earn money at part-time or odd jobs during the year.

3. Another 4 million join in the teen-age working force during the vacation season, for a total of more than 9,500,000 teen-agers with earned incomes.

4. More than 9 million teen-agers buy their own phonograph records, and more than 8,500,000 buy their own fountain pens. More than 5 million buy their own jewelry, shoes, deodorants.

5. More than half the boys buy their own sports equipment, more than a third their own shirts, slacks, and shaving cream.

6. More than three quarters of the girls select and pay for their own blouses, sweaters, skirts, and lingerie and one-fourth their own dresses and toilet soap. When asked about the features, characteristics, etc., they like most about the various mediums, the teen-agers' overwhelming choice for information—about sports teen-age activities, school, movie, and local, national and world news—was the newspaper. There were wide differences in their reactions to various mediums. In the case of television, dislike of advertising was voiced by 59 percent of the respondents; for radio the figure was 48 percent; for magazines 40 percent; and for newspapers 27 percent.

Conflicting Statements and Facts

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. MASON. Mr. Speaker, President Eisenhower says that we cannot cut the budget much until the world situation settles down so we can reduce our appropriations for military and defense purposes. Senator BYRD counters with the following facts:

First. The President's 1958 budget proposes to spend $2 billion less for military and defense purposes than the 1954 budget called for, but the 1958 budget asks for $7 billion more for domestic and civilian expenditures than the 1954 budget.

Second. The 1958 budget asks for $3.5 billion for 78 grants-in-aid programs, while the 1932 budget—before New Deal-Fair Deal-Modern Republicanism were invented—called for total grants-in-aid amounting to only $250 million, making the present budget request just 14 times greater today than before the New Deal took over.

Third. The President requested in his budget an authorization bill for Federal aid to schools that would require an expenditure of $325 million each year for 4 years. What has this request to do with national defense? If the President wants to economize he should cut out this entire item of school aid.

Not even President Eisenhower can reconcile these conflicting statements and figures. The truth is that our New Deal-Fair Deal-Modern Republican welfare philosophy—entirely outside of national defense—is the cause of the inflated, bloated $71.8 billion national budget.

[From the Richmond Times-Dispatch of May 15, 1957]

THE PRESIDENT'S BROADCAST

Mr. Eisenhower's radio speech in behalf of his exorbitant budget seemed overlong because it was largely redundant. He repeated what he and the big spenders in Congress have said over and over again; namely, that the budget can't be cut because it costs money to "wage the peace." "Good defense is not cheap defense." "There is no cut-rate price for security."

The President spoke earnestly and with seeming conviction, but his sales talk made no customers, except those already "sold." His slogans have lost their luster. They have become clichés. Their repetition merely served to confound confusion.

Last night's "appeal to the people" served one useful purpose, however. It set up a fresh target for the congressional economy bloc to shoot at. It is our guess that Mr. Eisenhower's claim of a tight, thrifty, virtually "irreducible" budget will have been shot to ribbons when the battle of the budget ends.

The shooting will be done not only by the conservative wing of the opposition, but by Republicans in Congress. In his floor speech on Monday Senate Democratic leader LYNDON JOHNSON censured the Republican Party for not knowing its own mind, budgetwise. He cited half a dozen instances of "mutually contradictory expressions" by men close to the White House. He quoted from a statement made on Sunday in the course of a TV interview with Sherman Adams, assistant to the President and his chief political mentor. Mr. Adams conceded that "a budget cut of $1½ to $2 billion could be made without impairing the quality of the services or the ability of the administration to carry out those services."

Republican Senators listened in stony silence to the Texan's sardonic indictment of administrative budget confusion. That's understandable. Their own floor leader, KNOWLAND of California, has been demanding a "minimum" cut of $3 billion.

Nor has Congress, or the public, forgotten that Treasury Secretary Humphrey, the Cabinet member most intimately conversant with this subject, said that "there are a lot of places where this budget can be cut," or that the President himself had suggested a half billion cut in foreign aid after Vice President NIXON had assured taxpayers that not 1 budget dollar was approved for foreign aid unless essential to American security.

Small wonder that last night's radio listeners, remembering these contradictions within the White House circle, were bewildered.

Even those who consider themselves in tune with modern Republicanism must realize that they are asked to accept the President's arguments purely on faith in their own assumption, that Ike's arguments are superior to the seasoned judgment of men like BYRD of Virginia, JOHNSON of Texas, and other Members of Congress who may be assumed to judge the Eisenhower budget with a minimum of partisan bias.

Undoubtedly, there has been, and will be, some partisan jockeying for credit in initiating whatever tax cuts might eventuate as the result of budget cutting. Yet as Senator BYRD and Secretary Humphrey have warned, those chickens must not be counted until they are hatched.

The job on hand now is to cut wherever possible. The Macmillan government of Britain has done it. Mr. Eisenhower has given us no reason to believe that it can't happen here.

[From the Richmond Times-Dispatch]

SEES IKE'S APPEAL DOOMED TO FAIL

(By Ray Tucker)

WASHINGTON.—President Eisenhower's belated crusade for his stymied legislative program may flounder on the hard rocks of practical politics. Even his friends entertain doubts that a few television speeches will overcome the growing opposition to huge expenditures on and off Capitol Hill.

In deciding to plead his cause with the people, Ike had in his mind the precedents set by the only Presidents who have resorted to this strategy in modern times—Woodrow Wilson and Franklin D. Roosevelt. But there is a vast difference between the circumstances which confronted the two Democrats and the apostle of modern Republicanism.

The contrast concerns the attitude of the politicians and the general public. Wilson and Roosevelt were not seeking any sharp break with the historic principles of their party (which had been generally progressive

and internationalistic). They played along with Democratic leaders and organizations except for periodic clashes with Tammany Hall.

Moreover, they succeeded in mobilizing public opinion on behalf of their great objectives only when their views coincided with the popular mood. When there was a basic clash of Presidential and public interests, they failed tragically.

But when Wilson toured the country on behalf of the suspect League of Nations, he and his cause cracked up. Despite Roosevelt's eloquence, which Ike cannot match, the late President could not persuade Congress to pass a major piece of White House legislation after his first 4 years.

Like Eisenhower, Roosevelt retained his hold on the popular imagination and did so in four elections. Nevertheless, he could not influence the stubborn legislators on Capitol Hill. Nor could Harry S. Truman whip or wheedle them into line, despite his upset victory over Thomas E. Dewey in 1948.

Ike must buck the same adverse public and political tides that Wilson and F. D. R. met in their less fortunate adventures. Every bit of evidence indicates that his own congressional leaders, the formerly friendly business community and the people generally are bitterly hostile to his $71.8 billion budget.

The American people, it appears, do not feel that the United States alone should be called upon to fortify or finance more than half the world. They seem to agree with the Humphrey-Burgess warnings that we can easily spend ourselves into bankruptcy.

Finally, as intraparty protests prove, many GOP leaders are in open opposition to the President. Some do not even consider him to be a Republican, or to have the future interests of the party at heart.

Nor has it escaped the atention—and the criticism—of Republicans that Arthur Larson, the high prophet of modern Republicanism, was known as an Independent when he was a professor at the University of Pittsburgh. They think it odd that Assistant Secretary Larson's book, which has been Ike's inspiration for his current attempt to remake the GOP in Larson's image, should be entitled: "A Republican Looks at His Party."

The Importance of Skill in the Use of Weapons

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 16, 1957

Mr. MARTIN of Pennsylvania. Mr. President, a recent issue of the Army and Navy Journal contains quotations from the Journal of 10 and 90 years ago. I was particularly impressed with the one of 90 years ago—May 11, 1867—in which attention is called to the fact that skill in the use of weapons is so much more important than the weapon itself.

For real defense in the United States, every man should be given basic military training.

I ask unanimous consent that the article from the Army-Navy Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Ninety years ago (May 11, 1867): The Indian skirmishing on the plains furnishes an appropriate occasion for some remarks we have long proposed upon the general importance of target practice. It is a long step, intrinsically, from the bow and arrow to the breech-loading rifle; yet in each so much depends on the skill of the user, that an expert Indian warrior, armed with the former weapon, will actually use it as fast and as fatally as a raw recruit will employ the latter.

Dissension in the Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 15, 1957

Mr. ANDERSON. Mr. President, the May issue of the Atlantic Monthly contains an article entitled "Dissension in the AEC," written by Warren Unna, of the Washington Post and Times Herald, who for 3 years has been covering the Atomic Energy Commission.

Mr. Unna has a reputation for careful and complete reporting. In this article he has discussed the value to the United States of an Atomic Energy Commission in which majority and minority views are not only permitted equal opportunity for survival, but perhaps are encouraged.

The immediate consideration, which it is my understanding inspired the article, is the approaching end of the term of AEC Commissioner Thomas E. Murray, and the possible consequences of his absence to the Commission and the atomic-energy program.

It is no secret that Mr. Murray and the Chairman of the Atomic Energy Commission, Adm. Lewis L. Strauss, have found themselves repeatedly on opposite sides of policy questions. Mr. Unna points out also that there have been many instances of agreement between Mr. Murray and Mr. Strauss, although they were less publicized.

In my opinion, the article makes a valuable and accurate contribution to the public knowledge, which may furnish a better understanding of events about to unfold.

I ask unanimous consent that the article be printed in the Appendix of the RECORD. I am informed by the Public Printer that the cost of printing the article is estimated to be $231. Notwithstanding the excess cost, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DISSENSION IN THE AEC
(By Warren Unna)

I

While the Atomic Energy Commission has been most successful in controlling nuclear fission for weapons, it has been somewhat less than successful in controlling the human fission within its own ranks: that of AEC Chairman Lewis L. Strauss (pronounced "straws") and Commissioner Thomas E. Murray.

Both men, with markedly similar ways of life and, in some respects, markedly similar philosophies, have been at opposite poles of the atomic orbit since the beginning of the Eisenhower administration. Now, with Murray's term as Commissioner due to expire June 30, and Strauss certain to continue for at least another year, the Commission's personality polarization may be coming to an end. This is not necessarily a good thing.

The Atomic Energy Commission watches over a $15 billion public investment. Its major efforts are devoted to the design and manufacture of weapons, the bulwark of our defense against potential and actual enemies. But beyond the preparation of weapons, the AEC is vitally concerned with the peaceful applications of atomic energy; the use of radioactive isotopes in industry, agriculture, and medicine; the use of atomic fuel in generating electricity.

Murray, the last of the Truman appointees to the AEC, is the only 1 of the 5 Commissioners who lists himself as a Democrat. Strauss is a Hoover-Taft Republican; retired Studebaker chairman, Harold S. Vance, is also a Republican; University of Chicago chemist, Willard F. Libby, usually votes Republican; the late John von Neumann, of the Princeton Institute for Advanced Study, kept his political preference to himself.

Although Murray is anxious to remain on the Commission, few people in Washington think that President Eisenhower will reappoint him to another 5-year term, or that Strauss would tolerate it even if the President should get such a notion. Murray has been the only Commissioner to speak out whenever he is persuaded that something alien to the public interest is going on behind the AEC's secrecy-protected doors.

It is ironic that these two Commissioners who have so much in common should hold opposing views. Both are in their sixties. Both are multimillionaires and highly successful financiers. Strauss started out by drumming up business for his father and uncle's wholesale shoeshop in Richmond, Va., and rose to become an investment banking partner with Kuhn, Loeb & Co. Just before joining the Eisenhower administration, he served as financial adviser to the Rockefellers.

Murray is the son of the man who built the giant power-generating stations in New York State which eventually became the nucleus of the Consolidated Edison network. The father left a $12 million estate. The son, a mechanical engineer with more than 200 electrical and welding patents to his credit, has carried on and augmented the family's electrical manufacturing business.

Both Strauss and Murray are extremely devout. Strauss, a member of the Reformed Jewish congregation, once taught Sunday school, once was president of New York City's Temple Emanu-El, conducts Friday night and Saturday morning Sabbath services in his home for his family and his guests, and once prepared a beautifully written Bible with hs son, so anxious was he for young Lewis to learn to love and appreciate Biblical lore as he did.

Murray, a Roman Catholic with 3 knighthoods from the Pope and honorary degrees from 15 Catholic colleges and universities, has a private chapel in both his Long Island home and his Park Avenue apartment, attends mass at 7:30 each morning, and takes more than fatherly pride in the fact that 2 of his 11 children are Jesuit priests.

Despite the current involvement of the AEC's atomic power program in the public versus private power issue, Strauss and Murray are essentially private power men. It was Strauss who, out of loyalty to the White House team if not blind faith in big business, first allowed the Commission to become involved in the notorious and now defunct Dixon-Yates contract for steam-generated power in the Tennessee Valley Authority

area. It was Murray who first suggested that the AEC farm out its power needs to private utilities—in the Electric Energy, Inc., plant at Joppa, Ill., and the Ohio Valley Electric Corp. plant at Portsmouth, Ohio. Murray made both proposals during the last year of the Truman administration.

Both Strauss and Murray are humanitarians and take enormous pride in the good the atom promises when it is not being devoted to war. Strauss helped to devise President Eisenhower's "Atoms for Peace" proposal before the United Nations General Assembly in December 1953, the main goodwill plank in the administration's foreign policy. And he also helped to conceive the "Atoms for Peace" conference in Geneva in August 1955, which for the first time brought the world's nuclear physicists together to discuss the benefits of the atom. Murray's every speech is in essence a prayer, a plea to make atomic warfare impossible, a plea for world harmony that atomic energy may be devoted to improving the way people live.

Strauss is bald, bespectacled, rather owlish-faced; he has a ramrod posture and a superbly tailored figure. He has fluidity of thought and tongue and an Old World courtliness, but when he is piqued the Strauss expression varies between childish indignation and pouting martyrdom. Strauss claims he never had enemies before coming to Washington. And even his enemies concede his executive brilliance and mastership as a tactician.

At his mother's instigation, Strauss volunteered his services to Herbert Hoover during the Belgian war relief days and later became Mr. Hoover's private secretary. He was with Mr. Hoover in his Palo Alto, Calif., home in 1928 the night he was elected President; and with him again in the White House in 1932 when Mr. Hoover learned he was defeated for reelection. Strauss' attraction to science began early when he read a physics primer. When both his parents died of cancer in quick succession, Strauss became interested in an accelerator to develop radioactive isotopes for cancer treatment. As a rear admiral during World War II, he represented Navy interests in the Manhattan project, the program which produced the A-bomb.

Murray is frail in appearance, bashful in voice and manner. He has a sort of pug face, a friendly twinkle, and his double chin is his one concession to obesity. Unlike Strauss, Murray did go to college, to Yale's Sheffield School of Engineering. But he is proud that he is a second-generation Irishman. He can be as stubborn as he is gentle, and when he is, this Irish comes out and the frail frame throws all its energy into the scrap for God and country. He frequently has declared, "I won't give up unless they fire me."

Murray's experience has made him well aware of the needs of private enterprise. For 10 years he was receiver for New York City's Interborough Rapid Transit subway. Prior to joining the Commission, he was president of the Metropolitan Engineering Co. and a director of its parent which makes welding devices and electric switches, the Murray Manufacturing Co. He has been a director of the Chrysler Corp. and a member of its finance committee, a director of the Bank of New York, a trustee of the United Mine Workers welfare fund. His niece married Henry Ford II.

II

The first great storm which followed Strauss' appointment as AEC Chairman was the dismissal of Dr. J. Robert Oppenheimer, when he was ruled to be a security risk. Murray, a member of the 4 to 1 majority against Oppenheimer, went even further than Strauss and his colleagues by branding the scientist "disloyal." Strauss dismissed Murray's zeal as "Jesuitic reasoning"—an opinion shared by a good many others involved in the case. Strauss has particular pride in his academic connections, and some describe the Oppenheimer case as his Achilles' heel. Strauss took what might be termed the rap for the case and describes it as "a tragic thing—I shall have to live with it as long as I live." Yet the case did not originate with Strauss, but with FBI Director J. Edgar Hoover and Attorney General Herbert Brownell, Jr., who went to the President and demanded that the physicist be ousted from his position as a consultant to the AEC and that his "Q" clearance be revoked.

Through the misadvice of AEC General Counsel William Mitchell, Strauss was reluctantly persuaded that Oppenheimer's "Q" clearance could be revoked only after a formal hearing. Actually, the mere termination of Oppenheimer's consultant's contract would have accomplished the same thing. Once the hearing was underway, however, Strauss, with his usual precision, vigor, and no-stone-unturned thoroughness, cooperated with Hoover and Brownell in seeing to it that the Government's case could not fail.

Then, as president of the Princeton Institute for Advanced Study, Strauss not only voted to retain Oppenheimer as the institute's director, but also to raise his salary. He also saw to it that Oppenheimer had a say in the $15,000 Strauss award given to a promising scientist every 3 years in memory of Strauss' parents. Strauss thus displayed another facet of his personality: Mercy, generosity, even solicitude—once the enemy is on his knees. Many scientists have never forgiven Strauss for the Oppenheimer case, however, and to appease them he saw to it that the Commission, for the first time in its 10-year history, had two of their representatives on it at the same time: Libby and von Neumann.

In some ways, Murray is now no more of a lone dissenter on an AEC headed by Strauss than Strauss himself was when he served on an AEC headed by David E. Lilienthal. President Truman appointed Strauss to the first Commission when it began in 1946. Three years later, Strauss was before the Joint Congressional Committee on Atomic Energy complaining of what he considered to be Lilienthal's one-man rule. A year later Strauss resigned, partly because of a long scrap with Lilienthal, who opposed going ahead with the development of the H-bomb (Strauss took the matter to Truman and Congress and won); partly because of his firm belief that sending isotopes to Norway for testing jet plane engines would endanger the Nation's security (Strauss took the matter to Congress and lost). Looking back upon his record during the first Commission, Strauss is particularly proud of his plea for the H-bomb and his insistence that this country set up a weapons-detection system. Because of the latter, the United States was able to pick up the first Russian A-bomb detonation in 1949 and alert itself to the atomic weapons race.

Similarly Murray, during his term, has pushed establishment of the Nation's huge weapons stockpile and seen to it that there is a uranium procurement program with enough incentive behind it to insure the United States a practically limitless supply of fissionable fuel.

III

Why, in the light of the many things they have in common, are Strauss and Murray at swords' point so much of the time? Although they live within almost wall-to-wall proximity of each other on the eighth floor of Washington's Shoreham Hotel, they take separate elevators. And not too long ago Strauss had Commission personnel bring him Murray's long-distance phone call record so that he might learn with whom Murray had been talking.

The trouble began when Murray sensed that Strauss had come to conceive of himself as the Commission and had very little use for the services of the AEC's other four members. Strauss had been made the President's assistant for atomic energy matters as soon as Eisenhower took office. A few months later he was given his "second hat," that of AEC Chairman.

The Strauss-Murray differences grew during the hearings on the 1955 Atomic Energy Act in which Strauss, anxious to have complete authority over AEC security cases, asked Congress to make him "principal officer" of the 5 heretofore coequal Commissioners. Strauss argued that some of the secrets he picked up in the White House as the President's atomic energy assistant with a side seat on the National Security Council could not always be passed along to the boys on the Commission. Strauss declared there might come a future time when a majority of the Commission would decide that one of its members should not be granted full access to the Nation's top atomic secrets.

Congress, which had established the commission system to gain the advantage of 5 men's thoughts, rather than 1, compromised on Strauss' "principal officer" request and allowed the AEC chairman instead to become "official spokesman" for his colleagues. Commissioner Eugene M. Zuckert, who once declared, "We ought to get ballet slippers," allowed his term to expire and quietly returned to his Washington management consultancy. Commissioner Henry D. Smyth, weary of learning what the Commission had done through his morning newspaper, resigned and returned to the academic life at Princeton. Commissioner Joseph Campbell resigned to become Comptroller General.

This left only Murray of the pre-Strauss appointees, and Murray declared: "I am accused of not playing on the team. I've worked on a team all my life; but when something comes up and I don't agree, I'm not going to take it blindly just because the chairman (through his other offices) tells me it's what the President wants."

Strauss' personal public-relations assistant, Everett Hollis, counters: "Murray hasn't been just one against Lewis L. Strauss; he's been one against the Commission. He has taken a completely 'anti' attitude." Among AEC employees, Murray is now referred to as the enemy and it has been made clear to them that they must have nothing to do with his camp if they mean to get on.

In 1955, when the Democrats had replaced the Republican majority in Congress, the so-called Murray amendment was tacked on as a rider to the AEC's appropriation bill. It compelled Strauss, as Chairman, to give his fellow Commissioners full access to all information involving AEC business. Murray had submitted a long list to the joint committee detailing those AEC matters Strauss had not informed him of. The list included everything from the Dixon-Yates contract, which Strauss presented to the Commission as a fait accompli, to the atomic peace ship, which Murray earlier had refused to testify on since he had yet to be told what it was all about. Again last year, Murray disclosed AEC matters which Strauss had still not filled him in on. But with the Murray amendment already on the books, the joint committee could only ruefully conclude that it had no police powers—and had to let it go at that.

The Commission meetings where Strauss and Murray confront each other sometimes are so bitter that a stenographer has to be summoned to be sure the charges and countercharges are recorded verbatim.

One particularly acrid series of meetings involved security. Strauss, ordinarily extremely security conscious, has had a different attitude toward the British. After a red-carpet reception in England in 1955, including family lunch with the Queen, Strauss came home and helped smother a combined FBI–AEC report questioning the adequacy of

British atomic security. Last year, in what Congressman COLE, former Republican chairman of the joint committee and a friend of Strauss, termed a direct violation of the intent of Congress, Strauss quietly put through an amendment to our bilateral agreement with Britain regarding the peaceful uses of atomic energy. The amendment permits exchange of military information, specifically regarding the atomic propulsion mechanism on the submarine *Nautilus*. Because of the fury from both sides of the political aisle on this one, Strauss held up the actual exchange of information. And Her Majesty's First Sea Lord, Admiral Mountbatten, did not take the trip on the *Nautilus* which he had been booked for.

Declassification is another big point of contention between Strauss and Murray. Strauss, under frequent goading from Senator ANDERSON, the Democratic joint committee chairman during the 84th Congress, appointed a special team of declassifiers and periodically announced that so many thousands of secret atomic documents had now been gone through, of which so many thousand could now be declassified. A great many secrets involving the peaceful uses of atomic energy were declassified at the 1955 "Atoms for Peace" Conference in Geneva. But the totals of items still held secret are never given in the Strauss declassification announcements.

Anyway, Murray has no toleration of what some call the Strauss "numbers game." Murray is for declassifying all peaceful aspects of atomic energy, leaving only the military secrets in the combination safes. He firmly believes that the enemy, and even our allies, have most of the information anyway. He thinks the only ones kept from it are the American citizens who paid for the discoveries and might well be making use of them in the medical, industrial, and agricultural applications of the atom. On the other hand, Strauss feels there are areas where military and peaceful atomic secrets overlap and for this reason the peaceful secrets have to be kept locked up.

Strauss was hard put to it, however, in explaining why the University of Indiana's Hermann J. Muller, a Nobel Prize geneticist, was prevented by the AEC from appearing in person at the Geneva conference and giving a reading of his paper on the dangerous effects of radioactivity. The AEC tried to make it appear that the United Nations had suppressed Muller. But the U. N. would have none of this and pointed its accusation right back at the AEC. Murray stayed on the sidelines in this one.

By all odds the most dramatic Strauss-Murray clash in open view occurred during the more than yearlong arguments in 1954 and 1955 over the Dixon-Yates contract. Dixon-Yates called for a $107,250,000 steam-generating (nonatomic) powerplant to be built and owned by private enterprise on the Arkansas side of the Mississippi River, across from Memphis. It was to feed power into the TVA system to "replace" power TVA was supplying AEC installations some 180 miles upriver. TVA people saw it as a clever move by the administration to break up the Government's biggest public power system.

The contract was finally canceled when congressional Democrats found that one of the key advisers to both the AEC and the Bureau of the Budget on the matter was at the same time vice president of the First Boston Corp., a Wall Street investment house which had a considerable financial stake in seeing that the contract went through. Dixon-Yates and the Oppenheimer case, by Strauss' own admission, have been the sources of his greatest grief as Chairman. Yet Dixon-Yates was actually started by the Bureau of the Budget and the White House, just as Oppenheimer had been started by the FBI and Justice Department.

At any event, Murray was furious with Strauss for embroiling the AEC in politics for the first time in its history—and said so. Murray thought the AEC's serious responsibilities in developing weapons were being sidetracked—and also said so. Strauss avowed otherwise, and at one memorable point the Chairman paraded into the Capitol's old Supreme Court chamber followed by an entourage of department heads, attorneys, public relations men, and workmen in overalls bearing wooden crates and grocery boxes full of top-secret folders.

"Who ordered this physical display?" demanded Senator ANDERSON, then the Joint Committee chairman.

"I did," said Strauss, flushing. He then proceeded to point to a six-inch pile of documents on the witness table before him. This, he explained, represented the Commission's preoccupation with Dixon-Yates matters during the first few months of 1955. And that, he said, pointing at the crates and grocery boxes, represented the Commission's preoccupation with its regular business.

During another round in the Dixon-Yates fight, Murray in his turn followed Strauss to the witness table and bluntly stated that the chairman had taken it upon himself to make changes in the AEC's proposed contract with the TVA without consulting the rest of the Commission. Chairman Strauss, his dark eyes flashing fire, came running up from his corner of the Old Supreme Court Chamber, grabbed a microphone at the other end of the witness table, and outshouting Murray declared he couldn't allow such testimony to go into the record unchallenged. At the end of the session, Mr. Strauss followed the chairman from the hearing room whispering, "You were too much of a gentleman. You shouldn't have been so nice to him."

Strauss' difficulties over Dixon-Yates weren't all with Murray. When the Joint Committee learned that the Commission had voted on Dixon-Yates matters the very morning of the day Strauss testified that the contract hadn't been discussed for months, Senator GORE mused: "It's rather remarkable that a discussion was held, a motion made and a vote taken, and yet that very afternoon Mr. Strauss couldn't recall it." Strauss then went into a nit-picking argument that he had only testified he couldn't "recall any discussions" on Dixon-Yates matters being held.

IV

During the past year and a half, Murray has made three major public proposals on atomic matters, all of which have been just as publicly opposed by Strauss and the rest of the Commission.

In November 1955, Murray proposed a mid-Pacific meeting at the "atomic summit" in the hope that a firsthand sight of an exploding superbomb would deter policymakers, both in this country and abroad, from thinking in terms of future war. The morning preceding Murray's evening speech, Strauss called the other Commissioners into emergency session. He then issued a statement to the effect that Murray's proposal had been considered and voted down months ago as contrary to the best judgment of the AEC. And anyway, he declared, the Russians had witnessed this country's 1946 (baby bomb) tests in the Pacific without any noticeable deterrence. All this rebuttal to Murray's speech was given the public before the Murray speech had actually been delivered.

The next day, Air Force Secretary Donald A. Quarles, who had not been taken into Strauss' counsel, generally endorsed the Murray proposal at a National Press Club lunch. Quarles later got the word and hastily announced he had been giving only his private opinion and wouldn't have made any statement at all had he known it was the subject of an intra-AEC dispute.

In February and April 1956, first in executive session before the Joint Committee and then in public, Murray formulated the ban on superbomb tests which later in the year was to be given a somewhat garbled endorsement by Adlai E. Stevenson. Although the Strauss camp suspected Murray of planting his ideas with the Democratic candidate, Murray actually was quite annoyed with Stevenson for taking on something he didn't understand.

Murray's proposal, unlike the various Stevenson versions, was not fuzzy. The Commissioner said the United States, unilaterally, should call a halt to its superbomb tests since the superbombs in the stockpile were already big enough and we couldn't, with a humanitarian conscience, drop them on civilian population centers anyway. Then Murray called for a rational armament, one in which the United States would develop and test small—tactical—atomic warheads. These, he said, would prove sufficiently powerful to deter any enemy from thinking it could push around this country and its allies.

When questioned by the Joint Committee on whether our military policy didn't already include such small-scale armament, Murray testified: "I know of no policy." He told Congress that as far as he, an atomic Commissioner, knew, the Pentagon was merely shouting to make the bombs bigger and bigger and the AEC was dutifully filling out the orders of its bomb factories.

Strauss, in the President's name, later issued a White House statement declaring the tests an indispensable part of our defense program. But the statement did not face up to Murray's proposition for cutting down on the big tests (which produce the harmful radioactive fallout) and increasing the development and tests of smaller weapons.

Subsequent to the Murray proposal, Strauss and then the President tried to sell Congress and the public on the idea of a "clean" bomb, a term which Eisenhower once carelessly used but which Strauss has scrupulously never used. This is a bomb whose internal makeup is not so disposed to producing strontium-90 and the other deadly radioactive fission elements. It is also one which, when dropped high enough, tends to cut down on purely local fallout. Murray was unimpressed with the clean bomb. As the first member of the Commission to warn of the cancer-producing qualities of strontium-90, once it finds its way into the human bone, he has also been the only member of the Commission to footnote his dissent in the AEC's semiannual report on the fallout danger.

The AEC has failed to indicate how it would rid the superbomb of its A-bomb trigger and thus make the "clean" bomb really clean of fission products. The joint committee knows of no way this could be done. Nor has there been any sign from the Pentagon that it would order any of these "clean" bombs. From a military point of view, the dirtier the bomb the more economically valuable it becomes as a strategic weapon. Overriding all "clean" bomb skepticism is the argument, "What if the enemy won't play according to the same rules?"

Murray's third major proposal came in February 1956. As a professional power engineer, he declared the AEC's atomic power program was pretty much a figment of its own imagination and would continue to be so until the Government stepped in to build the first commercial-scale plants itself and showed private industry the way. Murray called for a billion-dollar 5-year program. He particularly stressed the need for this country to develop atomic power as an instrument of foreign policy. He urged that the United States bring this power source and the assurance of better living conditions to its friends abroad, in the developed and the underdeveloped countries. And he

warned that if this country didn't, Russia and Britain surely would.

The Murray proposal was later wrapped up in a bill sponsored in the Senate by GORE of Tennessee, and in the House by HOLIFIELD of California. To remove it from the private versus public power issue, the bill's sponsors specified that the AEC should spend $400 million to build and operate the first commercial-scale atomic powerplants on its own installations, to satisfy its own governmental power needs. This was to differentiate it from TVA, which, as a public-sponsored power network, supplies both public and private users and in this way outcompetes the private utilities.

Strauss would have none of it—neither the Murray proposal nor the Gore-Holifield bill. He argued there was no need for a Government subsidy program; that private industry was perfectly capable of developing atomic power—with the AEC standing by as a research partner; that this approach would produce the most economical and efficient atomic power in the long run; and that the Government had no business at all becoming an atomic power producer. Strauss told the Joint Committee he particularly didn't like the way the Gore-Holifield measure directed the AEC to proceed. This, said the Chairman, was the kind of wording you use to your valet.

The Gore-Holifield bill was passed by the Senate, but with Strauss' vigorous opposition it met defeat in the House. Now, with Britain, Russia, and soon France going ahead in the atomic power business and American industry still discussing blueprints, Strauss recently indicated he may consider having Government do some of the first powerplant construction—if private industry really decides it can't.

Before Congress adjourned last summer, Strauss and Murray had a final conflict. So far the United States has only one commercial-scale atomic power plant underway. This plant, started at Murray's instigation and largely financed by the AEC, goes into operation at Shippingport, Pa., later this year under the aegis of the Duquesne Light Co. Strauss, to counter the Gore-Holifield bill, had to do better than merely point to a single commercial-scale atomic powerplant, largely Government-financed. The nearest one off the drawing boards was that of the Power Reactor Development Co., which was to be financed by a group of private utilities and manufacturing concerns under the leadership of Walker L. Cisler and the Detroit Edison Co. The design is the most advanced known, a "fast-neutron, breeder-type" reactor which promises to produce more fissionable material than it consumes in making power.

Strauss, in testifying before the House Appropriations Committee in early August, expressed such confidence in the Cisler reactor that he said he would be leaving for the shores of Lake Erie within the next few days to turn the first shovelful of earth on the site. Murray, out of town during the Strauss testimony, rushed back the next day to tell the Appropriations Committee the AEC's own high-level Reactor Safeguards Committee had given the Cisler proposal an adverse safety report. Chairman CANNON of Missouri, furious at Strauss for not having come clean, wrote in his report that the AEC Chairman either was "deceiving the Committee as to the actual progress of the Detroit Edison project, or he intended to force the AEC licensing of this project in disregard of public safety."

At about the same time, Strauss was asked by the Joint Committee why he hadn't informed them that Detroit Edison's Cisler was acting as the International Cooperation Administration's power consultant abroad while he was in the power business in the United States. Snapped Strauss at Senator ANDERSON: "I assume that you would not care to have us run a clipping service."

Subsequently Strauss and a Commission majority, in an extraordinary action, overruled the AEC Reactor Safeguards Committee's adverse report. Murray again dissented. Strauss turned the first shovelful of earth last August. But the consternation is far from over. The United Auto Workers and two other unions currently are challenging the Cisler group's right to have a construction license—both on safety and financial grounds. And should the Commission rule against them, the unions intend to take the matter to Federal Court.

What issues lie ahead for Strauss and his Commission—amicable and not so amicable—can only be unraveled with time. But it seems apparent that once dissenter Murray passes from the atomic scene, the healthy give-and-take in determining AEC policy will pass with him. Something of Strauss and something of Murray are essential to both the success and the failure of the AEC. That is why any forthcoming harmony in the AEC may have dubious value.

Address by John S. Bugas, Vice President, Industrial Relations, Ford Motor Co., at the Industrial Relations Conference of Michigan State University, East Lansing, April 24, 1957

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS BY JOHN S. BUGAS, VICE PRESIDENT, INDUSTRIAL RELATIONS, FORD MOTOR CO., AT THE INDUSTRIAL RELATIONS CONFERENCE OF MICHIGAN STATE UNIVERSITY, EAST LANSING, APRIL 24, 1957

I am honored by your invitation to participate in this series of lectures, and have looked forward to this occasion with a great deal of pleasure and anticipation.

You are to be complimented on sponsoring so challenging and imaginative a project as this cross-sectional look ahead at 1975. Certainly all of us can benefit by lifting our sights occasionally beyond the immediate and urgent problems of today, or even of next year and looking ahead to the far goals—reminding ourselves of the wonderful possibilities that lie ahead of us if we are wise enough and courageous enough to bring them to reality.

I am aware, of course, that anyone who attempts to predict the course of industrial relations over the next 18 or 20 years runs some very grave risks—not the least of which is the possibility of becoming too optimistic over the chances for calm, reasonable, and sound settlement of future labor-management differences. That explains, I think, why predictions of this kind are usually based on the obvious or are projected so far into the future that the prophet can be sure of being far removed from the scene—literally or figuratively—when an accounting is due.

In my own case, I hope to be around and active in 1975—as well as during the years between now and then—and, if possible, to play some small part in helping to bring about the kind of future I want to discuss here today. So I take it that, even if no one waits breathlessly to check my score 20 years from now, I'm going to have to live with any mistakes as best I can.

Let me say frankly that it's a great temptation, today as in the past, to speak aggressively against some of the more obvious distortions of fact that are appearing in public statements on labor's current economic goals. I'm sure most of you are familiar with recent pronouncements on record wage increases, the shorter workweek, increased unemployment compensation supplements, bargaining strategy and tactics, and so on. The smoke signals—or should I say the smokescreens—are going up in the hills and apparently the "softening up" process is underway on a number of fronts.

As I say, it's a great temptation to join issue with the obvious excesses right now. But it just doesn't pay to joust with smoke signals. If I read those signals right, there will be plenty of chance to deal with those issues at a time and a place that have already been appointed. I don't think it would do much good right now to send fire equipment up into the hills.

Many people argue that, by remaining silent, management plays directly into the union's hands. They reason that such silence, if it doesn't indicate consent or partial approbation, at least gives the union a tremendous advantage at bargaining time.

Actually, there are two schools of thought on this point: One, that management should promptly and loudly take issue with the various union demands as soon as they are announced publicly; and the other, that bargaining should await the time and place of the actual bargaining sessions.

The reasoning behind the first view is that not only does management have a responsibility to expose and correct promptly what we think are fallacies in the union's statement of its objectives, but that failure to do so creates a general impression that these demands—however unsound or impossible they might be—actually can and should be accepted.

A part of the reasoning behind the second course of action is that labor and management can far more effectively argue and resolve their differences in the relative calm of face-to-face negotiation than in heated exchanges on the front pages or over television and radio. Experience demonstrates that public ballyhoo and position taking has the effect of deep freezing each side into rigid, inflexible postures that neither is willing to change for fear of losing face. What you have then is one party or the other fighting for a slogan rather than for some measure of gain in the actual substance of its demands.

Furthermore, one of the prime purposes of all this sound and fury is to bait management into assuming a posture of seeming opposition to the interests of its employees.

Where we find merit in the union's underlying objectives, we want to be in a position to work out those issues successfully across the table. We don't want to be embarrassed by having opposed publicly some broad, defiant statement of a demand that might later, in actual negotiation, turn out to hide something perfectly reasonable in its actual scope and intent.

An excellent illustration of what I mean is found in our 1955 negotiations with the UAW. Here the union had propagandized so loud and long for a guaranteed annual wage that it very nearly blinded everyone, including itself, to the possibility of a truly sound and workable approach to increased protection against unemployment. The fears and unfounded hopes generated by that unfortunate slogan "guaranteed annual wage," could have resulted in a complete deadlock, meaning no plan at all, or possibly in an unsound concession on the GAW elsewhere in industry

that would have done more harm to employees than good. What we came up with finally, as you know, was the supplemental unemployment-benefit plan.

We in Ford management have tested both theories. Up to the present—and I emphasize "up to the present"—we have believed, and still believe, that it is best in terms of our own management-union relations to wait for negotiations to air our views.

Now, against that rather lengthy background, I'd like to turn to some observations—I hesitate to call them predictions—as to the future. For the sake of organization, I have grouped my remarks under two broad headings: the future of the American economy and the future of collective bargaining.

We at Ford are very much concerned with the long-range economic outlook because we must plan product designs and plant expansion programs for distant markets. We are just now in the process of completing a $2,700,000,000 expansion and modernization program to get ready for the great automobile market we anticipate during the 1960's.

Our outlook is strongly optimistic. That's a view, I think, that is shared by management generally. There is every reason to hope that the American economy will continue to grow and prosper, that American living standards will rise impressively, that in 1975 we will all have higher incomes, greater security, substantially greater educational opportunities for Americans of all ages, better medical care abundantly available to all, increased opportunities for travel, and many wonderful new ways of enjoying our leisure hours.

We can ride into that glowing future behind the tandem horses of technological progress on one hand and our fast-growing population on the other.

Our swelling population means a great and growing demand for all the things that American agriculture and industry produce, and for the growing segment of our economy that services our multitudinous wants and needs.

This is a highly promising picture of our future as it can and should be 20 years hence. We at Ford are certainly anxious to move ahead into the bright future, to do all we can to make the American pie grow as fast as possible and see that everybody shares fully and fairly in its growth.

Across that bright future lies a shadow, however, a danger of which some of our most respected economic minds have repeatedly warned. The threat is of a pervasive and persistent inflationary pressure that could gradually corrode the American dream and destroy not only our individual security but the very underpinnings of our social structure.

An eminent economist, the late Joseph Schumpeter of Harvard, warned a few years ago of a "perennial inflationary pressure" that would threaten the survival of our free society, because he felt we had not the experience with inflation which would enable us to understand its dangers and to act effectively against it. And again Peter Drucker, in his recent book, America's Next 20 Years, predicts that the basic economic problem of the next two decades will not be unemployment but inflation. Economist John Galbraith and many others point to this new danger on our economic horizon.

In part the inflationary threat reflects certain goals and some almost involuntary trends in the current activities of organized labor.

During the present decade ending in 1965 the United States Census Bureau shows that our total population will increase by more than 15 percent while the population of working age will increase by only a little more than half as much. Fewer people will have to produce many more goods for many more people. That fact alone points to a prospect of either demand or cost inflation.

It is clear that meeting the needs of our society and at the same time avoiding serious perennial inflation will require steady increases in both the productivity and output of our industrial system.

This means that, in the interests not only of industrial workers but of Americans in all fields of endeavor, we must have a rapid development of technological progress, which means no direct or indirect barriers to the evolutionary process that has come to be called automation.

But, as is no secret, union leadership has fastened upon automation as a scare word to dramatize almost any and all of the union goals and as a banner to rally the rank and file to the cause.

Again, avoiding inflation and advancing our living standards also requires that we do not prevent the formation of large amounts of capital required to sustain our growth.

But there is serious evidence that inflation is being fostered and that capital formation may be discouraged by attempts of organized labor to seek wage and fringe benefits which the economy cannot safely absorb.

The great question then is: Will organized labor share in orderly economic progress or will it inexorably promote constant inflation and economic dislocation? This question lies at the root of the current debate about the wage-price inflation cycle.

We are now in the midst of a great debate as to whether wages or prices are the real villain in recent inflationary increases. Labor leaders stoutly maintain that the worker is not interested in unduly enlarging his share of the national income. Presumably he merely wants to share equitably in the increasing productivity of the American economy.

I realize that I may not be viewed as an entirely unbiased spokesman in this matter. I strongly recommend that anyone seriously interested in the problem seek the opinion of entirely impartial and objective economists. Then it is up to the public at large, to people like you in this audience, after hearing what industry has to say in this regard and what the unions have to say to draw your own conclusions.

In our view there is a strong factual case that the threatened inflationary spiral which so concerns the economists is a wage-cost-price spiral, and not the reverse. Historically, over a period of many years, output per manhour for the economy has grown at an average annual rate of slightly more than 2 percent. This is the divisible growth which makes possible the rising living standards enjoyed by the great bulk of Americans.

But lately we find a great and growing effort on the part of organized labor not only to increase its share of a growing pie but actually to eat the pie before it is baked. Wage and fringe benefit packages since 1954 have exceeded 5 percent a year in key industries. Average hourly earnings in manufacturing, which exclude the cost of fringe benefits, increased 10 percent from mid-1955 to the end of 1956.

Increases of this magnitude could not be absorbed through greater productivity. Output per man-hour rose only 2 percent a year for the economy as a whole in 1955–56.

There was a consequent cost pressure against prices. The prices of goods and services bought by workers did not start rising, however, until after the first quarter of 1956. A rise in the cost-of-living was not a justification for the size of labor packages initially. Once the higher labor costs were reflected in consumer prices, however, we had a spiral of higher wage demands to catch up with a rise in prices generated largely by increased labor cost.

Union leadership has used profits as the scapegoat, claiming that prices did not have to be increased. The facts are that employee compensation accounts for 78 percent of the income generated in manufacturing (and in corporate business as a whole). The Government absorbs another 12 percent in profits taxes. Profits remaining for dividends and reinvenstment in the business are a relatively small portion of the total pie.

Furthermore, profits have not shared in the advancing economy since 1948. Employees and the Government received all of the $40 billion increase in income generated in manufacturing between 1948 and 1956.

I do not intend to make a speech on economics today. I do want to bring to your attention what I think is a vital fact of economic life: Growing labor costs have outstripped productivity, profits, and in point of time, prices. I hope that this will raise some questions in your mind.

Who, for example, has gained most from industry's technological advances and the vast capital investment of the postwar years?

Can we continue to absorb increments in labor costs above and beyond the normal increase in productivity without bringing about cost inflation?

Finally, if increased investment fails to produce increased profits, can we continue indefinitely to develop and attract the capital necessary to sustain progress?

Let me point out that industry has been put on notice that even bigger labor-cost demands lie ahead, and so the likelihood is that there will be continuing strong pressures of the kind I have just described. The growing economic and political power of the great unions, which I will discuss in some detail in the balance of this talk, lends a great and somewhat ominous significance to this picture.

I would ask, then, whether it is not time for all of us, including those who fill the ranks of American organized labor, to look long and hard at the implications of this very human but unrealistic desire to eat the pie before it is baked.

Now, let's turn to the question of what we can look for in terms of labor-management relations. In view of some of the statements that have been made about the factory of the future, perhaps I should start by saying that I expect the automotive industry to be employing production and maintenance employees in very large numbers in 1975. I believe that their services will be just as essential to automobile making as they are now. Moreover, I believe that the great bulk of these hourly employees then, as now, will be represented for purposes of collective bargaining by the UAW, or whatever name the organization may have at that time. And I anticipate that there will continue to be an adequate supply of problems and differences of opinion between management and organized labor covering terms and conditions of employment for these employees.

I would also predict that we will continue to place basic reliance on the collective bargaining process for dealing with these differences and problems.

Certainly it is my fervent hope that free collective bargaining will still be the dominant tool relied upon by unions and management for working out both their mutual problems and their differences. This implies, of course, that there will continue to be strikes, since there is no way of eliminating this possibility without destroying free bargaining in the process.

With all its imperfections—and there are many of them—collective bargaining is the only process we in this country have been able to hit upon to resolve disputes between management and its organized employees in a manner consistent with our American ideals of individual freedom and free competitive enterprise.

I certainly hope also that, by 1975, reasonableness and responsibility will have come to replace emotional hysteria and naked force as the dominant characteristics of the bar-

gaining process. I like to think forward to a future in which the results increasingly will be dictated by factual consideration, calm appraisal, and regard for the mutuality of interest in a healthy enterprise.

But let us be clear on this point: There is nothing invitable about these predictions. Collective bargaing as we know it is not a preordained institution whose continued health and development will be automatic. It can be preserved as an institution consistent with basic human freedoms only if it is supported by an informed public opinion—a public understanding which recognizes clearly both the conditions which will foster its development and the dangers which can destroy it.

I would like to consided with you briefly some of those conditions and some of the dangers. I do not speak with rancor, but I want to speak candidly, because, I find some aspects of the current scene deeply disturbing.

There are, on the one hand, positive and encouraging signs. For one thing, by and large, unions clearly are gathering more intelligence, more learning, more ability, and more sophistication into their leadership and their staffs. This has paralleled similar developments in management. These attributes are essential to sound and healthy collective bargaining. Without them, a truly responsible approach to the process is impossible. Responsibility on the part of both management and labor is the one indispensable element to good collective bargaining.

Furthermore, there can be no question that management and organized labor have learned, from first-hand experience, better ways of dealing and living with each other—certainly that has been true in Ford-UAW relationships. This has been helped greatly by, among other things, the Federal Government's recent policy of minimizing intervention in legitimate collective bargaining disputes, and thus reducing one of the major deterrents to the development of a real sense of responsibility in the parties.

Whether these encouraging signs are transitory or truly point the way of the future depends on whether the underlying conditions that largely have fostered their development are strengthened or destroyed. There are, as I see it, two things which might come about to destroy these conditions; First, one side or the other might possess such dominant economic power that bargainging in form would be dictation in fact; secondly, one side or the other might gain such great political power that collective bargaining would largely be supplanted by Government regulation.

Effective measures to prevent management from gaining such dominance have long been a feature of American society. As a matter of fact, there is in America today no dedicated, organized management movement in any way comparable in power—economic or political—to the organized labor movement. Furthermore, the diversity of management responsibilities and interests, the competitive instincts which characterize its thinking, and the nature of its objectives all work against the development of any such organization. The manager's basic purpose is not, per se, to deal with employees or labor unions, but to plan intelligently and operate his business successfully.

On the other hand, in today's great international unions we find a great and growing concentration of economic and political power. The generating forces for continuing growth and centralization of power are abundantly present within them. We see the appearance of all the trappings of entrenched power, the growth of bureaucracy, of hierarchies, of empire building. Uncontained, the movement could become like a glacier, moving steadily and inexorably, sweeping aside all that lies in its path.

A striking example of the institutional nature of organized labor's power drive is furnished by its recent emphasis on the necessity, from its viewpoint, of organizing white-collar and professional employees. It is quite clear that this determination basically is neither prompted by the traditional desire to protect its negotiated standards from competition, nor responsive to any significant feeling of need or desire on the part of the employees themselves. On the contrary, the talk at the top has been primarily about ways in which the unions can sell these employees on the virtue of being organized. The reason for this drive has been made abundantly clear: It is to enhance the power of the union leadership by extending its influence and domination over substantially greater numbers of individuals.

The continued growth and development of this monolithic institution raises disturbing questions as to whether sufficient checks and balances against its power now exist, and clearly suggests that at the very least it be kept under close and constant scrutiny.

In the public's appraisal of this situation, there is one central fact which should never be forgotten: The mass trade-union movement takes deep pride in being a militant, fighting institution. In the final analysis the leadership of mass labor organizations is responsible to, and dependent for its power upon, the membership it attracts and serves. The strongest, most successful leaders in the mass trade-union movement are those who have a full understanding of this fact and its implications. They are those who most fully comprehend and adroitly direct the emotional force and organizational strength which can be mobilized through the martial concept of closing ranks against the common enemy.

Many union organizations, as might be expected, are engaged in a great promotional effort to convince the public that organized labor is representative of the public as a whole, equally zealous to safeguard the interest of all elements of society. And I would not deny that many union leaders recognize the interdependence between the well-being of labor and that of others. I would not deny that many of them may believe the doctrines and policies they espouse would benefit not only labor but others. Moreover, I do not deny that many union leaders sincerely would prefer to see collective bargaining carried on in a more rational and business-like way than it is today—if internal union politics and the techniques of leadership would permit this. These things are not relevant to my point.

Examine the statements that union leaders make to their membership, read the literature aimed at their constituents, observe the activities and records of their conventions and one must realize that the power and tenure even of those union leaders who present the most calm and reasoned aspect to the outside world depend on appearing to their constituents as fighters defying all dangers and obstacles to advance the group interest. Indeed, so ingrained is this concept in the institutional dynamics of the mass union movement as it exists today that union leadership would have to invent an adversary if it did not have one.

An equally disturbing fact is that organized labor's power puts it in position to stifle some public criticism of its activities. Clearly the power to suppress adverse comment by those outsde the movement who know labor best— the management people who have daily dealings with it—is a factor to be reckoned with. The reluctance of many people in management to speak out is not a mere matter of distaste for the vilification—the name-calling, the accusations of reaction and antiunionism—which labor frequently heaps upon its critics. We who enter this field presumably recognize that this is one of its occupational hazards—that even though it is far from necessary to the promotion of union interests, at least it is a sort of impersonalized phenomenon flowing naturally from the dynamics of mass unionism. (And I am not implying that all the name-calling comes from one side of the table: There has been far too much of this sort of thing on both sides.)

The real basis for this reluctance to speak out is the union's power of economic retaliation. Retaliation need not take the form of a dramatic strike, called for that purpose. It can be made effective in a countless variety of subtle ways—but they all add up to more trouble, more cost in the shop, more difficulty in getting along with the union. Too often management decides not to risk it, and this is not healthy.

I'm not saying these things simply to be critical or condemnatory. These are facts, as I see them, which have a real and direct bearing on the public interest. For the conclusion is clear—granted the most enlightened and intelligent union leadership, the contexts within which that leadership must operate make it unrealistic to expect adequate self-restraint and voluntary moderation on the part of the union. Checks and balances are not built in; and when they come from without, it must be expected that unions will fight them, with outcries that the very existence of unionism is threatened.

While intelligence, reason, and moderation have come to play a larger role in bargaining than was the case 10 or even 5 years ago in many industries, it does not follow, as is often suggested, that this is evidence of a new maturity brought about automatically by the passage of time. In part, certainly, it has been made possible by the emergence of dominant leadership from the earlier internal struggles for power.

I am convinced, however, that it would not have occurred in nearly the degree that it has if it had not been for two other factors. For one, the Congress of the United States demonstrated in 1947 that abuses resulting from an excessively one-sided balance of power would be met with public disapproval and governmental measures. The other was the change in the Federal Government's policy on intervention in collective-bargaining disputes. Both had the effect of imposing from outside the necessity for exercising a greater sense of responsibility by organized labor.

It is significant, however, that despite the mildness of the restraints imposed by the Congress, they have chafed the leadership of organized labor as a challenge to its power.

In fact, the existence of Taft-Hartley has since been used as one of the rallying cries for intensified activity by labor on the political front. There have been other reasons given. And there have been, and likely still are differences of opinion within the unions as to what labor's role and objectives in the field of public politics should be.

Whatever the historical background, the fact of the matter is that organized labor has jumped into politics solidly with both feet and with the avowed purpose of exerting every possible effort to elect its friends and defeat its enemies at both the local and national levels. Apparently, for this purpose an enemy means anyone who isn't in the union's camp. The coordination and enhancement of organized labor's political strength has been given as one of the primary benefits aimed for in the merger of the AFL and CIO. It contributes not only money and campaign propaganda, but also, in many instances, the services of its ready-made political and organizational machinery.

The record will not support the thesis advanced by some union leaders and others, that labor's increasing concentration on political activity is primarily defensive. Its objectives are to me quite clear and to be expected—one is to assure, if it can, that the Government will not serve as an effective brake or counterbalance to labor's forward drives; the second is to promote substantive objectives with respect to terms and conditions of employment through legislation rather than at the bargaining table. There is good reason to be concerned that the objectives of influential elements within the movement may go considerably further even than this.

To repeat, my personal conviction is that free collective bargaining will still be the basic tool of union-management relations 20 years hence. However, I cannot emphasize too strongly my feeling that if organized labor achieves the dominant political position for which it strives, it is almost certain that free collective bargaining, as we know it today, will have become simply an interesting historical fact.

The public at large ultimately will determine, either by timely action or by inaction, whether or not this will be so.

One of the basic decisions the public must make is whether reasonable and effective restraints on their institutionalized political activities shall be placed on and enforced against unions, and whether the nature and extent of such permitted activities shall be kept in balance with those of other organized interests within our body politic.

Some union leaders have sought at times to minimize the importance of organized union political activity by reference to striking examples of their inability to deliver the labor vote. It is perfectly true that there have been many such examples, some of them rather striking. More important, however, is this truth: The union leadership regards such instances as serious failures, and is constantly at work improving the means and techniques for maximizing its ability to deliver the vote.

One of the serious issues facing the Nation is the adequacy and equity of the rules governing political activities by the various organized groups in our society.

A prominent labor leader is fond of remarking that freedom is indivisible. With this generality we are in complete agreement. I have been intensely interested in the union's concept of freedom as it bears upon our American tradition of a private enterprise economy. Freedom is not preserved by proclamations that it exists. There is small comfort to be derived from statements endorsing freedom in the abstract by those who simultaneously advocate wide and severe restrictions on the exercise of freedom in a wide range of specific instances.

I do not pretend to know what the political and social objectives and goals of all organized labor are, much less what the individual subjective beliefs of all or the majority of its leaders are. Because we deal principally with the predominant union in our industry—which is one of the strongest, most influential unions in the world today—I follow its activities and thinking more closely than those of others. And I must confess that I find a reason for grave concern on this score.

I may say at the outset that we sometimes find it difficult to reconcile that union's professed belief and faith in the American system of private enterprise with many of the Government measures it has advocated. More specifically, I will say quite frankly that we have felt considerable misgivings about the union's seeming eagerness to build up a great public fear about automation and its alleged consequences if Government does not intervene.

We have been extremely curious about the specific objectives encompassed by the program of Government action the union advocates under the attractive-sounding generality of assuring "* * * that the fruits of technological advance are fairly shared."

In May of 1956, the UAW played a leading role in an International Automotive Conference in Paris held by the Automotive Department of the International Metalworkers Federation. The president of the UAW is also president of this automotive department. One of his principal assistants was the chairman of the conference.

Automation was a principal topic of discussion at that conference. In his opening address to the delegates, the chairman made this statement: "We should concern ourselves also not only with the development of a practical trade-union program, but also turn our thinking to what policies and programs should be advanced at the Government level. While we in the States may have done some pioneering on automation, because the problem hit us somewhat earlier, and developed our guaranteed employment plans and a host of other specific collective bargaining approaches, we as American trade unionists have much to learn from the European experience as regards mobilizing our labor political strength for social gains at the political level, if we want to benefit by the experience of our European colleagues."

The conference resolution on automation is far too long to read all of it here, but I am going to read enough to enable you, I believe, to judge its implications. After reciting certain Government responsibilities in general terms, the main body of the resolution sets forth specific and detailed objectives in the field of Government action, a part of which I quote:

"We propose, and in our respective countries we will insist, that governments prepare without delay to carry out these responsibilities through specific measures of the kinds outlined below.

* * * * * * *

"(c) Measure to insure fair distribution of the fruits of automation:

"This objective requires that prices be reduced to reflect the sharply reduced costs of production flowing from automation. Depending upon the particular circumstances, governments may fulfill this responsibility by rigorous investigation and full public exposure of profiteering, whether by monopolies or otherwise; by setting price ceilings for particular commodities where they can be administered effectively; by the breaking of monopolies through the creation of additional publicly owned production capacity with prices set so that, through competition, they drive down the prices set by the private profiteers; and by codetermination and outright nationalization.

"(d) Measures to regulate the volume of investment and to direct the flow of investment capital in accordance with the needs of the economy as a whole:

"In addition to regulating the volume of investment, it will be necessary in economies experiencing rapid technological advance to insure that investment is channeled—

"(i) so as to provide ample employment opportunities in distressed communities; and

"(ii) under some circumstances, toward industries and activities offering expanded employment opportunities as against those seeking merely to modernize in order to reduce labor requirements."

I will leave it to you to decide how much freedom would survive the adoption of that program.

Now, you may question whether this resolution, in view of the international character of the conference at which it was passed, is truly representative of thinking in the UAW. I have asked myself this same question. I cannot answer that definitely, I suppose. But I can tell you this: the official report of the proceedings named as its principal architect a top member of the UAW's headquarters staff. The record of the proceedings does not indicate that the resolution departs from the desires of the UAW representatives who participated.

There are other straws in the wind. The official newspaper of the UAW's largest local, which covers our River Rouge location, has just featured a series of articles purporting to analyze the problems posed for the union by the automobile industry. (According to the editors, "Although the solutions * * * are not necessarily officially those of the Union, we believe them to be well reasoned * * *.") The problems are attributed to the existence of competition in the industry, which is attacked as being "a blind law," "unrestrained," and "mad." What chiefly distinguishes these articles from others of their kind is that they state explicitly the conclusion that is implicit in their premise. Again I quote:

"The only effective answer to the new challenge to security posed by the present conditions in the industry lies in a comprehensive program of Federal regulation. Only such a wide ranging program would tackle the problem at its source. Such a program, and its effectiveness, can best be illustrated by showing how it could cope with the problems that have been listed in this series of articles" (Ford Facts, March 23, 1957).

The article among other things advocates that rigid rules on inventory accumulation be set up for all companies and enforced by law, and states:

"Just as in the Korean war the percentage penetration of any given company would be set in advance by Government action" (Ford Facts, March 23, 1957).

And so on. The program of regulation advocated is, as advertised, comprehensive indeed.

I must tell you frankly that I have on a number of occasions heard the top men in the UAW as well as leaders in other unions express general views that are at odds with the kind of thinking implicit in these statements and resolutions. What then are we to believe?

In any event, I have a very deep conviction that the overwhelming majority of the American people are opposed to the kind of thinking reflected in such statements and resolutions.

It is important that all of us deal in facts, not fancies, that we understand the nature of our institutions and of the dynamic forces a work in our society, so that we can relate the particular to the general and evaluate correctly the flood of propaganda which is continuously loosed upon us from all sides. Above all, we must recognize this clear truth: First, overwhelming political power in the hands of any single interest group is an extremely dangerous thing.

So much for the political problem, as such. I would like to suggest to you certain other areas in which an informed and alert public opinion can contribute to the preservation and improvement of free collective bargaining.

One of these has to do with the difference between behaving responsibly and merely sounding plausible to a particular audience. The distinction that I seek to draw here is that between rationality and mere rationalization. This requires objective evaluation of the fine-sounding positions and statements publicized by both labor and management.

I think it is fair to say that management, more than labor, has learned to take, and has the motivation to take, a balanced approach to its problems. In the nature of its function, it must take into account a number of varied interests in arriving at its decisions. This is so because the health of the enterprise depends vitally and directly on management's ability to achieve a proper balance among all of these sometimes conflicting interests.

Stockholders, customers, employees, and even its relationships with Government and the communities it serves are directly, im-

mediately, and simultaneously affected by a company's decisions on wages, prices, investment, and other such matters. It thus is in a position fundamentally different from that of a union, whose basic concern is primarily with the reactions of its membership.

All of us should be alert to the fallacy in the plausible-sounding thesis that the economic power of management and labor can be measured in terms of the dollar resources shown on their respective books. The basic economic power of unions does not lie in their relative dollar resources, but in their power to withhold an essential ingredient in the productive process.

Similarly, management's strength in a labor dispute is not measured by the dollars on its balance sheet. Its dollars do not represent fat stored in a vault; rather, they represent plants, tools, equipment, design costs, work in process, and countless other committed assets devoted to the purposes of the enterprise. These assets must remain active and productive if they are not to be dissipated. Let me conclude, then, by emphasizing this point: Management plays—and must continue to play—a vital and constructive role in advancing the well-being of its employees. The function of maintaining balance imposes on it the obligation to resist unsound and excessive union demands, not only in the interests of its customers, its stockholders, and the community, but also—and importantly—for the long-range welfare of its employees themselves.

It is inherent in the nature of things that unions will make excessive demands which call for resistance. This, of course, exposes management to all sorts of charges by union leadership, which, as I remarked earlier, needs an "enemy."

It is important that there be general understanding of this union tactic. For it is essential to the preservation of the bargaining process that both the nature and the indispensability of management's role be understood.

I referred earlier to the developing monolithic union power with its absence of built-in limitations, and to the growing danger that, in the course of time, bargaining in form might become dictation in fact. Only with the support of broad public understanding of management's essential contribution in balancing the militant force of mass unionism will free collective bargaining continue to be the dominant instrument of management—union relations in the future.

You might conclude from all this that I foresee a cataclysmic struggle—a final great battle for power between labor and management, with all of the harm and suffering that such a conflict would bring both to the protagonists and to the Nation as a whole. I don't. I am confident that, granted a reasonable equality among the interplaying forces and a realistic and equitable system of checks and balances, both management and unions will have the good judgment and foresight to avoid a showdown. In balance, these two great forces can continue to play their vital roles in building and strengthening our economy. This is what the American people expect and this, I believe, is what they will demand.

What America Means to the Free World

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. VAN ZANDT. Mr. Speaker, the following article by Mr. Robert T. Oliver, head of the department of speech, Pennsylvania State University, University Park, Pa., appeared in a recent issue of Vital Speeches of the Day and is a timely discussion of our foreign-aid program:

WHAT AMERICA MEANS TO THE FREE WORLD—NOT TOO LITTLE BUT TOO MUCH

(By Robert T. Oliver)

What does the rest of the world think of the United States? Do we have any real friends? Or does our aid buy only neutralism and a thin veneer of undependable alliances covering up the real problems?

There are many aspects of America, and naturally they do not all look alike when viewed from abroad. Also, there are many kinds of people in the free world, and they do not all look at the United States from the same point of view, nor with the same basis of judgment. Finally, any American traveling abroad carries along his own preconceived set of prejudices and convictions, which he naturally tends to see reflected back to him even when he tries with great sincerity merely to record attitudes that really do exist.

Nevertheless, the question of how America is regarded by its free world allies is not necessarily entirely inscrutable. It is a question which I have studied on 7 trips to the Far East and 3 to Europe and the Middle East, over a span of 10 years. I have talked with heads of state, with newspapermen and diplomats, and have trudged many miles through the back streets of cities and villages in a score of nations—and have ridden in second-class compartments on dozens of railways, in order to soak up impressions from those the Lord must love for He made so many of them—the ignorant and the poor.

My conclusion is startlingly different from much that is written, repeated, and regretfully believed about the opinion the Eurasian world entertains of the United States. What I find is that the reservoir of good will toward America is not being drained dry but is so overflowingly full that it appears to be fed from an inexhaustible fountain. We are so well liked, so much trusted, so genuinely admired that our friendly allies feel no more restraint in criticizing us than fond parents do in scolding a warmly loved child. Our misunderstanding of the occasional sharp criticisms is as naive as that of the child, who threatens to leave the home where he fears he is hated, merely because his hands were slapped when caught drawing pictures on the wallpaper.

No one in his senses can doubt that everywhere the United States is regarded as the most successful, materialistically, of any nation ever established on this earth. Our standard of living is not only accepted for what it is—the highest ever achieved—but is generally far exaggerated by foreign observers. I have been seriously asked by an astute English businessman if it is not a fact that the average American family owns three automobiles. It is commonplace to hear the remark, "Of course, you Americans can afford it"—whether the "it" refers to colored television, trips to Europe, or college education for girls as well as boys.

Neither is it true that this view of our material success is snobbishly condescending. There can be no underestimation of the value of good food, warm clothing, solid housing, and adequate medical care by the 2 billion people around the world who are not quite sure of having even enough to eat—and who, when they see their one suit of clothes wearing out realize it will take everything they can earn for anywhere from 2 months to a full year to buy another. Naturally there is some jealousy in their view of our vastly superior wealth. But only in a few isolated instances have I ever found any indication of a belief that our wealth is gained through the exploitation of the world outside. And these few expressions have been in situations of high tension—as when, during the Suez crisis, an English workingman sitting beside me in London's underground asked if I thought it was true that American policy was dominated by oil producers who wanted a monopoly of the European market.

Convincing evidence of the real admiration the Eurasians feel for our American materialistic achievements lies in the eagerness with which they adopt, adapt, and imitate American goods of almost every kind. Canny Italians market a P. ARKER fountain pen, making the period after "P" as inconspicuous as possible. Japan named one of its industrial towns Usa, so that it might stamp the magic letters, "Made in USA" upon its goods. Scanning newspaper advertisements in any country from neutralist Burma to aloof Sweden, a frequent recommendatory tagline is, American style, or Just like American. These tags may refer to cosmetics or electric sweepers, to radios or raincoats.

There is no question whatsoever that American movies are the most popular in the world. So are American songs—so much so that the current jukebox favorites in Kansas City are also being hummed by taxi drivers in Tokyo and Calcutta, and sung by teen-agers from Seoul to London and Copenhagen. American magazines are not only sold everywhere in the world in their original editions, but a surprising number are translated and republished in many languages—even though they have to sell at triple the price of native-edited competitors. This is not at all because of a paucity of productive genius outside the United States. Many foreign films, songs, and periodicals compare very favorably with their American competitors. But they can not match the magic prestige that clings to the United States product.

The story is different—but only in detail, not basically—when we shift to the views held of United States foreign policy. The opportunity to criticize McCarthyism was seized upon and magnified around the world with the same zestfulness that spices gossip in any American community about the peccadilloes of the locally prominent families. Gossip is never so entertaining as when it concerns the unquestioned aristocrats.

The charges that have been so frequent in many nations (from India to England) that the American fear of communism has been hysterical have reflected attitudes we should have been able to understand. In part the charges have been self-protective, in an attempt to justify the inability of lesser powers to engage in similar manifestations of defensive strength. In part they have been the relaxed chatterings of peoples who have, indeed, felt safer than we have felt—but only because of their knowledge of the deterrent power of our weapons and policies. In part the criticisms have been diversionary, to direct attention away from the shortcomings of political regimes only weakly established.

Far more typical of real feelings is the message urgently pumped into me in Geneva, in 1954, by a group of English foreign news correspondents, who pleaded that the United States must give up its partnership approach to foreign policy, and really lead—even to the extent of going far beyond what its allies would agree to in combating Russian aggressiveness. "We had to move first in 1914 and 1939, when you weren't ready," they told me. "Now the job is up to you. If you insist on waiting until our politicians feel strong enough to make a stand, the world will be lost just as surely as it would have been if England and France had refused to challenge Hitler until America was ready to come in with them."

One evening in New Delhi, in late September 1956, I spent inthe company of a group of prosperous young Indian businessmen, who were seriously ill at ease. After a while they explained their embarrassment. "We know Nehru's policies are unpopular in

America," they said. "The fact is, we don't like them either. We think his neutralism is shortsighted and foolish—and that Krishna Menon, in particular, is doing India and the whole free world a vast amount of harm. But we simply have to depend on Nehru's leadership to hold India together. He's a curious man, but the only leader we have. We hope you Americans will be tolerant and understanding and not think too badly of us. Just wait and you'll find we have always been on your side." It was almost pathetic to find how eagerly this most independent-minded people was to deserve and hold the good opinion of Americans, which they obviously value chiefly because of their conviction that our course is right.

One subject I've always been most assiduous in investigating is whether our foreign beneficiaries really do fear that the economic aid they get from us is actually a form of colonial control. They certainly do not. The generosity of the United States is commonly regarded almost with awe—for no other country is able even remotely to afford such a luxury of self-abnegation. Despite the horrendous efforts of Russian propaganda, those who receive the aid (as well as their wistful neighbors who would like the same) simply refuse to believe it is motivated by ill will.

While in the Philippines I talked for several hours about this problem with President Ramon Magsaysay. Manila was a good city in which to raise the subject, for Magsaysay's political rivals talk loudly and often about the "imperialism" of American military bases and economic programs in the islands. After assuring me in a dozen ways that this was nothing but empty froth, Magsaysay abruptly jumped up, motioned me to come with him, and took me out to a small village where an irrigation project had just been completed with American aid funds. There, in a half-hour speech, he told the farmers in exact terms how much American money was spent for the pumps and pipelines, and what it would mean in family income for all of them. There was no doubt that they were with him.

Korea is one country that has most strongly disagreed with what it considers American "appeasement" of the Russians—particularly in the signing of the truce which left the Red Chinese armies in North Korea. But nowhere among the 22 million Koreans has there ever appeared anything remotely approaching anti-Americanism—no "Yankee home" signs on the walls—no popular outcries against the (not always commendable) behavior of American troops.

What I have found, everywhere I've gone, amongst all manner of people, is the deep conviction that the United States is the one strong nation of the world whose motives can surely be trusted. And this is something new in the history of the world.

It was not at all the attitude of other nations and peoples during the periods of dominance by Spain, Napoleon's France, or England. It was not the feeling of other countries about Hitler or Mussolini. And it certainly is not the view held of the Soviet Union—not really even by such "neutralists" as Nehru and Sukarno.

How the so-called "uncommitted" peoples feel about Russian communism is illustrated by a story told me by a hotelman in Geneva. "We all say," he explained, "that communism is like the Garden of Eden. For, just like Adam and Eve, the Communists have no clothes, no food, no houses, and no right to knowledge—and they call it Paradise."

A question of most importance is whether, in view of the high regard in which the United States is held around the free world, we Americans can safely sink back into a complacent conviction that the cold war is going well and is certain to be won. Without qualification, the answer has to be a resounding No.

The free world does indeed think highly of us—in large part because it expects better of us than that. It expects that we will make any sacrifice necessary to prevent the communization of the world—for we, above all others, would suffer the greatest loss in such an event. The free world knows that no other people is so well informed as are Americans. They think we must be smart in order to achieve what we have. They know we are willing to fight to defend others, for we did so in World Wars I and II. They lean upon us for leadership and their disappointment is greatest when we fail to provide it.

President Eisenhower's action in regard to the English and French action in Egypt has been reluctantly popular—even to a degree among the thoughtful majorities in England and France, so soon as the first hot resentment wore off. Where our prestige has suffered most has been in our failure to take any similar kind of positive leadership in dealing with the far more tragic events in Hungary. Even in this situation, I have been told by many individuals in Austria (for I was in Vienna when the Russians roared into Budapest with their tanks), Switzerland, Italy Spain, and Portugal, "After all, there was nothing more you could have done."

But this is always followed by the expression of a strong hope that "America will do something to help the captive people get free." The faith in American power, in American intentions, and in American wisdom remains strong. If anything, the danger is that such sentiments are not too weak, but that they are too genuine and widespread.

"Leave it to Uncle Sam. He'll finally pull us through" is a feeling far more prevalent than any superficial criticisms or doubt. What we have principally to contend with is not a growing antagonism of peoples around the world, but a jellying dependence upon us which loads us with a responsibility we may not be ready to assume. This is the real problem. Our growth to maturity as the greastest power of the free world depends primarily upon our forgetting the nagging worry that we may not be liked and awakening to the fact that everywhere the people who value liberty are consigning more and more into our hands the task of preserving it.

New York Supreme Court Decision Becomes Final Holding That a Labor Union Has Legal Right To Expel Communist Party Members

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of a decision of the New York Supreme Court upholding the right of labor unions to expel Communist Party members. The history of this significant decision came to my attention recently when presiding as subcommittee chairman of the House Un-American Activities Committee in 5 days of public hearings in New York City. It was called to my attention by Attorney David I. Ashe, of the New York bar, who wrote me the letter dated May 1, 1957, as hereinafter set forth and which letter gave me the present status of this case in which he appeared as counsel of record for the defendant. His letter to me of May 1 comes in answer to my inquiry to him asking to be informed of the status of this decision by Justice Hammer. I submit the text of a booklet which was printed and circulated extensively by the New York District Council No. 9, Brotherhood of Painters, Decorators, and Paperhangers of America entitled "The Right of the Painters Union To Expel Communist Party Members":

LAW OFFICES, ASHE & RIFKIN,
New York, N. Y., May 1, 1957.

Hon. CLYDE DOYLE,
New House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: In answer to your inquiry of April 30, Harry Sacher filed a notice of appeal to the appellate division of the New York Supreme Court from the decision of Justice Hammer, which I sent you. However, he never perfected the appeal. The result was that Justice Hammer's decision became the final one in the action.

You will also be interested to know that this decision has been cited time and again by other courts on the subject of Communists in labor unions.

Since I do not receive the CONGRESSIONAL RECORD regularly, I would very much appreciate your sending me a copy of it should the decision be reprinted there.

With kindest regards,
Cordially,

DAVID I. ASHE.

THE RIGHTS OF THE PAINTERS UNION TO EXPEL COMMUNIST PARTY MEMBERS—COURT DECISION UPHOLDING RIGHT OF LABOR UNIONS TO EXPEL COMMUNIST PARTY MEMBERS

FOREWORD

The Communist Party has been a menace, plaguing the American labor movement for many years. Those of us who have observed at first hand the activities of Communists in labor unions know only too well from bitter experience that their tactics of deceit, subterfuge, character assassination and blind subservience to the dictates of their party and Soviet Russia over and above the welfare of the memberships of the unions, if not checked, can only lead to the destruction of free American labor unions. Some unions have sought to meet this Communist Party threat by bringing Communist Party members on charges of one kind or another, such as slandering union officials, dual unionism, etc. Other unions have preferred to face squarely the fact that the Communist Party is an enemy of the labor movement and have provided in their constitutions that no Communist may be a member of these unions. The constitution of the Brotherhood of Painters, Decorators, and Paperhangers of America contains the following provision:

"Any member who associates himself with any organization or group that expounds or promotes any doctrine or philosophy inimical to or subversive of the fundamental principles and institutions of the Government of the United States or Dominion of Canada, the American Federation of Labor or of this brotherhood, shall be granted a hearing by the local and, if found guilty, shall be disciplined in the manner provided for in this constitution.

"The German-American Bund, the Nazi Party, the Fascist Party, the Communist Party, and organizations which subscribe to the doctrines of the foregoing shall be conclusively presumed to be organizations within the condemnation of the foregoing section."

In spite of this provision the Communist Party leaders in our union insisted that no

action could be taken against them because a union had no right, under the Constitution of the United States, to bar Communists from membership. However, acting on the advice of our attorney, David I. Ashe, that we had such power, the New York Painters District Council No. 9 brought charges against three of our members who are Communists and we expelled them from the union. The three—Louis Weinstock, Morris Gainer, and Morris Davis—are all former officers of the district council or of their local unions.

Immediately upon their expulsion they started an action in the New York Supreme Court to declare the expulsion illegal and to reinstate them as members of the union. The decision of Justice Ernest E. L. Hammer, holding that the district council had the right to expel these Communist Party members, is, we believe, one of the most important that has ever been rendered by any court in a case involving the internal affairs of labor unions. Not only is it the first court decision on this subject, but it is a masterly analysis of the role of Communists in unions and of the power of unions to protect themselves against this danger.

Because of its significance for the entire labor movement, we have reprinted Justice Hammer's decision in this pamphlet.

LOUIS CAPUTO,
President,
MARTIN RABBACK,
Secretary Treasurer,
New York District Council No. 9, Brotherhood of Painters, Decorators, and Paperhangers of America.

JULY 1950.

SUPREME COURT,
COUNTY OF NEW YORK.

LABOR UNIONS—EXPULSION OF MEMBER OF COMMUNIST PARTY

A labor union may, under a provision in its constitution permitting it to do so, expel a member on the ground that he is a member of the Communist Party. A provision permitting expulsion on this ground, included in the constitution by an amendment adopted in pursuance of a power to amend which was reserved in the constitution, is binding on one who was a member before the amendment was adopted and who did not acquiesce in its adoption. The provision is not contrary to public policy and does not infringe on political or other constitutional rights.

Louis Weinstock et al., plaintiffs, v. *Harry Ladisky and company, District Council No. 9, Brotherhood of Painters, Decorators, and Paperhangers of America*, defendant.

Decided May 18, 1950.

Sacher & Sacher for plaintiffs.

Ashe & Rifkin (David I. Ashe of counsel) for defendant.

Hammer, Justice: The action herein is by plaintiffs for a mandatory injunction commanding the defendant to reinstate them as members of the Brotherhood of Painters, Decorators, and Paperhangers of America from which they were expelled after trial.

There are two motions presented for decision. The plaintiffs have moved for an injunction pendente lite restraining defendant from interfering with or depriving plaintiffs of any of the rights which they have as members of the Brotherhood. The defendant has cross-moved for an order dismissing the complaint on the ground that it does not state facts sufficient to constitute a cause of action. The complaint sets forth in its allegations all the facts and annexes to it the constitution of the Brotherhood and a copy of the trial board's report. The affidavits supporting and against the motion for a temporary injunction reiterate or admit the facts shown in the allegations of and exhibits attached to the complaint. Plaintiffs assert interpretations, constructions, and conclusions which are denied by defendant, whose affidavits also assert interpretations, constructions and conclusions. The facts shown by the complaint and it exhibits and also by the affidavits will be stated.

The defendant District Council No. 9, Brotherhood of Painters, Decorators and Paperhangers of America (hereinafter referred to as the district council or as the union) is a labor union of painters and paperhangers in the Boroughs of Manhattan and the Bronx. It exists by virtue of a charter granted to it by the Brotherhood of Painters, Decorators, and Paperhangers of America (hereinafter referred to as the brotherhood), an international labor union organized at Baltimore, Md., March 15, 1887. It is affiliated with the American Federation of Labor. The district council in turn, consists of 12 local unions chartered by the Brotherhood in Manhattan and the Bronx. Each of these local unions elects delegates to the district council. The brotherhood, the district council and the local unions are all voluntary, unincorporated associations.

Each plaintiff is a journeyman painter. Plaintiffs were admitted to membership in defendant and its locals, Weinstock in local union No. 499 in 1926. Gainer in local No. 905 in 1935, and Davis in local 1035 in 1927. Plaintiff Weinstock was until July 1947 secretary-treasurer of the defendant district council.

The brotherhood is governed by a written constitution, which is binding upon the brotherhood, all district councils and all local unions, and all members of the brotherhood.

The constitution of the brotherhood provided in section 107 thereof as follows: "(d) Any member who associates himself with any organization or group that expounds or promotes any doctrine or philosophy inimical to or subversive of the fundamental principles and institutions of the Government of the United States or Dominion of Canada, the American Federation of Labor or of this brotherhood, shall be granted a hearing by the local and, if found guilty, shall be disciplined in the manner provided for in this constitution. (e) The German-American Bund, the Nazi Party, the Fascist Party, the Communist Party and organizations which subscribe to the doctrines of the foregoing, shall be conclusively presumed to be organizations within the condemnation of the foregoing section. The decision of the general executive board that an organization expounds and promotes principles condemned in the foregoing section, shall be final and binding. (g) The foregoing sections and the authority conferred therein shall apply with equal force and effect to district councils and other subordinate bodies."

The complaint alleges that the above provisions were added to the constitution of the brotherhood in 1941, many years after each of the plaintiffs became a member of the brotherhood. It is further alleged that none of the plaintiffs at any time prior to the commencement of this action assented to or acquiesced in the adoption and inclusion of said provisions in the constitution of the brotherhood. It will be assumed that no act or word of any of the plaintiffs evidenced assent or acquiescence. Whether in law the new provision became binding upon them will be discussed later.

On December 7, 1949, charges were filed with defendant district council against each of the plaintiffs under the above provisions of section 107 of the constitution. As to each of the plaintiffs the charges alleged that he "* * * is a member of the Communist Party and has consistently associated himesif with other organizations which subscribe to the doctrines of the Communist Party and which expound and promote doctrines and philosophies inimical to and subversive to the fundamental principles of the Government and the American Federation of Labor. He has consistently followed the Communist Party line of sabotaging of union activities within the brotherhood and the district council, thus causing untold and irreparable harm to the membership of the union, to the entire brotherhood and the American Federation of Labor." Each plaintiff was served with a copy of the charges and with a notice to appear for trial on January 28, 1950. On that date each plaintiff submitted to the district council's trial board a typewritten statement challenging the authority of the district council to exercise original jurisdiction of the charges brought under section 107 and stating each refused to stand trial or participate in the proceedings. The trial was adjourned to February 4 and thereupon each of the plaintiffs repeated this position. The trial board then proceeded with the trial of each of the plaintiffs in the manner prescribed in the constitution. At the conclusion thereof the trial board submitted a report to the district council finding that each of the plaintiffs "is a member of the Communist Party and of organizations which subscribe to the doctrines of the Communist Party" and recommending that the plaintiffs be expelled from the brotherhood. The district council on March 1, 1950, approved and adopted the findings and recommendations of the trial board. This procedure is also that set forth in the constitution.

Plaintiffs contend (1) that the charges preferred against them were vague and indefinite and in the circumstances the district council and its trial board were without jurisdiction to try and to expel plaintiffs; (2) that section 107 of the constitution is contrary to public policy and the law of the land; (3) that no evidence was adduced before the trial board that the Communist Party was an organization or group inimical to or subversive of the fundamental principles and institutions of the United States and of the American Federation of Labor and (4) that the expulsion of the plaintiffs being, as a matter of law, null and void, they have a right to apply directly to this court for the relief prayed for herein without exhausting their remedies with the brotherhood.

It is shown that the plaintiff Weinstock in his written objections presented to the trial board stated that the charges were the same as charges filed against him in 1945 and which upon the trial at that time resulted in a dismissal by the district council. It is contended that the charge made against each plaintiff that "he is a member of the Communist Party" is vague and indefinite. The fact is, nevertheless, that each plaintiff admits that he was and is a member of the Communist Party. Under the circumstances it cannot be held that the charge was vague and indefinite, as each knew exactly and with definiteness what was meant by the language used. What union members understand by the language of such charge, and what Americans generally understand will be later discussed. Suffice it to say here that such an accusation has connotations which if spoken or written and not shown to be true would be actionable per se entitling the injured party to damages (*Mencher* v. *Chesley*, (297 N. Y., 94, 102); *Grant* v. *Reader's Digest Association*, (151 F., 2d, 733, 735, cert. den. 326, U. S. 797)).

At the outset, plaintiff's contention that section 107 is not binding upon them because they never assented or acquiesced in its adoption and inclusion in the brotherhood constitution will be considered first, because if it be well founded it would entitle them to the relief sought. The plaintiffs concede that except for reasons of race, creed, color, or national origin (civil rights law of New York, sec. 43), a labor union may legally exclude anyone it pleases from admission to membership, even upon the ground of membership in any particular political party. They allege that once a person has been admitted to membership and has thereupon acquired rights of membership, including the

right to earn a livelihood as such member the union does not continue to have any such power. They assert as a conclusion that a union may not expel such a member for violation of a constitutional amendment later adopted, as in the present instance, making membership in the Communist Party ground for expulsion. It is admitted by plaintiffs that in the existing state of the law a union may exclude from admission to membership any person who is a member of the Communist Party solely on the basis of such membership. Plaintiffs' concession in effect is that if at the time of a given member's admission to such union its constitution or bylaws provided that membership in the Communist Party was a cause for expulsion, the member could be expelled for joining such party. The theory of the concession apparently is that such a member would have violated the contract made with the union which he joined. Reliance for the position taken is placed in *Polin* v. *Kaplan* (257 N. Y. 277, 281).

In respect to plaintiffs' statement that the defendant union as an original proposition had the right to fix qualifications and grant or refuse membership it is fair to observe that the conceded matter is not open to question and in fact is no concession (*Simons* v. *Berry* (210 App. Div., 90, 92, 205 N. Y. S., 442); *Colson* v. *Gebler* (192 Misc. 520, 80 N. Y. S., 2d, 448); *Matter of Miller* v. *Ruehl* (166 Misc., 479, 2 N. Y. S., 2d 394).

We advert to the plaintiffs' claim that they may only be expelled for breach of contract under authority of *Polin* v. *Kaplan* (*supra*). Such a breach of the contract would furnish a good ground for such expulsion. What is overlooked is that were there a violation of the union's constitutional provision in respect of membership in the Communist Party such violation in and of itself would warrant such expulsion, and, if there were a contract, is what would render the breach of contract of such substantial significance as to constitute an expellable offense. Under the circumstances the reason for a choice between these two grounds of expulsion would be insignificant.

The plaintiffs assert that the question posed by the present case is: May a union, whose constitution contains provision for its amendment, expel a member solely because of his membership in the Communist Party where the amendment was added to its constitution long after the member joined the union? Plaintiffs answer the question by asserting that under the general reservation of amending power existing here the contract may not be changed in any essential particular at the election of those in whose favor the reservation is made. The provision in question, plaintiffs charge, is a radical change in the contract which was not within the contemplation of the parties.

As plaintiffs rely on *Polin* v. *Kaplin* (*supra*) it is deemed appropriate to make note of a quotation therefrom (p. 281): "The constitution and bylaws of an unincorporated association express the terms of a contract which defines the privileges secured and the duties assumed by those who have become members. As the contract may prescribe the precise terms upon which a membership may be gained, so may it conclusively define the conditions which entail its loss. Thus, if the contract reasonably provides that the performance of certain acts will constitute a sufficient cause for the expulsion of a member, and that charges of their performance, with notice to the member, shall be tried before a tribunal set up by the association, the provision is exclusive, and the judgment of the tribunal, rendered after a fair trial, that the member has committed the offenses charged and must be expelled, will not be reviewed by the regularly constituted courts (*Belton* v. *Hatch* (109 N. Y., 593)), *Matter of Haebler* v. *New York Produce Exchange* (149 N. Y., 414). A court cannot review the proceedings or reexamine the merits of the expulsion,' (Per Miller, Judge, in *Wilcox* v. *Royal Arcanum* (210 N. Y., 370, 376).)"

In *White* v. *Brownell* (2 Daly, 338; 4 Ab. Prac., N. S., 162), the court, in reference to an unincorporated association, said: "The constitution of the association, and its laws agreed upon by its members, contain all the stipulations of the parties, and is the law which should govern. The members have established a law for themselves. * * * The court must regard the constitution and laws of this board as the contract by which all the members are bound. The court cannot make any other contract for the purpose than they have solemnly made for themselves."

Looking at the constitution of the brotherhood, it is found that prior to the 1941 convention it was provided therein that: "No member shall at any given time belong to more than one local union of the brotherhood, nor become a member of any dual organization of painters, decorators, or paperhangers, nor become a member in nor affiliate with, in any way whatsoever, the German-American Bund, nor the Nazi Party, nor the Communists' organization, nor any other foreign alliance opposed to the principles of the American Federation of Labor, under penalty of expulsion. (At the 1941 convention the above provision was renumbered as section 107 and was amended to read as heretofore set forth.) In the circumstances, the amendment to the constitution must be said to be a gradual, progressive, evolutionary change, and not a radical one, in the constitution and laws of the union. This is so regardless of whether it was within the contemplation of the parties when plaintiffs entered into membership in the union. The United States District Court for the District of Columbia, in the case of *Durkin* v. *Murray* (civil action No. 5376–49, decided Feb. 6, 1950, 17 Labor Cases, par. 65, 601), inter alia held: "Plaintiffs seek to justify their failure to exhaust their remedies within the CIO by concluding and alleging in their complaint that the CIO had no right to amend its constitution to provide for expelling a union for devoting itself to the program of the Communist Party rather than the objectives of the CIO; that the UOPWA's certificate of affiliation with the CIO constitutes a compact barring the revocation of that certificate and the expulsion proceedings are improper or illegal. It does not appear to the court from the complaint and from plaintiffs' exhibits that such conclusions are warranted."

The terms of the contract between an unincorporated association, such as a labor organization, and its members, are expressed in its constitution and bylaws. When the constitution provides for future amendments by the vote of the membership in a manner provided, that is a term as binding and enforcible as are the other presently expressed terms.

In *Everett* v. *Supreme Council, C. B. L.* (236 N. Y., 62, 68) it was held: "Where the reservation of authority to amend a charter or the constitution and bylaws of a society is clear, the right to have the rate of assessment and the amount of benefits continued as originally provided is not vested or fixed beyond the possibility of reasonable changes to meet new conditions."

The holding in *Kehlenbeck* v. *Logeman* (10 Daly, 447) requires that the issue of the alleged unreasonableness of the amendment expressed in section 107 must be resolved against the plaintiffs. There, at page 448, it is stated: "It has been held in this court upon more than one occasion that in respect to the bylaws of a voluntary association the court has no visitorial power, and cannot determine whether they are reasonable or unreasonable, and the only question which it can examine is whether they have been adopted in the way which has been agreed upon by the members of the association."

No issue is presented questioning that section 107 was adopted in the manner and by the vote required by the constitution of the brotherhood. The facts show it was duly and properly adopted (*Cipriano* v. *Societa San Salvatore* (161 N. Y. S., 284)). It was, therefore, a valid amendment binding upon all the members.

Every association is under the duty to protect the interests of its general membership rather than that of a few individual members. The private interest of the individual is subservient to the general good of the whole body (*Marshall* v. *Pilots' Ass'n* (18 Pa. Sup. Ct. 644, 651)).

While plaintiffs appeal to public policy to protect them in the pursuit within the defendant union of their avowed purposes as Communists, public policy as it is expressed in the Labor-Management Relations Act of 1947 (61 Stat., 136, 146, 29 U. S. C. Supp., secs. 141 and 159 (h), amending the National Labor Relations Act of 1935, 49 Stat., 449, 29, U. S. C., sec. 151 et seq.) indicates that any such appeal is futile. Section 9 (h) of that act denies the use of all facilities of the National Labor Relations Board and all benefits of the Labor-Management Relations Act to a labor union "unless there is on file with the Board an affidavit executed contemporaneously or within the preceding 12-month period by each officer of such labor organization and the officers of any national or international labor organization of which it is an affiliate or constituent unit that he is not a member of the Communist Party or affiliated with such party, and that he does not believe in, and is not a member of or supports any organization that believes in or teaches, the overthrow of the United States Government by force or by any illegal or unconstitutional methods." The constitutionality of section 9 (h) was upheld by the Supreme Court of the United States on May 8, 1950 (*United Steelworkers of America* v. *National Labor Relations Board*).

Senator WAYNE MORSE, former dean of the University of Oregon Law School, in opposing the Taft-Hartley Act, made a statement in the Senate on May 13, 1947, which may well be regarded as expressive of the viewpoint of all the Senators, relative to communism. He said (CONGRESSIONAL RECORD, p. 5290): "I need not reiterate my opposition to Communists and their beliefs. I shall fight communism with all my energy because it destroys the liberties of freemen. I want to say that communism must be stamped out of the free labor movement of this country, if we are to preserve the rights of free workers and protect the dignity of the individual." In *National Maritime Union of America* v. *Herzog* (78 F. Supp. 146) the statutory three-judge court of the District of Columbia in the course of its opinion said: "Before the enactment of the Taft-Hartley Act, of which section 9 (h) is a part, extensive hearings were conducted by congresional committees at which alarming evidence was presented that Communists in positions of authority in trade unions tend to foment industrial unrest and strife, not to attain legitimate economic aims, but to serve political purposes; that they thus impede the flow of commerce in the very teeth of the act's purpose to promote it. Quotations from the abundant evidence presented to the committees would prolong this opinion unduly. Suffice it to say it afforded ample basis for the formation of a legislative policy to curb Communist influence in labor relations (p. 162). * * * In view of the avowed purpose of both the Wagner Act and the Taft-Hartley Act to bring about a peaceful solution of labor quarrels, and the discernible purpose of the Communist Party to foment strikes and industrial disorders, Congress could well conclude that persons occupying key positions in the administration of labor laws should not be subject to conflicting loyalties or interests (p. 171). * * * Admission is sought here to

the arena of exclusive bargaining in which the conduct of the agent will affect not only the rights of its members and all other employees, but the interests of the public, too. Accordingly, having with good reason diagnosed communism as a contagion which is deleterious to labor relations, Congress has the power to ask a prospective bargaining agent whether he is so affiliated (p. 171)." The House of Representatives Committee on Education and Labor has stated (H. Rept. No. 245, 80th Cong., 1st sess., p. 39): "Communists use their influence in unions not to benefit workers but to promote dissension and turmoil." The Communist Party and numerous organizations fronting for it are listed as subversive by the Attorney General of the United States. And President Truman, in his veto message to Congress after the first passage of the Taft-Hartley bill, said (CONGRESSIONAL RECORD, p. 7503): "Congress intended to assist labor organizations to rid themselves of Communist officers. With this objective I am in full accord." J. Edgar Hoover, Director of the Federal Bureau of Investigation, has branded domestic Communists as belonging body and soul to the Red Hitler at Moscow and has asserted that by seeking to destroy the fabric of democracy they have forfeited their constitutional liberties (address, Masonic Grand Lodge of State of New York, Hotel Astor, May 2, 1950, the New York Times, May 3, 1950). Gen. Douglas MacArthur, in advising the Japanese people to consider possible legislation of the Japanese Communist Party, pointed out that while the Communist Party professes championship of the workers' rights in order to enlist support within labor's ranks, events abroad demonstrate that the worker loses all rights under Communist political rule. The general warned: "The issue is therefore clear and unequivocal—how far may the fundamental human rights be exercised unabridged without becoming the instrument of their own destruction. It is an issue which confronts all free people forewarned that others have lost their liberties because, blindly following an ideal, they have failed to see the dangers inherent in reality. While it is the universal desire of all freemen to preserve unabridged the exercise of their personal liberties, there is thus an issue projected into every law-abiding society which may not be ignored without hazarding the survival of liberty itself" (the New York Times, May 3, 1950).

The Smith Act (18 U. S. C. 2385), to which reference is made below, is declarative of the policy of the United States Government to rid itself of communism and supporting groups. All three branches of our Government have recognized the dangers of communism and Communists. The Communist threat to the American trade-union movement also has been exposed by trade-union leaders. In 1948 President Philip Murray, of the Congress of Industrial Organizations, attacked Communist leaders of unions who condemned their own country, but failed to criticize "a single, solitary thing that Russia has done since the end of the war" (10th Constitutional Convention of the Congress of Industrial Organizations, November 22, 1948, Portland, Oreg.). At the same convention Walter Reuther, president of the United Automobile Workers, castigated those bent on destroying the American labor union and said that "they have a simple question to resolve in their own minds and their own hearts. It is a question of loyalty. Are they going to be loyal to the CIO or loyal to the Communist Party? Are they going to be loyal to this country or loyal to the Soviet Union? You cannot be loyal to both." William Green, president of the American Federation of Labor, in a broadcast of September 6, 1948, warned of the hypocrisy of communism and told of efforts of Communists to capture control of unions. Mr. David Dubinsky, president of the International Ladies' Garment Workers Union, has stated that "the spirit and aims of totalitarian communism are totally distinct from and hostile to the ideals and policies of free trade unionism. * * * Communism in unions and other organizations is conspiratorial. It is based on the elimination of majority rule. It aims to establish the one-party state as the sole power over all groups. * * * Free, democratic trade unionism and communism do not mix. One cancels out the other. To be free the unions must keep the Communists out of leadership which they would use to advance their party interests" (A Warning Against Communists in Unions, the New York Times magazine, May 11, 1947). Speaking at a section meeting of the American Civil Liberties Union, held at the Waldorf Astoria Hotel in New York on February 22, 1950, Mr. Will Herberg, of the International Ladies' Garment Workers Union, said: "All this (the rights of unpopular minorities), however, has no relation to Communists. Communists do not constitute a union minority in the ordinary sense. Communists constitute an antiunion force in the service of a foreign dictatorship whose purpose it is to destroy all labor organizations and to subject mankind to ruthless totalitarian slavery. Communists are enemies of the labor movement in the same sense as people serving as undercover agents of open-shop employers; indeed, they are far more pernicious than the latter could ever be. * * * Allegiance to the Communist Party seems to me to be an obvious disqualification for any position of power, trust, or influence, whether it be in the Government, in the educational system, or in trade unions." The obvious conclusion is that section 107 is not contrary to the public policy of the United States.

It should be noted that voluntary, unincorporated associations, including labor unions, have inherent power, somewhat akin to the police power of a State, to provide for the welfare of their members and to regulate their affairs so as to attain the objects and purposes for which they were constituted. Aside from and independent of any provisions in this constitution and by-laws, a labor union has the right of self-protection and self-preservation, and may discipline a member or officer for conduct tending to thwart or destroy its objects. Such power may be exercised even to the extent of expelling a member from the organization (*Polin* v. *Kaplin*, 257 N. Y. 277, at pp. 282–3, supra; *Yockel* v. *German-American Bund*, 20 N. Y. S., 2d 774, 777; *Belkin* v. *Spiegel*, Supreme Court, Special Term, N. Y. L. J., December 29, 1938; *Otto* v. *Tailors' P. & B. Union*, 75 Cal., 308, 314; *Weiss* v. *Musical Mutual Prot. Union*, 189 Penn. St. 446; Martin, "Modern Law of Labor Unions," sec. 306, p. 380; License Cases, 5 How., 504, 583; *People* v. *Ryan*, 230 App. Div. 252, 255). The rule is succinctly stated by Martin, supra, as follows: "The power to expel or otherwise punish a member for conduct in violation of its fundamental objects, and which if persisted in would have a tendency to thwart or destroy such objects or bring the union into disrepute is inherent in the union." The Court of Appeals in *Polin* v. *Kaplan* (supra, at pp. 282–283), also gave recognition to and reiterated the principle that in every union constitution "* * * there inheres a term binding members to loyal support of the society in the attainment of its proper purposes, and that for a gross breach of this obligation the power of expulsion is impliedly conferred on the association."

While it must be found that the plaintiffs have failed to exhaust their remedies under the Brotherhood constitution (*Browne* v. *Hibbets*, 290 N. Y., 459, 465; *Lafond* v. *Deems*, 81 N. Y., 507, 514; *Keller* v. *Lindelof*, 268 App. Div., 877, aff'd 294 N. Y., 717; *Cabana* v. *Holstein-Friesian Assn.*, 196 App. Div., 842, 850, aff'd 233 N. Y., 644) and that would suffice to dispose of the motions presented, if the motions may be decided on the merits and the litigation thus brought to finality, then obviously it would be proper to make such a final determination.

In the interest of such finality, therefore, the charges by plaintiffs that the amendment in question is contrary to public policy as an unwarranted abridgement of the freedoms guaranteed by the First Amendment to the Federal Constitution, is the equivalent of a bill of attainder and is violative of the 14th amendment to the Constitution, will be accorded further consideration.

It must be clear that the amendment attacked does not infringe on the political rights of the plaintiffs. In the public forum they may talk, act, and vote as they have a mind to, provided they violate no public law. Section 107 of the Brotherhood constitution in no way interferes with the rights of the plaintiffs to hold or express any views or to belong to any organizations with which they choose to affiliate themselves. Their own acts and not those of the union made them members of the Communist party, an organization declared by the union to be hostile to its fundamental purposes. Their own acts of disloyalty to their union, the defendant, subjected each of them to discipline. That a labor union has the power to expel a member for failure to support "the society in the attainment of its proper purposes," is the holding of the very authority upon which they rely (*Polin* v. *Kaplan*, *supra*, at pp. 282–283).

The basic fallacy in plaintiff's argument concerning interference with their political rights is their assumption that as members of the Communist Party they have standing identical with members of other political parties. Of the major parties, one is in control, through persons of its choice, of the executive branch of the Government, and usually of the legislative branch, and is the party answerable to the people for the administration of those branches. The other party is the opposition and critic of the acts and failures of the party in control. Both parties act under and within the Constitution and laws. The main object of the Communist Party, on the contrary, is the overthrow by force, if required, of the Government of the United States and of its Constitution and laws and the substitution in place thereof of the Soviet communistic totalitarian dictatorship. All public officials and officers, as a qualification for office, take an oath to support the Constitution and laws of the United States, and, if a State office, also of the State. Obviously, Communists could not honestly and truthfully take that oath. If such were taken, they would be guilty of willful deception and fraud, as under its cover their party allegiance would require them to conspire and hatch plots for treason, and upon opportunity to spring into destructive action. Plaintiffs assert no evidence was adduced at their trial showing that the Communist Party was inimical and subversive to the United States and the American Federation of Labor. The evidence presented to the trial board was that as Communist Party members the plaintiffs at union meetings preached the superiority of the Soviet Union to the United States and its form of government to the American form—they predicted the fall of China to communism and stated that the United States would be next; they prophesied a depression in this land, which our laws and economic system would be powerless to avert, and which they hoped would hasten the subjection of this country to communism; and they solicited candidates and funds from their fellow union members for the Communist Party. The evidence, among other things, showed that three articles on Hungary appeared in the Communist paper, the Daily Worker, written by Weinstock, and his Communist standing and leadership were

described. There was evidence also that he was a member of the national committee of the Communist Political Association, and that he conducted a course on Marxism and labor at the Jefferson School, a subversive organization, and was grand marshal of the May Day parade, of which the organizing committee was also a subversive organization. The evidence showed statements by Gainer that he admitted being a Communist; also showed him to be a member of the Communist Political Association and heading the list of sponsors of the May Day committee, and other documents in evidence showed he participated in Communist front organizations. The evidence showed Davis to be a member of the Communist Party and of the Painters Educational Forum, a Communist group which in 1950 conducted a meeting at which Davis, Weinstock, Gainer and Jack Stachel, 1 of the 11 Communists recently convicted in the Federal District Court, were listed as speakers. The evidence also showed the distribution at union meetings of Communist leaflets by Davis and that he urged members to join the Communist Party, and documents in evidence showed his participation in Communist front organizations. The report of the defendant union's trial board on the charges against Weinstock, Gainer and Davis recited the findings and supporting evidence as is noted above, is annexed to the complaint and is a part thereof. Such conduct on the part of the plaintiffs was anticountry and antiunion and completely political. Their adherence to the party line, and their acts and statements, foreshadow a resort to violence, a substitution of force for reason, and of bullets for ballots.

There are many instances in which workers have been deprived of their democratic rights, where the courts have granted the required relief (*Irwin* v. *Possehl* (143 Misc., 855, 858)). There are also many instances where under the pretense of constitutional protection union members have sought to continue nefarious acts contrary to the interests of union, of labor, and of country, in which the authority of the union was upheld by the courts (*Ames* v. *Dubinsky*.(70 N. Y. S., 2d, 706), and cases there cited). The emphasis upon the Bill of Rights and the 14th amendment pointedly brings to mind another section of our Constitution, that defining treason against the United States as "levying war against them, or, in adhering to their enemies, giving them aid and comfort" (art. III, sec. 3). The American people have come to the realization that too many assert the protection afforded by the Bill of Rights and the 14th amendment while engaged in conduct closely approximating that definition of treason. We have held that the brotherhood in its constitution not only had the right to provide the terms upon which membership might be gained, but by providing the reservation of amendment it also had the right to define reasonable conditions for continued membership. Section 107 was enacted by the Brotherhood to defend itself from those who would destroy it, and who would give "aid and comfort" to a foreign power, and to organizations and institutions commonly known and labeled as enemies of the United States and of the defendant's parent body, the American Federation of Labor (*Polin* v. *Kaplan, supra; L'Hommedieu et al.* v. *Board of Regents, N. Y. L. J.*, March 16, 1950; *Lederman et al.* v. *Board of Education, N. Y. L. J.*, March 30, 1950).

Contrary to the claim of plaintiffs, section 107 is not equivalent to a bill of attainder. A bill of attainder "is a legislative act inflicting punishment without a judicial trial" (16 C. J. S., sec. 452, p. 902, and footnotes). Bills of attainder have been said to be also ex post facto because passed after the commission of the offense which is to be punished. Chief Justice Marshall stated the accepted definition of an ex post facto law as "one which renders an act punishable in a manner in which it was not punishable when it was committed" (*Fletcher* v. *Peck, Mass.*, 6 Cranch, 87, 138, 3 L. Ed. 162). The constitutional prohibition on bills of attainder applies to legislative enactments passed after the commission of the offense which is to be punished. The defendant's section 107 does not create a penalty for past conduct not then an offense or increase a penalty for past misconduct, and it does not inflict punishments without a trial. It operates prospectively and only in futuro. The constitution of the brotherhood requires the service of charges upon the accused. Section 107 specifically provides that before a penalty may be imposed for its violation the accused member shall be granted a hearing and must first be found guilty. This constitutes due process and cannot be said to be a bill of attainder (*United States* v. *Lovett*, 328 U. S., 303; *L'Hommedieu* v. *Board of Regents, supra*).

Plaintiffs' complaint alleges that the defendant district council did not have jurisdiction to try them on the charges against them under section 107. This contention was made before the union's trial board. Section 285 of the brotherhood constitution sets forth the original jurisdiction of the district councils over certain types of charges. The question of which body or bodies shall have original jurisdiction of charges under section 107 is not referred to anywhere in the entire constitution except in section 107 itself. Section 284 (b) of the constitution provides: "Local unions shall have original jurisdiction only. District councils, the general executive board, and the convention shall have original and appellate jurisdiction, as provided in the constitution." Subdivision (d) of section 107 provides that any member charged with its violation "shall be granted a hearing by the local and, if found guilty, shall be disciplined in the manner provided for in this constitution." Section 107 then goes on to provide in subdivision (g): "The foregoing sections and the authority conferred therein shall apply with equal force and effect to district councils and other subordinate bodies." In March 1949, the general executive board acted on an appeal by a member of the brotherhood against this defendant district council, that the council had failed to act on charges under section 107 filed with the council by that member. On March 31, 1949, the general executive board sent its decision to the defendant council, ruling that "the district council must act on these charges." Courts, in interpreting the constitutional provisions of an unincorporated association, will accept the interpretations placed on such provisions by the organization itself through its officers and authorized tribunals (*Simpson* v. *Grand Internant. of Engineers* (83 W. Va., 355, 98 S. E., 580, cert. denied 250 U. S., 644, 39 S. Ct., 494, 63 L. Ed., 1186); *Shaup* v. *Grand Internat. Brotherhood* (223 Ala., 202, 135 So., 327); *Pratt* v. *Amalgamated Ass'n of Ry. Employees* (40 Utah, 472, 167 Pac., 830; 63 C. J., 663); Oakes, Organized Labor and Industrial Conflicts, p. 32).

Section 64 of the brotherhood constitution provides: "The general executive board shall decide all points of law arising under the jurisdiction of the brotherhood and also all grievances and appeals." The conclusion is that the defendant district council did have jurisdiction to entertain and try the charges against the plaintiffs.

The Smith Act (18 U. S. C., 2385) makes it a crime knowingly to advocate the overthrow of the Government by force or violence or to organize or, with knowledge of its purposes, belong to any group that advocates such overthrow. From the foregoing it is obvious that combinations or agreements directed toward establishing a Communist dictatorship are not innocent activities. There is no constitutional objection to punishing evil-purposed agreements. If the provisions here considered do abridge any rights of speech, press, and peaceable assembly, there is authority for the view that there exists a clear and present danger sufficient to authorize any such possible abridgement as is claimed by plaintiffs to be present in section 107 (*Schenck* v. *United States* (249 U. S., 47, 52); see *Hartzel* v. *United States* (322 N. S. 680)). That there is such a clear and present danger appears to be the unanimous view of the leaders of American labor as we have previously indicated.

While ordinarily facts may not be established by mere legislative declaration and constitutionally should be found only by the courts (see *Tot* v. *United States* (319 U. S. 463), and *Manley* v. *Georgia* (279 U. S. 1)), the evils and dangers of communism to trade unionism and the American democratic form of government are so notorious that a legislative finding of clear and present danger is entitled to very great weight (*Whitney* v. *California* (274 U. S. 357)). The amendment under consideration (sec. 107) is as clear and definite as it can be made in view of the evil it is designed to combat. It is sufficiently clear and definite so as not to constitute a violation of the due process clauses of the United States and New York State Constitutions.

It is a matter of common knowledge that nism both as a threat to our domestic institutions and as a menace to our peace and security. The ruthlessness and unscrupulousness of the Communists and their skill in the use of deception to advance their the vast majority of the American people view the dangers of international communcause is also a matter of common knowledge. It follows that there is imminent necessity for action to be taken to protect trade unionism and the country against those dangers and that the adoption of section 107 was such action, both reasonable and proper. In consequence, the trial, conviclation of section 107, must be held to have been in the lawful exercise by the defendant tion, and expulsion of plaintiffs on the charges served upon them, alleging the viounion of its rights under its constitution.

For the reasons stated, the plaintiffs' motion for a temporary injunction is denied and defendant's cross-motion to dismiss the complaint as insufficient in law is granted.

The Federal Budget

EXTENSION OF REMARKS

OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to insert in the RECORD the text of a letter I received from one of my constitutents. In my opinion this letter reflects clear and sound thinking on the part of the writer, Mr. H. F. Wardwell, 1300 East 92d Street, Chicago.

The letter follows:

BURNSIDE STEEL FOUNDRY CO.,
Chicago, Ill., May 9, 1957.

Hon. EMMET F. BYRNE,
Representative, Third District, Illinois,
House Office Building,
Washington, D. C.

DEAR MR. BYRNE: Senator BYRD, of Virginia, says this budget can be cut $6½ billion. His fiscal knowledge and his integrity are unquestioned. Knowing his conserva-

tism, one can feel sure that this is a minimum figure.

You have, no doubt, seen the March 23, 1957, issue of the Chicago Daily News, the Fantastic Story of Government Waste, by Edwin A. Lahey and David J. Kraslow, which analyzes the Eisenhower budget of $71.8 billion. They read every one of the 1,249 pages. Both men are competent in every way and I believe their evidence would be accepted in any court. They have proved that this budget can be heavily cut. I urge you to work and vote for the maximum possible reductions, not the small nibbling around the edges that has been done so far.

I am sure that you have read on pages 93 through 95 of the April 1957 Reader's Digest the article Our Foreign Aid Program, a Bureaucratic Nightmare, by GEORGE MEADER, a United States Representative from Michigan. Mr. MEADER's qualifications as an investigator make his facts and conclusions unimpeachable. His evidence, and that of many others, proves that economic foreign aid is wasteful and ineffective and that it cannot be justified. I believe that this country should cut off all economic and much military foreign aid.

What good there is in it is more than counterbalanced by the waste, foolishness, and ineffectiveness of the bulk of it. For instance, Great Britain reduces income taxes and cuts defense cost, while here we pay the highest income tax in the world. I urge you to work for and vote for maximum reduction of foreign aid.

I do not expect that you alone can determine the acts of our Government and bring our country back to what I believe is a sound economy and American principles. I do not expect you to wholly agree with me, but if you work for these objectives, you can count on me to support you.

And I know that alone I can influence or accomplish little. However, I employ 280 voters. I will endeavor to have them vote for public officers who are for America first. I will urge others to do the same. I believe there are tens of thousands who feel as I do and will act accordingly.

I hope you will work and vote against the waste, extravagance and squandering that makes huge spending necessary and try to bring us to sanity, economy, solvency and the principles of sound Americanism.

Yours very truly,

H. F. WARDWELL, *President*.

Cotton Can Stand on Its Own Feet

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. ROBERTS. Mr. Speaker, cotton in Alabama is a mainstay to our great State's economy and has been ever a source of concern for me. My feelings on one phase of this subject were incorporated in an editorial appearing recently in a daily newspaper of Alabama's Fourth Congressional District.

Under leave to extend my remarks, I submit the following editorial from the Selma (Ala.) Times-Journal of April 11, 1957:

COTTON CAN STAND ON ITS OWN FEET

An effective blow in behalf of the cotton industry was struck by Fourth District Congressman KENNETH ROBERTS, in an appearance before a House subcommittee considering legislation requiring proper labeling of textile products.

In formal language Representative ROBERTS appeared before the Subcommittee on Commerce and Finance of the House Interstate and Foreign Commerce Committee to urge approval of a pending Textile Fiber Products Identification Act.

All of which boils down to a plea that cotton be given the same protection now enjoyed by wool under provisions of an existing labeling act.

As pointed out by Congressman ROBERTS, the proposed legislation would enable consumers to know what is being purchased, thus protecting them as well as the cotton farmer.

"Cotton has many marvelous characteristics and the cotton industry has invested a great deal of time, money, research, and imagination in perfecting its products, and deserves the right of proper labeling," Congressman ROBERTS added. "If cotton products are not labeled properly, hardship will be suffered by the industry, as well as losses by consumers."

Here is a highly effective argument of a theme on cotton products which the Times-Journal has been preaching for many years. We constantly have maintained that the only factor required to keep cotton in competition with other fibers is an adequate measurement of virtues and faults. Cotton goods give more wear with less upkeep than any others, and public education to this fact by adequate labeling is one of the greatest needs of the industry.

Equalization of Retirement Benefits—More Confirmation of the Congressional Intent

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. HUDDLESTON. Mr. Speaker, once more I call to the attention of the Members the accumulating evidence which supports the basis for H. R. 689, the bill which I introduced on January 3, 1957, and which is entitled, "A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942." Every bit of evidence continues to emphasize the correctness of my position in introducing and seeking the enactment of this proposal to reaffirm the intent of Congress as to parity of retirement treatment of Regulars and Reserves.

On previous occasions I have pointed out that the only question at issue here is the original intent of Congress in enacting paragraph 4 of section 15 of the 1942 act.

Heretofore it has been my privilege to bring to the attention of my colleagues the statements of former Senator Edwin C. Johnson, of Colorado, and of former Representative Dow W. Harter, of Ohio. Both of them fully confirm my contentions in respect to this matter. Now it is my privilege to bring you still another confirmation of that original intent, in the form of a letter I have just received from Vice Chairman of the Civil Aeronautics Board, and former Senator from South Dakota, the Honorable Chan Gurney. Vice Chairman Gurney, who had a distinguished career in the Senate, is continuing his distinguished service to our Nation in the important and responsible position he now holds in the Government. In view of his close association with this legislation in former years, his comments on the congressional intent of 1942, the issue which my bill, H. R. 689, proposes to resolve by reaffirmation, should be of considerable interest to the Members.

Vice Chairman Gurney's letter follows:

CIVIL AERONAUTICS BOARD,
Washington, May 13, 1957.

Hon. GEORGE HUDDLESTON, JR.,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have carefully read your remarks inserted in the CONGRESSIONAL RECORD for February 14, 1957, and April 8, 1957, especially noting the reprint of a letter you received from former Senator Edwin C. Johson, of Colorado. I concur in the Senator's remarks that it was the intention of the committee in the Senate of which I was a member at that time that there should be no discrimination between the Regulars, the Reserve, or National Guard officers.

One of my first committee assignments on coming to the Senate in 1939 was to the Military Affairs Committee, and although I cannot specifically remember any particular pay bill, I do remember vividly the efforts of our committee and the intent of Congress in equalizing retirement benefits for all officers of the Military Establishment, for at that time we were using every effort to bring back into the service the only experience that was available at the start of World War II, and that experience needed so badly was only had by those officers who had served in World War I.

Congress in 1942, and a few years previous to that, was using every effort to induce those experienced officers to come on active duty and to do it quickly. Therefore, in my opinion a contract was made with those who did come back on active duty under the intent of Congress at the time the bill was passed.

With kindest regards, I am,

Sincerely yours,

CHAN GURNEY.

Tenth Anniversary of the Kingdom of Laos, May 11, 1957

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, Indonesia, I announced that I would address from the floor of Congress each one of the participating countries, except the two Communist regimes, on the occasion of their independence celebrations. May 11, 1957, was Laos' 10th anniversary of independence. I would like to congratulate the people of Laos, His Majesty Sisavang Vong and His Excellency Ourot Souvannavong, Ambassador of Laos, in recognition of this event.

For the 10th time the flags flutter high over Laos to commemorate their rebirth

of freedom. In his address delivered at the ceremony of the signing of the Franco-Laotian Treaty, His Majesty Sisavang Vong recalled the origin of their association:

A little more than a half century ago, one of my ancestors, His Majesty Oun Keam, entrusted into the hands of France * * * the destiny of the Laotian Kingdom, whose very existence was then threatened. His Majesty Oun Keam knew that he was safeguarding in this way the sovereignty and the permanence of his kingdom.

However, as nationalism and anti-colonialism spread throughout southeast Asia they found fertile soil in Laos. The idea was the idea of liberty which has had its ardent followers in all climates and all countries. When Laos' time came, its call summoned them too, and they could not hold back. The Laotian people, fired by their own burning desires for freedom and inspired by the examples of their neighbors in the region, actively entered the lists against colonialism and second-class citizenship and thus secured once more their independence.

The attainment of independence was only the beginning of a new life. Well-versed in the lessons of history, the Laotian people realized that the achievement of freedom is not an instantaneous event; it is a process. The seed is planted, but before the tree can take root and grow and spread it has to be nurtured untiringly by innumerable hands. The government established at the close of the colonial era was that of a constitutional monarchy with a king who is popular among his people. A constitution guaranteeing democratic freedoms to the Laotian peoples was promulgated May 11, 1947. Legislative power is exercised by direct universal suffrage.

Less disrupted by Communist aggression than some of its neighbors, Laos has known a smoother transition from colonial status to independence. However, very recently she has had to stoutly resist attempts at Communist-backed encroachments. It is hoped that the forces which are trying to lure Laos from the western camp of the free world will be signally overwhelmed.

I salute Laos upon her many accomplishments during her short period of nationhood and wish for the Laotian people continued success and progress.

Plight of the Small Poultryman

EXTENSION OF REMARKS
OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. WHITENER. Mr. Speaker, in recent days we have heard discussion on the floor of the callous attitude which our present Department of Agriculture has taken toward the small farmer engaged in producing the various commodities.

One type of farmer now experiencing a total lack of appreciation of their problems is the small poultryman in this Nation. An article appearing in the May 10, 1957, issue of Poultryman, a trade magazine for the poultry industry, has been forwarded to me by one of my constituents, Charles E. Jackson, of Shelby, N. C., together with a letter dated May 15, 1957, written by Mr. Jackson, which clearly points up the plight of the small poultryman under the destructive policies of the present administration in this country.

I urge that every Member read Mr. Jackson's letter and the article referred to by him. I feel that it serves as a further warning to all of us that we must be vigilant in protecting the interests of the small farmer in this Nation.

The letter and article follow:

SILER CITY MILLS,
CLEVELAND BRANCH,
Shelby, N. C., May 15, 1957.

The Honorable BASIL L. WHITENER,
Member of Congress,
Washington, D. C.

DEAR MR. WHITENER: The enclosed article appeared in the May 10 issue of the Poultryman. I was surprised in a way to read such an article about a speech by the Assistant Secretary of Agriculture, Earl T. Butz, but then on second thought, I should have known that this is in line with the present administration's way of helping big business.

Integration in any industry leads to monopoly, price fixing, and destruction of free enterprise. It looks as if the Department of Agriculture not only wants integration in the poultry industry, but advises the red meat industry to do the same, thereby forcing the farmer out of the red meat business. I guess the next thing will be to advise the textile industry to grow their own raw material and run the farmer out of the cotton and wool business.

The giants in the feed industry have been trying to get control of the broiler industry for the last several years. At first they started by giving unlimited credit and pushing production to a point beyond the demand. When this happened prices tumbled to below cost of production. Then they started absorbing the losses to the grower and also guaranteeing him a profit of at least 5 cents per bird. The small feed companies and dealers had to go along with this or go out of business. Then the giants started a 2 to 3 cents per pound profit to the grower and absorbing the losses and at the same time pushing production beyond demand. The fall of 1956 and the spring of 1957 brought disaster to some and terrific losses to others. The giants had the reserve to take it and thought the small man would quit. Some did quit but those who were financially able stayed with it. Now the larger milling companies are integrating with the larger processors and keeping the price down. The large chain buyers are also taking advantage of it.

Mr. WHITENER, in Cleveland County, and surrounding areas, the poultry growers are farmers that turned to poultry after they had terrific cuts in cotton acreage and other money crops. They have gone to great expense and in some instances, deeply in debt, to get buildings and equipment so that they could get in business. Integration will ruin these people as well as the small mill, dealer, and processor.

It is bad for the country when one company gets so large that they can control the prices on farm products. This has already happened in the poultry industry. In North Carolina one large processing company is so large that it can set price for the whole State on live poultry. The same is true in Georgia and other poultry areas. Also the large buyers take advantage of this, and can control prices on dressed poultry, by working with the large processors.

Something should be done about this, but I am not sure just what it is. I am afraid that it will be a problem to work out.

I will appreciate it if you will talk with Congressmen from other poultry areas and compare notes with them. Maybe something good can come from it.

I am a small retail feed dealer that has had to go along with contracts and guaranties as stated in the third paragraph of this letter and like hundreds of others like me, I know what it is doing to the industry.

Yours truly,

CHARLES E. JACKSON.

BUTZ HAILS BROILER INTEGRATION AS MODEL FOR OTHER INDUSTRIES

CHICAGO.—Assistant Secretary of Agriculture Earl T. Butz says integration in the broiler industry has produced efficiency "that would make some other industries green with envy."

Butz made the statement in a speech last week before the American Feed Manufacturers Association assembled in annual convention here.

He made the statement in the face of a congressional investigation opening this week into complaints integration has caused the demise of small independent feed dealers and hatcherymen, and made sharecroppers of some farmers.

Integration has been defined by the Agriculture Department as an arrangement under which the production, processing, and marketing of poultry meat is conducted under the management of a single big company which sometimes owns all of the facilities involved.

Butz did not define the term in his speech before the feed manufacturers, some of whom have been charged by small-business men with undertaking to squeeze them out of business by financing integrated operations. These charges have been relayed to Congress and are the subject matter for an investigation by the House Small Business Subcommittee which began public hearings yesterday.

Here is what Butz told the feed manufacturers:

"The trend to integration will spread. When we speak of integration in agriculture, our thoughts nearly always turn to the poultry industry. Production of broilers in this country is now highly integrated, from the incubator to the dressing plant and beyond.

"At the production level, 1 man now takes care of up to 40,000 birds at a time. This means that during the year 1 man can take care of 150,000 to 200,000 birds.

"No longer is the raising of poultry a sideline which enables the farm housewife to earn a little grocery money. It is now big business. The large-scale and efficient organization of production, processing, and distribution have made this striking change possible.

"In the efficiency race, the white meat industry has put on a show that would make some other industries green with envy.

"We have practically eliminated scavenger feeding in the barnyard and on kitchen garbage, killing at the chopping block or by wringing necks, and scalding in a pail and dressing in the kitchen.

"The shift has been to large commercial units raising, say 150,000 birds per man per year, and killing, dressing and processing 2 million birds per plant.

"This kind of integration followed in the wake of rapid and far-reaching scientific discoveries, which almost made mass production of poultry inevitable. * * *

"Large animal production in this country is by no means immune from the possibility of integration. It may not happen in the

same way or to the same extent as occurred in the poultry industry. But the pressure is in that direction.

"We have concentrated broiler production into relatively large units for two principal reasons. In the first place, we have discovered that we can use labor more efficiently. This is a high-cost production item.

"In the second place, this kind of concentration gives us greater control over the environmental factors affecting the bird. This has helped to increase the efficiency of feed conversion in broilers.

"For example, in 1935–39 it took 4.2 pounds of feed to make 1 pound of broiler meat. In 1950–54 this was reduced to 3.1 pounds of feed per pound of broiler meat. We now know how to do this for about 2.5 pounds of feed per pound of broiler, and many producers average at that figure or better."

Butz made no reference to any need for special Government policy regarding integration of the broiler industry. But he indicated it would be a different story when, and if, integration reaches into the cattle and hog field.

"If and when this kind of integration begins to hit the large-animal field," he said "it will precipitate sociological and economic adjustments that will be difficult.

"We will need to study the organization of our production units carefully in order both to minimize the adverse impacts and to maximize the favorable aspects of this development," Butz concluded.

Congressman CHARLES H. BROWN, Democrat, of Missouri, told a news conference at the AFMA convention that his investigating group seeks to compile "a completely factual study of poultry industry practices." He is head of a special Subcommittee on Food Industries, which is an offshoot of the House Select Committee on Small Business.

"The industry has written the story and we want to compile it, reflecting the impact of modern methods of production on small hatcheries, small processing plants, small feed manufacturers, feed dealers, and growers," BROWN said.

"Congress has received complaints from all parts of the country. One-fourth of them have come from New England, one-third from the Middle West, and the balance from the west coast."

BROWN noted that for this reason, hearings will not only be held in Washington, but also on the west coast and in the other sections.

"Regional meetings, dates, and places have not been set," BROWN said, "but all small companies will have a chance to testify without the expense of traveling to Washington."

Resolution Opposing the Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks, I insert the following resolution adopted by the Board of Arlington County, Va., opposing the civil rights bill:

Whereas the attention of the members of this governing body of Arlington County, Va., has been directed to the proposal that the Congress of the United States adopt as law the Keating House bill and Senate bill S. 83, commonly referred to as the civil rights bills; and

Whereas a studied examination of the provisions and contents of these so-called civil rights bills reveals that the principal innovations they would foster upon our people would be the denial of trial by jury, the nullification of many of the provisions of our Bill of Rights, with the substitution of undemocratic and dangerous adjudication of proceedings under our civil and criminal law by fiats from Federal officials which could quickly lead to a vast maze of repugnant civil wrongs; and

Whereas conscientious Americans should not stand idly by and allow social experimentors to attempt to wrest from us our hard won heritage of constitutional government which embodies the common law, the sovereignty of the several States and the individual rights and liberties of the people, carved for us by the sweat and blood of our forefathers at Valley Forge, Bunker Hill, Trenton, and Yorktown, and the preservation of this wonderful heritage now demands no lesser effort on our part: Therefore be it

Resolved, That the Arlington County Board, recognizing the inherent evils that would accrue to our people should these abortive mandates be enacted as a substitute for the law and our Constitution, does strongly urge and pray that the Members of our Congress will soundly reject this proposed legislation and never succumb to the theory of governing the citizens of these United States through the personal whims and edicts of any Federal official.

General Eisenhower's Last Stand

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. WHITENER. Mr. Speaker, I call to the attention of our colleagues an editorial which appeared in the Shelby Daily Star, Shelby, N. C., in its edition of May 13, 1957. The editorial is entitled "General Eisenhower's Last Stand."

I am sure that this editorial accurately sets forth the attitude which a vast majority of people in the South have toward the recent improvident remarks of President Eisenhower with reference to General Lee:

GENERAL EISENHOWER'S LAST STAND

President Eisenhower must have lost his mind over the weekend.

After spending years cultivating a pretty good following in the South, he threw it all down the drain by bringing up the subject of the War Between the States, no less.

We southerners can take almost anything by some Yankee pretending the North won the war. Sometimes we'll even take that if the Yankee will concede that we had the best generals and the best troops, but the hardest luck.

The President had built up a sizable group of supporters in the area south of the Mason-Dixon line. But it's evident now that he's been getting too cozy with Yankee sympathizers.

Not only did he have the audacity to criticize our greatest military mind, but he did it in front of a redcoat general. Those two things taken together are certain to ruin Ike in the South.

Of course, he doesn't plan to run again, so we can't get back at him by not voting. We can, however, sign a petition that he be booted out of the Augusta National Golf Club—and that would surely be a worse blow to him than anything else.

We are disappointed in the President, but he's said it now. He could have spent his afternoon better. The President just didn't realize that when anybody starts stirring around in the hallowed graves of our rebel generals, there's bound to be trouble.

But what's done is done.

Ike is done.

In the South, that is.

Letter to Ike

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Pittsburgh Press, Pittsburgh, Pa., dated May 9, 1957, entitled "Letter to Ike":

LETTER TO IKE

DEAR MR. PRESIDENT: We read on the front pages you are planning a couple of TV speeches to explain the $71,800,000,000 budget to us taxpayers.

It is a formidable undertaking, Mr. President, and we wish you luck.

And having, as always, a friendly feeling toward you, we offer a tip.

Which is: If you want to save some of the pieces of the United States Information Agency, talk to someone besides Arthur Larson when you write that section of your speech.

We know you picked Mr. Larson as chief of the USIA but we don't know why. He is a personable and articulate gentleman, of fine poise and presence. He's a writer of books, a professor of law, and his record as Assistant Secretary of Labor seemed good. We hear he's a whingding of a speech writer.

But really, Mr. President, what Mr. Larson doesn't know about the USIA is getting your administration into trouble.

He was before a Senate appropriations subcommittee yesterday and didn't look good.

He was asked how many USIA employees in Washington were "engaged in gathering, reporting, editing, and processing news." Mr. Larson didn't know.

Apparently he thought he could bowl the Senators into the aisle by mentioning what a prodigious job the USIA did in correcting the Soviet propaganda distortions in the Autherine Lucy case. But when Senators asked exactly what did USIA do, Mr. Larson didn't know. Reminded them he hadn't been in the USIA at that time. Better he hadn't mentioned it.

Mr. Larson wrote a book titled "A Republican Looks at His Party." We hear tell you read it and liked it. It has become the bible of what is called Modern Republicanism.

Know what we think, Mr. President? We think a lot of your budget makers were reading Mr. Larson's book when they should have been reading the election returns. Most of us who voted for you favor less Government spending, not more.

Arthur Larson's role as Mr. Modern Republican doesn't set well.

Did you read the news article in our paper the other day? The one which reported that Mr. Larson didn't vote in the last election? Hadn't voted in five primaries and general elections in which he had been eligible to vote since he registered in Pittsburgh in August 1954.

A Modern Republican who doesn't know how to vote is on a par with a United States information chief who doesn't know how to inform.

Raises the blisters on the backs of precinct workers trying to get out the vote.

What Is the Future of Cotton?

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. DORN of South Carolina. Mr. Speaker, a friend of mine called to my attention a splendid article written by M. C. Rochester of the Agricultural Extension Service. In this article Mr. Rochester very vividly and accurately portrays what has happened to the cotton farmer of the Southeast. This splendid and superb analysis of what has happened to cotton in the Southeast is worthy of the attention of every Member of this Congress and all others interested in the agricultural economy of our country.

The article follows:

WHAT IS THE FUTURE OF COTTON?

(M. C. Rochester, leader, Agricultural Economics Extension Work, Clemson College, Clemson, S. C.)

What does the future hold for American cotton? This is a question being raised by farmers, merchants, bankers, businessmen, industrialists, and others. Each of these groups has a stake in the future of cotton. All are pretty well in agreement that cotton is in serious trouble. This does not mean, however, that the trouble will be fatal, or that it will necessarily be long-lasting. Let's take a close look at where we are with respect to cotton and the direction in which we are going.

As late as 1930 slightly more than 42 million acres of cotton were grown in the United States. About 16.9 million acres were grown in 1956. About 14 million bales of cotton were produced in 1930 and 13 million bales were produced in 1956. From 1930 to 1956 there was a decline of 61 percent in cotton acreage for the United States with only a decline of 7 percent in total production. The average yield per harvested acre jumped from 157 pounds to 408 pounds.

Perhaps more significant for South Carolina and for the Southeast has been the shift in trends within the cotton belt. In 1930 the Southeast (Virginia, North Carolina, South Carolina, Georgia, Florida, and Alabama) produced 35 percent of the total United States cotton crop and the West (California, Arizona, New Mexico, and Nevada) produced only 4 percent. The Delta (Missouri, Arkansas, Tennessee, Mississippi, Louisiana, Illinois, and Kentucky) produced 36 percent, and the Southwest (Texas, Oklahoma, and Kansas) 35 percent. By 1945 the Southeast was producing 30 percent of the total United States crop, the West 7 percent, the Delta States, 40 percent, and the Southwest 23 percent. In 1956, however, the Southeast produced 17 percent of the total United States crop, the West 19 percent, the Delta 35 percent and the Southwest 29 percent. Cotton production has been moving west and moving rapidly since the end of World War II.

CONSUMPTION OF COTTON PER CAPITA IN UNITED STATES DOWN

The consumption of cotton per person in the United States jumped from 30 pounds in 1940 to 41.8 pounds in 1942, and except for year-to-year changes, has declined steadily to 26.5 pounds per person in 1955, and declined further to 26 pounds in 1956. During the period 1945–56 the level of domestic cotton consumption, although it varied some between years, tended to stay around 9 million bales. With an increasing population and cotton consumption remaining fairly stable the result has been a decline in the per capita consumption of cotton.

CONSUMPTION OF MAN-MADE FIBERS IN UNITED STATES HIGHER

The consumption of rayon and acetate per person increased from 3.6 pounds in 1940 to 8.6 pounds in 1955. The preliminary figure for 1956 indicates a drop to 7.1 pounds per person. Thus the 1956 consumption of cotton declined about one-half pound from 1955 and the consumption of man-made fibers declined more than a pound. In 1940 the consumption of cotton per person amounted to 89.3 percent of the total cotton, rayon, and acetate. By 1955 it had dropped to 75.5 percent, but in 1956 it climbed to 78.5 percent. It is too early to tell if the trends that have prevailed in the past are changing, but experience during 1956 indicates that these trends may be changing.

FOREIGN PRODUCTION OF COTTON MORE THAN DOUBLED

The foreign production of cotton has increased at a fantastic rate, jumping from 10,500,000 bales in 1945 to 23,600,000 bales in 1955. The rapid increase in production of cotton in foreign countries, together with the United States production, resulted in the largest world supply on record at the beginning of the 1956–57 marketing year. The increase in cotton production in foreign countries has had a depressing effect on exports of United States cotton. Exports of United States cotton have declined each year since 1950 and dropped to about 2.2 million bales in 1955–56. The export picture, however, is brighter for 1956–57 and may reach 7 to 7½ million bales, but it is not expected that this high rate of export will hold for 1957–58 since the foreign demand for United States cotton is not expected to be as great.

PRODUCTION OF MAN-MADE FIBERS HIGH

Production of all man-made fibers (rayon and acetate, nylon, orlon, glass fiber, etc.) has increased very rapidly in the United States and in foreign countries since 1940. In the United States the production of all man-made fibers increased 145 million pounds between 1951 and 1956. The production of rayon and acetate decreased by about 146 million pounds, but the production of noncellulosic fibers increased by about 292 million pounds. The production of man-made fibers in the United States in 1956 was about 71 million pounds less than in 1955. The decrease was caused by smaller rayon and acetate production, down about 113 million pounds. However, the production of noncellulosic man-made fibers increased by about 42 million pounds.

World production of rayon and acetate has increased steadily during the post-World War II period in every year except 1952. Production in 1956 was about 5,215 million pounds. Since 1951 most of this increase has occurred in foreign countries. In 1956 United States production accounted for about 22 percent of world production but in 1951 it had accounted for about 32 percent. The increase in foreign production from 1955 to 1956 was about 311 million pounds. However, the rate of increase in rayon and acetate production abroad has been declining over the past 4 years. In 1953 production increased over 1952 by about 512 million pounds. This rate declined in each successive year and by 1956 had declined to the 311 million pounds mentioned above.

According to the Textile Organon prices for rayon staple fiber were reduced during the latter part of February and the first part of March. Prices for 1½ denier rayon staple fiber were reduced from 31 and 32 cents a pound to 29 cents a pound by 2 large producers.

EXPORTS OF UNITED STATES COTTON

Over the past 25 years the United States share of the world cotton market has dropped. As exports decline the United States share of the world cotton market drops. In 1931 the United States share of the world cotton market amounted to 66.6 percent. Up until 1956–57 exports of United States cotton have declined every year since 1951, except one. The 1955–56 total of 2.2 million bales was less than half the 1951–52 figure of 5½ million bales. The United States share of the world cotton market has dropped from 47 percent in 1951 to 30 percent in 1953 and about 20 percent in 1955–56.

Exports of United States cotton in 1956–57 are expected to be around 7½ million bales. The United States Government authorized funds for financing cotton exports for the 1956–57 fiscal year (July 1, 1956, to June 30, 1957). Public Law 480 will comprise the largest source of funds for United States financing of cotton exports in the current fiscal year.

Under the export program it is estimated that the Commodity Credit Corporation is losing from 6 to 9 cents per pound, or $30 to $45 per bale on 1956–57 export sales.

SUBSIDY FOR COTTON PRODUCTS EXPORTED

Equalization payments (subsidies) are being made to exporters of cotton products during the 1956–57 marketing year to offset the price advantage gained by foreign mills under the cotton export sales program. These products include practically all items from finished fabrics through waste.

SOIL BANK, 1957 ACREAGE RESERVE FOR COTTON

About 17 percent of the 17.6 million cotton acreage allotment for the United States has been placed in the acreage-reserve program of the soil bank. There was considerable difference in the proportion of the cotton acreage placed in the acreage reserve by areas and States.

In the Southeastern States 27.8 percent of the 1957 cotton-acreage allotment was placed in the acreage reserve. For the Southeastern States, Florida put the highest proportion in the acreage reserve with 40.5 percent and Virginia with 19.4 percent put the smallest portion in the acreage reserve. For South Carolina, 27.3 percent was put in the acreage reserve.

Growers in the Western States put 9.6 percent of the 1957 cotton acreage in the acreage reserve and this was smaller than for any other group of States. For the Delta States, growers put 14 percent of the allotted acres in the acreage reserve and for the Southwest the proportion was 15.7 percent.

COTTON IMPORTANT IN TOTAL ECONOMY

Although the total economy of the South is not geared as closely to cotton as it was 25 years ago, the cotton growers and the industries supplying the goods and services needed by them, the textile industries, bankers, merchants, farm organizations, land-grant colleges, and others are gravely concerned over the serious trouble our cotton industry finds itself.

Our cotton has been losing out in markets both at home and abroad. It has encountered stiff competition from man-made fibers and also from rapidly expanding foreign cotton production. As a result, much of the cotton we are producing cannot find a market and we now have on hand a large surplus piled up in warehouses.

Artificially high support prices for United States cotton have priced our cotton out of important market outlets. At the same time our supports for cotton have enabled competitors—the man-made fiber producers and foreign cotton growers—to expand their production and take over an increasing number of our cotton customers. All of this has happened because we so far have been unwilling to recognize once again the basic

fact that competitive prices for cotton are still highly important in holding and broadening domestic and foreign markets for the output of our efficient cotton farms.

ACREAGE AND PRODUCTION IN SOUTH CAROLINA DOWN

In 1930, South Carolina farms grew about 2 million acres of cotton. It dropped to 692,000 acres in 1956. The production in 1930 was about 1 million bales. The production in 1956 was 515,000 bales. From 1930 to 1956 there was a decline of 65 percent in the total cotton acreage in South Carolina with a decline of about 49 percent in the number of bales produced. The decline in acreage and production for certain counties, particularly in the Piedmont, has been drastic. In other counties, particularly the Upper Coastal Plain, the acreage and production have not been declining so severely and some counties produced more cotton in 1956 than in 1930.

A look at the change in acreage and production in a few counties provides information as to the direction cotton production is going in South Carolina.

In 1930 there were 50,300 acres of cotton in Oconee County. By 1955 the acreage had dropped to 7,950 acres or a decline of 84 percent. The number of bales of cotton dropped from 22,200 in 1930 to 9,300 in 1955, a decline of 58 percent in production. Greenville County had 87,500 acres of cotton in 1930. By 1955 the acreage had dropped to 16,000, a decline of 82 percent. In 1930, there were 54,700 bales of cotton produced in Greenville County and in 1955 there were 17,200 bales, a decline of 54 percent.

The cotton acreage decreased 45 percent in Allendale County and 51 percent in Orangeburg County between 1930 and 1955. During this period the bales of cotton produced increased 3 percent in Allendale County and declined 29 percent in Orangeburg County.

The cotton acreage in Clarendon County decreased from 36,700 acres in 1930 to 34,300 acres, a decline of 6 percent. At the same time the production of cotton increased by 300 bales.

Florence County grew 32,500 acres of cotton in 1930 and in 1955 there were 32,200 acres, a decline of only 300 acres. At the same time, the number of bales of cotton produced increased from 16,800 to 18,300 bales, an increase of 9 percent.

Although the trend in cotton acreage and production in South Carolina has been downward since 1920 there has also been a reversal of this trend since World War II in certain counties, particularly in the upper coastal plain area. The declining trend in cotton acreage and production in the Piedmont and the reversal of this trend in certain counties and areas of this State indicate that there should probably be further study of the trends in cotton production within the State in the event the present system of distributing State acreage allotments is changed.

COTTON AT CROSSROADS

Cotton farmes are at the crossroads. Cotton farmers want to hold present markets and expand them at home and abroad. Under present farm programs cotton surpluses have increased. Therefore, the problem boils down to: What kind of a farm program will work to provide the greatest net income to cotton growers?

Much thought is currently being given to a reexamination of the basic law relating to cotton. Cotton growers themselves should have a voice in deciding the kind of program that would be to their best interest over the longer time period. Each individual cotton grower should give this problem serious study and consideration. The solution will require the best efforts of cotton growers working individually and in groups. By working together, farm people through their organizations, can work out a solution to this multisided problem. At the same time individual farmers can reduce the cost of production, and attain greater efficiency in production, by adopting the latest research information and farmer experience in the production, handling, and marketing of cotton.

Ninth Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. POWELL. Mr. Speaker, the ninth anniversary of Israel's independence is an occasion of great rejoicing not only for the people of Israel, but also for all of her friends who have watched her evolve into a democracy of prominence and stability. I wish to extend sincere felicitations to the people of Israel and their leaders in observance of this occasion.

Israel has weathered some difficult times in the past 9 years. It has stood up against great adversity, shown great courage and determination. The Republic of Israel emerged fully clothed with the problems and realities of political statehood on May 14, 1948. During these short years of independence the two main preoccupations of Israel have been economic development of the country and the establishment by diplomatic and military means of the security of the country within the boundaries set by the armistice agreement.

Israel is a product of an ancient dream, a monument to man's inconquerable spirit. The triumph of the human spirit in Israel over seemingly endless and overwhelming obstacles is a constant beacon light of faith to all men.

That Israel has achieved so much in so short a time and under such trying circumstances is a credit to the fortitude, the intelligence, and the national spirit of the Jewish people. Because Israel is small and poor in natural resources it faces towering economic problems. The economy of Israel is still in the process of building healthy foundations for a normal existence. Israel is developing an indigenous blend of free enterprise and free government suited to its own particular problems.

Israel opened wide her doors to the poor and the oppressed. Many on arriving there have no possessions, only determination and willingness to be a part in the march of progress of which Israel is the symbol. She has kept her doors open to those still homeless, penniless, and broken by years of Nazi oppression and denied other sanctuaries. Israel fortified by her faith and ennobled with a cooperative spirit, made room for her less fortunate brothers.

Within the Middle East the state of Israel is clearly the heartland of the crossroads. The deeply disputatious question of peace with the Arab States leaves the political future clouded. Yet within Israel there is energy and optimism, for here at last a dream of centuries for a homeland has become a political reality. The avowed aim of the United States is to promote the political and economic stability of the entire region of the Middle East with a course of action based on neither favoritism nor on prejudice, but on the principle of safeguarding the best interests of the United States and the free world. If our worldwide position is to be secure, we must recognize the potentialities of Israel as an outpost for western civilization. We can strike no more effective blow in defense of our way of life on a global basis than to do everything possible to make Israel a strong bastion of freedom in the Middle East and through it to reach the rest of the region in the true spirit of our freedom.

May Israel enjoy peace and happiness on this ninth anniversary and hold steadfast to her principles of freedom, liberty, and democracy.

Don't Give It to Them

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. BYRNE of Illinois. Mr. Speaker, under leave granted to extend my remarks, I include in the RECORD a most commendable editorial appearing in the Chicago American recently regarding my friend and colleague from Pennsylvania, RICHARD SIMPSON.

The editorial follows:

DON'T GIVE IT TO THEM

We are indebted to Representative SIMPSON, Republican, of Pennsylvania, for the most sensible and practical piece of advice we have yet heard on the subject of reducing the administration's $71,800,000,000 budget. Cut taxes first, says SIMPSON. That will give the spenders less to spend.

SIMPSON is chairman of the Republican Congressional Campaign Committee. He put his budget-cutting plan before the Indiana Editorial Association in an address at Indianapolis Saturday night.

If Congress waits for a budget surplus to accumulate before reducing income taxes, he said, Americans never will get the tax cut.

"Instead of such surpluses being converted into tax reduction," he said, "we will find Government expenditures continuing to rise with Government income."

That, we are sorry to say, is exactly what would happen. A Government dedicated to lavish spending will find excuses to spend every dollar it can get.

The answer is for Congress to limit the money the spenders can get. If they don't have it, and if Congress refuses to make appropriations that would involve deficit spending, there will be nothing for the spenders to do but cut down their extravagant dreams to fit their resources.

To bring this about, Representative SIMPSON has introduced a bill providing for an income-tax cut for everybody. It would reduce taxes on individuals and business by about $5 billion a year.

Personal income tax exemptions would be raised $50 a year and the rate would be reduced 5 percent. The corporation income tax would be cut from 52 percent to 49.4, the capital-gains tax from 25 percent to 12½.

Representative SIMPSON thinks this would relieve 2 million present taxpayers from paying anything, save $3,200 million for individual taxpayers and lighten the income tax load on business by a billion.

We hope Congress will pass his bill or another designed to produce a similar result.

The Military Medical Supply Agency

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. DORN of New York. Mr. Speaker, on the 2d of January it was my privilege to participate in ceremonies marking the activation of an important new defense agency in my hometown of Brooklyn. This activity is the Military Medical Supply Agency which was established by the Navy at the direction of the Secretary of Defense in implementation of the single manager plan for consolidated management in the field of common supplies and services for all the Armed Forces.

On January 31, 1956, the Secretary of Defense designated the Secretary of the Navy as the single manager for medical and dental supplies and equipment and on April 12, 1956, approved the nomination of Rear Adm. W. L. Knickerbocker, Supply Corps, United States Navy, as the Executive Director of the new activity. The Secretary of the Navy in turn assigned management control of the Agency to the Bureau of Supplies and Accounts headed by Rear Adm. R. J. Arnold, Supply Corps, United States Navy and technical control to the Bureau of Medicine and Surgery under Rear Adm. B. W. Hogan, Medical Corps, United States Navy.

To cover briefly the highlights of this plan for supply management—the Military Medical Supply Agency will administer the wholesale inventories of all military medical and dental material within the continental United States, it will compute and procure net requirements, and it will operate a wholesale distribution system serving all 3 military services. This leaves to the individual services the development of total requirements—both peacetime and mobilization, and the management of their retail inventories.

I have closely followed the operation of this unique activity during the 4 short months since its activation and I am most impressed with the progress which has been made to date in setting up its methods and procedures to conform to the new single-manager concept of supply operations.

Rear Admiral Knickerbocker has developed a streamlined depot distribution system utilizing the field facilities of all 3 services which undoubtedly will result in economies in operation with ultimate savings to the taxpayers. This new system is designed to provide effective supply support with 6 less depots engaged in the handling of medical material, thereby releasing space at these facilities for the storage of other military supplies and equipment. The system further provides for the dispersal of depots across the length and breadth of the country yet permits an efficient and economical distribution of material. It eliminates costly cross-hauling and meets the criticisms which have been leveled at the armed services as to unnecessary duplication of assets and facilities.

The Executive Director informs me that he enjoys the finest relationship with the Surgeons General of the Army, Navy, and Air Force who provide him with the professional advice and assistance required in the fulfillment of his assignment and the enthusiastic cooperation received from the field activities of the 3 services has more than met his expectations.

The pattern of utilization of the assets of all services has also been followed within the agency proper. With the exception of the Executive Director's billet all military positions are rotatable among the 3 services and Admiral Knickerbocker reports that the caliber of military officers assigned to his organization has been of the highest order. The military billets are equally divided among the Medical Service Corps of the Army, the Supply Corps and Medical Service Corps of the Navy, and the Medical Service Corps of the Air Force, and the best man is placed in the appropriate job regardless of the color of his necktie.

In assuming the consolidated functions previously performed by four separate service agencies it was possible to effect economies in the number of personnel performing such functions—many of which were duplicating. Although a total of 113 billets were eliminated, the Industrial Relations Department of the Naval Supply Activities, Brooklyn, N. Y., which also performs the industrial relations functions for the new Agency, did an outstanding job in placing the personnel affected. All civilian personnel except two were placed in new jobs either with private industry or with other Government activities which were recruiting personnel with their specific qualifications. The two not placed had elected to retire. In addition, 75 military billets were eliminated during the reorganization. Although some 800 persons were affected by this change in administration, to date only one grievance has been received by the Executive Director and that was denied by the Civil Service Commission. I think that this fact alone attests to the soundness of the Agency's organizational setup and the careful thought and foresight which went into its original planning.

The reaction of the drug, chemical, surgical instrument and allied industries to the changeover to the single-manager concept of procurement and inspection has been most favorable since it has simplified procurement paperwork without loss of proper Government safeguards. The Military Medical Supply Agency expects to procure some $67 million worth of medical and dental items including blood plasma during this forthcoming fiscal year in addition to meeting procurement requirements placed on it by the Federal Civil Defense Administration.

The operation of the Agency to date has been truly a joint effort. All three services have actively participated in the planning from the very outset almost a year ago and the cooperation and coordination at the working level has been exceptional. Even though the responsibility for administering this important medical material commodity has been placed squarely upon the Secretary of the Navy as single manager, the new Agency expects to serve more as a joint organization, jointly staffed by capable and experienced officers of the Army, Navy, and Air Force and ever mindful that its primary mission is to effectively support the overall military effort of our country.

The people of Brooklyn are most appreciative of the opportunity to participate in this dynamic program under the single manager concept of supply management and of the efforts of the Secretary of the Navy in assuring that individuals separated from their jobs are placed in comparable positions elsewhere when possible.

I have taken a personal and continuing interest in the goals it is achieving and consider it most fortunate indeed that the people of Brooklyn are privileged to take an active part in contributing toward such a worthwhile endeavor.

National Federation of Independent Business' George Burger Makes Excellent Suggestion To Help Small Business

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, George Burger, of the National Federation of Independent Business, made the following excellent suggestion to help small business which I have incorporated in my bill, H. R. 5703, which a recent poll showed was supported by 84 percent of the members of this nationwide group:

Why not see if it is possible for the Government to revise its business tax regulations to allow both corporations and unincorporated firms to deduct from their yearly taxable income, says, $500 or $1,000, providing businessmen have spent this on expansions, improvements, or other things to improve their businesses. If a businessman has spent, say, $2,000, he would be able to take, under this thinking, $500 of that as a complete deduction from taxable income and compute his depreciation and other figures on the balance.

Included here is the text of my bill, and an editorial from the Trentonian, a leading New Jersey newspaper, which declares that "without small business, there would be no big business, as we

know it, for very long. Both must exist if our Nation is to remain strong, and grow stronger."

I likewise include a report by Mr. Burger on the results of the poll conducted by the National Federation of Independent Business on my H. R. 5703:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., May 13, 1957.

Hon. FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

MY. DEAR CONGRESSMAN: As we advised you, we are polling our nationwide membership on your bill H. R. 5703. The poll has been now completed and the results are 84 percent for, 14 percent against, 2 percent no vote.

I know that you will be interested in these results.

High regards.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

[From the Trentonian of Wednesday, May 8, 1957]

BULWARK OF DEMOCRACY

Is the threat to small business a matter of economics only, or does it carry implications of even greater and more alarming proportions?

Congressman FRANK THOMPSON, of the Mercer-Burlington District, and Senator PAUL DOUGLAS, of Illinois, see small business as a bulwark against plutocracy eating into our democracy, and have fired another round in the continuing battle to save small business.

When Thompson introduced in the House a bill to amend the Internal Revenue Code of 1954 so as to grant a tax writeoff of up to $1,000 to small-business men as reimbursement for amounts "paid or incurred for the expansion of the trade or business or for the permanent improvement and betterment of property used * * *" he emphasized that his aim was to preserve "the basic strength of our country."

THOMPSON'S amendment is based on a suggestion made by George Burger of the National Federation of Independent Business, who says that rather than complicated percentages, "$500 or $1,000 in hard cash is something that they (the businessmen) can all understand, and very clearly."

In any event, the struggle to save small business goes on, with Thompson very much in the foreground. Up to the time he submitted the tax writeoff amendment, the Trenton legislator had introduced six major bills to deal with what he called "the various aspects of this basic and fundamental issue." He underlined its importance in these words:

"It seems to me that we must make every effort to strengthen our economic and political system with its emphasis on individual liberty and responsibility. Only in this way can we advance the prosperity of our people and the security of our Nation and our way of life."

DOUGLAS said, "I would further urge that a concentration of business and power is neither desirable nor inevitable and that what we should seek, instead, is a broader distribution of property and of power to the end that all may have enough to be secure but not so much as to menace others. This is the underlying economic and social problem of our times."

Summed up, it might be said that without small business, there would be no big business, as we know it, for very long. Both must exist if our Nation is to remain strong, and grow stronger.

H. R. 5703

A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct from gross income certain amounts paid or incurred for the expansion or improvement of a trade or business

Be it enacted, etc., That (a) section 162 (a) of the Internal Revenue Code of 1954 (relating to deduction for trade or business expenses) is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (3) the following new paragraph:

"(4) amounts paid or incurred for the expansion of the trade or business or for the permanent improvement and betterment of property used in the trade or business, and amounts paid or incurred in restoring property used in the trade or business or in making good the exhaustion thereof, to the extent that such amounts do not exceed $1,000 during the taxable year."

(b) Section 263 (a) of such Code (relating to capital expenditures) is amended by striking out "No deduction" and inserting in lieu thereof "Except as provided in section 162 (a) (4), no deduction."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to taxable years beginning after December 31, 1956.

A. and M. Muster

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. TEAGUE of Texas. Mr. Speaker, Easter Sunday, because it fell on April 21 this year, had a double meaning for Texans and particularly former students of the Agricultural and Mechanical College of Texas.

April 21 is the day Texas won its independence and is annually observed by former students of Texas A. and M., their families and friends, as a day of commemoration of all Texans who have fought in defense of their country and all former students of A. and M. who have passed on.

This year the National Capital Texas A. and M. Club observed "muster" day at the Arlington National Cemetery Amphitheater and followed with the laying of a wreath at the Tomb of the Unknown Soldier. Former Texas Senator Tom Connally was the principal speaker at the ceremony. Former dean of agriculture at A. and M., Charles N. Shephardson, now a Governor of the Federal Reserve System, delivered the invocation.

Elsewhere A. and M. men gathered for musters in 44 States and 20 foreign countries. One was scheduled at McMurdo Sound at the South Pole.

The muster of former A. and M. students originated in 1903 but the annual ceremonies did not acquire prominence until 1942. In that year headlines over the United States were made by 23 Aggies, led by Maj. Gen. George F. Moore, class of 1908, who conducted a muster on the beleaguered island of Corregidor. At that historic muster, the Aggies, joined by other Texans, who had survived Bataan, drank a toast in water to their deceased comrades and to the heroes of 1836 who fought to free Texas.

As a graduate and a Texan, I am proud to say that Texas A. and M. is the largest military college in the United States. It is a land grant school and has always operated as a military school. It furnished more officers to the Armed Forces in both World War I and II than any other school or academy in the country. Over 400 Aggies, many of whom serve in the military, currently live in the Washington area.

How Aggies feel about the muster can be understood by quoting a portion of Senator Connally's address on that occasion:

Today with thankful hearts and tremendous pride we look back to the great traditions of our foundation and the independence of Texas.

On this A. and M. muster we pay tribute to the glorious past and we join together in our strength and our pride to pay appropriate observance to the independence of Texas and the great sacrifices made by the gallant sons at Goliad, the Alamo, and San Jacinto.

We also pay tribute to other sons of A. & M. who through the years at Corregidor and elsewhere have added luster to the historic heroism of A. and M. men through the years.

High Cost of Production and High Cost of Living

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the testimony presented by me before the Consumers' Study Subcommittee of the House Committee on Agriculture on May 9, 1957, concerning the difference in the price the farmer receives and what the consumer has to pay for his product. In view of the fact that there is considerable debate on the floor of the House at the present time concerning appropriations for the Department of Agriculture, I feel the information contained in this testimony is especially valuable:

I want to take this opportunity to say that I have followed the work of this subcommittee with great interest. It affects not only the producers of agricultural products, but the consumers of agricultural products. This covers every citizen of the country.

One of the most urgent needs this subcommittee has served is to contribute to the education of the consumer, and perhaps the farmer also. Publicity from some departments of Government and some farm organizations has widened the breach between the consumer and producer of agricultural products. This works to the detriment of both parties concerned. I believe this subcommittee is taking a big step in the direction of correcting this misunderstanding, and I would personally like to see it receive more publicity.

I would like to tell this distinguished committee how the findings of their investigation fully support the present plight of the farmers in southwestern Kansas. Because of

the depressed condition of the wheat farmer in my area, I feel I should testify on his behalf. We are only permitted to produce 30 to 50 percent of our tillable acres in wheat. The average production in Kansas is approximately 200 million bushels. This year we are only going to raise 80 million bushels of wheat in Kansas, due to acreage controls and dry weather. Much of the wheat acreage has gone into the soil bank. Soil-bank payments are a help in drought years, but they provide only a small percent of the income which would be derived from a good crop yield.

I would like to bring out the cost of production first—the cost of our machinery has more than doubled. At the close of World War II, combines were selling for approximately $2,500. The same combine today costs us $6,500. Where tractors sold at that time for $2,500, the same tractor today costs us $4,500. Cars and trucks are proportionately higher. When we were paying $2,500 for our combines in 1946 and 1947, we were selling our wheat for $2.20 a bushel. And by comparison we are selling our wheat today at $2 a bushel. Wheat acreage for the Nation has been reduced to a minimum of 55 million acres as required by law. This is about 30 percent less of the total amount of acres suitable for wheat in our country. In many areas of this country wheat is the lifeblood of that area and this is true in my part of Kansas. Labor costs for an example have risen proportionately. In 1945 farm labor costs were from $6 to $8 per day. Today we pay $10 to $12 a day and in some instances where you hire help to operate combines the fee for labor is $15 to $20 a day. The average farmer in my district with this kind of wheat base acreage, and an average wheat production at the present price of wheat and the present cost of overhead cannot show a dollar net profit on today's market. Let me give an example of an average farm in my district with an average wheat production and managed by a tenant farmer. This is the actual experience of a GI farmer in Gray County, Kans., who is the father of four children. This is a farm that is better than the average I would say, and perhaps a little larger than the average. However, it is a 1-man farm, operated primarily by family labor. The size of the farm is 960 acres. The cultivated land is 908 acres; the grass land is 52 acres; the wheat base on this farm is 456 acres, which is above the average wheat base. And at present the land is used as follows: Wheat—456 acres, the estimated yield (county average) is 12 bushels per acre over a period of 10 years. The total production if the crop produced 12 bushels would be 5,472 bushels. This land is rented so that one-third of the wheat production goes to the landlord and two-thirds to the tenant—which would give the tenant farmer a total of 3,648 bushels and the landowner 1,824 bushels. This year his commodity credit loan netted him approximately $1.90 per bushel. The total income available is $6,931.20. Due to drought no stock can be run so no income can be expected from livestock. The balance of land used is as follows: summer fallow—400 acres, and available for feed crops for 1956 were 52 acres, making a total of 908 acres again as first set out.

Now I want to give you a portion of what is the majority of the expenses of this farm. Expenses are based on income tax records of past years of operation. Crop insurance, where you have Federal crop insurance or local hail insurance, has cost annually $597. He acquired his machinery after returning from the war—most of which was used machinery. The interest on this boy's debts amounted to $150. He has some personal property tax on his equipment which totals $80. He has no real estate taxes because he owns no land. He did not own a combine so he hired his wheat cut. His harvesting expenses cost him $1,500 which included additional truck hire. He also had actual expenses on his automobile and truck—which amounted to $500. The extra labor which he had to hire for harvest was $300. Most of his machinery is getting old and his machinery repair bill on his income tax figures was $700. The total bills to operate this machinery such as gas, oil, and repairs on this farm was $900. Insecticides and grasshopper poisons and so forth which are necessary he listed as $20, but I can name you many cases where that could have run up to $200 to $300 or more. His wife likes to have a garden to help feed these four children, her husband, and what hired help they must have. The seed and the material that she bought for this garden amounted to $40. Because of drought he had no expenses on the feed for the livestock. The total cost of his farm operations and expenses were $4,787. His living expenses were figured at $2,000. The total cost of living and operating this farm are $6,787. So he has in the beginning a net cash income of $144.20. He was allowed $1,000 depreciation on his farm equipment. Depreciation on his household goods runs $250 per year. However, all this will eventually have to be replaced with new. If all this is figured it would appear that at the end of the crop year he will most likely be in a worse condition by about $1,105.80 even if he gets 12 bushels per acre on every seeded acre. Of course, they haven't been getting this during the past few drought years. At present it does not appear that there will be any wheat produced in that area this year, which leaves this particular operator nothing to pay on his debts accumulated since 1952 when the last normal wheat crop was cut. In other words, the average farmer is getting quite a lot like Tennessee Ernie's song—Sixteen Tons, "just another year older and deeper in debt." His only chance is to be able to put out more acres in crops and produce enough to offset his increased costs. This land does not profitably produce grain sorghums or any other crop, so there isn't much he can turn to in the way of diversification. Also if he plants more acres of other crops he will have less summer fallow and consequently lower expected wheat yields. As you can see this individual is going to be a poor customer for the merchant in his local community. He cannot hope to purchase any new farm machinery, a new car, household furniture, TV sets, or even additional clothes and groceries for his family.

His neighbor who has possibly a little less land is proportionately worse off and will be even poorer as a customer. This boy is a poor risk for the banker, his local gasman, or anyone else. He has little chance to pay the businessman to whom he is already indebted. I think that this is an average example of an average farmer with an average production in my area. It seems to me that the only possible way the wheat farmer can show a net profit today is to have a higher than average yield—in other words instead of having a 12-bushel average yield he would have to produce a 40-bushel-per-acre wheat crop and then dispose of his holdings. But over a 10-year period he will eventually slip back to his county average if he continues to operate.

I would like to quote further some farm prices—the price of eggs—25 cents per dozen to the producer. On the consumer base it's 45 to 60 cents per dozen. The price of a loaf of bread—a pound loaf of bread—sells today for 20 cents. A few years back when wheat was selling for $2.20 or better the price of a pound loaf of bread was 15 cents. Gasoline fuel for farmers is consistently higher. Taxes in many instances since 1946 and 1947 have gone up from 300 to 400 percent. We have got to have more production and better prices or reduced prices for the cost of production if we are to meet success. Over the past few years there has been an ever-widening breach between the American farmer and the city consumer. All this wouldn't be so disheartening if the consumer was gaining from the loss the farmer was receiving. This, however, is not the case as the subcommittee findings show. The high cost of production and low net returns are bankrupting many farmers in my area. This in turn affects small-business men supported by the agricultural communities. It is one of our many objectives to try to bring new income into this area in order to offset the increased costs of production for the farmers who can't make a go of it operating a farm. This is a necessity because certainly many businesses are closing due to a decrease in sales from their farm trade.

Mr. Chairman, my question is, What is happening to the difference in the price the farmer receives and what the consumer has to pay? Certainly in many cases the farmer is producing good food and losing money doing it. Yet the American consumer is paying the highest costs of all time to feed his family.

It has been a pleasure to present these views of mine to you and I thank you sincerely for your attention.

How the Labor Bosses Got That Way

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Saturday Evening Post entitled "Labor's Czars Got That Way by Court Decision." This is a most interesting article:

LABOR'S CZARS GOT THAT WAY BY COURT DECISION

If Messrs. Beck and Hoffa and lesser lights in the Teamsters' Union have come to feel that their activities were none of the ordinary citizen's business, perhaps this attitude is explained by one of the most extraordinary decisions ever handed down by the Supreme Court of the United States, a decision which in effect exempts labor goons and racketeers from the consequences of acts which would get lesser men into serious trouble.

The case, which Representative CLARE HOFFMAN, of Michigan, dug out of the records a few weeks ago, was *U. S.* v. *Local 807, International Brotherhood of Teamsters*, one of a series of court decisions and legislative acts which accounts for the special position of labor organizations under the law. This case was decided early in 1942 in an opinion written by, of all people, that eminent conservative, former Justice James Byrnes. It established the principle that threats, intimidation, and beatings are not subject to punishment under the antiracketeering law if those guilty of such practices were using the brass knuckles "to obtain the payment of wages from a bona fide employer to a bona fide employee."

U. S. v. *Local 807* grew out of the habit of teamster pickets to lie in wait at the Holland Tunnel or other points of entry to New York City, stop trucks on their way into the city, and insist on driving the trucks into New York or, if that was refused, riding deadhead. For this "service" the goons collected some $8 or $9. Owners or drivers who did not go along with the proposal were frequently hauled off their trucks and given the

treatment with some blunt instrument. A group of the offending pickets was prosecuted under the Federal antiracketeering law, inasmuch as the offense clearly involved interstate commerce, and convicted. But the Circuit Court of Appeals reversed the convictions and the case went to the Supreme Court, where Justice Jimmy Byrnes handed down the monumental decision.

The basis for the Byrnes decision was a clause in the antiracketeering law, inserted to meet labor objections to the original bill, which exempted from the definition of "racketeer" persons seeking to gain payment of wages. Therefore, money extorted from truck drivers under threat of violence was supposed to be "wages" within the meaning of the act. To Justice Byrnes it seemed clear that "the elimination of professional gangsters was the aim of the statute and, second, that no interference with traditional labor-union activities was intended."

Thus even when "traditional labor-union activities" included pulling men off trucks and beating them, the law, as far as this particular statute was concerned, was assumed to be helpless. Violence by Dillinger or Babyface Nelson was illegal; the same degree of violence by a picket of Local 807 was immune from prosecution under this statute. Justice Byrnes did try to sugarcoat this extraordinary doctrine by pointing out that when things got too rough, the States had laws under which violence could be punished. But for the Federal Government, the Supreme Court defined racketeering not by the nature of the crime but by the status of the criminal.

The late Chief Justice Harlan Stone, in a vigorous dissent from this legalistic schizophrenia, declared that "the defendants who conspired to compel such payments by force and violence, regardless of the willingness of the victims to accept them as employees, were rightly convicted." But, as the perpetrators of labor violence and extortion have noted over the years, it's the majority decisions that make the law. No wonder the boys who run some of our labor unions have assumed that they had things their own way.

Panama Canal Rights

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. DORN of New York. Mr. Speaker, as a member of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, I should like to call the attention of my fellow committee members and to the membership of the whole House to the letter published in the Evening Star of May 15, 1957, from Charles S. Collier, professor of law, the George Washington University:

PANAMA CANAL RIGHTS

The interesting statement of His Excellency Ricardo M. Arias, Ambassador of Panama to the United States, published in your issue of Tuesday, April 30, calls for attentive consideration and mature comment.

One of the chief purposes of the Ambassador's communication apparently was to express emphatic disagreement with Earl Voss, staff correspondent of the Star, as to the interpretation of the basic Isthmian Canal Convention, signed at Washington on November 18, 1903. This convention is a treaty in our constitutional sense. The difference of opinion just mentioned turns very largely on the issue as to the correct interpretation of article III of this convention when examined in the context of other provisions.

The text of article III of this treaty of 1903 is as follows:

"The Republic of Panama grants to the United States all the rights, power, and authorities within the zone mentioned and described in article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said article II which the United States would possess or exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

The Ambassador, in his letter, gives a brief restatement or paraphrase of this article but omits any mention of the highly significant concluding phrase just quoted.

Article III appears to the legal specialist as well as to the man on the street to grant to the United States in the territory of the Panama Canal Zone and other auxiliary lands and waters all the rights, power, and authority that are comprehended under the general legal concept of territorial sovereignty as defined by international law. And there is no consortium or partnership as between the United States and Panama as to the exercise of these sovereign rights, since the grant is explicitly stated to be "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

In his effort to establish some sort of a limitation on the lawful powers of the United States in the Canal Zone, Ambassador Arias relies chiefly on the language in a separate article of the treaty, article II, the opening words of which read as follows:

"The Republic of Panama grants to the United States in perpetuity the use, occupation, and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said canal."

The Ambassador maintains that these words express the idea of a limited grant for particular purposes, and do not impair Panama's paramount sovereign authority.

It may be true that article II taken alone would transfer to the United States only rights of beneficial use, occupation, and ownership, closely resembling what are designated by writers on the Roman law as rights of dominium, or domain. But for this very reason article III of the treaty was immediately added for the purpose of conferring upon the United States all the rights, power, and authority within the zone that any territorial sovereign would possess or exercise. These are the rights of imperium, or sovereign powers which are legally distinct from the rights of ownership or domain.

It seems plain that the recitals in article III of the treaty of 1903 which grant to the United States sovereign rights and powers within the Canal Zone and the auxiliary lands constitute by themselves a distinct substantive statement which is complete and self-sufficient and needs no transfusion from other sections of the treaty to reveal a concealed and artificial meaning that would greatly detract from the significance and practical value that are so obvious if the words of article III are taken in their natural and direct sense.

The subject of sovereign powers treated in article III is distinct logically and practically both from the grant of domain by virtue of article II and from the statement of the purposes of that grant of domain set forth in article II.

There are no words of restriction or limitation on the general grant of sovereign rights and powers to the United States set forth in the third article. It seems too plain for any reasonable doubt that the grant to the United States of all the rights, power, and authority within the Canal Zone which the sovereign (any sovereign) as such would possess or exercise is not limited to any particular interests in that territory. And this grant is expressed to be "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

CHARLES S. COLLIER,
Professor of Law, the George Washington University.

Statement by George J. Burger Before the House Committee on Banking and Currency

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I include a statement by George J. Burger, vice president, National Federation of Independent Business, before the House Banking and Currency Committee on May 15, 1957:

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote, and as it pertains to the Small Business Administration our nationwide membership has been polled six times since the legislation for the creation of this agency was first instituted.

So as not to bore the committee with a long detailed statement as to our views on the Small Business Administration—we have covered this in full detail in appearances before the subcommittee of the House Small Business Committee on two occasions, under date of March 28, 1957, and again on April 2, 1957.

Your committee well knows that in the first instance we recommended that the Small Business Administration be made a permanent agency, and we also recommended the elimination of the policy board being set up consisting of the Secretary of the Treasury or his alternate, the Secretary of Commerce or his alternate, and the Administrator of the Small Business Administration. Our position today, on direct nationwide vote of our membership, remains the same. We do not believe the agency can successfully carry out the will of the Congress with divided authority in the top bracket.

We believe it will be found the members of the subcommittee of the House Small Business Committee will be in agreement with our views.

To the credit of that committee, chairmaned by the Honorable ABRAHAM J. MULTER, and members of the committee being, the Honorable SYDNEY R. YATES, the Honorable TOM STEED, the Honorable R. WALTER RIEHLMAN, and the Honorable HORACE SEELY-BROWN, JR., they gave close and full attention during these hearings, hearing all sides on the proposition.

Shortly after the agency was created in the summer of 1953, and continuing right up to the present moment, we have made it our personal interest to check at the top and the local levels into the operations of the Small Business Administration to make certain that the will of Congress is being carried out. To a degree, we feel satisfied that our action in this respect has been helpful to the agency itself and to small business which we represent.

In July 1956, speaking for the Federation, in a conference with Dr. Arthur Burns, the then Economic Adviser to the President and chairman of the President's Cabinet Committee on Small Business, we made seven specific recommendations on small business to be considered by his group, and one of the principal recommendations was that the Small Business Administration be made a permanent agency and that full control be vested in the Administrator in setting the policy.

In our appearances, by invitation, before the platform committees of both Republican and Democratic national conventions in Chicago and San Francisco, again—one of the principal recommendations we made before those groups was that the Small Business Administration be made a permanent agency, with control vested exclusively in the hands of the Administrator. There were no outward comments from members of the platform committees of both parties as to any objections and in this respect we are glad to note that after my appearance before the Small Business Committees of both the Senate and the House, Mr. Barnes, the Administrator announced the administration would favor the agency being made a permanent agency.

There are bills presently before your committee which embody the recommendations of the membership of the National Federation of Independent Business, and in each instance the vote has been overwhelmingly in favor of the adoption of these bills.

In our appearances before the Small Business Committees of the Congress we have made our recommendations as to the overall policy which should be used in a continuing agency which would be as Congress expected it to be as a real help to efficient, progressive, independent business of all descriptions.

Finally, Mr. Chairman, we know of no other agency in the Federal Government that is subject to policy making in conjunction with any other Government agency. We do not believe that the Treasury Department has a full understanding of the problems of small business, and we hold the same view as it relates to the Department of Commerce. Both of these Departments have their rightful place in our Government, but they do not belong in any direct action that will be helpful to small business.

The Hungarian Refugee Program

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ADDONIZIO. Mr. Speaker, among the resolutions passed at the convention of the Christian Church, Disciples of Christ, held in Buffalo, was the following on the Hungarian refugee program. I believe that this resolution reflects the views of the majority of responsible and informed citizens on this compelling issue. We have a duty to make our immigration policy one that is totally consistent with our obligations to ourselves and to the world. I urge that consideration be given to the pending legislation in this field without further delay.

The resolution reads:

VII. THE COMMISSION ON SOCIAL ACTION

Whereas the Hungarian relief program is one that challenges the conscience of the entire Western World: Therefore be it

Resolved, That the Christian Churches (Disciples of Christ) of New York and New Jersey, urge Representatives in Congress to continue the Hungarian relief program, which has been discontinued for lack of funds.

WILLIAM SHOOP,
Chairman, Commission on Social Action.

Act for People or Sink, President Tells GOP

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following words of Garnett D. Horner contained in yesterday's Washington Evening Star:

ACT FOR PEOPLE OR SINK, PRESIDENT TELLS GOP

(By Garnett D. Horner)

President Eisenhower emphasized today that he believes the Republican Party will be sunk in the long run unless it follows his concept of modern Republicanism.

The President rejected at a news conference any idea of punishing Republicans in Congress who do not agree with him.

He said he will depend on trying to influence people in quiet conversation and occasional factual television-radio speeches to the country to try to win support for his programs.

Mr. Eisenhower's warning to the GOP right wing that its road leads to oblivion for the party came during a news conference devoted largely to a defense of his budget imperiled by the congressional economy drive.

MORE CONSERVATIVE

At the same time, he said he thinks he is more conservative now than he was in 1952.

Emphasizing that he is against any trifling with the Nation's financial integrity, the President said he has the same concern as others about the high cost of Federal Government.

He said he believes all Government programs must be studied carefully to make sure too big a load is not being taken on.

But, along with this, the President said the Federal Government cannot shut its eyes to such problems as assisting the aged and disabled.

Any political group that does not study the needs of the people and try to meet them will in the long run be sunk, he added.

SEEKS SOUND FISCAL POLICY

The President said he thought this summed up his conception of modern Republicanism.

He said it means adhering to sound basic principles in Government operations, including a balanced budget. He said new problems should be met head on and an effort should be made to solve them with a clear comprehension of what the people need.

Mr. Eisenhower was reminded that he interpreted his second-term election victory last November as a mandate from the people to carry forward a program of modern Republicanism, and was asked if he thought the will of the people was being flaunted in Congress.

He remarked that it is too much to expect everybody to understand all at once all that enters into this political philosophy. He said as people are informed they probably will support what the country voted for in November.

Told that Democrats in Congress seem to be supporting his program more than most Republicans there, he was asked if he expected to punish the Republicans not going along with him or reward those who do.

He replied firmly that he does not think it is the function of any President to punish anybody for voting what he believes.

Then a reported asked if he planned to try to work more for his programs in Congress through such Republicans as Senators CASE of New Jersey and JAVITS, of New York, who are supporting them.

WORKS THROUGH LEADERSHIP

Mr. Eisenhower replied that he does not see how it is possible for him to work with Republicans in Congress as a group except through their elected leadership.

Thus he made it clear that he expects to continue working with Senate Republican Leader KNOWLAND and House Republican Leader MARTIN, who have been in the forefront of those Republicans who have urged greater budget reductions than the President believes are possible without risking the safety of the country or cutting our needed domestic programs.

Told that some Republicans think he has "moved to the left" since his first election in 1952, Mr. Eisenhower said "far from it." He added that if anything, he has become more conservative. Then he went into his exposition of how modern Republicanism should try to meet needs of the people while following sound fiscal policies to preserve the value of the dollar.

Opinion of an Ordinary Citizen in Regard to Our Present Budget

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a letter which I have received from Arthur C. Hodgson, attorney at law, Lyons, Kans., dated May 9, 1957. I feel the remarks made by Mr. Hodgson are indeed sound and truly indicative of the thinking of the ordinary citizens of our country:

LYONS KANS., *May 9, 1957.*

Hon. J. FLOYD BREEDING,
Representative, Fifth Congressional District of Kansas, House Office Building, Washington, D. C.

DEAR SIR: I am writing you in regard to the budget which the Congress is presently considering for the operation of the Government for the next fiscal year.

Since the President submitted his proposed budget to Congress, I have been watching with a great deal of interest, items in the newspaper in regard to the proposed budget. Some have been in favor of the budget as submitted, others feel that it is

much too high. As a general proposition I do not write to my Representative or to my Senators. I feel that they are on the scene and normally in a better position to judge than I am here at Lyons, Kans. However, I have come to the conclusion that I should write and express the opinion of one ordinary American in regard to our present budget.

I am familiar with the thoughts of different officials in Government guarding this proposed budget. I am also familiar with the stand of the United States Chamber of Commerce and other organized groups, for all of them have been reported in the papers extensively. Personally I feel that the proposed budget is much too high, however, here again I am not in as good a position to judge as you are, and as one of your constituents I want you to use your best judgment. I do wish, however, that you should know what at least one person is thinking in regard to the budget.

I have been reading the paper for several years that we are having unprecedented prosperity, however, I have been inclined to except central and western Kansas from this claim of unprecedented prosperity. I have told myself that probably the drought is largely responsible for the fact that we in central Kansas have not been having the prosperity which the papers claim for the rest of the United States. Be that as it may, I know that when I am in a period of prosperity that I should be paying off any indebtedness which I may have. Assuming that we have been in a period of prosperity since World War II, then I think it is high time that we start paying off some of the public debt instead of having ever increasing national budgets. Somehow I can't see very much difference between the Government of the United States and myself as far as indebtedness is concernd, at least I think some of the same fundamental rules apply, and if I owed my banker substantial sums of money and kept buying a lot of things which I could do without and did not make any attempt to liquidate my indebtedness, I would soon find that I didn't have any credit with my banker. I think the same thing can and probably will be true with the Government of the United States.

The papers recently contained a statement from Mr. Wilson, Secretary of Defense, to the effect that why were those comprising the United States Chamber of Commerce screaming about taxes and expenditures when they were making more money than they had ever made before. I get the implication from these statements by Mr. Wilson, as quoted in the paper, that he thinks that as long as people are making a lot of money that they shouldn't be concerned because the Government throws a bunch of it away. For one, I do not go for this line of reasoning. I think it is fairly childish and I do not think it is a very worthy comment by the Secretary of Defense. Frankly I am concerned about the bigness of Government as well as the bigness of some segments of industry. As one of the garden variety of citizens of our country, I can observe the little person being gobbled up by the big operator and by the big corporation. Not that I have anything against the big operator or the big corporation, but I am alarmed that the little man is receiving what seems to me to be very little consideration from our Government or for that matter, from Congress.

I served in the Navy in the Southwest Pacific during World War II, and I would not sacrifice our national welfare because of the burden it would impose on me or other citizens of our country to keep up a sufficient Military Establishment, but what I do think I have a right to expect as a citizen, is to have the frills cut out and the unnecessary expense lopped off. It is my feeling, without actually knowing, that these frills and unnecessary expenses run into the billions rather than the millions of dollars. Naturally I want you to exercise your good judgment as far as the budget is concerned, but I do want you to know that at least one person in Kansas feels that the Government has gotten out of hand, that our duly elected Representatives and Senators represent us, and that we rely upon you, first of all to do what you think is the best for the good of our country, secondly, that you will do what you consider is best for the constituents and the State you represent, thirdly, that you be as businesslike with the affairs of Government as you would be in your own business at home.

Very respectfully yours,

ARTHUR C. HODGSON,
Attorney at Law.

The Washington Star, the Washington Post, and the Washington Journal, 98-Year-Old German-Language Weekly, Report on Cultural Growth of the Nation's Capital

---

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include three reports from as many newspapers on the cultural activities and growth which is taking place these days in the Nation's Capital.

It is the hope of all of us that Washington will one day soon rival London, Paris, Vienna, Rome, and other European capitals in cultural attainments.

The Washington Star in 1852 predicted that Washington was destined to be the most powerful and brilliant capital in the world.

Ninety years later W. M. Kiplinger, Washington publisher and businessman, was to say in his book Washington Is Like That:

Despite the wealth of national tradition attached to Washington there is very little native culture. The city has never been a notable breeding place for art, or music, or literature. Unlike other great capitals of world thought, such as prewar London and Vienna and Paris, where the native-born leaders of the cities shaped the intellectual patterns which influenced the nation, Washington as a city has no homegrown culture. Its influence in cultural matters is not by Washington but rather via Washington. Whatever culture there is here was started elsewhere and brought in and pasted on.

Mr. Kiplinger in 1956, 14 years still later, maintained that the situation had not changed much from what it was in 1942.

I feel that with this bit of background information the following newspaper reports take on added significance and interest:

[From the Washington Post and Times Herald of May 16, 1957]

SENATE APPROVES PURCHASE OF LAND IN FOGGY BOTTOM FOR CULTURAL CENTER

The Senate approved last night Government purchase of land in Foggy Bottom for the proposed $36 million auditorium and cultural center.

A joint conference report authorizing the General Services Administration to buy land west of 24th Street and Virginia Avenue NW., passed the Senate shortly before 8:30 p. m. The measure now goes to the House.

Senator WAYNE MORSE, Democrat, Oregon, acting chairman of the Senate-House conference committee that drafted the report, asked for immediate consideration after introducing the measure. It passed without opposition.

The Foggy Bottom site is the one favored by the Auditorium Commission over other locations including one in the Southwest redevelopment area.

The bill directs the General Services Administrator to acquire the 27-acre tract by purchase and condemnation.

Sould the House approve the report, further legislation appropriating funds will be necessary, though, before the land may be purchased.* * * The Peoples Life Insurance Co. had planned to build its headquarters building on part of the land.

The Auditorium Commission has agreed to finance construction of the $36 million building through national subscription if Congress provides the land.

In addition to setting the site, the Senate-approved bill changes the name of the auditorium to the National Cultural Center and the name of the Auditorium Commission to the Commission for a National Cultural Center. The life of the Commission is extended until the center is built.

[From the Washington Evening Star of May 15, 1957]

ARCHITECTS TOLD ARTS DESERVE CABINET STATUS

(By Francis P. Douglas)

The fragile Miss Lillian Gish, who is an enduring ornament of the theater, urged today that a Cabinet post be created to encourage the arts in America.

She addressed the American Institute of Architects at the organization's centennial convention in the Sheraton-Park Hotel. She asked the architects to join others of the arts and sciences in taking the project for a cabinet secretary to President Eisenhower.

Dr. Howard Mitchell, conductor of the National Symphony Orchestra, demurred.

"Getting the Government too deeply involved in the arts may well curtail their full freedom, making the artist dependent on the imagination of officials and bureaucrats and stifle his individual initiative," he said.

He conceded he is somwhat divided on the subject. One project the Government should foster is the establishment of an American National Theater and Music Center in the Capital, he said. The people cannot provide this themselves, he explained, and certainly not the voteless citizens of Washington.

Another area where the Government could help, he said, is in the preservation of historic sites, buildings, and art objects.

Dr. Leo Friedlander, sculptor and former president of the National Sculpture Society, opposed bills offered to set up an advisory commission on the arts. He said there is a danger that the proposed Federal Advisory Commission might tend to establish an overall supervision controlled to a great extent by too few artists. He said also the bills too pronouncedly have a political approach.

SEES ARTIST ALONE

Miss Gish said that since 1917 we seem to have concentrated on other lands more than our own.

We have given away billions to others while our own shrines come down one by one for lack of funds to care for them, she continued. "Why? Because the artist has no court of appeals as the laboring man, the war lord or the businessman. They all have a secretary in the President's Cabinet, but not the artist, not the scientist. He does not exist in our Republic."

Miss Gish said the architects are not entirely blameless for not receiving the rec-

ognition due them. She recalled she herself had heard of only two architects—Frank Lloyd Wright and Stanford White, who got shot.

"A prize fighter gets more publicity and, in some instances, a truck driver is better paid," she continued. "It would seem that our system of values has reached an Alice in Wonderland absurdity, worthy only of satire."

President Eisenhower, she pointed out has already said that "something should be done for the arts. Now it is up to us to tell him what that something is."

OPPOSES SUBSIDY IDEA

Dr. Mitchell spelled out what the President had said, quoting this from his 1955 state of the Union message:

"The Federal Government should do more to give official recognition to the importance of the arts and other cultural activities. I shall recommend the establishment of a Federal Advisory Commission on the Arts—to advise the Federal Government on ways to encourage artistic endeavor and appreciation."

The orchestra leader said he could not see how anyone could quarrel with this. But he added direct subsidy in the form of patronage to the musical organizations is another question.

"The Government would certainly tread on delicate ground," he continued, "for soon the question would come up as to what constitutes art, and I don't think any 2 Government commissioners could agree on that any more than can 2 music critics—or even you and I. They might finally compromise on some basis—a little modern and a little classic, a touch of Texas and a little of New England—and the result could spell utter mediocrity.

"I would dread to see home noble contributor to one of our political parties appointed to a Government commission or, heaven forbid, as secretary of culture, and tell me what symphonies I ought to conduct and what symphonies I ought not to conduct. Let's leave Federal patronage to politics and political jobs."

Dr. Mildred C. McIntosh, president of Barnard College, and Prof. Paul Tillich, of Harvard University, participated in the discussion.

NATIONAL AND INTER-AMERICAN MUSIC WEEK, MAY 5–12, 1957

Mrs. Ralph Becker, honorary vice chairman.

Mrs. Edward Cleaveland Sweeney, treasurer.

Hon. Sherman Adams, honorary chairman.

Philip A. Guarino, chairman, executive committee.

Hon. Robt. E. McLaughlin, honorary vice chairman.

Clinton Price, executive secretary.

DEAR MUSIC LOVER: National and Inter-American Music Week will be observed this year May 5–12 under the keynote "Life means more with music."

In order to emphasize the common bond existing among all peoples through music, hundreds of communities are planning recitals, concerts, and festivals featuring folk music of many nations and other appropriate programs.

Washington, D. C.'s, committee on Music Week is highlighting the week by having a luncheon at the Willard Hotel on May 6, at 12:15 p. m. An outstanding program is planned with Miss Marian Anderson as guest artist. Mrs. Agnes Meyer will speak on our new Cultural Center and Mr. George Marek, vice president of RCA Victor Records and music editor of Good Housekeeping magazine, will pay special tribute to Toscanini. Citations will be presented to persons who have made outstanding contributions to the music field in Washington.

Another highlight of the week will be the presentation of the opera The Gypsy Baron by Johann Strauss, Jr. Produced by Dr. Frederick Fall, who was formerly connected with the Volk Opera in Vienna, this three-act comic opera will have Dean Dittman, recent winner of the Lauritz Melchior award, to play the lead. The opera will be presented at Roosevelt Auditorium, 13th and Allison Streets NW., at 8:15 p. m., on May 9, 10, and 11. One of the significant features of this production is the opportunity it gives local performers for presenting their talents.

In order to make this program possible as well as perpetuate local opera this endeavor must capture the interest, the goodwill, the cooperation, and the financial assistance of friends of the opera. We are asking therefore that you make every effort to support this opera by attending the performances and making a contribution.

PHILIP A. GUARINO,
Chairman, Executive Committee,
National Music Week.

Honorary committee: Mrs. Robert Law Bacon, Senator J. Glenn Beall, Mrs. Ezra Taft Benson, Hon. Robert Woods Bliss, Mr. Barnee Breeskin, Mrs. Herbert Brownell, Jr., Hon. Joel T. Broyhill, Mrs. Wilber M. Brucker, Mrs. Arleigh Albert Burke, Mrs. Harold Burton, Dr. Leonard Carmichael, Edward R. Carr, Milo F. Christiansen, Robert W. Dowling, Mrs. John Foster Dulles, David C. Finley, Robert V. Fleming, Mrs. Marion B. Folsom, Hon. George A. Garrett, Henry Gichner, Maj. Gen. U. S. Grant III, Hon. Theodore Green, Father Gilbert V. Hartke, Maj. Gen. Robert W. Hasbrouck, Mrs. George M. Humphrey, Frank R. Jelleff, Dr. George Johnson, Hon. Lyndon Johnson, Hon. Eric Johnston, David Karrick, Hon. Carroll D. Kearns, Hon. Arthur G. Klein, Hon. William Knowland, Brig. Gen. Thomas A. Lane, Dr. Warner Lawson, Hon. Joseph Martin, Jr., Hon. Pat McNamara, Mrs. Agnes Meyer, Mrs. Eugene Meyer, Dr. Howard Mitchell, Mrs. James P. Mitchell, Hon. James H. Morrison, Hon. Matthew M. Neely, Mrs. Richard M. Nixon, Duncan Phillips, Mrs. Merriweather Post, Hon. Adam Clayton Powell, Mrs. Ivy Priest, Mrs. Donald A. Quarles, Adm. Arthur Radford, Hon. Samuel Rayburn, Mrs. William P. Rogers, Mrs. James H. Rowe, Jr., Mrs. Fred A. Seaton, Douglas Smith, Dr. Harold Spivacke, Mrs. Arthur Summerfield, Gen. Maxwell Taylor, Mrs. Charles Thomas, Hon. Frank Thompson, Jr., Gen. Nathan F. Twining, Mrs. Earl Warren, Mrs. Sinclair Weeks, Herman Williams, George Livingston Williams, Mrs. Charles E. Wilson.

[From the Washington Journal of May 17, 1957]

GYPSY BARON GETS SPARKLING RESURRECTION

The three performances of The Gypsy Baron given last week by the ensemble directed by Dr. Frederick Fall could, by all means, live up to the standards of a demanding criticism in spite of the fact that most of the participants were nonprofessional in status.

The many Europeans who attended the performances and who, indeed, through former experience of performances on German and Austrian stages, had good bases for comparison, were sincerely impressed. Many of our readers have confirmed this impression from personal attendance at the performances.

If, however, one reads in the Washington Post the writeup of Mr. Paul Hume (and his colleague from the Washington Star does not fall short of him) and if one sees how Hume, with the fraudulent freedom of an opera Pope, walks his own rather shaky tightrope (in regard to his operatic experience) and, further, if one sees how he strikes below the belt at the people of our city who, under great sacrifices of time and labor, have made these performances possible then one asks if, after all, one can place any value at all on Washington music criticism.

The Gypsy Baron is no Bach cantata and Zcupan is, after all, the most ridiculous hog-raiser on earth. That is what makes The Gypsy Baron so charming and so lovable.

May the men and women who worked so tirelessly to bring Smetana and Strauss to the Washington stage not let themselves be deterred from future efforts by "hume-id" malice.

In northern Germany there is a saying, "What the farmer doesn't know, he won't eat."

We inscribe this saying in the memory album of our arrogant District of Columbia music critics with much pleasure.

We hope, at the same time, to see again next year something as ridiculous which, in our European ignorance, we find so beautiful and reminiscent of home.

Policy Toward Satellite Nations

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

MINORITY VIEWS OF HON. JAMES G. FULTON, OF PENNSYLVANIA

The report of the majority of the Special Study Mission to Europe on Policy Toward the Satellite Nations lays great stress on the widely-voiced criticism of a lack of consistency in United States foreign policy. Yet where is this alleged inconsistency to be found? Certainly it is not in the fundamental principles and objectives of our policy. It is necessary to point out that the implementation of the same United States foreign policy must vary because of local area conditions. The same method of implementation would not have been possible toward both Hungary and the Middle East due to the essentially different circumstances and conditions of power access in the two areas.

In short, our United States capability of exerting influence or bringing power to bear directly is obviously greater in some areas of the world than in others. As applied to the satellite states, our United States policy during the present administration—and during the previous one as well—has been to sustain the hopes of the peoples of Eastern Europe in the eventual achievement of liberty and national independence, to maintain their faith in the value of these goals, and to promote by every means, short of force or the encouragement of force, an evolution toward freedom. There have been many allegations that the VOA and the RFE led the Hungarians to expect more than this. No substantial or affirmative evidence has been presented to our committee or otherwise that would bear out this allegation. There may have been errors through inferences drawn from program statements issued under changing and highly charged emotional conditions. The majority of the study mission is justified in pointing out that the most careful editorial supervision of these media is required.

Course of action of the United States Government taken by the White House, the Department of State, our United States representation at the United Nations, as well as

our United States missions abroad, from the very beginning of the Hungarian uprising appears to have developed logically from the basic policy just described. Certain fundamental decisions had to be considered and made and, clearly, were taken promptly upon the outbreak of violence in Hungary. These decisions would appear to be the following:

(a) That the United States Government was not prepared to resort to force or the threat of force in the Hungarian situation;

(b) That the United Nations organization offered the best hope of bringing about a satisfactory solution of that situation;

(c) That the United States should take all possible peaceful means outside the United Nations to assist that organization and to be of aid to the Hungarian people in the light of developing circumstances.

There are some who may question the validity of these decisions, but no evidence has been developed before our European subcommittee to indicate that these important and decisive steps were not taken expeditiously in view of the long unrest in Hungary, and the sudden dramatic culmination in violent and complete revolution. The steps taken by the United States in the Hungarian crisis were clearly in harmony with these decisions. It is a matter of record that our permanent representative in the United Nations took a strong lead in bringing the Hungarian question first before the Security Council and later before the General Assembly. According to a letter which he addressed to the editor of Time, Inc., on March 4, 1957, he was actively working with the members of the Security Council and the General Assembly at the United Nations how best to handle the Hungarian crisis from October 25. There is ample evidence that the United States did exert constant and leading efforts to marshal every possible support for the Hungarian people in the United Nations and have continued to do so up to the present time. The actions as to Hungary in which the United States participated were taken by the overwhelming majority of the United Nations in behalf of the Hungarian people.

The majority view of the subcommittee would on any other proposed course of individual United States action necessarily have the United States Government embark on a solitary and sudden course exactly as Britain and France acted on the Suez crisis which occurred at the same time as the Hungarian revolt. The United States could not insist on joint action against war in the dispute with Britain and France on Suez, and at the same time embark on a solitary policy as to Hungary when the United Nations was considering the question. It should be pointed out that the majority report recommends no specific action or policy that the United States Government should have taken in the Hungarian crisis other than the administration took, but simply complains of the necessary time to implement consultations for joint action in the United Nations agencies. Do we act with our allies and the United Nations in the next satellite crisis or revolution? I strongly recommend we do.

Outside the United Nations both the President (on October 25) and the Secretary of State (on October 27) vigorously condemned Soviet actions in Hungary while at the same time pointing out that the security of the Soviet Union would not be threatened by a free and independent Hungary. The United States Government unilaterally also made significant contributions to the material aid of the Hungarian people, though this too was coordinated through the United Nations.

Much is said in the majority report about the lack of United States action during the "fatal 4 days" between October 23 and October 27. Such criticism, however, neglects to take account of several important factors. While it was known long before October 23 that there was general popular unrest within Hungary and deep factional conflict within the Hungarian Communist Party itself, no one, including the Hungarian people, the Hungarian Communist leaders, or the Soviets, was in a position during the first days of the uprising to forecast the course which events were to take during the ensuing period.

The initiation of any precipitate action (and the majority does not specify just what action it has in mind) before at least the general outline and trend of events as they were developing had become clear would appear, even in hindsight, to be unwise.

Consider, for example, the situation as it existed on October 24. Imre Nagy, who was known to be more nationalistically inclined and more moderate in his political and economic policies than his predecessor, had become Prime Minister. The Stalinist Gero had ben forced to resign as party secretary.

In brief, progress had been made at that point not dissimilar to what had just taken place in Poland. Would the United States have been justified in taking some hasty action at that juncture which might have jeopardized Nagy's position as the only leader who at the time appeared even remotely acceptable both to the Soviets and the Hungarian people? Should all possibilities of a compromise solution have been endangered or forfeited at that stage when there was no clear basis for anticipating what the next days would bring?

It would appear from these considerations that our Government took the only steps feasible within the framework of its basic policy decisions: We made known to the Hungarian people that we shared their aspirations for freedom and national independence and stood ready to render economic assistance to a free Hungary. We condemned the Soviet intervention and initiated discussions with friendly governments, primarily within the framework of the United Nations but also on a direct basis, concerning action which could be undertaken with wide agreement in support of the Hungarian people.

More Than Illusory Controls Needed for Effective Regulation of Gas Rates

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "Gas Debate," which appeared in the East St. Louis (Ill.) Journal on May 13, 1957:

GAS DEBATE

The perennial natural-gas debate resumed in Congress last week amidst the kind of controversy that seems as much a part of the oil and gas industry as wildcatters and gushers. For as soon as hearings began before the House Commerce Committee no one knew for sure what sort of regulation of gas producers either the Eisenhower administration or the industry wanted. But it is already clear that none of the proposals before Congress would give adequate protection to the consumers of natural gas.

The present Phase of the gas controversy began when the United States Supreme Court ruled 3 years ago that the Federal Power Commission could regulate prices charged by natural-gas producers. The FPC authority to police the pipeline companies and the power of State agencies to regulate gas prices charged consumers by local utilities have long been settled.

The natural-gas industry wants a minimum of Federal controls over producers. So does President Eisenhower. Last year Congress passed such legislation, but the President vetoed it because, he said, of arrogant lobbying tactics by oil and gas interests.

Until last week it had been generally assumed that legislation sponsored by Chairman HARRIS, Democrat, of Arkansas, of the House Commerce Committee, was acceptable to the administration. However, hearings opened with a statement by Charles H. Kendall, General Counsel of the Office of Defense Mobilization, that the administration wants greater FPC authority over the prices charged by producers than the Harris bill provides.

But even with the changes suggested by Mr. Kendall, FPC control over prices charged by gas producers still would not be adequate to protect consumers. Their interests can best be met by allowing the Supreme Court decision of 1954 to stand.

For if there are no controls or only illusory controls over the prices producers get for their gas when they sell it to pipeline companies, there cannot be effective regulation of the rates charged by pipelines or local utilities.

Alliance Is Proud of Bentia

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. BOW. Mr. Speaker, Mr. John Bentia, of Alliance, received the Horatio Alger award this week for his outstanding achievement in rising to the presidency of the Alliance Manufacturing Co. at 38, having started with the concern as a stockboy while in college.

Details of his career were reported in the RECORD several days ago. At this time I ask leave to include an editorial from the Alliance Review commenting on this recognition, and Hal Boyle's syndicated column containing further information:

ALLIANCE IS PROUD OF BENTIA

Distinct honor came to Alliance yesterday when one of her native sons was accorded the signal honor of becoming the youngest American to receive the coveted Horatio Alger award.

This distinction fell to John Bentia, the son of Rumanian immigrants, who at the age of 39 has become one of the outstanding men of the country in the electronics field. He is at 39 president of the Alliance Manufacturing Co., where he started as a stockboy, after graduation at Mount Union College.

Bentia was among those honored at the Waldorf-Astoria Hotel in New York City by the American Schools and Colleges Association.

Bentia attributes his success to determination, hard work, and God-given good health, and is convinced that opportunities today are infinitely greater than ever before.

Bentia asserts that "chances for success today are much greater because more and more men are seeking security rather than competitive success. For the really determined individual, unafraid of hard work, today's opportunities offer less competition than ever before. Actually, the less capable person now has more chances for success than he ever had in the past."

Retiring and unassuming, but industrious and determined, Bentia's career and achievement should be an inspiration to every youth of the land, and especially to those of his home community. No better example of the privileges of the American free enterprise system could be cited for the young men and women graduating this month and next from Alliance High School and Mount Union College, both of which helped in Bentia's preparation for life.

Bentia's accomplishments likewise stand to the rest of the country as illustrative of the important role held in American industry by the concerns that thrive in Alliance. Only a successful industrial realm, such as Alliance, could provide the stepping stones for the kind of personal advancement which has come to this native son.

Likewise, Bentia's receipt of the Alger award will provide enjoyable nostalgia for those who included in their boyhood library the Horatio Alger works which unquestionably served as an inspiration to thousands of American youths.

As a community, Alliance is proud of Bentia, and pleased to take a bit of credit for producing this type of distinguished leadership.

FROM PAPERBOY TO PRESIDENT: BOYLE TELLS STORY OF ALLIANCE ALGER

(By Hal Boyle)

NEW YORK.—John Bentia, a 39-year-old bachelor who runs a 20-million-dollar-a-year business, has figured out a simple formula by which practically anyone can become successful in only 14 hours a day.

There's only one catch in it. You have to spend the 14 hours working.

"I feel strongly that a person of mediocre talent can, by determination and hard work, be more successful than a brilliant man with less drive," said Bentia.

"I've seen it happen time after time, and it's a simple matter of mathematics.

"If you work 12 hours a day and the other fellow works 8, every 2 days you gain a full day on him. The chances are that, even if he is a little smarter than you, he isn't smart enough to overcome the difference that your added hours on the job makes."

Bentia himself puts in 80 hours of work a week, and says he enjoys it.

The son of Rumanian immigrants, he sold newspapers at the age of 5. He worked his way through college and then in 1938, took a $135 a month job as stockboy with the Alliance Manufacturing Co., a subsidiary of Consolidated Electronics Corp., in Alliance, Ohio, his hometown.

Four years ago he became president of the firm. Last week his steady climb up the ladder of success was recognized by the American Schools and Colleges Association, which voted him an Horatio Alger award. He is the youngest executive ever to receive the honor.

A pleasant-faced man with an easy manner that cloaks his own Spartan sense of self-disipline, Bentia says there never in history has been a time when it was easier for a man to get ahead—if he faces up to the price.

"There have never been more opportunities—and fewer people really looking for them," he observed dryly.

"But most people today seem afraid to stick their necks out. They are afraid to take a hammering, but it is only by taking the hammering that you can learn what you have to know.

"They lack confidence in themselves, yet this you must develop and hold on to. They prefer to look for a pleasant job with minimum risks and a safe pension."

The truth, as Bentia sees it, is that most people who say they want to be a success actually are afraid of success and the penalties it imposes. He makes no bones of the fact success does exact a penalty.

"You sometimes are lonely when you're not working," he admitted frankly. "You miss some of the pleasure of family life, and the enjoyment of hobbies. You don't play as good a game of golf.

"Socially, you find it difficult to engage in small talk because you don't have the time to learn the things that make small talk."

The reward of success, he feels, lies in the pride of creative achievement rather than in the bigger paycheck.

But is success worth the things a man loses along the way?

"Obviously, most men in their hearts, don't think so," he said. "I do, even though I know I have missed—so far—the happiness of family life."

But Bentia says being a bachelor isn't one of his career goals, and he expects to marry soon.

What attribute does he value most in a wife?

"Primarily understanding," he said, smiling. "From what the older boys tell me, it can cause a lot of trouble if you like to work long hours and your wife isn't sympathetic."

The Supersonic Tonic

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. SIKES. Mr. Speaker, the following editorial which appeared in the May 9, 1957, issue of the Indian River News, Sebastian, Fla., has been called to my attention by Maj. Sidney J. Roche, who is stationed at Patrick Air Force Base, Fla.

The editorial on The Supersonic Tonic I believe refers to a timely and important subject and I am glad to have it inserted in the CONGRESSIONAL RECORD for the attention of my colleagues:

The editorial follows:

THE SUPERSONIC TONIC

(By Sallydale Wimbrow)

There seems to be a point to be made by the merging of two old cries: The shortage of school teachers and the shortage of electronic engineers. We have to encourage interest in difficult subjects like science and mathematics if America intends to win, place, or show in the jet age. Right now Russia is graduating at least 50,000 engineers annually, while America graduates only about 40,000. Why? America is suffering tremendously from a shortage of the right kind of school teachers. The right kind of teacher puts his subject across before a student becomes interested in it, as well as after. He knows how to lead; so he doesn't have to push.

It's no secret that teachers are shockingly underpaid. There's little attraction in the teaching field for a young man spry of step, who views the world as his oyster. It offers him horn rims and ruler while almost every other field holds out bright plums of promise, increased earnings and better chances of advancement. When that time arrives for the eager and enthusiastic college grad to choose between a Cadillac and a desk with an apple on it, only the truest of altruists chooses the latter with anything less than a Hara-Kiri attitude.

So it's become pretty apparent that this country can no longer afford young teachers. Not only young good ones at any rate, distant pastures are too green with greenbacks. But, luckily, youth alone offers no great advantage in this particular profession. The case here is opposite to other careers. The more seasoned the man is, the better he is equipped to teach.

Where is the youngster who can teach other youngsters how to avoid the pitfalls before he has learned how himself? And what youngster will heed the advice of another youngster telling him how to prepare for life? It's the old soldier who commands respect and knows whereof he speaks. Do we mean old soldier literally? You bet your last raise we do. He just might be the answer waiting to cure the shortage of school teachers and the shortage of electronic engineers in one fell swoop of Florida's legislative pen.

Right here we want to make it clear that we are not trying to militarize our schools. We mean the old soldier, the one who has put his gun away and retired from the hut, 2, 3, 4 routine. He'd be the last one to regiment our study halls. No one is more willing to forget regimentation than a man who's had it crammed down his throat for 20 or 30 years. The martial music is behind him and he likes it there. But he will continue to stand up straight and thirst terrifically for knowledge. He has learned a lot. He has had experience college grads can't even dream of. And while the old soldier may claim that all he wants from here on in is a potato patch on the Isle of Pines, he'll be scared to death of stagnation. He's had too much training. His mind will continue to demand the exercise it has been getting through the years. He has retired from soldiering, but he hasn't retired period. In a year or two, if not right away, he's going to be looking for more than a hoe to keep him busy. He won't be interested in any fast paced existence, because his body has forgotten how to keep pace with his active mind. So a full time, demanding position will look too hectic at any price.

But how would he react to the offer of a teacher's position—a room full of bright faces, a full summer's vacation, and a few thousand dollars per year to supplement the retirement check? How would he feel about sharing the wisdom from all his life's experience with the children who are going to need his knowledge now much more than he does? Here's the man who can put the romance back in mathematics—and not only tell children about the brilliant future they face, but take them to see it. How many potential engineers might result from one visit to the Air Force Missile Test Center near Cocoa, or the new Glenn L. Martin labs near Orlando? What boy won't find renewed interest in his multiplication tables if that's what it takes to teach him to build space ships? Florida is fast becoming a center for electronic manufacturers and guided missile rocket propulsion. In fact, this year electronics, aircraft, and missiles industries accounted for nearly one-third of the new manufacturing plants and one-half of all new jobs. Doesn't it seem a bit ridiculous that we must send our engineering-minded students to Georgia Tech and the California Institute of Technology? We can employ 'em here, can't we teach 'em what they need to know?

Why can't Florida accept teaching applications from retired service officers and other qualified service personnel? If the Florida legislature would set up a committee to study this possibility and work it out with the State and county boards of education and service Secretaries, results might be more than rewarding. The Armed Forces would no doubt be delighted, and it might open a whole new field to physically handi-

capped vets. Experienced armed services officers have a lot more to offer than a shiny-nosed graduate, no matter what their respective college degrees may say. Retired officers have lived—many of them through the horrors of war. They've got a mature outlook, and they don't demand fancy salaries. They've already been king for a day.

In many cases, retired officers have taught and trained to a large degree. They can practice a brand of child psychology that's worked quite well on adults. And those men who come from electronics fields, which have kept them vitally interested for 20 or 30 years, are bound to radiate the kind of enthusiasm for their subject which is contagious and will rub off on students. Every day, officers who have specialized in celestial navigation, aerodynamics, mathematics, electronics, radio, and civil engineering are retiring to backyard bean patches and probably wishing they could share their knowledge with those who need it most—today's children.

Army, Navy, and Air Force offer brilliant specialists who have covered every aspect of a much-needed type of education. Navy officers have had extensive experience with celestial navigation, mathematics, mechanical and steam engineering; the Army retires excellent civil engineers who know how to put their point across and are excellent leaders (in fact, the very motto of the infantry school is "Follow Me"). At the same time, the Air Force is retiring aerodynamics and rocket-propulsion experts—some of the best informed men in the business.

Aside from the education these men could offer, there is another condition which would be bound to improve and that is the overabundance of feminine influence in schools. While we would be the last ones to deflate the ego of the good old-fashioned school marm, classrooms need more masculine influence. In areas where juvenile delinquency is a large-scale problem, half the solution might be in having more men to teach, who can also command respect and dish out discipline where it will do the most good. We get a kick out of thinking about a tough ex-master sergeant taking over Miss Aggie's room full of mama's boys even for a day. They'd get down to business, and probably enjoy it. For all of woman's capability and many wonderful accomplishments, she still can't mold men like a man.

In Florida at present it is a county's responsibility to secure teachers. If the State wanted to help by offering a short training course to retired and eligible service personnel, we feel the teacher-shortage problem could be solved. We need teachers, good ones, for a salary that promising youth will not live on. And we need specialists, students willing to gain the background demanded by an air age. We need a good supersonic tonic.

Florida has to find some way to encourage its youth to pursue the fields that are now too empty for America's good, and who can do it better than the men who devoted their lives to protecting America's past?

You tell me.

Pioneer Mother

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, last Sunday was Mother's Day, a very happy institution for America, and all over this land sons and daughters paused to pay homage to this day, dedicated to mothers. The Poet Laureate of Louisiana, Mrs. Emma Wilson Emery, who is a resident of my hometown, Shreveport, La., for this occasion composed an outstanding poem dedicated to the Pioneer Mother. In this day of soft, plush, postwar living, it is proper that our minds turn back to the period when life was rough and rugged for those who developed this great land:

PIONEER MOTHER

My mother had no use for fragile things;
Old lace, old china, linen sheer and white.
She wore her homespun garment as a brave
And gallant soldier going forth to fight.

Hers was the narrow trail of naked truth,
Carved by the pioneer with blood and toil
Through measured rhythm of the heart and hand
That must reap bone and sinew from the soil.

Her courage was the torch that lit the way
While time echoed her never ending prayer.
With faith's victorious spirit shining through
She held a nation's soul above despair.

"National" Communism—A New Phenomenon?—The Georgetown University Forum

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. FEIGHAN. Mr. Speaker, Members of Congress are familiar with the educational programs of the Georgetown University Forum. This forum, under the able direction of Rev. Francis J. Heyden, S. J., and Rev. Daniel E. Power, S. J., has been an award winner for many years. Its standing in the field of TV and radio forums has been consistently high because of its firm policy to inform, clarify, and analyze the foremost public issues in an objective and dispassionate manner. On many occasions I had the pleasure of participating in the constructive discussions of this forum.

Recently, the Georgetown University Forum highlighted its TV program with a discussion on the very current and vital subject of "National" Communism—A New Phenomenon? Participating in this discussion were the Honorable Edward M. O'Connor, staff director, House Select Committee To Investigate Communist Aggression in the 83d Congress and presently government consultant; Dr. Jan Karski, professor of government at Georgetown University and national chairman of the Ukrainian Congress Committee of America. Mr. Speaker, all three discussants are widely recognized authorities on the subject of Russian Communist imperialism.

Many speak about so-called national communism as though it were an objective and new phenomenon. Actually, it was tried three decades ago and it failed to exist. The chief reason for its failure to exist in objective political reality is due to the fact that nationalism and communism are by nature incompatible. Those who would have us support the tendency toward national communism by material and other means are in reality asking us to squander our resources in pursuit of a mirage. The concept of national communism has long been and is now only a tactical tool of Russian Communist strategy.

These important points and many others are clearly brought out in this forum discussion. Because of the import of this discussion for our deliberations and thoughts on American foreign policy today, under leave granted, I insert the following transcript in the RECORD:

"NATIONAL" COMMUNISM—A NEW PHENOMENON?

Mr. WARREN. "National" Communism: A New Phenomenon? is the topic for the 541st consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss Studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

There are various schools of thought and differing evaluations of the brand of communism adopted outside of the Soviet Union. To some, the name of national communism has been attached. On today's program we shall attempt to prepare a basis for an intelligent estimate of the nature of communism in both European and Asiatic countries.

Dr. Dobrianski, to open our discussion, would you give us a bit of background on this so-called national communism?

Dr. DOBRIANSKY. Mr. Warren, this matter of national communism has tended to be a most complicated subject. In fact, as one looks at many newspapers, for example, today's Washington Post, March 31 issue, has a number of articles, one by Phillip Foisie on this very matter; in other newspapers as well, the term "national communism" is being used.

I think to prepare a background for this, two points must be kept in mind: The first point, how this verbiage arose in the past few months. Actually, prior to June, we didn't hear much about national communism. Then we had the Poznan riots followed by the Warsaw riots in Poland, still, in October, the Hungarian revolution, ever since we began using the term "national communism." It was used in connection with the proposed visit of Marshal Tito to this country.

Now, a second point, going even beyond this background, into Europe proper: It brings up the matter, is there a real phenomenon over and beyond the verbiage itself? Anyone acquainted with the history of the Soviet Union, going back into the twenties, will find there was a sort of testing ground or proving ground, and there was presumably a phenomenon of national communism, and I speak of Ukraine proper. However, that wound up in a debacle. Many of the so-called national Communists in Ukraine committed suicide. I have in mind Khvylovy, Skrypnyk, Ryiski, and numerous others. It was succeeded by a period of tyrannical Russian tyranny, Moscow-centered, and, of course, in the course of the whole 5-year plan. So the verbiage is not new. It is here in the United States but not in Europe, and certainly as one goes to the earliest phases of the Soviet Union one finds it persisted then.

I would say then we have to bear three things in mind: One, when we speak of national communism, do we mean that it is a

blend of nationalism and communism? That brings up a theoretical point: Is it possible to have that blend?

Secondly, if one conceives of communism as being identifiable in a sense with traditional Russian imperialism, then can that be somewhat reconciled with local or parochial nationalism.

Then the third point is, precisely how is it being applied, if at all, in certain areas, such as Poland, Yugoslavia, China, and perhaps parts of the Soviet Union.

Dr. WARREN. Dr. Karski, Dr. Dobriansky then tells us that historically national communism is not new. Would you concur in that?

Dr. KARSKI. Very much so. I would take up the issue from two standpoints. The first would be the relations between the concerned country run by the so-called National Communists and the Soviet Union, and secondly, the operation of the internal regime, in what way is it different from the regime in the Soviet Union.

As far as the first standpoint is concerned, as we know, either Gomulka or Tito, they never differed from the Soviets on any important point in international relations. They always voted with the Soviet Union and are voting with the Soviet Union on every important point. As far as the internal regime is concerned, indeed, in Poland, there is more freedom, there is private industry being started. The collectives are being abandoned. There is more freedom of the press. There are certain concessions to the society. This is the same kind of concessions which Lenin was making to the Soviet society in 1921 within his plan, the so-called new economic policy. Communism was crumbling. There was loud discontent. People were revolting against communism, and Lenin decided to save communism by, first, concessions to the society, and, secondly, by asking the help of the capitalistic countries. As he said many times, "You cannot build communism only with Communist hands. You must use those capitalistic scoundrels to do the job."

I can see the same situation is happening now in Poland. Russia is distrusted and hated. People are dissatisfied. There is poverty. Here Gomulka came to a conclusion, there is no other way but to raise the standard of living, giving more freedom to the people, asking the help of the capitalistic countries, and once the regime will be well established, I have not the slightest doubt he will try to return back to the old Communist line.

Mr. WARREN. National communism, in your opinion, is not a loosening of the Communist control, but rather a calculated risk on their part?

Dr. KARSKI. It is a practical step first taught all Communist leaders by Lenin himself.

Mr. WARREN. Mr. O'Connor.

Mr. O'CONNOR. I would concur with both the previous speakers, but I would add several points to that. First of all, I would get to the objective which I believe rests back of the Communist dialectic called national communism. What is it they seek? My personal view is they seek to cover up the actual objectives they have vis-a-vis the whole world, which is, in my view, world domination. I would like, therefore, in the historical sense to look back upon three significant points. The first is that the most important theoretical work of the late and nonlamented dictator, Josef Stalin, was called the Lenin-Stalin solution to the national question. This is the most publicized theoretical work the world has ever known. Over 80 million copies in some 40 languages have been thrust upon the unsuspecting people of the world. The thesis of this book is that all nations must be destroyed, all national spirit must be destroyed, and to be replaced by what I roughly call the Socialist proletariat.

My second point is that in 1954 the Russians were compelled to the celebration throughout their whole empire of the 300th anniversary of the signing of the Treaty of Pereyaslav with Ukraine. The thesis at that time was that the Ukrainians had their national independence; why all the fuss in the free world to get the Ukrainians their national independence because they already had it. This was the thesis then of Moscow. Upon examination it was held, the Russians held, that is, while this was national independence but national in form and socialist in content. This theme was played throughout the entire Russian empire. It is significant to remember in terms of what our good friend, Dr. Karski has just said, that the introduction of this theme, national communism occurred then, after Stalin had been eliminated by some of the present leaders of the conspiracy and, secondly, after the June 17, 1953, revolt of East Germany. There was no question, there were heavy signs of the crumbling of the empire. Something had to be done, and so therefore, in my view, the leaders of the Kremlin did two things: They have prepared an escape hatch for the leaders of the conspiracy of communism so that they could be a little different than the Russian type, and secondly, they provided a safety valve, what they thought was a safety valve for the oppressed people: Let off a little steam, things are getting too difficult for us.

Now we have to find some propaganda terminology to make the people feel they are free when really they won't be. That would be what I would add to what those two distinguished gentlemen have said previously.

Dr. DOBRIANSKY. Gentlemen, I would like to submit this for your consideration and evaluation, which I referred to as point I: Is it possible to have in reality national communism? This is a theoretical point, but it is a point that I think bears on the very core of the whole issue here.

Mr. O'CONNOR. It is a good point, Dr. Dobriansky.

Dr. DOBRIANSKY. If one speaks of national communism, as I understand it, it is supposed to be a blend of national traits, if you will, the doctrine of nationalism with the doctrine of communism.

Now I go back to the period of the twenties where an actual attempt was made along those lines. I think we could profit by the 4 or 5 years in the mid-twenties when this conflict arose in Ukraine. Here you had again a person like Skrypnyk, and others, who felt they were bona fide Communists. On the other hand, they were also, according to their own lights, Ukrainian nationalists. They proceeded to try to blend this very thing. But the counterforce here was Russian domination. It came from Moscow and these individuals were squelched. The theoretical point here is this: If Moscow had not squelched these efforts at national communism, would it have been possible to maintain national communism in that sense in Ukraine and use that as a model for Poland, for Czechoslovakia and numerous other areas.

Mr. O'CONNOR. I would like, Mr. Moderator, if I may, to ask Dr. Dobriansky, were the Ukranians seeking their national independence at that time?

Dr. DOBRIANSKY. Yes and no. When you speak of the Ukrainians, I take is you are referring to the leaders?

Mr. O'CONNOR. I am referring to the whole Ukrainian nation.

Dr. DOBRIANSKY. Yes, definitely, for national independence and without the Communists.

Mr. O'CONNER. Were they dissatisfied with Russian rule?

Dr. DOBRIANSKY. Definitely.

Mr. O'CONNOR. And their leaders were Communists?

Dr. DOBRIANSKY. Their leaders were Communists.

Mr. O'CONNOR. Very much like the present situation that applies in Poland, that applies in Hungary, and applies in all the other non-Russian nations of the empire?

Dr. DOBRIANSKY. That is right. But they were not permitted by Moscow to express this type of national communism. But the point I am making is, if they were allowed, as some think, for example, Mr. Dulles hopes that perhaps Tito, Gomulka and numerous others would be given greater latitude and we could use them as sort of spearheads in breaking up this empire if we play up to them. I am raising the point that if these early Ukrainian Communists, who thought they were national Communists, had been allowed to express themselves, would that have persisted in the sensible reality?

Mr. O'CONNOR. I would like to ask you a question on top of that. Do you think if it had persisted, that is, the Russians had allowed national communism to progress, would this have destroyed their empire?

Dr. DOBRIANSKY. In answer to that point one, definitely, it would have led to the dissolution of the Soviet Union, and point two, in explaining why, namely, that even the Ukrainian Comunists would not have been allowed to exist in power by virtue of the nationalism at work among the people. I submit here that on the basis of that experience Gomulka is, as Dr. Karski, if I understand him correctly, rightly stated, Gomulka finds nationalism in a sense expedient now, but the main ultimate source of opposition to Moscow, and not only to Russian rule but also to Communist socialistic forms rests with the Polish people, in the same way it did with the Ukrainian people and with any people, including the Chinese.

Dr. KARSKI. May I add something? Let us be rather careful. I have not the slightest doubt that national communism, so-called de-Stalinization, liberalization, was conceived by the Soviet leadership after the death of Stalin in order to strengthen their own regime. However, whatever Soviet leaders conceive, they do it under a pressure from below. This business of national communism, I have no doubt, and Gomulka, as far as Poland is concerned, and the Polish masses had a tendency in this direction. Gomulka, for instance, wants to have personal security and security of his party. He doesn't want to go to jail for 7 years. He was in jail 7 years. Consequently, he wants to have a little independence from the Soviet Union, which does not mean independence for the country. He wants to have an independence, first of all, a certain independence for his Communist party to be safer. As far as the public opinion is concerned, Polish public opinion, they know the Soviet Union was exploiting them politically and economically. They know there was no freedom. They want more freedom, and this pressure was being exercised on Gomulka.

What I am driving at is that although the so-called national communism is a kind of strategy on the part of the Soviet leaders, nevertheless it offers us opportunity to spread the idea of freedom, to use those leaders, perhaps, and to do a good work for the democratic countries. How to do such a work, this is a completely different business. What I want to stress is that we have a chance to do some good for the cause of freedom, to outmaneuver the Soviet leaders exactly with their own hands.

Mr. WARREN. Mr. O'Connor, do you feel that we as a democracy can hope to advance our cause of freedom through the loopholes in this so-called national communism?

Mr. O'CONNOR. I agree with Dr. Karski that the Kremlin has created these new characters who are posing in the world arena as national Communists. I subscribe to the idea that they are the escape hatch

in order to save communism as a world power, all these ideas. But I think Dr. Karski has given a great deal of thought to this.

I would like, Mr. Moderator, to ask him a few questions. Let us take the case of Poland. To what degree and to what extent can we expect to be able to press things in Poland without causing total revolution, and at the same time bringing to the Polish people the basic individual liberties and human freedoms that we as good Americans insist upon anywhere we give aid around the world, or we have that as a world objective for all people?

Dr. KARSKI. This is a very good question and probably, sir, my answer would disappoint you, because to my mind, if Americans that they themselves, with all their material power are too weak to oppose the Soviet Union and the Soviet bloc, and if they feel that those Polish masses being so much weaker and under the control of the Soviet police will do the job themselves without outside help, I am sorry to say that in all my conscience, as you know, I come from Poland, I don't believe it is possible.

Dr. DOBRIANSKY. Dr. O'Connor, if I may refer back to the episode of the 1920's, and the reason again I do it is that it serves lessons. I am very much concerned about the theoretical aspect, and my position is that national communism is completely a fiction. I think we intimated that by emphasizing the tactical strategy involved here. I would like to read, for example, to indicate the zigzagism in theory pertaining to this thing on the part of Stalin himself. In 1913 he speaks of a nation, any nation being simply a historical category of a definite epoch, the epoch of rising capitalism. If one should follow that, then there shouldn't be any nations where you have socialism today, but of course that isn't true. In 1929, we read Stalin saying this: "I reject the thesis that would have us believe that with the victory of socialism in one country, in our own, for instance, national languages will apparently wither away and nations will merge and instead of several languages there will be one language. This is impossible. This means that the party is supporting and will support the development and flowering of national cultures of the peoples of our country. However, the national cultures of the Soviet nations are Socialist in their content."

When one looks at the whole trend, theoretical as well as practical, of the Soviet Union—take the Russian Republic in relation to the non-Russian republics within the Soviet Union, however, since the Second World War the Soviet Union in relation to the other captive nations that have been annexed. I think there are two points that have to be emphasized in considering this matter of naitonal communism: One, that it is purely tactical. It is not a reality. It is not a phenomenon. It is a verbiage, a Trojan-horse type affair, used by Moscow when it suits its purpose when it is in trouble. Point 2, I would submit that in any aid, whether by principle or material, when I speak of principle I mean inviting Tito to this country, or for that matter, any Communist dignitary, perhaps even Marshal Zhukov and others, that any aid to any of these so-called national Communists simply is conducive to the net benefit of the entire empire. That in giving aid one must do it via the people, through American teams of one sort or another, when it comes to food, let us say, for the Polish people, in order not to give the impression that the United States Government is supporting in any way, even by innuendo, any particular national communism, and that goes for Peiping as well.

Dr. KARSKI. May I add something? Let us analyse a little what an impasse the free world found itself in. You remember several years ago the slogan was liberation of the so-called satellite area. Then the next slogan was peaceful liberation. They will liberate themselves. Now we came to such a point that when these people tried to liberate themselves by revolting, even then we do not help them, saying perhaps Khrushchev will get nervous, perhaps this will start the third world war. Consequently, the situation became completely hopeless. The only thing, however, so far we can do is to show to the people, to the masses behind the Iron Curtain that in spite of everything we are with them, that we want to help them and we can afford to help them at least materially. Consequently, I would be very much for giving help to those countries, but such a kind of help in such circumstances that the masses, only the masses, would profit from this help. They would realize that it comes from the Americans, from the freedom-loving nations, and that such a help would not strengthen the cause of international communism. How to do it, of course, this does not belong to this discussion. Some other people should think about it.

Dr. DOBRIANSKY. Well, Dr. Karski brings up a matter, I think, which Dr. O'Connor and I were involved in either directly or indirectly 2 or 3 years ago. That was in connection with the disposal of American surpluses, American food surpluses into the Soviet Union. I think on the matter of direction of help, certainly with regard to the non-Russian peoples, nations within the Soviet Union, and including the Russian people, that we should aid them in every way. That, Dr. Karski, would be in line with the policy of liberation. The policy of liberation that you mentioned earlier had as its purpose to aid the various nations within the Communist empire, whether it is done through these material means or otherwise. But I am saying here that where we get people today who claim that by going ahead and playing up to Tito, playing up to Gomulka, to the national regimes, if you please, in the Communist area, I am contending that we then will find themselves in a dead alley, because that will only contribute to the solidification and the strength of the entire Communist empire. Whatever quarrels there are between Tito and Khrushchev, Gomulka, and Khrushchev, these are essentially family quarrels. They have nowhere else to go. Tito will not go to the West. Tito a year ago, when he visited Moscow, spoke of standing shoulder by shoulder with his comrades in the Soviet Union, and that he at that time, I believe, expressed undying loyalty to the objectives of so-called world communism.

Mr. O'CONNOR. Mr. Warren, I think we might also learn a lesson from the people behind the Iron Curtain themselves. Recently the noble people of Hungary gave all the people of the world a demonstratior of what the people want as distinguished from the Russian-imposed regimes. They don't want communism. They don't want socialism. More than anything else they want to be left alone to build their own lives and to work toward their own destinies. In this connection, a very significant book was published this past week which brings this point out. It is called, No More Comrades, by a young Hungarian patriot called Andor Heller. He chose this title, according to his book, No More Comrades, for this simple reason: A national Communist called Imre Nagy, had been put up by the Russians temporarily to try to quell the demands of the Hungarian people for more and more liberty and freedom. On the day the revolution started the people called for Nagy to come and speak to them from the balcony of the Parliament building. After keeping them many hours of waiting in the darkness he appeared. His first word was "comrade." Comrade, of course, is the call name of the Communist, their greeting word. The people, 150,000 Hungarians assembled in the square, answered him with a roar, almost 150,000 voices, "There are no more comrades; we are Hungarians." From this lesson we can learn a lot. The people behind the Iron Curtain, whatever their origin, want to be free. They want their individual liberty. They don't want any kind of communism, national, international, or anything else.

Dr. KARSKI. Do you agree we should not trust the Communist leaders behind the Iron Curtain countries, those leaders who followed the so-called national communism; however, we should try to be in touch with the masses and to make the masses have trust in us, in the free world, in whatever way we can do it?

Dr. DOBRIANSKY. Dr. Karski, we agree on that score entirely. That would be entirely, again, in line with the policy of liberation, as has been espoused by the Republican administration, by many stalwart figures in the Democratic Party, by many outstanding Americans.

Mr. WARREN. Thank you very much, gentlemen, for your evaluation of national communism. I think we can agree it is not a new phenomenon.

The Administration Whittles Away Its Own Arguments for Giving Away Hells Canyon to Idaho Power

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, one by one, the administration, all by itself, is whittling away at its own arguments for licensing Idaho Power Co. to build low dams and use, for its own purposes, the choice Hells Canyon site which should be developed for the benefit of all the people, for flood-control purposes, for irrigation, for ample power for industrial purposes, and many other purposes. In granting the fast tax write off the ODM has joined another executive branch in destroying one of the principal arguments which materially contributed to last year's Federal high Hells Canyon Dam defeat, namely, that the private dam construction would be accomplished "at no cost to the United States"; that is, at no cost to the taxpayer.

Under leave to extend my remarks, I ask permission to insert in the RECORD an excellent article which clearly describes how the administration has laid to final rest this, its principal and unprincipled argument against the Federal high dam at Hells Canyon. This article is from the National Farmers' Union Washington Newsletter, May 3, issue, under the heading "Idaho Power Co. Subsidy Scandal Boosts Hells Canyon."

The article follows:

SENATE COMMITTEE O. K.'s HIGH DAM—IDAHO POWER CO. SUBSIDY SCANDAL BOOSTS HELLS CANYON

The granting of a huge tax subsidy to Idaho Power Co. for its Snake River "spite dams" has given an unexpected boost to chances for congressional approval of the high Hells Canyon Dam.

The tax subsidy for Idaho Power Co. was announced last week by the Office of Defense Mobilization in direct violation of commit-

ments made by the company that its project would not entail expense to the United States Government.

This week, as the full implications of the Government subsidy to the power company unfolded and the reaction against it grew in Congress, the Senate Interior Committee recommended passage of the bill to authorize the high Federal Hells Canyon Dam in place of the Idaho Power Co. project.

Senate action on the Hells Canyon bill is expected about mid-May. The happy coincidence of the subsidy announcement with Senate consideration of the Hells Canyon project is a heartening break for supporters of the high dam. Feeling is running high against the Idaho Power Co. program, and prospects appear bright that unexpected votes might be gained for the Hells Canyon Dam.

The fight will center on three principal points:

1. The circumstances under which the Idaho Power Co. subsidy was granted. The power company and its supporters have repeatedly assured the Federal Power Commission and the public that its project would be cost-free to the United States Treasury.

2. The merits of the subsidy. Total value to Idaho Power Co. of the subsidy amounts to $329.3 million, whereas the entire high Hells Canyon Dam would cost only $308.5 million.

3. The comparative merits of the two projects. Idaho Power's "spite dams" will produce under half as much electricity, at nearly three times the cost per kilowatt-hour, with much less flood control, water storage capacity, irrigation, fish and wildlife, navigation, and recreational benefits, than the high Hells Canyon project.

Many assurances were given by Idaho Power and its supporters that its project would not cost the Government anything. This was one of the principal grounds claimed by the FPC in granting permission to the power company to build its 2 or 3 small dams. (There is no assurance that the third dam will ever be built under the FPC order.)

The FPC decision itself stated that benefits from the Idaho Power Co. project "will be realized without expense to the United States to the extent that the projects are constructed by a non-Federal entity."

Later the FPC decision again asserted that "development by applicant (Idaho Power Co.) of the Hells Canyon reach of the Snake River would provide 1 million acre-feet of flood-control storage and the required streamflow regulation in aid of navigation on the lower river at no cost to the United States."

Senator WATKINS, Republican, of Utah, a stanch supporter of Idaho Power, apparently received a direct assurance from the company that it would not even ask for a tax subsidy. In a letter dated July 19, 1956, to Alex Hudgins, manager of the Virginia REA Association, Senator ROBERTSON, Democrat, of Virginia, stated as follows:

"Senator WATKINS of Utah informed me that not only had the Idaho company been granted no special depletion allowance but it did not intend to ask for any because it did not consider it to be good business to do so."

In the same vein, the "America's Electric Light and Power Companies' " ad in the Saturday Evening Post of May 26, 1956, stated:

"America's more than 400 independent electric light and power companies * * * don't have to wait for an act of Congress or for tax money from the Treasury."

In the same ad, the power companies gave a direct assurance to the public that the Idaho Power Co. "will save you and your fellow taxpayers $465 million" by building its projects in place of the high Hells Canyon Dam.

These power company assurances proved to be completely false. For the Idaho Power Co. had applied for the tax subsidy in August 1953. This was shortly after administration favoritism made it apparent that its project had a good chance of approval. The request was held pending until last week.

The tax subsidy is a complicated and roundabout device which is hard to understand, but it has exactly the same effect as an interest-free loan to the company directly out of the United States Treasury.

Total cost of the company's Oxbow and Brownlee projects is $103 million. ODM certified 60 percent and 65 percent of the total cost of the two dams for "rapid amortization." This amounts to $65.2 million.

The subsidy arrangement permits the company to charge its customers rates high enough to pay its full normal income taxes to the United States. But instead of paying the full amount collected for taxes, the company is permitted to deduct 20 percent of the certified amount each year for 5 years. In effect, the Government lends this tax money back to the company, with no interest charge.

The amount of this "forgiven" tax will eventually be repaid to the Treasury over the normal life of the project. But in the meantime, the company is permitted to invest it, and to draw a guaranteed "fair rate of return" on it averaging about 6 percent per year.

It is the value of the accumulated "return" earned on its "interst-free loan" that mounts up to the total value to the company of $329.3 million over the 50-year period comprising the normal productive life of hydroelectric powerplants.

The computations reported here were made by the National Rural Electric Cooperative Association. But the method followed in computing them has been accredited by the Federal Power Commission staff, and is exactly the same as that recommended to utility companies themselves by the Electric Bond & Share Co.'s tax accounting department.

A Widow Speaks

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial in the National Tribune of May 9, 1957, as follows:

A WIDOW SPEAKS

Perhaps the outstanding widow in the United States, one who is read by millions in our country, has come forth in behalf of H. R. 358, the bill which would grant $75 a month to the widows of our Spanish War veterans.

The widow in question is Mrs. Eleanor Roosevelt, the widow of Franklin Delano Roosevelt, our wartime President in the dark days of Pearl Harbor, the Normandy invasion and the South Pacific and the eventual conquest of Hitler and Japan.

Mrs. Roosevelt's attention to H. R. 358 had been brought up by a letter from William E. McCann, a member of the national committee on legislation and its administration of the United Spanish War Veterans.

Mrs. Roosevelt wholeheartedly supports the principle involved in the legislation under consideration. As she expresses it, "He reminded me that these veterans were 100 percent volunteers both in the Army and the Navy, and that their widows now are on an average of 78 years old. It seems to me that there can't be many of these widows living. And though I realize what a heavy burden the cost of past wars put on the United States taxpayer, I feel that this country would gladly accept the obligation of caring more adequately for this small group of war veterans' widows."

Outside of our own advocacy of H. R. 358 and previous measures along the same line, these are the nicest words we have read in many a day.

It will be remembered that the Economy Act was passed 16 days after Franklin Delano Roosevelt took his first oath of office as President of the United States. The bill had been prepared long in advance of his inauguration by certain economy-minded people who had little or no regard for veterans or their dependents.

It was labeled "A bill to maintain the credit of the United States." That was 24 years ago and, to our knowledge, the credit of the United States has stood up despite wars and costly efforts to see that all Americans were treated justly—farmers and labor alike.

In August of 1935, President Roosevelt, realizing the injustice that had been done to the veterans of the war of 1898–1902, approved a bill restoring the rights they had received before the Economy Act. In approving this measure he said that the veterans of the Spanish-American War were in a class by themselves and recognized their right to benefits to which they were entitled but could not prove by reason of lack of records.

It is heartfelt that the widow of Franklin Delano Roosevelt should come out at this time in behalf of the widows of the men whom her husband had put in a separate class. We only hope that the Congress of the United States, recognizing the warm heart and the honest words of this widow of a former Commander in Chief of our Armed Forces, will take early and favorable action on H. R. 358. The House has already done so. Now let the Senate act.

The national committee on legislation of the United Spanish War Veterans and the auxiliary committee on legislation considered that in view of an expected message from the President to the Congress regarding veterans, thought it advisable to make an appeal to the President and set forth the present hardships imposed upon the widows of Spanish War veterans. Therefore, such an appeal was prepared and sent to the White House requesting that no adverse action be taken as to Spanish War veterans and their widows and that favorable consideration be given to the widow's bill, H. R. 358. Response from the White House to this appeal indicated that consideration would be given to the facts set forth and to H. R. 358 if the bill reached the President's desk.

Despite all assertions to the contrary, it must be admitted by any discerning person that we do have, right now, a form of inflation which bodes no good to the pocketbooks of a vast majority of our citizens. The Bureau of Labor Statistics of the Department of Commerce once again reports that living costs have gone up for the seventh successive month.

Some writers have described it as creeping inflation. Perhaps it is only creeping up on the average wage earner who, in spite of rising living costs, is able to keep abreast of the situation and see that he or she can keep the wolf from the door.

But for one class of citizens in whom we are most interested it is not creeping inflation. Living costs for them have reached the point where they are engulfed and slowly but surely being swallowed by the rising

cost tides which they cannot meet. Once again we refer to the widows of our Spanish-American War veterans—too old to earn any extras to help them financially—at an age when they are completely unemployable, and they are being asked to get along on $54.18 a month.

Like squirrels in a cage they are in and they can't get out. Round and round they go on their bitter treadmill with nothing to look forward to but death—perhaps the only refuge to the poor.

It is a cruel world where the widows of our country's defenders are allowed to go on eking out a bare existence when so much can be spent for others who have little or no claim upon our generosity. We find it difficult to believe that our Representatives in Congress are so cold-hearted they would not grant this little extra measure of financial aid to our Spanish War widows, a group which has to do so much with so little.

People think of income in terms of dollars and cents but they do not realize that their dollars get smaller and smaller in purchasing power every day. The one group which does know the effect of living costs is the group on pensions and those whose income is static—never increasing but surely diminishing, as the price of food, shelter, and clothing increases.

We hear a good deal to talk about tight money. Perhaps it is a good thing to discourage borrowers from going too deep in their desire to purchase some luxuries they desire.

But tight money is a real issue with our widows. It is so tight that it squeezes them where they need it most. No borrowers, these women. No credit to borrow on and mighty little on which to live.

Let the Congress loosen up a little on the measure to grant these elderly folks some slight aid in their declining years. Tight money may be good to hold down inflation, but it is no help to those for whom we speak who are so distressed by the present existing inflation that they know not where to turn for aid unless it be to a considerate Congress.

Peter F. Drucker, writing on America's Next 20 Years, says that from 1946 to 1949 the three-quarters of the working population who were not unionized (and were therefore not protected against inflationary price increases) suffered a cut in their real purchasing power, fully comparable to the impact of a severe and prolonged depression. Let's end the depression for our Spanish War widows, neither unionized nor employable.

Resolutions Adopted by Massachusetts State Council of Carpenters

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions adopted by the Massachusetts State Council of Carpenters, as they were submitted to me by the Secretary, Mr. Harold Cardarett.

The resolutions follow:

RESOLUTION No. 8—FEDERAL FLOOD INSURANCE

Whereas insurance to protect real and personal property from the ravages of floods and hurricanes is rarely available, and then at almost prohibitive premiums. Damage from recent floods in 6 Northeastern States alone is estimated at nearly $2 billion, 98 percent of which is uninsured; and

Whereas Federal and State grants to disaster areas are limited exclusively to the removal of debris and the restoration of public property and buildings, utilities, streets, and highways. Other assistance to the victims of floods and hurricanes is severely limited by the meager resources of voluntary agencies such as the national disaster services of the American National Red Cross and other forms of community relief; and

Whereas flood victims often become debt victims because of the mortgage and personal loans they are forced to obtain to rehabilitate themselves after disaster. Many families, such as retired workers are, however, not eligible for loans: Now, therefore, be it

Resolved, That the Massachusetts State Council of Carpenters expedite the system of Federal insurance now enacted by requesting the Congress of the United States to protect citizens from the loss of houses, furniture, factories, and heavy equipment in floods, hurricanes, and other natural disasters.

RESOLUTION No. 9—TAFT-HARTLEY LAW

Whereas the present administration, in its campaign pledges, promised to alleviate the objectionable features of the Taft-Hartley Act; and

Whereas it has always been the national policy of the Democratic Party to work in harmony with the ideals and the aims of organized labor whenever possible; and

Whereas neither party has made an attempt in the past 4 years to make any concerted effort to do anything to bring about the necessary reforms or the complete repeal of the act: Therefore be it

Resolved, That the Massachusetts State Council of Carpenters support the position of the building trades department of the AFL–CIO in having enacted the proposed amendments to the Taft-Hartley law now pending in the Congress of the United States benefiting the building trades unions.

RESOLUTION No. 11—GOVERNMENT STATISTICAL PROGRAMS

Whereas in collective bargaining, negotiations, and formulation of economic policies, trade unions have increasingly turned to the statistical services of the Federal Government for information on wages, income levels, prices, profits, employment and unemployment, production, construction, and housing developments, social security, productivity, and a host of other economic trends; and

Whereas unfortunately the Federal agencies charged with providing these services are hampered by lack of sufficient funds. Therefore, they have often been unable to obtain and to make available to trade unions and other interested groups necessary statistical information; and

Wheeras inadequate appropriations have particularly handicapped the United States Department of Labor on which unions have relied most heavily for statistical information: Now, therefore, be it

Resolved, That the Massachusetts State Council of Carpenters recommends that the Congress appropriate increased funds to permit needed expansion of Government statistical services, especially those carried on by the United States Department of Labor, the Bureau of the Census, the Social Security Administration, the Federal Trade Commission, and the Securities and Exchange Commission; and

Congress will appropriate additional funds for the United States Bureau of Labor Statistics, so that it can provide more complete information on employment and unemployment, wage and collective bargaining developments, productivity, housing and construction, and industrial accidents.

RESOLUTION No. 22—LOCAL URBAN REDEVELOPMENT

Whereas many communities in the Commonwealth of Massachusetts have already expended a great deal of time, money, and effort in the preparatory steps of slum-clearance and urban development; and

Whereas in some localities the plans for slum clearance have progressed in some cities to the extent that business and home tenants and owners have moved to other localities leaving entire blocks of stores and homes vacant, and leaving the owners of said property with no income from the vacant premises; and

Whereas many cities have been urged constantly by Washington to proceed with urban renewal in accordance with Federal law and financial assistance offered and said cities have proceeded in good faith to develop workable plans under the Housing Act of 1949; and

Whereas the Federal Housing and Home Finance Agency is now putting the brakes on slum-clearance programs in scores of cities throughout the United States; and

Whereas we seem to have enough money to house the rest of the world by sending tremendous sums abroad for programs similar to our urban-development program: Be it

Resolved, That the delegates of the Massachusetts State Council of Carpenters assembled in the council's 1957 annual convention protest the action of the Federal Housing and Finance Agency in halting the urban-development program and that each affiliated local union be requested to protest the HHFA's action by contacting our Representatives in the House and Senate in Washington.

America Salutes Israel

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. ANFUSO. Mr. Speaker, on Sunday, May 12, some 50,000 people from all walks of life assembled at Ebbets Field in Brooklyn to express their solidarity with Israel on the occasion of the 9th anniversary of its independence. It was truly a magnificent celebration, a heart-warming event, in which the people of the greatest democracy in the world saluted the people of one of the youngest democracies on their national independence day.

It was a grand feeling on this warm spring afternoon to observe these thousands of people of all faiths as they came to salute Israel. They watched the colorful procession, they listened to the greetings and addresses of the various dignitaries, they enjoyed the sport games, but above all they cheered at the cry that "Israel must live and flourish as a bastion of democracy in the Middle East" and "Israel does not stand alone, strong bonds of kinship exist between Israel and America."

The celebration at Ebbets Field was also a great tribute to a most distinguished jurist and a great humanitarian, Judge Samuel E. Leibowitz, who almost single-handedly inspired these 50,000 people to fill the ball park. Such huge attendance at Ebbets Field is a rarity

even for a World Series game. Thousands of people actually paid for standing room.

The procession which led off the Salute to Israel was very interesting. It included representatives of three major faiths in America, the Mayor of New York, the President of the Borough of Brooklyn, Israel Ambassador Abba Eban, Senators IRVING IVES and JACOB JAVITS of New York and Senator JOHN A. CARROLL of Colorado, as well as Irish-American, Italian-American, Afro-American and Jewish organizations.

After the procession, there were several short addresses and a fine program of entertainment, which featured Cantor David Koussevitzky, Miss Elaine Malbin of the Metropolitan Opera, and Sammy Davis, Jr., one of America's premiere entertainers. Miss Marilyn, the famous movie star, led the Israeli and American soccer teams onto the field and kicked-off the first ball to start the game.

Another feature of the American Salute to Israel was the presentation of plaques to several persons who helped organize this huge festival. Plaques were presented to Congressman VICTOR L. ANFUSO and State Supreme Court Justice Anthony J. Di Giovanna, who led the Italian-American division of the parade; to State Supreme Court Justice John E. Cone, chairman of the Irish-American division; and to Mr. Edward Zeltner, famous columnist of the New York Daily Mirror, who served as chairman of the arrangements committee.

After the parade, the official program began with the singing of the United States and Israeli national anthems, led by the noted singer, Jan Bart. Invocations were given by Rabbi Israel Leventhal and Msgr. Vincent O. Genova. Monsignor Genova's invocation, which was particularly moving and inspiring, was as follows:

Almighty and Eternal God, we offer Thee humble worship and beg Thy blessing on this solemn gathering of people of our country, who join in a spirit of fraternal charity in the celebration of the ninth anniversary of the foundation of the State of Israel. Thou, O Lord God, art the Ruler and Master of all men and all nations; Thy divine providence guides their destinies; Thy authority is the source of all legitimate human authority; Thou art the strength of the young and the weak; the hope of the poor and the oppressed among nations.

On this joyful anniversary celebration, we implore Thy gracious blessing on Israel—the oldest of peoples and the youngest of nations. All mankind rejoices that this ancient race—whom Divine privilege made the custodian of the spiritual legacy of the human race, and the first recipients of Thy holy law—should now find a haven and a home of their own among the nations of the world. As America has opened its charitable arms to the victims of Communist persecution from many lands, so Israel has opened its arms to her own noble people, burdened by a centuries-old sorrow of dispersion and persecution.

The free world rejoices at the special role given to Israel by Divine Providence to be the custodian of those holy places which saw the accomplishment of the Redemption of mankind. May this mandate be ever regarded as a serious responsibility, and carried out with the dignity and justice merited by this sacred trust. For the eyes of all the world are on this spot of land which witnesses the union of two civilizations, and joins ancient and modern history.

We beg Thee, O God of might, wisdom and justice, to grant to the rulers and people of the State of Israel the wisdom to follow in the footsteps of their forefathers in the ways of justice and peace. Let Thy Holy Spirit guide its venerable and courageous leader, as Israel walks in the days of its youth as a nation with the Phylactery of Thy holy laws before its eyes. Grant to this young nation, we beseech Thee O Lord, the grace to continue to collaborate with the nations of the world in giving honor and glory to Thee, and in bringing peace among all men of good will. Amen.

Mayor Robert F. Wagner, of New York, the first principal speaker of the afternoon, received a thunderous ovation from the huge gathering when he declared that Israel will live forever and that Israel is the only hope of the civilized world for peace in the Middle East. He was followed by Borough President John Cashmore, of Brooklyn, who saluted Israel and welcomed its soccer team in these words:

Reverend clergy, Mayor Wagner, Ambassador Eban, distinguished guests, Chairman Judge Leibowitz, and ladies and gentlemen, we are gathered here today to witness and applaud the skill and athletic ability of the Israeli championship soccer team, but in a larger sense we have come to salute the people of Israel—the courageous country which they represent.

We in America rally to the support and encouragement of any nation which demonstrates that it is dedicated to furthering the dignity of man and the preservation of his God-given liberties.

No nation in modern times has been more dedicated to democratic ideals than Israel. When one considers the handicaps under which that state was founded, the dangers to which it is still constantly exposed, and the fortitude with which it has withstood every onslaught against it, we cannot but help applaud the bravery and perseverance of this courageous nation.

A nation so conceived and so dedicated as Israel is must endure.

The tidal wave of Soviet propaganda has all but engulfed many surrounding countries, but Israel has chosen to resist all the allurements and false hopes held out by communism. The memory of Israel's strong and firm resistance will always remain a bright chapter in the eternal struggle of man to fulfill his destiny.

As president of the Borough of Brooklyn, I welcome the Israel championship soccer team and salute the great nation which, by its actions and by its conduct, has alined itself with the forces of goodness and honor. May the coming years bring for Israel its deserved share of respect, admiration, and encouragement from all the nations which can profit by its noble example.

The following are some excerpts from the address by Senator IRVING IVES, of New York:

Ideals, principles, and a common faith in the dignity of man bind the United States and Israel together. Mutual interests link them inexorably. * * * Today Israel is the only stable and progressive country in the Middle East. * * * Israel requires our help, and is entitled to it. All freedom-loving peoples everywhere—all believers in humanity's aspirations for a better life—must turn to Israel for an example of a young nation dedicated to freedom's cause.

Israel stands today in a most troubled area of the globe. But she does not stand alone. Let us never forget the strong bonds of kinship—the kinship of blood and the kinship of ideals—which underlie the relationship of the United States and Israel. Let us join in hopes and efforts for Israel's material success, for her well-being; let us also join in prayers for her ever-widening spiritual influence and for a just and lasting peace throughout the Middle East.

The next speaker was Senator JACOB K. JAVITS, of New York. An extract from his remarks follows:

There are two requisites to Israel's being able to continue its role as the free world's principal ally in the explosive Middle East and as a refuge for the oppressed and the wandering—first, the time and the climate of peace in which to grow and develop; second, the continued and unflagging support of Israel's friends to aid Israel in surmounting the obstacles which bar her way—support in resources, in prestige, and in morale.

There can be no doubt that the maintenance of a just peace in the Middle East is essential to United States foreign policy. And a secure and viable Israel is an essential element to a truly secure Middle East. This is my own firm belief and I believe that our Government has learned this, too—may it ever continue to be so.

Senator JOHN A. CARROLL, of Colorado, in his remarks gave recognition to the New York Democratic delegation in Congress for its continued interest on behalf of Israel. He specifically pointed out the efforts toward this cause on the part of Congressman EMANUEL CELLER, dean of the New York delegation, and Congressmen ABRAHAM J. MULTER, JOHN J. ROONEY, EDNA F. KELLY, EUGENE J. KEOGH, and VICTOR L. ANFUSO.

Israel's very able and popular Ambassador, His Excellency Abba Eban, who was the last of the major speakers on the program, told the large gathering:

Israel has opened a new bridge which links the east and the west—and that is the new road which passes through Israel and through the Gulf of Aqaba. The Gulf of Aqaba is open and open it shall remain. * * * Israel is a land which is steeped in the ancient Jewish culture; at the same time, however, Israel's future is deeply rooted in the new era of atomic energy.

Many messages and telegrams were received from leading personalities in this country and in Israel, including former President Harry S. Truman, Israeli President Itzhak Ben-Zvi, Israeli Foreign Minister Golda Meir, and from nearly a hundred Members of both Houses of Congress. The following are a few brief greetings and remarks by those who participated most actively in organizing this very successful Salute to Israel at Ebbets Field on May 12:

As chairman of salute to Israel Festival, it is my proud privilege to welcome you to this momentous gathering. Your presence here is as appropriate as it is inspiring. You represent all the racial and religious strains that make up this blessed land of ours. It is your heritage to possess an uncompromising belief in the right of people everywhere to "Life, Liberty and the Pursuit of Happiness." In your veins throbs the pulse of fellow-feeling for small nations who seek, like Israel, to determine their national destinies for themselves and to live at peace with all men.

This commemoration of the ninth anniversary of Israel's independence is a rallying cry for all those who, like you, believe in the dignity and security of the small nation. Israel will be grateful for this magnificent

expression of your good will. Your encouragement will be a significant part of the spiritual armor which is vital for her survival.

JUDGE SAMUEL S. LEIBOWITZ,
General Chairman.

It is a great pleasure for me to welcome you to this celebration of Israel's ninth year of independence in the name of the arrangements committee.

This gathering is an important demonstration of the friendship and support of the American people for the State of Israel. The American people will never fail to extend a hand of friendship to democratic nations struggling for freedom and self-determination.

EDWARD ZELTNER,
Chairman, Arrangements Committee.

We are indeed happy to have the opportunity of sponsoring this Salute to Israel Festival, marking the ninth anniversary of the State of Israel.

The Farband-Labor Zionist Order salutes the State of Israel. Our membership feels a deep sense of gratification and pride in our participation for over 40 years in the activities for the Jewish national homeland, which ultimately led to the proclamation and establishment of the State of Israel.

This is a grave hour of anxiety for democratic and free nations all over the world and, in particular, for Israel, which is the only democratic stronghold in the Middle East and the only reliable ally of the free world in that part of the world.

Israel has only one desire, and this is to live in peace, strengthen her economy, and help in the ingathering of the exiles—all those Jews who are being persecuted in lands of oppression.

We are very proud to welcome the Hapoel soccer team. We are proud of these young athletes who represent the idealism of the pioneering youth of Israel.

We also take this opportunity to express our thanks and appreciation to all those individuals, groups, and organizations that helped to insure the success of this great festival.

FARBAND-LABOR ZIONIST ORDER,
MEYER L. BROWN, *President.*

I am proud and happy to participate in the activities in behalf of the Salute to Israel Festival on the ninth anniversary of the State of Israel. In the 9 years since the birth of Israel, the Histadrut and the State of Israel have performed miracles.

Hapoel, the soccer team of Israel, represents not only the spirit of the fine young sportsmen of Israel, but especially the spirit of Jewish youth who not only play and build, but also defend this young democratic state.

As a trade unionist, I welcome this occasion not only on my behalf, but on behalf of the American trade unionists who are responsive to the call of Israel in all its needs.

HARRY GREENBERG,
Chairman, Trade Union Committee.

As an American of Irish decent, it is my pleasure to join with all Americans in saluting the State of Israel on the ninth anniversary of its independence. Israel has demonstrated that with idealism and determination, it is possible to make even a barren country blossom with the fruits of economic well-being and democracy.

Judge JOHN E. CONE,
Chairman, Irish-American Committee for the Salute to Israel Festival.

I am proud to join in saluting Israel on its ninth independence day. This new nation is a bastion of democracy in the Middle East and an example for newly liberated nations throughout the world.

Congressman VICTOR L. ANFUSO,
Cochairman, Italo-American Committee for the Salute to Israel Festival.

It is an honor for me to participate in the Salute to Israel Festival. This gathering symbolizes the cooperation of Americans of all national and religious origins in making this country great.

All of us join together in congratulating Israel on the ninth anniversary of its independence.

Judge ANTHONY J. DI GIOVANNA,
Cochairman, Italo-American Committee for the Salute to Israel Festival.

The State of Israel is an encouragement for new nations everywhere to develop their institutions in the traditions of democracy and in the interests of their entire populations. It is an honor, therefore, for me to join in this Salute to Israel Festival on the occasion of the ninth anniversary of Israel's independence.

Judge MILES PAIGE,
Chairman, Afro-American Committee for the Salute to Israel Festival.

Honoring Ambassador Munthe de Morgenstierne, Retiring Dean of the Diplomatic Corps in Washington

---

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, Ambassador of Norway, the Honorable Munthe de Morgenstierne, dean of the diplomatic corps and a resident of Washington for the past 47 years, will retire in the fall of 1957. My district has a large proportion of descendants of Scandinavian countries. We have been very proud of Ambassador Morgenstierne's distinction and ability. His almost fabulous career as Norway's spokesman to our Nation has contributed immeasurably to the maintenance and the solidity of the most cordial relations between our two countries.

We, who are of Norwegian descent, are particularly and immensely proud of this eminent and esteemed representative of Norway. His retirement will be deeply regretted and he will be greatly missed in the diplomatic service by his innumerable friends and by all those who know of his outstanding and effective personality. I know my constituents join me in these greetings and in heartfelt and earnest wishes for long and restful, but continuing fruitful, years ahead.

I have taken the occasion of Norwegian Constitution Day, this May 17, 1957, to request permission here to insert in the RECORD two excellent articles about Ambassador Morgenstierne. They are Norway's Goodwill Man, by Wilbur Elston, and Morgenstierne Believes in Telling All the Facts, by Trygve M. Ager, both of which appeared in the Minneapolis Sunday Tribune of April 13, 1952.

The articles follow:

NORWAY'S GOODWILL MAN
(By Wilbur Elston)

WASHINGTON.—A Midwest editor once introduced the Norwegian Ambassador to his readers in this way:

"Wilhelm Thorleif Munthe de Morgenstierne arrived in town today, trailing his name behind him."

A reserved but friendly man, the Ambassador has "trailed his name" into Minneapolis and Minnesota so often in the last 42 years that he is regarded as almost a resident of the State.

He is a member of the Minneapolis club. He holds a degree (honorary) from St. Olaf College. He addressed a joint session of the Minnesota legislature in 1941. He has spoken at countless Norwegian-American celebrations in the city and State.

Hunting with an old Norwegian-American friend, former United States Senator Henrik Shipstead, he has enjoyed the thrill of bringing down a mallard over a northern Minnesota lake and of toppling a ringneck pheasant whizzing out of a Minnesota cornfield.

Through his close association with Americans for so many years, he has become Norway's foremost authority on American affairs. At the same time he has become the leading interpreter of Norwegian affairs to America.

Looking back over his long service in this country—he has spent 30 years in the United States—he is convinced that relations between Norway and the United States never have been closer—culturally, politically, and militarily—than they are today.

A modest man, he doesn't take the credit for these close ties, but in Washington it generally is recognized that he played an important part in forging them.

With his Roman nose, ruddy complexion and characteristic Norwegian accent, Morgenstierne looks and talks much like his kinsmen in Minnesota.

Now 64, he still is erect and vigorous. That is a tribute to his sturdy Norwegian ancestors and also to his long daily walks around Washington.

His rather spare figure is a common sight striding along the shady streets of Embassy row on the outer edge of the Capital City.

His aids say he knows all the little back lanes from the Embassy out to suburban Bethesda, several miles away. Years ago he and a friend once hiked to Baltimore, more than 30 miles from Washington.

He enjoys other outdoor exercise, too. He's a good skier. When he was serving as consul general in New York he frequently took weekend trips up to Lake Placid ski runs.

And Secretary of State Dean Acheson disclosed the other day that he once saw his old friend roller skating on Massachusetts Avenue back in 1919.

Morgenstierne today is the dean of the diplomatic corps in Washington. This means that in one respect he rates right behind President Truman—for chiefs of the 72 foreign diplomatic missions in Washington. As each new diplomatic chief arrives, he presents his credentials to the President, and then makes his first official call on Dean Morgenstierne.

Like a United States Senator who inherits a committee chairmanship, Morgenstierne earned his job as dean on the basis of seniority. In the main, he says it costs him both time and money. He is expected to be present at many diplomatic functions that the Norwegian Ambassador otherwise could skip.

And the job of receiving and returning the calls of the new diplomats is time consuming and expensive.

Of course, these Embassy affairs have their compensations, too.

They give the diplomats an opportunity to sip a cocktail together, become better acquainted and talk over problems without

the formality that is necessary when one Ambassador makes an official call on another.

For example, the Morgenstiernes recently entertained at a dinner and reception for Secretary Acheson. Washington society columns lavishly described the women's gowns and the food, but the dinner also gave the Secretary and Ambassador a good chance to chat together on an informal basis.

They've been close friends for years. When Madame Morgenstierne, a native of Winnipeg, Canada, came to Washington as a bride more than 25 years ago, she attended her first capital party at the Acheson home.

Acheson long has been close to the Norwegian Government through his work in the United States Government and his law firm's legal work for Norway at the international court of justice at The Hague.

Entertaining at such a dinner has other compensations, too. Howland Sargent, Assistant Secretary of State for Public Affairs, usually is invited—with his wife, screen actress Myrna Loy. At the Morgenstierne party she was as glamorous as usual in a strapless black Parisian gown.

The dean of the Diplomatic Corps gets some special privileges, too. When President Truman or a distinguished visitor like Winston Churchill addresses a joint session of Congress, Ambassador Morgenstierne leads the parade of the Diplomatic Corps into the House Chamber.

That's an impressive job for a man representing a country whose 3,500,000 population is only a little larger than Minnesota's.

But Morgenstierne and Norway loom larger than that country's population in the eyes of Americans.

In his quiet way, Morgenstierne helped awaken the American public to what was happening in Norway under the Nazi occupation before we got into World War II.

A close friend of the late Senator Arthur Vandenberg, he shared with the great Michigan Senator the soul-searching that he went through before he made the shift that transformed him from an isolationist to an internationalist.

Morgenstierne brought to the United States members of the Norwegian underground who told what had happened to a peaceful people who had relied more on a tradition of neutrality than on the force of arms to keep out of war.

Just after the Germans completed their occupation of Norway, Morgenstierne consulted with his government-in-exile in London. Returning to the United States, he said that Norway would fight on until her soil was clear of every foreign invader.

That was stout talk from a man whose little country had just been devastated by Hitler's legions.

In 1942, he visited his exiled government again. Once more he returned with the challenge that "Norway is a conquered country, but the people remain unconquered."

Morgenstierne recalls that there was in the United States a "great upsurge of feeling toward the old country" as a result of Norway's resistance and the contribution made to the cause of freedom by Norwegian sailors and ships.

The easing of travel and trade restrictions since the war has caused the liveliest interchange of people and trade ever known between the two countries. The ambassador believes this helped cement the good relations between them and encouraged Norway to sign the North Atlantic Pact.

Morgenstierne first came to the United States back in 1910 as an attaché in the Norwegian legation. After he had been here two months, the death of the Norwegian minister left Morgenstierne, then only 22, in charge of the legation on a temporary basis. He served ably until a new minister was named several months later.

It was in 1911 that he made his first visit to Minneapolis, he recalls. With a wry grin, he says a newspaper picture recently published in Minneapolis must have been taken during that first visit.

After service in Antwerp and Oslo, he returned to the United States in 1915 as Norway's deputy commissioner at the San Francisco World's Fair. Afterwards, he made a 6-month lecture tour of the United States.

Again he came to Minneapolios. This time it was to install a branch of the World League of Norsemen, an international organization of Norwegians that he served as secretary-general for several years.

It was during this trip, too, that he joined the Sons of Norway. This national organization has its headquarters in Minneapolis, and next August will observe its 60th anniversary. The Ambassador plans to be on hand for the ceremonies.

After more service at home—and a visit back to the Twin Cities in 1925 for the centennial celebration of Norwegian immigration into the United States—he was named consul general of Norway at New York in 1929.

He has been assigned to the United States ever since. He was appointed Envoy Extraordinary and Minister Plenipotentiary from Norway to the United States in 1934. This was Norway's highest ranking Envoy to the country at the time.

In 1942, the Legation was raised to the status of an Embassy and Morgenstierne became his country's first and only Ambassador to the United States.

During his 30 years in various diplomatic jobs in the United States, Morgenstierne has served through the terms of 7 American Presidents.

If Senator Robert A. Taft should be elected president, Morgenstierne would present his credential to a man he met at dances at the White House back in 1911 and 1912.

In those days, Morgenstierne was a young attaché and Robert Taft was a law student at Harvard, visiting his parents, the late President and Mrs. William Howard Taft.

Not that Morgenstierne is expressing any presidential preference, for foreign diplomats avoid any public comment on a decision they feel is one for Americans only.

But in talking with Wilhelm Munthe Morgenstierne, you get the impression that he'll represent Norway well—and interpret America intelligently to Norwegians—regardless of who is President.

Morgenstierne Believes in Telling All the Facts

(Trygve M. Ager during World War II worked closely with Ambassador Morgenstierne as a staff member of the Royal Norwegian information service at the Norwegain Embassy in Washington. Here he gives his personal impressions of Morgenstierne.)

(By Trygve M. Ager)

Recently I was glancing through the yellowed pages of a small paperbound book by Wilhelm Morgenstierne, published many years ago.

It was a compilation of articles he had written and addresses he had made on various occasions, and it included the text of his speech at a July 4 celebration aboard a Scandinavian ship on the high seas in 1919.

In it he raised the question:

"What is it, this subtle influence which seems to take hold of everybody, regardless of former nationality, as soon as he has spent some little time on American soil and under American institutions?"

He answered by asking some more questions:

"Is it not so that we all have a feeling of the promise of American life? Is not this American spirit a spirit of optimism, of confident faith in the ultimate destinies of the human race? America, does it not stand in our imagination intimately bound up with the future of the world? Can we conceive of that future without America?"

This warm admiration for America has been an important part of Morgenstierne's makeup since his earliest years in his country's foreign service, and it explains why associates in Washington have sometimes spoken of him as a "two-way ambassador."

While never shirking his main job of representing Norway in America, he has always been ready to take up the cudgels when America has needed a little championing among Norwegians.

He has unbounded faith in Norway, too.

He showed that best on April 9, 1940, when the first news of Hitler's surprise attack on Norway reached Washington. Instantly he knew his freedom-loving countrymen would never submit to German rule. Without waiting for instructions from his Government, he rolled up his sleeves and set to work rallying all Norwegian strength and resources within his call to the cause.

By coincidence the Norwegian Government, at Morgenstierne's urging only shortly before had acted to create an information service in Washington. The man who was to head it, Hans Olay, arrived on the scene barely ahead of the German invasion.

Olav's first big job was cut out for him by early newspaper accounts of the invasion which made it appear that Norway was teeming with "quislings" and that the Germans were making a picnic of it all.

The truth was far different, but with Nazis in control of communication systems it took time to get at it. In the beginning it had to be gleaned principally from refugees reaching Sweden or England. Later the underground organization contrived ways of gathering news and smuggling it out of the country.

Under the circumstances, the objectivity maintained by those underground reporters was remarkable. They reported activities of traitors, complete with names and places, as well as those of loyal Norwegians. The information service relayed the accounts to newspapers and newscasters just as they came from the underground.

I remember more than one redfaced individual who indignantly protested that the traitor problem was being magnified.

One man—a VIP in Norwegian Government circles—insisted the word "quisling" should never be used in information service publications.

"What will the Americans think of us?" he wanted to know.

But when any such question of policy was carried to Morgenstierne, his answer, in substance, was:

"Give the news out as it comes to us. Anything short of that would be a betrayal of the people of Norway, who sent it, and of the people of America, who are entitled to it."

That kind of policy won respect where it counted. And it shows how well Morgenstierne understands America and Americans, as well as Norway and Norweigans.

American Economic Aid to Poland and Other Russian-Dominated Nations

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. FEIGHAN. Mr. Speaker, the issue of American economic aid to Poland and other Russian-dominated nations is

fundamental and vital to the security of our Nation. It is amazing that many are quick to urge such aid without considering the necessity of conditions. There can be no doubt that the freedom-loving Polish people are in dire economic need. Unquestionably American economic aid should be offered to the Polish people. But the basic question is—how is this aid to be distributed among the Poles?

Experience itself has taught us that in the Communist mentality, be it that of the dominant oligarchs in Moscow or the puppets in Warsaw, Kiev, Peiping and elsewhere in the Communist empire, economic means are just as much a weapon in the cold war as any other factor. Aid to Poland will not necessarily mean aid to the Polish people where no conditions are observed. In this circumstance, it will most likely mean aid to the Communist Polish regime, to Moscow, indeed, incrementally to the entire Russian Communist empire.

The need for an operational policy on economic aid to Russian-dominated lands is carefully analyzed in a recent memorandum on American Economic Aid to Poland and other Russian-dominated nations, addressed to the Secretary of State but in his absence submitted to Undersecretary Robert Murphy by Dr. Lev E. Dobriansky, chairman of the Ukrainian Congress Committee of America. The argumentation for conditions contained in this memorandum is close and incisive. The operational principles it sets forth as a general basis of guidance in the distribution of economic aid to Russian-dominated countries, both within and outside the Soviet Union, are worthy of studied attention. Under leave granted, I insert this memorandum in the RECORD.

The memorandum follows:

MEMORANDUM ON AMERICAN ECONOMIC AID TO POLAND AND OTHER RUSSIAN-DOMINATED NATIONS

The current negotiations between our Government and the Communist Polish delegation on the vital subject of American economic aid to Poland are of the deepest concern to the Ukrainian Congress Committee of America. These negotiations are fraught with a multiple significance and potential widespread ramification. Their results will undoubtedly affect not only our relations with the Polish people but also the intricate complex of our interests in and connections with all other captive nations in the Russian Communist empire, the various puppet Communist regimes, the ruling oligarchy in Moscow, and, generally, our posture of strength in the unending cold war.

It is with this broad orientation that the Ukrainian Congress Committee—the representative national body of a million and a half Americans of Ukrainian ancestry—deems it necessary to express certain views which emphasize the need for a consistent, operating policy to govern the distribution of American economic aid to any sector of the Russian Communist empire. The present negotiations with the Communist Polish delegation will very likely set a precedent for similar economic transactions with other Communist regimes as circumstances and opportunity occasion them. Needless to say, the character of our aid to the Tito regime these many years is not without influence on the nature and content of these current negotiations. However, the glaring fact is that we still have to reap some small measure of concrete benefit from the conditions of such assistance given to the Tito regime.

In regard to any Communist regime an offer of economic assistance "with no strings attached" is a careless offer of conspicuous waste from the viewpoint of our relative political position to the Russian Communist empire. Indeed, and worse still, it contributes on net balance to the solidity and maintenance of this remaining empire in the modern period. The belief that by such aid the interests of "national communism" will be served in order to loosen the sinews of this vast empire is contradicted not only by our sad experience with Tito but also by the illusion of any real possibility of an objectively established national communism. The repeated dedication of Tito to the objective of communizing the world and his widely publicized declaration last year of fighting "shoulder to shoulder" with Moscow in any war against the West are scarcely expressions of gratitude for years of American economic and technical assistance. Our economic aid to the puppet Gomulka regime—in fact, to any Communist government—can only meet with the same results when the hollow condition of "no strings attached" persists.

Economic aid is just as much an important weapon in cold war maneuvering as any political, psychological or military factor. It should be employed with a sense of concrete effectiveness, with wisdom and prudence, directed at specific goals of political leverage and return. Our resources should not be dissipated in a vain gesture of humanitarian response or thrown aimlessly into a venture that promises to be nothing more than a shot in the dark. In our dealings with unrepresentative Communist governments such misuse of resources is virtually guaranteed by the "no strings attached" stipulation. Both the record of experience and reason show that this condition devolves to the benefit of the dedicated Communist enemy and works a detriment to our position and stature in international dealings. Both experience and logic require in this situation an operational policy attuned to weighted conditions of assistance, whether in relation to the Communist Polish government or to any other entrenched agency of Russian Communist imperialism.

I

The sound principles underlying such a working policy have been enunciated before. In the light of the sobering lessons of the patriotic Hungarian revolution they are even more applicable now. The principles are flexible enough to cover any situation that might develop in any dominated country behind the Iron Curtain, including those within the Soviet Union itself. The application of these principles would insure modicum of political benefit for the cause of world freedom as well as a measure of respect for ourselves in the rationally calculated distribution of our resources.

It is reported that at this stage of the negotiations with the Communist Polish delegation our Government is willing to extend in aid about $75 million in surplus farm goods and approximately $25 million for their purchase of farm machinery and coal mining equipment. This type of offer recalls a similar attempt made 2 years ago to ship American food surpluses to the Soviet Union. In testimony to a congressional body this committee opposed that attempt (Trade Agreements Extension, Hearings, House Committee on Ways and Means, pt. 2, 1955, pp. 2333–2356). In a letter to the President on March 8, 1955 this committee reiterated its position in opposing the shipment of American food surpluses to the Soviet Union and again set forth the principles determining its position. These same principles apply to the present Polish case as well as to the unfortunate repeal by the Senate recently of the law prohibiting barter deals with the Iron Curtain countries.

These principles of effective use of resources are: (1) the enforced distinction between the unrepresentative Communist governments and the enslaved peoples, (2) the distribution of American consumer goods, chiefly surplus farm produce, through the agency of neutral teams among the native populace, (3) under a workable strategic-goods concept, the prohibition of any export of producer goods to Communist-dominated lands, and (4) conditions of demand for specific liberalization of known circumstances peculiar to the Iron Curtain country with which we may be dealing. The first three principles are necessarily invariable; the application of the last obviously would depend on the conditions existing in the country under consideration.

II

These grounded principles are fully applicable to the present Polish case. First, in our official political addresses and reports we make much of the real distinction between the unrepresentative Communist governments and the subjugated peoples; yet, contradictorily enough, we are willing to transmit aid through such governments without reservation or qualification. There can be no doubt that the Communist Polish government will make political capital of the fact that it received from the United States a bulk of economic assistance. From the political angle, if not the economic, it will assume and exploit a creditable standing before the Polish people.

Second, the overt expression of the preceding distinction is afforded by the second principle which calls for the distribution of American consumer goods through neutral agencies. The application of this principle would prevent the biased use of these goods by the Communist government and it would also establish a more wholesome contact between our Government and the needy Polish population.

Third, the export of any producer or capital goods to Poland or any other Russian-dominated area should be scrupulously disallowed in order to preclude indirect material benefit to Moscow. Not only should we not relieve Moscow of its current burdens and problems but we should also make sure that it will not gain from the increased capital equipment of one of its captive countries. It is common knowledge that imperialist Moscow has systematically stripped Poland of its agricultural and industrial production. There is no reason to believe that Russian economic imperialism will not reassert itself in Poland. Briefly, then, in the economic sphere this is no time for us to relieve Moscow of its empire burdens. On the contrary, such burdens should be augmented while at the same time consumer goods aid should be channeled directly to the people of Poland.

III

The fourth principle has ready application to the Polish case when due account is taken of the circumstances in which the large Ukrainian minority finds itself in Poland. Conditions of economic aid can serve to ameliorate these circumstances and abet the renowned anticommunism of the Ukrainian people. The specification of these conditions may well be as follows:

1. The release of hundreds of UPA (Ukrainian underground) prisoners now lingering in Polish jails for the "crime" of fighting against Russia's domination over Ukraine;

2. Civilized and equal treatment for the Ukrainian minority in Poland;

3. An opportunity for the reestablishment of the Ukrainian Catholic Church and other religious bodies genocided by Moscow; and

4. The admission of Ukrainian welfare agencies into Poland from the West.

Mr. Secretary, we earnestly believe that the adoption and execution of these prin-

ciples would enable our Government to gain political leverage in our economic dealings with the Communist world. Our resources would be reasonably and effectively spent. Above all, the methodical observances of these principles guiding our operational policy would guarantee that no benefit in the short or long run would accrue to our dedicated enemy. We wish to stress again that the time now is to intensify the empire problems of Moscow, not to relieve them. Only in this spirit can we truly act in accord with the wisdom expressed by the President last year: "We hear from the peoples of Eastern Europe, the solemn word—the solemn proof—that men who have once known the blessings of freedom will lay down their lives in its name. The people of Poland and of Hungary—indeed, of all Eastern Europe—are men and women whom America has never forgotten—nor ever will. And it remains the firm purposes of America to strengthen the love of liberty everywhere—and to do all within our peaceful power to help its champions." (New York Times, Oct. 26.) A rational policy of economic aid is such a peaceful power.

Respectfully submitted.

THE UKRAINIAN CONGRESS COMMITTEE OF AMERICA,
By LEV E. DOBRIANSKY, *Chairman, Professor, Georgetown University.*

Salary Priorities in Bankruptcy, H. R. 7604

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. MULTER. Mr. Speaker, I am introducing a bill, H. R. 7604, to amend the Bankruptcy Act of 1898 to increase the priority claims of salesmen and other workers for moneys due them from bankrupt employers.

The Bankruptcy Act of 1898 provided that workmen, clerks, and servants should have a claim, prior to the dividend claims of creditors and not to exceed $300, to wages earned within 3 months of the commencement of bankruptcy proceedings. This provision was amended in 1906 to include salesmen and again in 1926 to increase the allowable claims from $300 to $600. The only change in this provision since 1926 was contained in the 1938 amendment when the type of salesmen to be included was amplified.

The proposed amendment to section 104, part (2), of the Bankruptcy Act would merely change the amount of the allowable claim from $600 to $1,500. The necessity for this increase is partially explained by the price increases of recent years. The Consumer Price Index has increased 57 percent since the present $600 claim was granted in 1926, and it has increased 115 percent since 1933.

The essential question, however, is whether claims to back earnings of salesmen, workmen, servants, and clerks should be given priority over dividend claims of creditors. Since the original act of 1898, the principle has been to grant the claims of workers priority over the claims of creditors. There has, nevertheless, always been a maximum allowable claim for workers, presumably based on the theory that no wage earner should permit his employer to become too heavily indebted to him.

After salesmen were included in the 1906 amendment, it became evident that the amount of back earnings owed to salesmen was likely to be much greater than the amount owed to other wage earners and was likely to be much greater than the $300 maximum allowed in bankruptcy suits. This situation was partially righted in 1926 when the allowable maximum was raised from $300 to $600.

The changes which have taken place in the nature of selling since 1926 make imperative a further increase in the maximum allowable claim of wage earners. The expansion of credit and modern sales techniques emphasizing installment buying have revolutionized the art of selling. They have also made the modern salesman a substantial creditor to the extent that his sales commissions, in some instances, are not received until the items sold, are paid for. Payments may be spread out over a period of many months.

In the modern age of mass production and mass selling the salesman often stakes his livelihood on a few sizable accounts. The commissions due him from a single purchaser are likely to amount to thousands of dollars. This is the result of good, not poor, salesmanship. Yet the present bankruptcy law permits the salesman to collect only $600 in back commissions before dividends are paid out to creditors.

If the maximum amount of the prior claim is to be an amount above which the wage earner should not permit himself to become a creditor, as I believe it was intended to be, then that amount should be at least $1,500 in the case of salesmen.

By adding to his financial security, this bill will help to preserve the strength and character of the salesman who has always been a leading figure in the development of our free enterprise economy. His essential task has been to find, develop and, wherever possible, to create consumer demand capable of keeping pace with expanding production.

In planning for future economic growth the ability to consume is now considered equally as important as the ability to produce. Only in wartime has consumption been sufficient to utilize our full productive capacity; and when production outstrips demand, as it did in 1929, the necessitated cutbacks can be a prelude to economic disaster.

The salesman is our not-so-secret weapon for combating overproduction with increased consumption. Yet he is "in constant danger of becoming the skelton at the feast," according to an article appearing in the Saturday Review of January 19, 1957. The paradoxical plight of the salesman in an age of prosperity is described in the article as follows:

> The man who sells goes into the coming year as into the jaws of a gigantic press. The lower jaw, squeezing upward, is the rising price level necessary to maintain production in a time of high costs and tight labor. The upper jaw is the intensified, and different, competition for sales he will be facing.

There is an acute need for more and better salesmen in the present era of expanding production and expanding productive capacity. Thus, Nation's Business commented in September 1956 that, "More and more companies report difficulty in attracting and holding sales personnel."

The proposed amendment to the Bankruptcy Act is a necessary first step in rejuvenating the selling profession by making the financial insecurities of its members somewhat less severe.

I must take a moment to give due credit to the National Council of Salesmen's Organizations, Inc. and its energetic President, Louis A. Capaldo, for having called this matter to my attention in the first instance, and for their persistent efforts in trying to remedy this situation. This organization very appropriately calls itself "The National Voice of Salesmen." Mr. Capaldo has been always alert to the needs and desires of salesmen and over the years has done much, through the national council, to advance and protect their interests.

Foreign Aid to Americans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very comprehensive editorial which appeared in the Boston Christian Science Monitor on May 13, 1957:

FOREIGN AID TO AMERICANS

As study of the mutual security (foreign aid) program digs deeper, the plainer it is that it should be reshaped rather than scrapped. The report just made by the Senate's special committee proposes changes and economies, but also shows that the program is of real value to the American people.

The major changes it proposes are shifts from military to economic aid and from grants to loans. The cuts it recommends would mainly come out of military items. President Eisenhower himself has suggested a $520 million cut made possible chiefly by a speed-up in manufacture and delivery of supplies to allies.

The drive for more economical and effective operation of the program should go on. Yet the more the American people learn about it the more likely they are to agree with the President and the committee that so-called foreign aid is of genuine assistance to Americans. Improvements are already under way.

The new budget contains $500 million to start a revolving fund for that purpose. But this still leaves roughly $1 billion going as direct military grants to the regimes the United States supports in Korea, Formosa, and South Vietnam.

Congress, which has just applauded Ngo Dinh Diem as a bulwark against communism, appears indisposed to cut such "foreign aid." And it takes much the same attitude toward "defense support" expenditures which are partially economic measures intended to build up the military strength of allies. It appears much more ready to sacrifice the relatively small amount of economic aid, which is often more carefully supervised and is more largely furnished as loans.

The simplest argument for military aid is that it is much the cheapest kind of defense. Since 1949 the United States has spent on its own Military Esetblishment $226 billion, on military aid to allies about $24 billion. On the average, it costs 7 times as much to keep an American rifleman on the job as it does a soldier in allied countries.

About one-tenth of the mutual-security program is devoted to strictly economic aid. The purpose of this is to help independent nations (Jordan is a case in the news) to resist Red pressures. Impartial observers usually report that the United States is getting its money's worth. Many intangibles are involved. Friendship cannot be bought, but the price tag on unfriendliness in key spots can be high.

Finally, there is the fact that 70 percent of the dollars put into so-called foreign aid never leave the United States. They pay for goods and services produced by Americans. Some 600,000 jobs are attributed to these expenditures. Large amounts provide markets for farm surpluses. While the mutual-security program takes only about 1 percent of the national gross product, the help it gives certain areas of American business is important.

To summarize: The program helps the United States maintain a military stance which would be impossible or far more expensive otherwise; it fights communism and helps peoples in need to help themselves; it provides markets and employment for American citizens. Despite defects, it is not basically a handout to foreigners, but a program of aid to Americans.

Idaho Power Tax Aid Riles Congress

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. ULLMAN. Mr. Speaker, on May 6, 1957, the Portland Oregonian carried an article by the editor of the Oregonian editorial page, Mr. Herbert Lundy. Mr. Lundy has long been a close observer of the resource development program for the Pacific Northwest. I believe his article will be of interest to my colleagues, and ask that it be included in the Appendix of the RECORD.

The article is as follows:

IDAHO POWER TAX AID RILES CONGRESS

(By Herbert Lundy)

The accelerated tax amortization certificates granted Idaho Power Co. for 2 of its dams on Snake River have caused such an uproar in Congress that two results are possible: (1) repeal or drastic revision of the 1951 act allowing such deferred tax payments on defense projects; and (2), attraction of several more Senate votes for the bill to supersede Idaho Power's dams with a high Federal dam in Hells Canyon.

Besides the Hells Canyon Dam advocates, such free enterprise Democrats as Senators BYRD and RUSSELL have assailed the tax benefits to Idaho Power. They have not, however, said they would vote for a Federal dam. The present outlook is that Hells Canyon may pick up a few more votes than when it was defeated in the Senate last session—but probably not enough.

The original, stated purpose of accelerated depreciation of plants for tax purposes has long since been lost. This device was legitimately used in World War II to help industry meet war demands for new planes and other rush jobs—expansion which would be obsolete or unneeded after the emergency had been met. It is doubtful in the extreme if the revival in 1951, under the Korean war impact, was justified in so far as the legislation applied to such long-range projects as hydroelectric dams under 50-year amortization.

Idaho Power Co.'s application was made before the Federal Power Commission granted licenses for the three dams in the Hells Canyon reach of the Snake, and before last year's freeze on new grants. The Office of Defense Mobilization evidently felt obliged to honor the application, which had been kept alive, after the United States Supreme Court refused to intervene against FPC.

ODM permitted Idaho Power to write off in 5 years, in depreciation for Federal tax purposes, 65 percent of the cost of Brownlee Dam and 60 percent of the cost of Oxbow Dam. The way this works is that the company takes larger than normal deductions for 5 years, and smaller than normal deductions for the remaining 45 years of the license.

Statisticians say this means a tax saving for Idaho Power of about $31 million in 5 years, and that if the interest-free loan from Uncle Sam were reinvested at a rate of return of 6 percent the company could benefit to the extent of $338 million at the end of the fiftieth year. This would be not a bad gimmick, since the two dams would cost about $100 million. In the meantime, of course, the Government would get its money back—but not the interest.

What burns up the Government dam proponents—and may interest all taxpayers and power consumers—is this. The $6,500,000 a year withheld in taxes by the company for 5 years is collected from rate payers and put into a deferred account. Yet it can be paid to stockholders as dividends subject only to capital gains taxation, which is much lower than ordinary taxes. What happens, they ask, at the end of the accelerated depreciation period if the money has been paid to stockholders? Their answer: Probably rate increases, to pay the higher Federal tax for the next 45 years.

This tax benefit is an outright subsidy from the Treasury, an interest free loan, to private utilities qualifying under a nonexistent defense emergency. The Government might justify it by requiring a utility to eliminate the loan from its rate base. But utilities need not consider it in ratemaking. And of course if the tax saving is passed along to stockholders under the heading of capital gains, there is another tax bonanza at Government expense.

It is estimated that rapid amortization for tax purposes has deferred Federal tax revenues amounting to around $50 billion since the program started. Senator BYRD's committee should recommend repeal of the entire act.

How Trenton, N. J., Almost Became the Federal City

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include from the Trentonian, a leading newspaper of the Fourth New Jersey District, an interesting article by Eleanore Nolan Shuman describing how Trenton almost became the Federal City.

[From the Trenton (N. J.) Trentonian, of May 6, 1957]

HOW TRENTON ALMOST BECAME "FEDERAL CITY"

(By Eleanore Nolan Shuman)

The great honor of becoming the Capital of the United States was first bestowed upon Trenton in 1784. Commemorating the event, in 1930, the newly built first Mechanics Bank, at the southwest corner of State and Warren Streets, had inscribed in stone above its sixth floor, several of the titles of the inn that once stood at the site. One of them, the "French Arms Inn," was the name of the mansion during the critical period of our Government which concerns this story.

Here in the "Long Room" of the inn, Trentonians watched the great leaders of post-Revolutionary America struggling to operate the system of self-government set up under a weak constitution known as the Articles of Confederation. This type of experiment was new in the world at the time and the results of its failures brought about our strong Constitution of today—our Government which is the oldest working democracy of any large nation.

Why was there a need for such a government? The United States as a nation had been created on July 4, 1776, when the Continental Congress of the Revolutionary period had created the Declaration of Independence. Trentonians had applauded the ideas of the document especially on July 8, 1776, when at 11 a. m., the Declaration was read from the steps of the Old Hunterdon County Courthouse at 6 South Warren Street. This stirring scene marked the first time anywhere that the Declaration had been read publicly. (The site was marked by a plaque by the historic sites committee on May 3, 1955.)

Because the leaders of the new nation realized that they needed a written constitution to tie the Thirteen States together, a Federal document called the Articles of Confederation was drawn up and approved by the Continental Congress in 1777. These articles were adopted by the several States in 1781.

The Government became weak and ineffective. There was a dreary anticlimax after the surrender at Yorktown in 1781 and the final settlement of peace 2 years later. The States became very remiss about furnishing financial support to Congress and subsequently to the Army. When the soldiers found that they were about to be disbanded without settlement of their pay, they became very angry. One group marched from Lancaster to Philadelphia, where the Congress was meeting, to demand their money. This mutinous attack alarmed the Conferation Congress. The Pennsylvania authorities gave them insufficient protection and they fled in terror to Princeton, a safer locale.

It was at this time that Congress considered the problem of finding a safe location for permanent headquarters. Trenton sought the honor in 1783. Each Member of the Congress wanted the capital near his own home. (In the days of the stagecoach, when 50 miles a day was considered good time, the matter of travel distances loomed in the minds of the Members.)

While at Princeton, two sites were decided upon. One was the Delaware at Trenton, the other the Potomac at Georgetown. (The latter had the tremendous support of George Washington, who lived at Mount Vernon.) After much debate, a compromise was reached. There would be two Federal cities, one on the Delaware River and one on the Potomac.

More than a year later, the Congress met at Trenton from November 1 until December 24, 1784. Here the Hon. Peter Van Berchel, representative, from the Netherlands, conferred with Congress. Here, Lafayette made his farewell address to Congress before his

return to France. When the matter of the Federal capital was discussed the Potomac alternative was voted down. The Congress voted that $100,000 be spent to build a Federal city not more than 8 miles above or below the falls of the Delaware. Three commissioners were appointed to select the site: Philip Schuyler of New York, Philemon Dickinson of Trenton and Robert Morris of Philadelphia.

Nothing definite happened for the Congress was weak and the Treasury was too depleted to put the plan in effect. Several spots in the locale were considered. These included Morrisville, Pa., and the present Ellwood Lake section. (An old stagecoach route extending from the latter section toward Lawrenceville still is locally known as Federal City Road). The most favored spot, however, was Lamberton, today part of South Trenton. So sure were they of this selection that Dr. David Cowell of Lamberton, a physician, bequeathed 100 pounds to the United States for the erection of a public building at Trenton. This was the first legacy ever recorded as given to the United States.

No definite action was taken, however. The Confederation finally gave way to the government of the present Constitution in 1789. When the question of a permanent Federal capital came up again in Congress the story of the selection of Washington, D. C., became famous in history books. The deciding vote in its favor in 1790, caused the matter of the "Federal City" to become an interesting shadow in the traditions of Trenton.

Reexamine the Test Issue

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the Christian Science Monitor for May 14, 1957:

REEXAMINE THE TEST ISSUE

On two counts the United States Government should take a fresh look at the possibility of banning H-bomb tests.

First, there is new information about the dangers from fallout.

Second, the Soviet is winning a propaganda battle of no little importance.

The experts and diplomats tie tests up with disarmament. But they have not removed the widespread popular conviction that here is one area of arms limitation where it would not be necessary to depend on Moscow keeping its promises—there is no hiding a big bomb explosion. No new inspection system is required.

The British are nearly ready to carry out their delayed Christmas Island tests, and no ban is likely to block them. These should bring Britain up to date on knowledge to be gained by testing. But what is to be won by indefinite continuance is far from clear. Some American authorities say the United States already possesses more of the big bombs than are ever likely to be used.

British and American experts are insisting that a ban on tests is not feasible until tight controls are established on fissile materials. To the layman this until sounds ominously like never. Nor is he satisfied with the argument that banning the big bombs would still leave dangers from smaller tests.

The United States Atomic Energy Commission has been very positive in denying danger from nuclear fallout. But there is mounting evidence that the AEC has miscalculated at various times. Aside from the slips at Bikini, it appears that on several occasions the Nevada tests have produced unexpected and dangerous fallout. The Reporter magazine describes a series of incidents which make it plain that the AEC is far from infallible.

The AEC has published impressive figures on the smallness of the average danger from fallout. Groups of nuclear scientists and geneticists have supported it with estimates showing many times as much average radiation coming constantly from cosmic rays, materials in the earth, and from X-ray machines.

The trouble is that averages are made up of low and high figures. Dr. Albert Schweitzer's figures on concentrations of nuclear material cannot be answered by averages. And it is high time that Washington realized that Moscow is steadily persuading the uncommitted peoples that only the stubborn rejection of the Western Powers stands in the way of a ban on tests which millions believe are poisoning their air and food.

Of course, it may be that the necessity for keeping massive retaliatory power honed to a fine edge can be shown to warrant any determinable risks of continued big-bomb tests. It may be that Russian talk about a ban would prove to have all kinds of catches attached (Moscow usually speaks of atomic as well as hydrogen tests). But why should not Washington take the initiative and try to clear up the present state of confusion, secrecy, and negation?

Republican-Controlled Illinois Senate Defeats FEPC Measure

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. BOYLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

REPUBLICAN-CONTROLLED ILLINOIS SENATE DEFEATS FEPC MEASURE—GOP IS REBUKED FOR REPUDIATING IKE

(By George Tagge)

SPRINGFIELD, ILL., May 14.—So-called fair employment practice legislation was killed today by the senate amid expressed regrets that for years it has been a political football.

A similar measure has been cleared by a house committee and is expected to be passed by the house, as was done at the 1953 and 1955 sessions. The senate will defeat the house FEPC bill if it comes over.

Senator Fred Smith, Democrat, of Chicago, only Negro senator, attempted to have the senate override unfavorable action by the senate committee on industrial affairs. His motion needed 30 votes and got only 18. Twenty-one senators voted against it.

MEYER REVERSES STAND

With a single exception the rollcall followed party lines. Senator John P. Meyers, Republican, of Danville, broke with his past custom and voted in favor of the bill.

However, Senator Meyer complained that Democrats were making the matter a campaign issue. He said the Negro race has been hurt by being thus involved on many occasions.

Lt. Gov. John William Chapman, Republican, made a long oration in behalf of FEPC. Not being a member of the senate, he was given the floor by suspension of the rules. The courtesy was extended after a GOP caucus on the question. In the 1953 session Chapman did the same thing, but was denied the privilege in 1955.

CLAIM IKE REPUDIATED

Chapman's contribution to the 2-hour debate—longest in the senate this session—was a rebuke to Republican senators for repudiating the leadership in race relations of President Eisenhower, Vice President Nixon, and Governor Stratton.

"A hundred years from now white men may need FEPC," Chapman said.

The bill would create a State commission of five members with $50,000 for expenses. This commission could cite employers on charges of discriminating against persons on grounds of race, nationality, or religion. Courts could jail employers to carry out orders of the commission.

"Such a law would be inimicable to freedom," said Senator ROBERT MCCLORY, (Republican of Lake Bluff). "It would subject every businessman with 25 or more employees to possible imprisonment. Greater progress has been made in race relations by the Republican administration during the last 4 years without such a law than ever before."

CALLS BILL MILD

Senator Smith said at least 15 States have some form of FEPC without harming business or industry. He described the Illinois bill as "very mild." Smith declared that Illinois in general has good laws but that many persons have "second or third class citizenship."

Senator William J. Connors (Democrat, of Chicago), who has more than 20,000 Negroes in his 42d ward bailiwick, said that if Abraham Lincoln were in the senate today he would "disown Illinois and claim Kentucky as his State." Kentucky doesn't have FEPC laws, a fact unnoticed by Connors.

Senator Hayes Robertson (Republican of Flossmoor), whose factory has employed many Negroes for a period of years, said his experience in World War II with Federal officials foreshadowed troubles under an FEPC.

FEARS GESTAPO SPREAD

"Employers would be faced by a gestapo type of official in every town," Robertson said. "One liberty we must guard is freedom of choice. Integration problems will be solved, as they are being solved, if we don't incite discord with such laws as we are considering here."

Senator Everett Peters (Republican of St. Joseph) said operations under an FEPC law in Massachusetts have become "a racket" for shyster lawyers.

Report Red Tourists Being Sent Into Syria

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news story by Frank Kelley, dateline Paris, which appeared in the New York Herald Tribune on May 9, 1957:

SUBVERSIVE TEAMS: REPORT RED TOURISTS BEING SENT INTO SYRIA

(By Frank Kelley)

PARIS, May 7.—In the interest of building Syria into a Middle East satellite the Soviet Union has sent 800 Bulgarian tourists into

Syria since April 1 and Russian technicians are still arriving in that country at the rate of 50 to 100 a week, according to information received in diplomatic quarters in Paris Tuesday.

Travelers returning here from Lebanon said the Bulgarians are already forming special mixed teams ready for any subversive action, either to take control of Syria or to defend it in case of unexpected attack from outside.

SOVIET AID PUT AT 100 MILLION

Lebanese intelligence sources were said to have discovered concentrations of the Bulgarian visitors near the town of Ruseifa, near Raka, where three large dumps of Soviet-manufactured arms have been set up under Bulgarian guards.

Soviet aid for Syria, the same sources said, now amounts to more than $100 million in material and technical supplies. Upward of 300 Soviet specialists, including trainers of jet pilots, are in Syria, the diplomatic sources said.

AIR MAPPING REPORTED

As disclosed in the New York Herald Tribune April 19, training teams for jet planes have been arriving in Syria regularly on a 6-week rotation basis, and on their way the reconnaissance planes bringing them from bases in the Soviet Caucasus have been photographing large areas of northern Iran and northern Iraq. Partial confirmation of these reports was given in the British House of Lords last Wednesday by the Earl of Home, the Government leader.

He said that Russian reinforcements have been arriving in Syria, but he could not confirm specifically the activities of jet training teams.

JOIN SYRIAN TEAMS

Diplomatic reports here said the infiltrating Bulgarian teams had the assignment of joining an existing Syrian organization known as the "Grouping for the Popular Fight," which now numbers about 30,000 so-called progressive Syrians.

The organizer and director of the new venture of Bulgarians into Syria, the sources said, is a Soviet intelligence officer with the rank of colonel who works in the office of Syrian Col. Abdel Hamid Serraj, the chief of military intelligence and right-hand man of President Shukri al-Kuwatly. Colonel Serraj is not only pro-Egyptian but he is also known to be pro-Moscow.

Open Letter to Massachusetts Congressional Delegation Concerning Boston Naval Shipyard

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an open letter to the Massachusetts congressional delegation issued by Mr. Henry A. Wozniak, secretary of the Charlestown Metal Trades Council, AFL–CIO, which concerns an item of $284,000 which was removed by the Navy Department from the 1958 public works budget:

AN OPEN LETTER TO THE MASSACHUSETTS CONGRESSIONAL DELEGATION

HONORABLE MEMBER: Civil defense, many words, speeches, and statements stressing its importance have been written and spoken, but when it's necessary to implement it with hard cash, only moans and groans are heard.

In preparing the 1958 public works budget, the top management at the First Naval District, included an item of $284,000 (a mere drop in the bucket) which would create greater, easier, and safer exits from the Boston Naval Shipyard. This recommendation was made after exhaustive study, research and planning in the best interests and safety of the shipyard and its civilian employees, if and when (we hope never) a disaster of a major type should occur. The Navy Department in Washington, D. C., removed this important and necessary item, without giving it the serious consideration that it should have received.

$284,000 versus the mangling, killing, and crippling of hundreds, yes, even thousands of employees—all taxpayers to the Federal, State, and municipal governments. Is this true economy? Who will have the conscience to explain to the wives, mothers, fathers, children, brothers and sisters that their beloved ones couldn't be spared from being killed or crippled because $284,000 was too much to spend to allow for a safe exit from their place of employment. Will a belated outpouring of thousands and millions of dollars bring back even one life, salve the pains of a crippled employee, or ease the tragedy of many families? Would this then make everything even or would it square matters?

The truth is that an investment of $284,000 now would be the best possible and wisest economy. Not only would it save millions of dollars later on, but could and would be the possible means of saving the precious lives of many people.

The answer is in your hands.

Sincerely and respectfully,

HENRY A. WOZNIAK,
Secretary, Charlestown Metal Grades Council, AFL–CIO.

Warden Ragen of Joliet

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. BOYLE. Mr. Speaker, recently a distinguished constituent of mine, Gladys Erickson, newspaperwoman, wrote and published a book entitled "Warden Ragen, of Joliet." The book details the activities of one of the greatest penologists of our time. Advance copy indicates that it will be highly instructional by parents and juveniles throughout the country in combating crime.

Under permission to extend my remarks, I am honored and privileged to include the unanimous resolution of the Illinois State Legislature paying tribute to Warden Ragen and Gladys Erickson:

Senate Resolution 42 and House Resolution 71

Whereas Joseph E. Ragen has served with distinction as warden of the Southern Illinois Penitentiary at Menard, Ill., in 1933 and 1934 and as warden of the dual maximum security prisons, known as Stateville-Joliet penitentiaries near Joliet, Ill., since October 1935, except for a brief interval; and

Whereas Warden Regan when he assumed the duties as chief administrator of the Stateville-Joliet prisons, was confronted with a critical situation marked by lax discipline and dissatisfaction among inmates, many of who were armed with dangerous weapons; and

Whereas Warden Ragen, by the conscientious application of courage, intelligence, principle, and tenacity, remolded the two prisons into disciplined and secure institutions, with administration based on impartial justice and firm rules; and

Whereas by his fairness Warden Ragen has gained the respect of inmates and guards in the two prisons; and

Whereas more than 82,000 inmates have been incarcerated in the Joliet prison since it was opened in 1858, including 35,000 who served time under Warden Ragen's administration, 95 percent of whom were eventually discharged or released on parole; and

Whereas Warden Ragen has aided many of these inmates to reform and rehabilitate themselves by instituting church and religious services for all denominations, as well as general education classes and a varied and expanded program of trade and vocational facilities to prepare them for return to a new life and place in society; and

Whereas Warden Regan has earned the high esteem and regard of other State officials as a penologist of note, has been called in as a consultant on prison administration and the aversion of prison riots by 18 States in the Nation, and has addressed the Parliament of the Dominion of Canada as a recognized authority on prison problems; and

Whereas a book has been written and published about Warden Regan, entitled "Warden Regan, of Joliet," authored by Gladys A. Erickson, a native of Joliet, Ill., and a Chicago newspaper woman; and

Whereas the book authored by Miss Erickson will serve to spread the achievements and unparalleled fame of the State of Illinois in dealing with society's incorrigible, and its forward program of maintaining maximum security institutions; and

Whereas it is the consensus of many who have seen advance copies of this book that if it is read by parents and juveniles throughout the country, it might serve as a definite deterrent to crime: Therefore be it

Resolved by the House of Representatives of the 70th General Assembly of the State of Illinois: That we pay due tribute with this testimonial to Warden Regan as one of the State's most devoted and illustrious public servants and to Miss Erickson for narrating the unusual story of one of the world's toughest prisons and its great warden; that suitable copies of this resolution, properly printed and engrossed be sent to Warden Regan and Miss Erickson; and that a copy of this resolution and the book, Warden Regan, of Joliet, be made a permanent part of the record of the Illinois Historical Society, and such other copies of the book as may be deemed necessary be made available as part of the Illinois State Library for all to read.

Big End of Television Needs Regulating, Too

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BYRD. Mr. Speaker, I recently directed the attention of our colleagues to the proposed action by the Columbia Broadcasting System to discontinue its

television affiliation with station WCHS–TV in Charleston, W. Va.

The following editorial, which appeared in the May 15, 1957, issued of the Charleston Gazette, points out "the life-and-death hammerlock the Federal Communications Commission exerts over individual stations while the networks are left to their own designs—often at the expense of the general public." The editorial follows:

BIG END OF TELEVISION NEEDS REGULATING, TOO

Among the absurdities prevalent in the world of television is the life-and-death hammerlock the Federal Communications Commission exerts over individual stations while the networks are left to their own designs—often at the expense of the general public.

A case at point is the recent action of CBS–TV in being able to tell WCHS–TV—a faithful affiliate—and the viewers it serves that after July 1, 1958, both can jolly well look elsewhere for their CBS television fare.

To date, no reasonable explanation for this move has been advanced by CBS. In fact, the callous indifference of this network to facts and public opinion deserves to be investigated by Congress. If this is the way CBS–TV wishes to plunder a market and a reliable little business, then certainly the time has arrived when the Federal Government should take steps to prevent future pernicious, public-be-damned tactics.

The entire transaction smacks of a deal between big business interests concerned more in selfish motives than in serving the public. There is reason to suspect it was consummated prior to the purchase of WHTN–TV in Huntington by the Cowles management, wealthy owners of multiple newspapers, radio stations, television outlets, and national magazines.

Without a CBS agreement to move its franchise to WHTN–TV, it shatters reality to presume the Cowles organization would have bought an insignificant station which was making scarcely a dent in viewership surveys. Only with such an assurance could the present WHTN–TV owners accept the "risk."

Quite pertinent, we think, is the easy manner in which Cowles is able to tie up with CBS–TV (this makes the fifth affiliation we believe) and it would seem to be a matter of legitimate inquiry to discover to what extent these vast public opinion mediums intermesh.

Since the small operator in television is subject to rigid governmental control for a number of worthwhile reasons, it doesn't make sense to allow giants in the business to gobble up these independents at will—and that is exactly what is taking place in Charleston.

The lifting of the CBS–TV franchise here is the sorry spectacle of big business scuttling little business to the detriment of the public good. This cannot and should not be tolerated.

Before more little scalps are added to network pelts Congress should act. Despite what President Stanton and his coterie of directors may think, television is more than a mere dollars-and-cents proposition. The entire industry must have the confidence of the people, and as a public information medium it must be responsible to the people as well as to itself and its shareholders.

The CBS–TV action in Charleston is arbitrary, tyrannical, senseless, amoral, and irresponsible, and therefore deserves the attention and application of Government regulation.

The Future of Suez

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. MULTER. Mr. Speaker, it was Thomas Jefferson who, in the early days of our Republic, said:

I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man.

It was with that thought in mind that he also said:

We are not acting for ourselves alone but for the whole human race.

It is my belief that we will certainly be held accountable for dictator Nasser's victory over freedom-loving peoples. The following editorial, which appeared in the New York Herald Tribune, is "must" reading for all Americans:

THE FUTURE OF SUEZ

Britain's decision to permit its ships to use the Suez Canal was inevitable. Thanks to the United Nations the canal is open; thanks largely to the United States it is under Egyptian control. With Middle Eastern oil so vital London had little choice but to accept use of the canal on whatever terms it could get.

But to equate British acceptance of Suez Canal conditions with British approval of them would be a serious error. Some measure of the discontent is provided by the withdrawal of support from the Macmillan government on foreign-policy questions by eight Conservative members of Commons. Actually the disapproval runs even more deeply, for most Britons find Nasser's single-handed control of the canal a bitter pill indeed. To Britain—and to all Western Europe—the Suez Canal is a lifeline that provides the continental nations with more than half their fuel-oil supplies. To place so important a link in the hands of a dictator—particularly one who is willing to work with the Soviets—endangers the welfare of Europe and, through it, the entire free world. Small wonder, then, that Cairo regards itself as having scored a tremendous victory in the general acceptance—France remains the only holdout—of its control of the Suez waterway.

And yet there are strong indications that the last word has not been spoken on the Suez Canal. Prime Minister Macmillan himself indicated this when he reaffirmed Britain's intention to press for a less one-sided settlement through the various international agencies available. The British also expect to maintain economic pressures on Egypt. And the possibility—which seems to be increasing—that Israel intends to test its rights in the canal may explode the issue once more.

Beyond all these factors lie the basic discontent of the West over a situation which leaves the canal's future involved in inter-Arab rivalry and the Soviet effort to expand its influence into the Middle East. What it all boils down to is that Nasser has won a big victory. The West has suffered another painful demonstration of the impossibility of reasoning with an arrogant, power-thirsty dictator. Only force makes an impression on such people. And if power is lacking, or if the exercise thereof is impractical, then there is no use of continued prattling that the U. N. can somehow win through with high-sounding principles.

The plain fact is that Nasser had his way, and those who don't like it had better get to work on ways and means of applying the screws to the Egyptian boss. That means, among other things, to build tankers and pipelines as substitutes for the Suez Canal. Then Nasser, with a shrunken treasury, might learn something.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Let's Get Everybody Pitching Hay

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. DWORSHAK. Mr. President, the senior Senator from Utah [Mr. WATKINS] was one of the principal speakers at the Western Water and Power Conference, conducted at Salt Lake City, May 9 to 11, by the Utah Cooperative Association.

The Senator from Utah stoutly defended the administration's partnership approach to water resource development and received a warm round of applause at the conclusion of his remarks from the delegates who represented National Farmers Union organizations in more than a dozen States.

I ask unanimous consent that the speech delivered by the Senator from Utah be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S GET EVERYBODY PITCHING HAY

(Address by Senator ARTHUR V. WATKINS, Republican, of Utah, before the Western Water and Power Conference in Salt Lake City, Utah, May 11, 1957)

Mr. Chairman and friends of western water and power development, when it was announced that I had accepted an invitation to be a speaker at this session, I ran into some criticism for doing so. To those who were dubious about my participation, I said, in effect, "I don't know many of the spokesmen for the National Farmers Union, but I do know Doug Simpson, the Utah president, a friend of many years, and some of the other Utahans in responsible positions in the Utah Farmers Union. In fact, a number of them are Republicans. So I feel that I can expect a bipartisan reception for my remarks. Furthermore, it will be a group of farmers, and being a farmer myself, I am sure that this group will respect and listen to a man who speaks his mind honestly and openly."

And that's what I expect to do here today. Furthermore, I believe that it won't take long for you to recognize that even with a prepared text—to keep me somewhere within the time limit—you will have little difficulty in recognizing that even though I have been in the Congress for 10 years, in spirit and in speech, I am not very far removed from my fruit farm in Orem, Utah.

Since I have identified myself as a fruit farmer from that fruitful oasis on Provo Bench, some of you may be wondering if I got a little mixed up on my use of metaphors in the title of my talk. Perhaps you are wondering why I didn't entitle my remarks, "Let's Get Everybody Filling the Berry Cups," or "Let's Get Everybody on a Ladder With a Picking Bag." Either of these alternative titles would have applied, but I felt that in any farm group, there was a little more affinity, a little more general acquaintance with the hay fork—at least among my generation—than with the pruning knife. Furthermore, some of my off-the-cuff remarks—which I warn you have sometimes exceeded the text itself—may get a little corny, and I thought that this product would mix a little better with alfalfa.

Seriously, I have been greatly impressed with the program outlined for this meeting. Inasmuch as I have been kept extremely busy on other matters during this weekend visit, I have not been able to participate in your other sessions, as I would have liked to do. However, I have been impressed that you have assembled here some of the top authorities in Utah and the Nation on water and power development. And I will be pleased to report to your organization's critics that sitting beside me and Dr. Leland Olds on the platform here today is Ed Naughton, president of Salt Lake City Chamber of Commerce and of Utah Power & Light Co.

Also I am pleased that your other congressional guests included my colleague, Senator WAYNE MORSE, and Congressman MIKE KIRWAN. Senator MORSE and I are on opposite sides of the fence on the high Hells Canyon issue, but I can assure you members from the upper Colorado River Basin that the senior Senator from Oregon has not joined other spokesmen for the Northwest in their unfair and unrelenting attacks upon the Colorado project, which has as its primary objective not the production of low-cost power but the production of water for four-State desert area and low-cost byproduct power. MIKE KIRWAN also deserves plaudits from the upper Colorado Basin States because of his public pledge to increase appropriations in the House for the Colorado project. I hope that he is successful in these pledged efforts. You may be assured that I am publicly pledged to make the same effort in the Senate.

This reference to appropriations needs for just one river basin of the country leads directly into the first major premise I wish to offer to you today. It is: Our needs for water and power development in this country now and in the foreseeable future are tremendous.

This is a point with which I am sure you have been amply impressed during your deliberations during the past day and a half. Hence, I will implement this statement only briefly.

The President's Cabinet-level Committee on Water Resource Development estimated that the total demand for water in the Nation will almost double by 1975. This tremendous need is based upon this breakdown of the major uses:

Municipal and rural water supplies: Estimated need in 1975 of 25 billion gallons per day, as contrasted to 17 billion gallons per day used in 1950. This is an estimated increase of 50 percent.

Direct industrial uses: Estimated need in 1975 of 215 billion gallons of water per day, as contrasted with 80 billion gallons per day in 1950. An increase of 170 percent.

Irrigation: Estimated need of 110 billion gallons per day in 1975 as contrasted with 88 billion gallons per day in 1950. An increase of 25 percent.

The Hoover Commission Task Force on Water and Power reported that while Congress had appropriated only $693,400,000 on water and power development up to 1910, its appropriations up to and through 1954 totaled $14,300,000,000. Furthermore, the task force estimated that projects now authorized by Congress will cost about $18,494,000,000, providing they are all built. Estimates by the task force of projects under discussion but not authorized would bring the total up to over $84 billion.

In the current U. S. News and World Report, Secretary of the Interior Fred A. Seaton reported that the Federal Government, under the partnership program, is trying to promote the construction of $40 billion worth of electric generating facilities in the next 10 years, and $94 billion worth in the next 20 years. This estimate includes transmission lines and distribution facilities as well as generating plants.

Appropriations requested in the current budget for Federal natural resource development amount to slightly over a billion and a half, so we are doing something in this field in spite of the astronomical defense spending needs.

And to this farmer, all these amounts in multi-millions and billions still remain astronomical—even after 10 years of exposure to them.

Make no mistake about it, then. Our needs for water resources and power development are tremendous, and they are going to cost us considerable money over the next half century. This hard, economic fact must be kept in mind while we consider the needs for and the economic justification of the many projects before us.

This program not only is vast, but it is one that demands advance planning and a continuing program of construction. Our population and our needs for water and power grow every day, and if we don't get on with the job of building new facilities, we can suffer serious social and economic losses. We mush keep our construction and rehabilitation program ahead of the needs.

I am convinced that anyone who studies this problem will agree that the needs are vast and pressing. The problem that immediately presents itself, therefore, is "Can we get the money for it?" That, gentlemen, is the eighty-four or the ninety-four billion dollar question, and leads to my second major premise, which is: Barring an armistice in the cold war—which does not seem likely—appropriations for public works will face continuing and intensive competition with other important governmental activities and with heavy defense costs.

In other words, the chances are good that in the foreseeable future, we will not be able to get the public money that we would like to see devoted to resource development. This is reflected in current congresisonal consideration of the 1958 budget. And prospects for improvement for fiscal 1959 are not more favorable, if we are to succed in further reducing the national debt and providing for tax reduction. And this is a bipartisan observation, bcause pressures for reductions are coming from both major parties.

With respect to resource development, this places the National Government in much the same position that many farmers find themselves in. They recognize needs for improving the facilities on the farmstead to create new income and make the farm operation more efficient, or even to keep it from bankruptcy. At the same time, the farmer faces the problem of mounting costs and increased competition for the dollars that remain, if any, after taxes and other costs are paid.

Now what does the farmer do under such circumstances?

If he is not as conservative as most farmers are in this part of the country, he might consider that the nedeed improvements are so important that it is worth a gamble on the future, even to the detriment of some other activities that he might otherwise finance.

But I think that most farmers would resist the temptation to plunge into large-scale investments without heed to inflationary or other budgetary ill effects, especially if they were in debt to the same extent as is Uncle Sam. I believe that most farmers still have the problem I do of comprehending the size of a $275 billion national debt. But I think that nearly all of us appreciate that while building up that tremendous debt, we have reduced the purchasing power of the dollar to 50 cents or less. It will be difficult enough to pay for needed resource development with 50-cent dollars, without making it more difficult by letting higher debt and acoempanying inflation further reduce the purchasing power of the dollar.

The course, therefore, that I think the average farmer would take toward solution of such a problem is to first assess the needs and determine the costs, and then to weigh the first priority improvements with all the other program expenditures proposed in the Presidential budget. In such an evaluation, I think that most farmers, if given the opportunity, could figure out a way to eliminate waste and reduce spending for nonessentials and to find money for a long-range improvement program.

Such a process is going on in the executive branch, and in the Congress, and I think there are enough farmers in both branches to help the nonfarmer member come up with a sound answer in due time, assisted by considerable coaching from individuals and organizations such as those represented here today.

The next thing that a farmer would do in such circumstances, I believe, would be to get everybody into the act—to get everybody pitching hay—or picking fruit, if you will. Farm improvements are not paid for by idle men or machinery. The whole farm plant must produce to its capacity if it is to prosper to the maximum degree possible.

This is an oversimplification of the position taken on water and power development by the Eisenhower administration:

Since his selection in 1952 as a candidate for President, Mr. Eisenhower not only has been conscious of the tremendous need for water resource development, but also he has been sold on the importance of having all levels of government and private enterprise contribute to the desired results.

I had the pleasure of discussing water with Candidate Eisenhower in Denver in the summer of 1952, and I have had many other rewarding conversations with him on this subject since that time. Hence, I can testify to you that probably no other President has been more concerned with or better informed on the need for water resource development. We in the upper Colorado River basin are especially grateful to the President, because his firm and consistent support was absolutely decisive in obtaining authorization of the Colorado River storage project in 1956. And this project, as most of you are aware, was supported by all of the States involved and by the public power interests and the privately owned public utilities of the region.

In May of 1954, the President initiated a Cabinet-level study of water resource development. His letter of May 26, ordering the study, contained this estimate of the need for adequate water resource development:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens. If we are to continue to advance agriculturally and industrially, we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans."

In the next paragraph, after expressing the need for a comprehensive review of water policies and programs, he stated: "We must do this with a full realization that the States, communities, and private citizens are vitally concerned with the policies and actions of the Federal Government."

The Cabinet-level committee's 1956 report on this study recognized the President's request by this statement in the referral letter:

"The policies set out in the report embody a framework within which the Federal Government, with State and local governments and other non-Federal interests, may cooperate to develop our water resources."

This reaffirmation of the President's partnership policy follows a furrow plowed nearly a century ago by another distinguished President—a Midwest lawyer-farmer named Abraham Lincoln. One of Lincoln's basic policies was set forth in this quotation: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves in their separate and individual capacities. But in all that people can individually do as well for themselves, government ought not to interfere."

I don't think there are many in this group, or in any other farm organization, that would disagree with either of these basic positions.

It may be possible, although the Communist experiment seems to disprove it, to produce wheat or livestock more efficiently by breaking up our little farms, which are frequently economically hard pressed, and letting the corporate state run large collective farms. But tough as our problems are and become, as farmers, I think it will be a long time—if ever—before any of us suggests that we should end private agriculture and turn everything over to the Federal Government. And I don't believe that anyone in this or any other farm organization is seriously suggesting that we are ready to abandon the free enterprise system.

Of course not. And what the President is doing in his partnership program is recognizing that privately owned public utility power—the only kind of power we knew in our pioneer days—is here to stay and inviting it to join all levels of government in utilizing our water resources.

The name of another Republican President, who served a half century ago, is being used increasingly these days. And lest some people have come under the misapprehension that our great trust-busting President Teddy Roosevelt was opposed to private enterprise, I would like to read this quotation from a statement by that great President in the historic Conference of State Governors on May 13, 1908.

In discussing the regulation of corporations, he said: "Take such a matter as charging rent for waterpower. My position has been simply that where a privilege, which may be of untold value in the future to the private individuals granted it, is asked from the Federal Government, that the Federal Government shall put on the grant a condition that it shall not be a grant in perpetuity. [Applause.] Make the term long enough so that the corporation shall have an ample material reward. The corporation deserves it. Give an ample reward to the captains of industry, but not an indeterminate reward."

So you can see that he, too, was suggesting a partnership approach to water resource development. It is significant that he, too, was favoring the FPC licensing program of the type authorized by the Federal Power Commission in the Hells Canyon case. The power permit there is granted for only 50 years.

In my estimation, as a long-time supporter and admirer of Teddy Roosevelt, I believe that Teddy Roosevelt would have endorsed the Hells Canyon decision made by the FPC and sustained later by the Supreme Court. That action was an outgrowth of the far-reaching Federal Water Power Act of 1920, which his forward-looking resource utilization policies helped create. But more about this later.

In order to show the bipartisan flavor of these remarks, I would like to call to your attention the remarks of another well-known American President on the partnership policy. In a statement to Congress on January 19, 1953, President Truman stated:

"This job of getting our land and water developed, I repeat, is so big that we must enlist the participation of all agencies—Federal, State, community, private enterprise. The results can be timely and economical only if States and communities invest their dollars, as well as the Federal taxpayer."

So you can see that Republicans and Democrats alike are on record for more than half a century favoring the general purposes of the "partnership approach" to water resource development. I hope that this group will follow suit, even if you feel impelled to call it by some other, nonpolitical and noncontroversial term. Let's get everybody pitching hay—not just Uncle Sam.

Now, before closing, I would like to review briefly with you my stand on two major water-resource developments of recent years. I believe you will agree, if you examine the entire record, that my stand is consistent and is not incompatible with a sound program for water-resource development.

The two projects, of course, are the Colorado River storage project and the high Hells Canyon project. I dealt with this subject at some length in the Senate last year, and the statement is available for reference in the CONGRESSIONAL RECORD. Hence, I will hit only the highlights at this time. I link the two projects here not only because of their intense regional interest, but also because in seeking approval of high Hells Canyon, many of that project's supporters have been seeking to discredit the Colorado project, which won approval by the Congress.

First of all, the Colorado River storage project is an extremely well-planned program for comprehensive water-resource development to benefit a four-State semidesert area. It will make it possible for the people of these four States to develop their last remaining major water resource, a renewable water and energy resource made possible by watersheds in the upper basin which gather 90 percent of the water that flows down the Colorado. The four upper basin States were allocated roughly half the flow of the river in an interstate compact drafted in 1922, but they have been able to develop only one-third of their allocated half. Failure of the upper States to develop their allocated share of the river would mean that the water will be put to use in southern California or Mexico and the upper basin States forever denied access to it.

The upper Colorado legislation provides for an integrated program of reservoirs and water delivery facilities, planned on a basin-wide basis. This planning was financed by $10 million raised by the upper basin States through revenues from Hoover Dam power receipts and through State contributions. Roughly 99 percent of the project's capital costs will be reimbursed by area water and power users, with interest paid on two-thirds of the project costs, allocated to municipal and industrial water and power production.

Power will be produced as a byproduct at the tremendous storage dams required to guarantee downstream delivery commitments to the lower basin and Mexico. Costs

of power at the largest project producer—Glen Canyon Dam—are estimated at 4.7 mills per kilowatt-hour, but project power will be sold at 6 mills per kilowatt-hour to help provide revenues for water development.

State rights to the waters involved are protected by 2 interstate compacts, 1 for the entire river, and another 1 for the upper basin only. Operation of the project to meet these compact provisions is one of the major deterrents to development of this program by private enterprise.

Construction is already underway on Glen Canyon Dam, where costs are working out at 20 percent less than the engineers' estimates, based on the first two project contracts.

Now let's take a look at the high Hells Canyon project.

This is not a comprehensive, basinwide water-development project. It is primarily a power project, with associated flood-control benefits. The legislation authorizes no reclamation projects as such, and provides no funds for reclamation development until after the power features are paid for in 50 years. I might add that such funds also could be made available from the 3-dam development in 50 years, because that is the extent of the licensing period.

The Corps of Engineers in 1948 recommended a flood-control reservoir of 2,300,000 acre-feet at this site. The proposed capacity of the high dam, however, is approximately 4 million acre-feet.

Water user groups in the State of Idaho have protested against the building of a 4-million-acre-foot storage vessel on the Snake River at that point, because it is located too far downstream to permit any possible diversion for consumptive use of water in Idaho. Furthermore, they feel that this large storage body, used to regulate river flow for power production at several large hydro plants downstream, would be a threat to Idaho's water rights and future expansion of uses. Idaho has been demanding ratification of an interstate compact to protect her rights on the Snake River, but Washington and Oregon steadfastly refuse to grant such protection, in spite of the precedent-setting action on the Colorado River in the 1920's.

The power head of 602 feet on that section of the river can be utilized either by construction of a single dam or by use of multiple dams that accomplish substantially the same purpose. In either case, power output and costs are comparable. Flood-control storage capacity is less on the 3-dam plan, but it is deemed adequate if supplemented by water storage elsewhere in the basin.

After the Federal project was proposed, a privately owned public utility, the Idaho Power Co. announced that the people of Idaho badly needed power and that the company would like to build the 3-dam project in the Hells Canyon reach of the river. Applications for licenses were filed under the Federal Water Power Act of 1920, a far-reaching conservation law proposed by President Theodore Roosevelt and passed during the Wilson administration, and expanded in its powers during the Franklin Roosevelt administration.

The FPC studied the Idaho Power proposal for 2 years and issued the customary 50-year license for the 3-dam project. This action was reviewed and sustained recently by the Supreme Court.

Idaho Power began construction of two of the dams shortly after the FPC license was awarded. Some 20 to 30 million have been invested in this project and power production is scheduled for 1958.

In spite of this reasonable and legal procedure, some people are now demanding that we stop that federally authorized and supervised program, and throw away the time, money, and effort that has been expended so far. This would be adding many millions of dollars to the costs of the Federal project, because I presume that Idaho Power would have to be compensated both for the investment made and for the delay the company would suffer in obtaining the needed power that it is providing legally and could have on the line in 1958.

In addition, the taxpayers of the country—and that means you and me and our neighbors—would have to put up more than a half billion dollars to build a Federal dam and necessary transmission lines in the same area. Does that make good sense to you?

And lest anyone here may be under the misapprehension that our good neighbors in the Northwest have been discriminated against in the area of water-resource development, let me put your fears at rest. Quite the contrary is true. The two States of Oregon and Washington are only one twenty-fourth of the 48 States, but they have received one-fifth of all reclamation construction funds and one-seventh of all flood-control and navigation-construction funds. In addition, these two States have a backlog of $1,828,717,000 in authorized flood-control and navigation projects—one-fourth of all the outstanding authorized projects in the 48 States. Furthermore, Oregon and Washington were given an additional $133,012,000 in new or expanded projects in the omnibus flood-control and navigation bill recently passed by the Senate.

The Northwest Public Power Association has recommended appropriation of $2½ billion for Federal power construction in the Northwest during the next 20 years. To fully develop the power resources of the Columbia River, it will require investment of another five to six billions.

Yes, they have a genuine need for much water resource development in the Northwest and I have supported their projects for many years and expect to continue doing so. But I balked when, in addition to the largesse granted, we were asked to tear down a private project under construction at Hells Canyon and spend a half-billion dollars we do not have to spend for a Federal project that accomplishes little more than the private project. In addition to this wasteful destruction of a going project, we would be foregoing nearly a half-billion dollars in tax revenues that could well go toward paying for vital water-resource projects in the Northwest and elsewhere. To this farmer, that just doesn't constitute good horse sense.

The three-dam project will produce almost as much power at the project site and at about the same cost or less than at the high dam. This may surprise you, because you have heard a lot about 2-mill power at Hells Canyon, and you have heard derogatory comments on the high costs of producing private power. But don't let anyone kid you.

It is true that power from the proposed high Hells Canyon Dam would be sold for a little more than 2 mills per kilowatt-hour. But it will be sold below actual cost, because the costs of generation at the dam site and transmission facilities will make the true costs of high Hells Canyon power more than twice the proposed 2-mill sales price.

How can they do this? Well, I believe that they accomplish this by putting the power into the Bonneville system and applying a system wholesale rate, established at or near the 2-mill level largely because power from depression-built projects on the Columbia River produced energy for less than that amount. Since completion of those early dams, however, virtually every project built on the Columbia has produced power at a cost greater than 2 mills, and the added energy has been sold therefore below actual cost. This sales policy has largely nullified the low-cost advantage of those early subsidized projects, which otherwise might have yielded excess revenues for water development.

As an example of such below-cost sales I cite the Hungry Horse project, a very good project built on a Columbia River tributary in the State of Montana. Power from this project costs 3.76 mills to generate and transmit. But what is it sold at? Why most of the power—$1¼ million worth—is sold to Anaconda Aluminum Co. for 1.72 mills a kilowatt-hour, or less than half cost. Another million dollars' worth of power is sold to Montana Power Co. at 2.49 mills, or one-third less than cost.

You people will be interested to learn that power pricing for co-ops and REA's is more realistic. These groups, which you farmers own, by and large, and all of which use relatively small quantities of power, pay an average of from 3.24 to 3.55 mills per kilowatt-hour, or roughly twice what the great Anaconda Aluminum Co. pays.

Similar pricing policies would, I presume, apply at high Hells Canyon, because power from this proposed project would be sold through the same Bonneville system.

There has been a considerable outcry recently about the so-called subsidy given the Idaho Power Co. in the rapid amortization granted by the Office of Defense Mobilization. Now I did not come here to defend this tax amortization program, or to defend any private utility. But the facts are that this law was instituted by a Democrat Congress, and it has been perpetuated by the Democrat 84th Congress, and, so far at least by the Democrat 85th Congress. I believe there undoubtedly are needs for changes in this legislation, beyond the curtailments made voluntarily by the Agency, and it may be that these changes now will be made.

But lest you become too indignant at what is being done for Idaho Power, let me tell you first that some 900 private utilities have had the same kind of treatment. Also let me tell what is done for big corporation in the Pacific Northwest, apparently with the knowledge and approbation of the Northwest supporters of the high Hells Canyon project.

The below-cost power concession granted by the Bonneville power system to Anaconda Aluminum Co., to which I referred previously, amounts to a subsidy of more than $100 million over the 50-year repayment period, based upon the price at which this power is sold in relation to actual costs at Hungry Horse. In addition, the Federal Government granted this firm a rapid tax amortization of $55,378,000, or 85 percent of the total cost of the aluminum plant built by Anaconda at Butte, Mont.

From the same project, Montana Power gets a million dollars' worth of power at a rate one-third below actual cost. This represents a 50-year subsidy to that private utility of roughly $16 million. This firm also received rapid tax amortizations, three to be exact, between 1951 and 1956. The total amount amortized was $11,285,000, or nearly half of the firm's investment in new power facilities.

It is also significant that both of these large corporations have firm contracts for this power—with no withdrawal provision for recall of the contract energy to meet the needs of preference customers downstream. This, too, apparently is satisfactory to the Northwest groups backing high Hells Canyon and damning Idaho Power, except that they won't offer the same terms at Hells Canyon to the State of Idaho.

Farther down on the river, similar advantages have been granted to Harvey Machine Co., which built a large aluminum plant at The Dalles, Oreg. This company was aided by a grant of a rapid tax amortization certificate for $55,462,000, or 85 percent of the cost of the plant. This was objected to by no one, so a charitable Bonneville Power System granted the firm a rate of 1.72 mills per kilowatt-hour for power that costs 3.4 mills per kilowatt-hour to generate and transmit. Hence, in addition to the so-called subsidy reflected in the rapid tax amortization, Harvey Machine received a below-cost power

subsidy which will amount to something like $300 million in 50 years.

This type of public generosity apparently is fine in the States of Montana, Oregon, and Washington, but reprehensible in the State of Idaho.

In referring to these power pricing subsidies, I do not wish to reflect any criticism upon the companies or the Federal agencies involved. So far as I know, this was all done legally and aboveboard. In fact, I believe that the backers of Federal power in the Pacific Northwest will be able to give you convincing explanations of how it is both reasonable and necessary to pour into the system large quantities of 4.5 mill power from high Hells Canyon and sell it for slightly over 2 mills. My farmer's mind has not been able to comprehend how that can be done and continued in project after project on the Columbia River, without ultimately penalizing the REA's, municipal power system, private utilities and all other nonindustrial users of power in the Pacific Northwest system. I have given notice that I plan to ask for a review of Bonneville pricing policies to ascertain that the smaller power users in that area are being given the benefits to which they are entitled.

I could go on and amplify this subject at greater length, but it is scheduled for future airing on the Senate floor, so I will resume this continuing debate in Washington.

In closing, I wish to commend your organization for its merited interest in water resource and power development. Let us all maintain and expand that interest, seeking always for the facts, and supporting movements on the basis of principle and need, and not from uninformed bias or misdirected emotion. And as we work and study in this field, let us give heed to the wise admonition of President Eisenhower, which I repeat because of its timeliness and significance:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens. If we are to continue to advance agriculturally and industrially, we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans."

I also wish to commend to you another admonition on water resource development, which I first saw carved into a plaque on a monument erected on the Holland coast to commemorate the closing of the last gap in the great Zuider Zee dike, which reclaimed from the sea a tremendous acreage in that low country. The monument contains this mottor of an industrious people who have met and overcome the world's greatest problems in land reclamation.

"A nation that lives builds for the future."

Let us emulate our ancestors who conquered the desert and the equally courageous Dutch people, who have to conquer the raging seas themselves to permit adequate utilization of their natural resources. Let us have the vision and the courage and the tenacity to develop the resources of the good earth, and to build for the future that our children and their children deserve.

Thank you very much.

Stahmann Farms, Inc.

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. CHAVEZ. Mr. President, in today's New York Times, Friday, May 17, 1957, there is a wonderful article with reference to my State entitled "Farm Empire Is Built on Pecans." I ask unanimous consent that this article, written by my good friend Byron Porterfield, may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM INCOME IS BUILT ON PECANS

(By Byron Porterfield)

LAS CRUCES, N. MEX.—A virtual empire, built on the rich meat of pecans, is fluorishing here in the drowsy air of southern New Mexico. It was started in 1926 when Deane F. Stahmann, Sr., first farmed 150 acres of land that he had hacked out of the sand dunes and tough mesquite along the Rio Grande.

Today, Stahmann Farms, Inc., has the largest grove of cultivated pecan trees in the world. It will harvest and process 3,500,000 pounds of shelled pecans this year from 96,000 trees set in rows on 4,000 acres of irrigated land.

The average age of the trees is 17 years. It is estimated that production will reach 10 million pounds a year within 8 years.

Every foot of space on the farm is utilized. Cotton has been planted on 900 acres between rows of the trees. Alfalfa and rye grass between the cotton and trees are grazed to the ground by 200,000 white Chinese geese, which snap up weeds and grass shoots but not the cotton plants.

Another thriving feature is the production of pecan nursery stock. The specially developed seedlings are in great demand by nurseries and other commercial growers throughout the Southwest.

TRIMMINGS ARE SOLD

Even the trunks and branches of trees being thinned in the grove have a commercial value. Cut up and bundled according to length and size, they are sold through retail outlets for use in outdoor grills and barbecue pits.

Stahmann's most recent venture involved 30,000 chickens producing fifty cases of eggs a day in two air conditioned chicken houses. Plans have been made to increase this operation to at least 150,000 chickens.

The operation has a central office building, two pecan-shelling plants, a cotton gin, a slaughtering and quick-freeze plant for geese, blacksmith shop, machine shop and a store. Mr. Stahmann, a lean, vigorous man in his midfifties, directs the overall operation. He is aided by his two sons, Deane Jr. and William.

The father incorporated his holdings in 1946. Each son was made a vice president in charge of certain departments. Mr. Stahmann is president and general manager.

The office man is John D. Chandley, controller since the company was formed. In addition to keeping tabs on finances and personnel, he maintains a detailed, first-hand knowlede of every working phase.

DISEASE AT MINIMUM

Pecans are produced at Stahmann Farms through controlled (irrigation) conditions. Diseases and insects are at a minimum in the area's high, dry climate, irrigation is from Rio Grande reservoirs when there's water; from 20 wells on the property that can produce 2,500 gallons a minute each when there isn't.

Del Cerro (Spanish for "of the highlands"), the trade name for Stahmann pecans, is well known among brokers in the trade throughout the country. Most of the Del Cerro production is handled in bulk through the brokerage concern of Stewart Risdon Co., 99 Hudson Street, New York. The company distributes to makers of ice cream, candy and bakery products.

These include the Borden Co., General Baking Co., Horn & Hardart Co., Continental Baking Co., and the Ward Baking Co.

The entire production of quick-frozen geese, weighing 7 to 8 pounds each, is marketed through Armour & Co. The Department of Agriculture report for 1956 on slaughtering plants shows Stahmann's to be the largest producer of geese in the country.

Prayer Pilgrimage for Peace

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. JAVITS. Mr. President, it is appropriate that there should be noted here today the presence in Washington of some thousands of Americans who will meet in front of a national shrine, the Lincoln Memorial, this afternoon as a Prayer Pilgrimage for Freedom.

There are some who have doubted the wisdom and others the efficacy of this pilgrimage. But I have every expectation that it will be truly a pilgrimage for prayer by patriotic Americans exercising their right to peaceably assemble and to petition the Government for a redress of grievances, as provided by the first amendment to the Constitution.

We would be remiss, I believe, if we did not recognize this pilgrimage as the expression of the agonizing trial of a people among the American people. Violence and defiance of the law in some areas and the struggle over the Supreme Court's decision on desegregation of public schools have dramatized and intensified their struggle. I know the deep and sincere concern with which some here from the South, and millions whom they represent, regard this issue, and I have no doubt that an equally great prayer pilgrimage, equally sincere, could come here from that quarter. The point is that it is this marshaling of forces within the terms of the Constitution and our laws which has for almost a hundred years resolved domestic issues, deep and serious as they may be. I feel, therefore, that the Prayer Pilgrimage for Freedom should be regarded with respect; for which it represents is to bring home to all of us the deep suffering caused by the denial of civil rights, wherever they may be denied, to a broad section of the American people, notwithstanding the Constitution and the laws.

I ask unanimous consent that there be printed in the Appendix a message to the pilgrimage from the Senator from Pennsylvania [Mr. CLARK] and myself.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *May 17, 1957.*

PRAYER PILGRIMAGE FOR FREEDOM, NAACP,
Washington, D. C.:

Deeply regret our schedules prevent addressing prayer pilgrimage today. We send greetings and best wishes to all in attendance at prayer pilgrimage for freedom. The right of our citizens to peacably assemble and petition the Government for redress of deep grievances is one of the most precious

rights secured by our Constitution and citizens are entitled to respect as well as protection in its exercise. The spirit of your meeting reflects what we believe to be the spirit of a great majority of our country to support the achievement of civil rights legislation this session of Congress. There is a real fight here both for minimal civil-rights measures and to change the Senate rule which allows filibusters that have killed the chances for civil-rights legislation before. We both assure you that we will give these measures our strong support on a bipartisan basis. We present our respects to Roy Wilkins, A. Philip Randolph, and Rev. Martin L. King and to the great audience at the Lincoln Memorial today.

JOSEPH S. CLARK,
United States Senator,
JACOB K. JAVITS,
United States Senator.

Housing Act of 1957

SPEECH
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

(Mr. SAYLOR asked and was given permission to revise and extend his remarks.)

Mr. SAYLOR. Mr. Chairman, with due respect to the Committee on Banking and Currency of the House, that has brought out this bill, I have a few remarks that I should like to direct to the attention of this committee with regard to the act of 1946 which established the standing committees of the House.

In the 1946 Reorganization Act the Congress in its wisdom decided that there should be a committee of the House of Representatives to handle the affairs of veterans. The Veterans' Affairs Committee was specifically created as one of the 19 standing committees of the House. There is no comparable committee in the Senate. There have been from time to time special committees set up in the House whose aim and purpose has been to deprive the Veterans' Affairs Committee of some of its jurisdiction.

Whether you realize it or not, I believe there are forces in this country that would do away with the Veterans' Committee in the House and would do away with veterans' preference or any act which has given to the men and women who have served in the armed forces of the United States any special privilege.

I know there is a feeling in some of the committees that if they can only get a little angle of veterans' preference in a bill, it will enable them to get their bill passed.

When the distinguished chairman of our Veterans' Affairs Committee, the gentleman from Texas [Mr. TEAGUE], called the Veterans' Affairs Committee together in executive session concerning this bill, the one thing that stood out in the minds of all the members of that committee was the fact that the Veterans' Affairs Committee had seriously considered what should be done with regard to veterans' housing and had turned down proposals to increase the interest rates and that another standing committee of the House had added to a housing bill, which is not basically for veterans but primarily for the banking and home-building trades, a veterans' preference provision for the purpose of making their bill more attractive and possibly getting the bill through the House.

The Veterans' Affairs Committee unanimously decided that they would oppose this bill, unless all provisions with regard to veterans were taken out of it. I may say that I would even go so far as to oppose the amendment which was offered by the gentleman from Ohio [Mr. AYRES]

Mr. Chairman, I favor the so-called Talle substitute sponsored by the gentleman from Iowa [Mr. TALLE]. I feel that the approach taken by this member of the Banking and Currency Committee is much sounder than the proposal proposed by the full committee and better for our veterans.

I take this position mainly because first, it will mean a liberalized FHA program which will give veterans of service after January 31, 1955, and who are presently ineligible for VA housing benefits the same right and chance to buy a home as any other person who has a sufficient downpayment and who meets the credit requirements. The downpayment schedule in the Talle substitute is much more realistic and, in my opinion, will be of great assistance to all home buyers, as well as providing a stimulus to the home-building industry.

Secondly, I think it is very important that the national service life-insurance trust fund be kept intact, its sanctity preserved, and that the present mode of investment be continued. The Committee on Veterans' Affairs held full and rather lengthy hearings on a number of bills which had as their main purpose the use of this trust fund for providing additional money for direct loans or providing a secondary market for guaranteed loans. The comimttee, after the conclusion of the hearings, met in executive session and rejected these proposals, and rightly so. Despite this fact, the Committee on Banking and Currency reported a bill with the provision therein which would permit the use of this trust fund for housing loans. This is a matter which is most important from a precedent standpoint. If $1 billion is used today for these housing loans, it will be only a short time before money is siphoned off of this source, and after that some other substitute project will find it necessary to levy on the resources of the social-security fund, or the civil-service retirement fund, or some other trust fund maintained by the Federal Government. Once this dam is broken, there is no stopping place, and the Under Secretary of the Treasury is certainly correct in telling our committee and the Banking and Currency Committee that he would recommend a veto of legislation which contained such a proposal. The Talle substitute does not use national service life-insurance money, which is another reason why I am supporting it.

Tied into the matter which I have mentioned above is the matter of jurisdiction of the Committee on Veterans' Affairs. We have clear and definite authority over the loan-guaranty program of the Veterans' Administration, as well as the direct-loan operations. We also have control of the trust fund for the payment of future death payments on insurance. I would be remiss in my duties as a member of this committee if I did not resist, along with all of the other members of our committee, this invasion of our jurisdiction, and by striking from the bill as reported by the Banking and Currency Committee all reference to veterans' housing and the use of the national service life-insurance trust fund.

I have had some experience in the banking field and there has been much talk here and in the hearings about the question of discounting of mortgages. It is a practice which is universally condemned and almost universally practiced. The investigation which our committee has conducted and the experience of others in this field clearly indicates that discounting is a matter which cannot be controlled centrally here in Washington. Discounts vary greatly between areas with the highest discount activity being found on the west coast. If the Congress should enact a law prohibiting more than 2 or 3 points of discount even those loans which are not being made today subject to a discount would undoubtedly grow to the maximum discount permitted by the legislation. The mortgage money situation is improving, if we can believe the information which we read daily in economic publications. If the money market is improving there will be a lowering of the discount and in many areas a complete elimination.

The bill which the committee previously reported and which the House passed, H. R. 4602, dovetails into the proposal which I am supporting today. The bill which the House has already passed relates entirely and exclusively to direct loans granted by the Veterans' Administration in rural areas and in small towns below 30,000 in population. This is the place where the greatest need is for loans of this type, and with the liberalized Federal Housing Administration program with lower downpayments and with more money available for the operations of the Federal National Mortgage Association, the housing program as a whole will have been given a sizable boost and nearly all individuals who desire homes should be able to obtain them.

It is always pleasant to find one's self with such strong support for a position he has taken. In this instance it is gratifying to note that the Bureau of the Budget, the Federal Housing Administration, the Veterans' Administration, the four veterans' organizations, and a large section of the banking fraternity together with other lenders and home builders all oppose H. R. 6659 in the form which it was reported to the House.

The veterans' organizations have largely taken their position on the basis

that the enactment of H. R. 6659 as reported would have the practical effect of destroying the sound veterans' housing program already established and being administered by the Veterans' Administration.

It is significant to note that the Bureau of the Budget, in reporting H. R. 6659, pointed out that the enactment of this bill would not be in accord with the program of the President, which is the strongest language an agency can use in reporting on a particular piece of legislation. Similar criticisms have been made by other organizations which I have indicated and I want to reiterate again that, in my opinion, the only worthwhile solution to this question is the adoption of the Talle substitute.

Before closing I would like to call to the attention of the Members the Veterans' Administration loan experience in 1957. In the month of January there were over 46,000 guaranteed loans. In the month of February, 35,706, and in the month of March more than 31,000—interest was at 4½ percent for these loans even though many of these loans represent prior commitments made before the FHA rate was raised to 5 percent. Our committee has been advised by the Veterans' Administration that the Veterans' Administration with money remaining at 4½ percent in 1957 expects to have approximate requests for 330,000 houses in 1957. Loan applications are expected to total 275,000 and I submit that while these figures do represent a decrease the fact must not be lost sight of that most World War II veterans have obtained the homes which they are going to use and that it is unlikely that there will be any large market from this single group in the future except in those instances where the families have expanded and the need for larger homes is apparent.

I do hope that the Talle substitute will be adopted.

Challenge to Mideast Policy—The Suez Canal

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence with Under Secretary of State Christian Herter concerning the United States position in the Suez Canal. It relates to Senate Resolution 120, sponsored by myself, and the Senator from Maryland [Mr. BEALL], the Senator from Illinois [Mr. DOUGLAS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from New York [Mr. IVES], and the Senator from Oregon [Mr. NEUBERGER].

I shall seek in every way open to me to get our Government to back Great Britain, France, the Netherlands, Italy, Norway, West Germany, Australia, and all other major users of the Suez Canal in finding alternate means for transit of their essential commerce. The key to Mideast peace and hope is to see that Colonel Nasser does not control alone the jugular vein of free Europe—the Suez Canal, but instead shares control with the principal users. The free world dare not relinquish this position. It is the outstanding challenge to our leadership in the Mideast.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

LETTER FROM SENATOR JAVITS TO UNDER SECRETARY OF STATE CHRISTIAN HERTER

APRIL 8, 1957.

DEAR CHRIS: Enclosed herewith you will please find resolution introduced last Thursday urging our Government to consult with the major Suez Canal users "for the purpose of considering collective action to establish and internationalize alternate means and routes for assuring to the free world its normal petroleum supplies and conduct of its commerce normally moving through the Suez Canal." The sponsors have already requested hearings before the Senate Foreign Relations Committee.

I am enclosing herewith from the CONGRESSIONAL RECORD the remarks made upon the occasion of the introduction of this resolution.

I deeply believe that Colonel Nasser's political control of the Suez Canal is a most active threat to United States peace objectives. It is also a major overt manifestation of Communist machinations. The resolution was introduced with the hope that every agency of Government may help to see that we are not found wanting in meeting this challenge.

Sincerely,

JACOB K. JAVITS,
United States Senator.

LETTER FROM UNDER SECRETARY OF STATE TO SENATOR JAVITS

MAY 6, 1957.

The Honorable JACOB K. JAVITS,
United States Senate.

DEAR JACK: The Department wishes to thank you for your interest in the Suez Canal problem and your desire to be of help in seeking a satisfactory settlement. The Department notes that the resolution which you have introduced (S. R. 120) has two objectives, the convening of a "conference of nations engaged in international trade for the purpose of considering collective action to establish and internationalize means and routes for assuring to the free world its normal petroleum supplies," etc., and to "support an effective action within the United Nations to preserve freedom of transit through the Suez Canal for the peaceful commerce" of all nations.

The United States Government has been giving extensive study to the petroleum requirements of the free world; it has attempted to assess carefully the anticipated growth of these requirements, the significance of the Middle East in meeting these needs, and the adequacy of existing and planned transport facilities for the movement of Middle East petroleum into free world markets. All available information indicates that the bulk of the additional petroleum required to meet the anticipated growth of free world petroleum requirements will have to come from the Middle East where most of the world's proven reserves lie. Therefore, the Department believes that not only must Midle East transit facilities be expanded, but that the construction of new pipeline routes with new port outlets appears to be necessary.

The subject of free world petroleum requirements is being studied intensively by a great many other governments, particularly in Western Europe, and some aspects of the problem are already being jointly considered by the Organization for European Economic Cooperation. These governments and international petroleum producers generally share the views set forth above. A number of international petroleum producers are now actively considering the construction of a major pipeline system from the Persian Gulf to an outlet in Turkey on the Mediterranean.

With particular reference to the Suez Canal, the United States has actively sought, in and out of the United Nations, agreement on ways to establish an internationally acceptable arrangement for its operation. In particular, we have urged that any system envisaged for the canal meet the six requirements approved by the Security Council on October 13, 1956. In view of the reopening of the Suez Canal and the release by the Government of Egypt of a set of proposals to govern its operations, the United States thought it appropriate to request a meeting of the Security Council on April 24, 1957, at which time the United States and other members of the Council could express their views on the regime now proposed by Egypt for the Canal. As noted in these discussions, the United States does not believe the Egyptian declaration in its present form adequately meets the six requirements of the Security Council; in particular, it lacks provisions for organized and systematic cooperation between Egypt and the users. There is no assurance that the six requirements will in fact be implemented. The United States recognizes, however, that the manner in which the Egyptian declaration is implemented and interpreted will determine Egypt's intent and whether confidence among the users of the Canal can be established. The United States believes that the system proposed by Egypt should be considered provisional at this time and that the Council should remain seized of this matter while the system is tried out in practice.

I believe that the action which the United States Government is taking to meet the problems arising from Egypt's seizure of the Suez Canal Company is consonant with the objectives of your resolution, but that it can be accomplished without a conference of nations as you suggest.

Most sincerely,

CHRISTIAN A. HERTER,
Acting Secretary.

Daylight Saving Time

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the Honorable Herschel Lashkowitz, mayor of the city of Fargo, N. Dak., and a resolution adopted by the Board of City Commissioners of Fargo.

The resolution urges the Congress to take immediate steps to establish daylight saving time across the United States during the months of April through October, inclusive.

Mayor Lashkowitz states that arguments in favor of such action are overwhelming, and that it would clearly be

in the public interest to adopt daylight saving time on a nationwide basis.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

CITY OF FARGO,
FARGO, N. DAK.

The Honorable MILTON R. YOUNG,
United States Senator from North Dakota, Senate Office Building, Washington, D. C.

DEAR SENATOR YOUNG: Enclosed is a copy of a resolution which I introduced at the regular meeting of the Fargo City Commission this morning and which was adopted unanimously calling upon the Congress of the United States to adopt daylight saving time across the United States between the months of April and October, inclusive, annually.

The resolution traces the situation, giving one the picture of a confused and chaotic situation that exists in many areas of the United States and particularly in the Minnesota and North Dakota area. We hope that the Congress will take immediate steps to alleviate this confusion and act on this vital matter without regard to partisan and political considerations. It is our experience and judgment that decisive action is generally appreciated by the people and ultimately accepted. It is clearly in the public interest that daylight saving time be enacted into law for two primary reasons—first, to eliminate confusion and chaos, and secondly, to enhance and better our standard of living by providing the American people with an additional hour of sunshine to spend in healthy recreational pursuits with their families and friends.

Almost any measure will have some opposition, however, we sincerely believe that the arguments in favor of such action by the Congress are overwhelming. The matter of time in our Nation with its interdependency on transportation and communication requires orderliness of our time zones, therefore, we respectfully urge that the Congress of the United States take immediate steps to correct this situation.

We would appreciate your introducing this letter and accompanying resolution into the CONGRESSIONAL RECORD and sponsoring appropriate legislation.

With kind personal regards.

Respectfully yours,
HERSCHEL LASHKOWITZ,
Mayor.

Be it resolved by the Board of City Commissioners of the City of Fargo:

Whereas the Legislative Assembly of the State of Minnesota recently passed a bill which was signed into law providing for central daylight saving time throughout the State of Minnesota between the dates of April 28, 1957, and October 26, 1927, inclusive; and

Whereas, the city of Fargo, N. Dak., is situated on the border of North Dakota and Minnesota and many residents of Fargo, N. Dak., work in Moorhead, Minn., and many residents of Moorhead, Minn., work in Fargo, N. Dak., and the possibility of two time standards would create great confusion and misunderstanding and disrupt the lives of thousands of people in North Dakota and Minnesota; and

Whereas a similar situation exists in other border cities on the North Dakota-Minnesota boundary; and

Whereas the North Dakota Legislative Assembly adjourned without having considered the matter of daylight-saving time and its impact on the social, economic and physical lives of the people, and recognizing this situation, after having duly and carefully considered the situation and after consulting with many citizens in all walks of life, Mayor Herschel Lashkowitz called the Fargo City Commission into special session and a resolution was adopted on April 26 establishing daylight-saving time to coincide with the Minnesota law, and further steps were initiated to enact an ordinance pursuant to the resolution adopted; and

Whereas the city of Fargo, N. Dak., is the first municapality in the State of North Dakota to pass a resolution and then to enact an ordinance providing for daylight-saving time and that thereafter many cities, towns, and villages as well as counties in the State of North Dakota have taken steps to place their communities on daylight-saving time; and

Whereas this serious matter of the confusion of times and its impact on the lives of thousands of people has been called to the attention of the League of North Dakota Municipalities by Mayor Herscel Lashkowitz at a regional meeting of the league of municipalities held in Casselton, N. Dak., April 30, 1957, and the expression of 115 municipal officials in attendance was approximately 4 to 1 in favor of daylight-saving time; and

Whereas it has been called to the attention of the Fargo City Commission that similar situations regarding dual standards of time and resultant confusion and chaos exist in many areas throughout the United States of America with a serious effect upon the transportation and communication and allied industries of America and creating confusion in the personal lives of perhaps millions of people throughout America; and

Whereas there is as a result of this confusion in times, many serious legal questions that have arisen and many will arise in regard to contractual matters, licenses and police problems, personal and business and social commitments and the general way of life of millions of Americans; and

Whereas the Fargo City Commission recognizes that only the Congress of the United States can bring orderliness out of this confusion and chaos and help to restore a degree of certainty and clarity into the lives of millions of Americans as it relates to myriad daily problems and the social, economic and legal aspects of these problems: Now, therefore, be it

Resolved, That the Fargo City Commission does hereby memorialize and request that the Congress of the United States of America take immediate and forthright steps to establish daylight-saving time across the United States of America during the months of April through October, inclusive, annually so as to bring orderliness into the lives of the people and to contribute to the enhancement and betterment of the standard of living of Americans by providing the American people with an additional hour of sunshine to spend with their families and friends in recreational and healthy pursuits; and be it further

Resolved, That copies of this resolution be forwarded immediately to the Representatives and Senators of the States of North Dakota and Minnesota for appropriate and immediate action.

Address by the Secretary of Agriculture Before the Iowa State Club

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. HICKENLOOPER. Mr. President, on May 6 the Secretary of Agriculture, Hon. Ezra Taft Benson, made a speech before the Iowa State Club in Chicago. In the speech he discussed some important facets of the situation in connection with agriculture. I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE SECRETARY OF AGRICULTURE

It is good to be here.

The invitation to address your Iowa State Society has brought many happy memories.

It seems only yesterday—although my grandchildren make me realize it must have been longer than that—when Mrs. Benson and I first went to Iowa. We had been married only a few days when I enrolled as a graduate student at Iowa State Agricultural College.

My modest scholarship of $70 a month seemed adequate for a young couple who had heard somewhere that two could live as cheaply as one.

I recall that our household budget was helped somewhat by the vegetables and other farm produce which were available for the gathering at the experimental plots at the college.

I remember that it was during my first year at Iowa State that I rode on a special 4-H Club train which brought me to the international show here in Chicago. On that train trip we sang the proud Iowa song, That's Where the Tall Corn Grows.

The corn stalks with which we kept time to the music, as I recall, were tall enough and husky enough to discourage any who might have doubted our claim.

Today, the cornstalks in Iowa may not be as tall as those we remember but they produce more bushels to the acre. And the farmers have the same vision and the same quiet faith which gave strength to their ancestors who pioneered the rich fields of Iowa.

I am proud to claim some kinship with those hardy pioneers. It was in Iowa that my grandfather was born in a rain-soaked wagonbox some 111 years ago, as his parents were moving with the first caravan of Mormon pioneers in their long, hard journey westward.

For as far back as I can trace, the people of my family have been farm folk like myself. I am proud of that heritage.

I propose to sepak plainly tonight. I intend to talk about agriculture, in which everyone has an interest, whether or not he is especially trained in this field. I shall speak frankly and as honestly as I know how. Specifically, I shall talk about the problems of the Corn Belt, the great heartland of the United States, which stretches east to west from Ohio to Nebraska and from Minnesota on the north to Missouri on the south. This is the feed grain-livestock area, the great region which converts feed grain and roughage into nutritious, wholesome meat, milk, and eggs. Iowa is the geographic center of that economy and the seedbed of ideas regarding it.

The feed grain-livestock segment is the giant among our agricultural enterprises. Meat animals alone bring in 27 percent of our farm income. When we add dairy and poultry, livestock brings in 53 percent of the gross receipts from farm marketings. So we are talking about the biggest receipt item in the farm account book.

Since 1920, profound changes have occurred in crop production, the consequences of which are equivalent to an enormous increase in the amount of cropland available for domestic food production. And this in spite of the fact that the actual acres of cropland were virtually unchanged during this period.

Permit me to cite just a few of these great changes:

Crop production per acre has risen more than 25 percent since 1920.

Mechanization has released for food production about 80 million acres that formerly were used to grow feed for horses and mules. This is equivalent to an increase of about 23 percent in our cropland.

The reduction, through Government programs, of cotton and wheat acreage has greatly increased the cropland available for the production of feed and forage.

Since 1920, tremendous changes have occurred in the livestock business as well as in crop production. These are primarily the result of better breeding, better feeding, and better sanitation. Production per breeding unit—that is per cow, per sow, and per hen on an aggregate basis—has gone up 72 percent.

There has been a great increase in population, of course, about 60 percent since 1920. But the combination of mechanization, better yields, and higher production per animal has boosted food marketing even faster, by about 78 percent.

Hence, per capita marketings of food are now 13 percent greater than in 1920.

Never before have American consumers had so bountiful a supply of wholesome, tasty, nutritious food at so reasonable a cost—only 25 percent of their incomes. Never before have so few farmers produced such abundance for so many.

Perhaps in no other large area of the United States has the impact of the technological revolution wrought such profound changes as here in the Corn Belt. Hybrid corn, increased rates of fertilization, almost complete mechanization, the rapid advance of nutritional science, the conquest of plant and animal diseases, and now supplemental irrigation in many areas—these are some of the most striking changes.

Much attention has been focused on the huge stocks of farm products owned by or under loan to the Government—stocks which now represent an investment of $8.3 billion. Agriculture is faced not only with the necessity of reducing these stocks; there is the even greater challenge of using constructively the abundant production which, year after year, is likely to flow to market from American farms.

This great outpouring of agricultural abundance is the result of improved technology, of course. But it is also partly the result of a prolonged period of incentive prices—incentives supplied first by the market place and then by law. Agricultural production expands its productive plant readily in response to such incentives, but is slow to shrink its plant when market outlets dwindle and prices decline. Agricultural output is like taffy, which stretches out readily but is difficult to squeeze back.

Price support policies of the past are responsible, to a degree, for the presently overpanded agricultural plant. While the technological revolution undoubtedly supplied the means for increasing output, the support program helped provide the incentives; and while these policies increased production on the one hand, they choked off consumption on the other. The result is an accumulated stock and a continuing production of farm products greater than our growing population can assimilate unless adjustments are made.

How can we best make the adjustments called for by the prospect of agricultural abundance?

Can we reduce production? For 25 years we have tried to control production by restricting the acreage of a few selected crops. Yet total production has increased even more rapidly than the increase in our population. The evidence of the past quarter century is that farmers offset acreage controls by fertilizing more heavily, increasing the yield per acre. And they use the acres diverted out of one crop to produce other crops. So total production is not decreased; in fact, in the long run, it probably is increased by the control programs.

Shall we sell these commodities abroad? Yes; we should and we are. Agricultural exports this year are at an alltime high. We sell our commodities for dollars, both for cash and for credit. We sell them for foreign currency, and we barter them for strategic materials. Yet there are limits—and we may be approaching them—to what we can do in the way of selling our abundance abroad. Production has also increased sharply in other countries. If we were to unload our stocks irresponsibly we would depress prices in world markets and we would jeopardize our friendship with other exporting nations. With prices for certain commodities supported substantially above world levels, exports are very expensive. We now subsizide wheat to an amount of about 80 cents a bushel in order to reach the world market, and we subsidize cotton by about 6 or 7 cents a pound. Exports sales are part of the answer to our agricultural abundance, but not the whole answer.

Shall we give the commodities away? Yes; we should and we are, to the extent that we can do so constructively. This past fiscal year we donated more than 2 billion pounds of farm products to public agencies, charitable organizations, and needy persons at home and abroad. Forty percent of these donations went to people in our own land. But if we push donations beyond a certain point we only displace what would otherwise be purchased; we achieve no net increase in food use. And, as anyone knows who has worked with charitable organizations, it is far from easy to develop programs that are genuinely helpful in the long run, both to him who gives and him who receives.

Shall we put our excess productive capacity into the soil bank? Yes; and we are doing this, chiefly through the acreage-reserve program. But this is temporary and costly. It would be difficult to justify the continued payment of such sums as would be needed to operate a permanent acreage-reserve program. And a permanent program which subsidizes nonproduction is contrary to our tradition.

Shall we destroy food, or let it spoil? No; we should not, and we have exercised every safeguard to prevent spoilage. Our people would not condone such moral bankruptcy or such economic waste. The capacity to produce abundantly is a blessing; the challenge is to make wise use of this abundance.

Is there any way out of this impasse? After we have sold what we can for export, after we have given away whatever we can donate constructively, after we have put the soil bank into operation and still have more farm products than we can use, is there anything else we can do?

I am convinced that the answer is "Yes."

We can so price our products that we reduce the incentive for overproduction.

We can price our products so they will move into use.

We can move away from acreage-control programs that do not control.

We can expand markets for industrial and nonfood uses—as we are doing in our increasingly vigorous research programs.

We can give special attention to the problems peculiar to small farmers—as we are doing in the rural-development program.

We can, above all, build up our markets for livestock products—milk, meat, and eggs—wholesome, tasty, nutritious foods that people can and will purchase in greater quantities if the price is attractive.

If we consume more of our food in the form of livestock products, then we need the output of many more acres.

When we move from producing an acre of corn used as corn to an acre of corn fed to hogs, we greatly reduce the caloric output.

When we move from using the acre for corn and hogs to using it for grass and beef, we reduce the caloric output even more.

Livestock condense about 7 pounds of dry matter in the form of grain and other feed to about 1 pound of dry matter in the form of meat, milk, and eggs. The other 6 pounds are used for heat and energy or are wasted and cannot be recovered by man. Thus, far more agricultural resources are needed to provide a diet which contains a high percentage of livestock products.

Increasing and decreasing the livestock population is the time-honored method of adjusting the food supply to changing needs. The amount of flexibility provided by this system is tremendous.

The American consumer has been increasing his consumption of livestock and poultry products. But on a per capita basis he is still behind the Australian, the New Zealander, or the Argentinian in meat consumption. We can go further in shifting consumption to milk, eggs, and other highly nutritious livestock products.

Markets for more animal products must be potentially available before we begin producing for them. Expansion in output of meat animals, poultry, and dairy products should occur only gradually; sharp increases can be disastrous, as we found a little over a year ago with hogs. But we have been moving toward an animal agriculture during the past 20 years and w can move further.

The present mandatory price-support acreage-control program for corn, based on legal formulas, has the opposite philosophy. Its objective is scarcity. Corn acreage, cut back by the control program, is now at the lowest level in 66 years. This program has reduced corn acreage in the Corn Belt and increased it in California, Washington, Oregon, and other areas. To a degree the Corn Belt has foregone its natural advantage in feed-grain production and has defaulted to the West, the South, and the Northeast. The corn-producing areas has been spread out and diluted. Nineteen years ago, when the commercial corn area was laid out for acreage-control purposes it included parts of 12 States. Now it includes parts of 24. Originally it included 566 counties; now it includes 894.

But even more amazing is the size of the corn allotment in the commercial area. In 1938 the allotment totaled 40,491,279 acres; for 1957 the allotment is 37,288,889 acres. With a smaller pie being cut into more pieces, is it any wonder that most corn producers here in the Corn Belt prefer to ignore their allotments?

Corn is the major feed grain, far exceeding in importance all the other feed grains combined. But the other feed grains are moving up. By cutting back on corn, the program has provided an opportunity for an expansion in the acreage of competing feed grains such as barley and sorghum grain.

The program has also caused serious and costly storage difficulties. Since early this year, the Department of Agriculture has been carrying out a broad reconcentration program to move Commodity Credit Corporation stocks out of the Corn Belt. We faced special problems in handling 1956 crop loan stocks of corn which will be turned over to the Corporation this summer.

Some CCC corn has been moved out of the area into commercial storage in nearby regions. Some has been sold locally, including corn from the bin sites which was classified as nonstorable. Some has been sold for export. Altogether, about 245 million bushels of CCC corn have been involved in this movement. In addition, from 50 to 60 million bushels of wheat and other small grains have been moved to the Southwest, to make more storage available near the Corn Belt.

We have now nearly met the objectives of this special movement of CCC stocks.

I cite this as just one of many pressing problems occasioned by the present price-support acreage-control program.

Are corn farmers willing to move in the direction of competitive pricing, more freedom, and growing markets?

It appears that they are. More than 61 percent of the corn farmers who voted in last fall's referendum expressed a preference for greater freedom to plant, coupled with greater flexibility of price supports. Yet, because the law required a two-thirds vote to carry, corn farmers today continue under a program which the majority of them have disapproved.

We now have this interesting situation:

A clear majority of the corn farmers have expressed a willingness to move toward greater freedom of operation and greater reliance on our marketing system. Yet the law has not been changed.

Clearly, the corn farmers have given leadership in the direction of freedom and enterprise, the institutions which have made America great.

Do we lack the courage to strike a legislative blow for freedom when the people directly concerned have, in effect, requested it?

We have heard, until now, that economic freedom is lost because the people most concerned bargain it away in exchange for security. The leaders of the people, we are told, cannot stand against the strong popular urge for what is considered to be economic security. That this does in fact occur I readily acknowledge.

But how shall we then explain a circumstance in which the people themselves request less Government interference, but their Government will not relax its paternalistic grip?

We have come a far way indeed, in this land of liberty, when we continue to impose on a particular group of farmers, against the will of the majority, control programs which do not control, and support programs which pile up surpluses and lose markets.

There are more than 200 farm products for which we are authorized to provide price supports. For 6 of these, corn among them, programs are in effect to control production and to support prices according to a legal formula.

These 6 commodities bring in only 25 percent of our farm income.

Yet for these 6 commodities, surpluses are greater, costs are higher, infringements on individual liberty are more extensive, international relations are placed in greater jeopardy, and farmer complaints are more vociferous than for all the other of the 200 commodities combined.

Experience has demonstrated the shortcomings of the present control programs.

Farmers who produce certain commodities, such as soybeans and livestock, have demonstrated that realistic pricing can build markets and increase net income.

Half the corn farmers choose to ignore the supposed benefits of the control program. They plant in excess of their allotments.

Corn farmers have asked, in a referendum, that the paternalistic grip of Government be relaxed.

Is there, then, any good reason for maintaining the corn program in its present form?

The price-support program for basic commodities was originally designed to combat a general depression, and had considerable justification on that basis.

The program was overhauled during the war for the purpose of expanding production, a need which it served in acceptable fashion.

Our present need is not that of combating a general depression, nor of stimulating production to meet the demands of war. Our need is for agricultural adjustments to accommodate the tremendous technological revolution through which agriculture is passing. And it is time to make the program changes called for by these new conditions.

The largest farmer organization in the country, the American Farm Bureau Federation, has said so.

Most of the professional research institutions which have studied the problem have said so.

The corn farmers, voting with both their corn planters and their referendum ballots, have said so.

These voices are being heard in a growing crescendo.

What judgment will history record of leaders who fear to move as far in the direction of freedom as those whom they represent?

We should ever lend our ears to voices raised in behalf of freedom, responsibility, and enterprise. The most glorious pages of history result from giving audience to the plea for freedom; the darkest pages result from its denial.

God grant that we hear the voice of freedom, that we give leadership to it and that we act upon it in the best tradition of liberty-loving people everywhere.

Report to the People of New York

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report by me to the people of the State of New York on the 1st session of the 85th Congress.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE OF NEW YORK, 85TH CONGRESS, 1ST SESSION, SPRING 1957

Our republican form of government imposes upon a representative of the people in the National Legislature the responsibility to seek to ascertain the thinking of the voters of his State and also to report to them his own thinking and record of performance. This is the first of a series of such semiannual reports which I propose to make to the people of New York as their Senator.

PROSPECTS FOR PEACE AND FOREIGN AFFAIRS

While the United Nations still remains man's great hope for peace, the United States must continue its position as the leader for world peace both within and without the United Nations.

Early in the session, the Congress passed the President's Mideast doctrine, which I actively supported, stating American interest in the active preservation of peace in the Middle East. The dispatching of the 6th Fleet to the eastern Mediterranean in the Jordan crisis and the extending of financial aid to bolster the Jordan Government illustrate the first successful operation of this doctrine. There can be no doubt that the maintenance of a firm peace in the Middle East is essential to United States security. The United Nations emergency force has helped to maintain the peace in the sensitive Gulf of Aqaba, and in the Gaza area and to discourage Fedayeen guerrilla raids from there. I am supporting the effort to make permanent this U. N. peace force.

In recognition of the importance of an unimpaired and continued flow of vital oil to the free world, which constitutes 60 percent of the traffic through the Suez Canal, 5 of my Senate colleagues joined with me in the sponsorship of a resolution expressing the sense of the Senate that our Government should consult with major users of the Suez Canal for the purpose of considering collective action to establish and internationalize alternate means for traffic now moving through the canal. Pointing up the importance of the adoption of such a resolution, the State Department has informed me that the Department is doubtful of the adherence by Egypt to the six principles for operation of the canal which was adopted by the United Nations and to which Egypt agreed and that the United States, in concert with Great Britain and France, is already actively considering the feasibility of alternate routes.

I am constantly opposing the restrictions against the admission to our own Dhahran Air Force base of United States citizens and soldiers of Jewish faith on the basis of religious faith in Saudi Arabia.

I have introduced legislation and am working otherwise to aid the victims of religious and Communist inspired persecution in Egypt and there is hope that a reasonable number of these persecuted people will be admitted into the United States through administrative means utilizing the parole provision of the Immigration and Nationality Act.

American tourists are once again permitted to visit Israel. United States aid to Israel, which has so dramatically demonstrated its role as an effective and strong ally of the free world in the Mideast, is being resumed after having been temporarily suspended due to the Suez-Sinai hostilities. Above all, I am working for achievement of an effective and permanent peace solution in the Middle East, to end the blockade and boycott of Israel, resettle the Palestine Arab refugees in Arab lands, bring about security for the borders of the nations in that area and secure freedom of transit for all, including Israel, through the Gulf of Aqaba and the Suez Canal.

I shall support the programs for foreign military, economic and technical assistance and for the United States Information Agency as proposed to the Congress. They should be developed and implemented as vital to peace and United States security. American private investment abroad, now standing at over $32 billion and increasing at the rate of $2.5 billion annually, offers us an excellent opportunity to supplement and eventualy to replace at least some of our foreign economic and technical aid. I am readying some constructive programs to implement participation of the private sector in foreign aid.

The Congress passed the Agricultural Trade Development Act authorizing barter transactions of surplus agricultural commodities to distressed peoples in Poland and other satellite nations, implementing our Government's program of seeking to help any such satellite nations which show an indication of independence.

I have opposed the effort to liquidate and return to Germany and Japan certain assets vested during World War II. The question of return of vested enemy alien assets should not be confused with Germany and Japan's postwar roles as partners in free world defense and in assuming their responsibilities as democratic nations nor be identified with our friendship for these nations. Many claims of American citizens against Germany and Japan for losses which occurred during the war remain still unsettled. No matter what the status of these individuals at the time of their loss, the fact that they are presently American citizens merits our government's support in obtaining redress and I am vigorously supporting the effort to gain just compensation for these persons.

I joined Senator Ives in his resolution calling for self-determination for the people of Cyprus, and also worked in the effort to secure mercy for some of the young pro-

Greek patriots being tried by the British administration there.

AGRICULTURE

In the past 10 years while the price of food at retail has risen 16 percent, prices paid to the farmer have in contrast declined 14 percent. It is essential that the farmer receive his fair share of the food dollar.

The difficulties experienced in the milk crisis have abated, and a single marketing order has now been recommended for the New York metropolitan area, northern New Jersey and upstate New York. The net result of this order, it is hoped, will be to eliminate the longstanding inequities which have faced the milk producers of our State and could result in substantial improvement in their returns.

Together with my colleague, Senator IVES, I am cosponsor of S. 1808 to provide Federal assistance for rehabilitation of orchards destroyed or damaged by natural disaster. I voted for the $25 million drought-relief measure which passed the Senate, but opposed the increased corn-acreage bill which failed of passage in both the House and the Senate as this bill would increase the burden of Government expenditure while offering no definite relief in corn prices.

BUDGET AND TAXES

Our people have properly expressed a deep interest in the $73 billion budget ($71.8 expenditure in 1957–58) submitted to the Congress, economy in Government operations, minimizing the effect of Federal spending on inflation and reducing the tax burden insofar as possible. But the issue of our national security—which includes our Armed Forces and foreign military economic and technical assistance and information programs cannot be compromised in the interests of all our people. So, too, urgent measures like emergency Federal aid to school construction where States cannot effectively help themselves, compel our attention. Our duty here is to be responsible to the Nation's urgent needs.

A budget cut of in the range of $2 to $3 billion is, I believe, possible without endangering the national security and essential programs. The recommendations of the Hoover Commission offer opportunities for increased Government efficiency. I am a cosponsor of S. 1585 which passed the Senate on April 4. This measure establishes a Joint Committee on the Budget which would enable Congress to better analyze and act on the literally tens of thousands of items in the 1,100-page Federal budget. In the interests of reducing unnecessary expenditures I am also opposed to appropriations required for the $1.5 billion "pork barrel" rivers and harbors bill which passed the Senate and is presently pending in the House.

The Tax Rate Extension Act of 1957 (Public Law 85–12) was enacted into law extending for 18 months excise and corporate income tax rates. I am looking forward to the reduction of these temporary levies imposed as a wartime emergency measure. I was 1 of 7 Senators willing to vote on registering opposition to the 27.5 percent depletion allowance extended to producers of petroleum whom I believe should no longer be extended so much in special tax exemption privileges passing the burden to other segments of the national economy.

I have again introduced the bill, originally suggested by a constituent, which would grant to the physically handicapped the same $600 tax exemption now given the blind. As Federal expenditures can be reduced, the savings thus attained should be passed on in the form of selective tax relief, especially to families of modest income, small businesses, older citizens, and the handicapped, and for national debt reduction.

In recognition of the competition with private investment and savings faced by Government bonds, the Congress enacted legislation which raised the interest rate on the Series E Savings Bonds generally acquired by small investors from 3 percent to 3.26 percent.

CONSUMERS

While the cost of living has risen to an all-time high of 118.9 (1947–49=100) prices have remained relatively stable as compared with the period of runaway inflation experience prior to 1952. Employment and personal income remain at peak levels although there are soft spots in some individual industries and areas which merit special attention.

Under authority of Senate Resolution 64, of which I was a cosponsor, the Senate has been investigating the high prices of oil and gasoline and the Department of Justice has since instituted an inquiry of its own to determine whether there have been any violations of our antitrust laws.

The Congress passed the poultry inspection bill which gives the housewife and her family the same assurances of sanitary protection on poultry that the American consumer has enjoyed for years on meat. I have introduced a measure authorizing the Senate Committee on Interstate and Foreign Commerce to conduct a study of the consumer services rendered by the Federal Establishment and how these might be best coordinated and expanded for the maximum public benefit.

CIVIL RIGHTS AND CIVIL LIBERTIES

As a member of the Senate Rules Committee, I sought the establishment of a special ad hoc committee to consider modification of rule XXII, the so-called filibuster rule, which is the key to passage of civil-rights legislation. In addition to being a member of this subcommittee, I am also a cosponsor of the Douglas amendment to end the filibuster on terms of fair debate. So far even the President's civil-rights proposals—a modest, indeed a minimal program—have been bottled up in the Senate Judiciary committee, but they seem on the way to passage in the House. As a sponsor of several civil-rights measures, I testified before both the House and Senate committees and have pledged to join in an effort to discharge the Senate commitee from consideration of the President's civil-rights program in order that it might be brought to the Senate floor for debate and passage. It will be a fight all the way.

The case of Canada's Ambassador Norman has again pointed up the necessity for rules of procedure for congressional investigating committees. To this end, I am the sponsor of Senate Resolution 123 which would establish rules of procedure for Senate investigating committees, based on recommendations submitted by the Bar Association of the City of New York and recommendations contained in Senate Resolution 17 which, after lengthy hearings in the last Congress, was approved by the Rules Committee but failed to gain consideration in the Senate itself.

EDUCATION, HEALTH, AND SOCIAL SECURITY

Of the 1,400,000 young Americans graduating from high schools throughout the country this year, some 200,000 who are of college caliber will not be able to continue their education due to financial reasons. I am the sponsor with other Senators of the Education Loan Act of 1957 which would establish a 8-year $1 billion program of Federal loan insurance and loans to aid these young people who merit it. I also joined in the sponsorship of S. 1728 to extend Federal help to State maritime colleges and the Kings Point Academy in our State.

Acting on the suggestion of a constituent, I introduced S. 1475 to increase from 18 to 21 years the age limitation for receiving social security orphan benefits where the individual concerned continues in school. Although the Congress last year enacted a comprehensive revision of the social security law, the realities of the increased cost of living make necessary a continuing reappraisal of social security statutes. Readjustment of benefit payments, simplification of the accounting procedure so as to permit 1 annual report by employers instead of 4 quarter-annual reports and other improvements merit early congressional action.

I joined in sponsorin the Juvenile Delinquency Control Act which would carry out the recommendations of the President authorizing grants to assist States in fighting juvenile delinquency and also three bills bolstering the efforts in the States to deal with narcotic drug addiction.

HOUSING

Housing starts for April, the latest reporting date, were at a rate of 940,000 annually. In order to meet new family formations and to replace outmoded housing, 1.5 million housing starts annually are required. In order to alleviate the housing shortage and hold down rising interest rates, Congress increased by $50 million the capitalization for the Federal National Mortgage Association (FNMA) which has the effect of increasing by $500 million that agency's borrowing authority, thus providing some immediate relief of the home loan funds shortage through secondary mortage market operations. Also increased from $200 million to $250 million was the money allotted FNMA to purchase military housing mortgages. In addition, the Federal Housing Administration acting under Presidential authority lowered by 2 percent the downpayment requirements for homes having FHA loan guaranties.

Also I am cosponsoring for middle-income housing a measure establishing a $1 billion loan fund for families of moderate income. A bill just passed by the House of Representatives and coming over to the Senate proposes a decrease in FHA downpayments, placement of the GI home loan program under FHA so as to permit its effectual continuation after the GI loan program's scheduled expiration next year, increases FNMA funds for secondary mortgage market operations by $1 billion, increases slum-clearance authorization by $250 million and strengthens the military housing and urban renewal programs.

Veterans are experiencing great difficulty in obtaining GI home loans and the pressure to raise the interest rate on VA-guaranteed home loans continues strong. I joined in sponsoring and testified in committee urging passage of the Johnson bill which would make available for direct lending for GI homes $1.3 billion of national service life insurance funds. Before increasing mortgage interest rates for VA-guaranteed loans, we should make this effort to relieve the pressures in the home loan money market.

IMMIGRATION

The McCarran-Walter Act still stands on the statute books as a refutation of our traditional American ideals of justice and hospitality. The administration is supporting legislation in which I have joined and I am also sponsoring independent legislation which would rewrite this law so as to eliminate its injustices and make more realistic the admission of immigrants to our shores, permitting a pooling of quotas and utilizing the 1950 instead of the outmoded 1920 census. Under this legislation the overall number to be admitted would be 220,000 against the present 154,000 under the quota provisions of the law only about 80,000 of which are used; plus provisions for refugees and escapees.

Although some 26,000 Hungarian refugees have come into the United States under the emergency parole provisions of the law (plus 7,000 under the Refugee Relief Act now expired), the Congress still must act to give status to these refugees and those who are still coming in and to enable the United

States to take our fair share of these and similar refugees, such as the victims of Colonel Nasser's persecution who have been ejected from Egypt. I have joined in introducing legislation to accomplish this as well as to facilitate the adoption by United States families of children orphaned by war and disaster abroad.

LABOR

The current investigations by the Select Senate Committee on Improper Activities in the Labor or Management Field (the McClellan committee) have disclosed abuses which should be redressed, but these revelations should not be misused by those who would destroy the gains made by the rank and file of labor to enact negative legislation like the so-called right-to-work laws. I am supporting the President's proposal for protective regulation of union welfare and other funds as a constructive means to assure honest and effective administration of these moneys for the benefit of the working people for whom they were originally established. But I am opposed to right-to-work laws. These laws have a deceptive name for they would seriously prejudice the normal processes of collective bargaining and the maintenance of trade unionism as a means to bring about collective bargaining agreements.

The Congress is presently considering the administration's recommendations for amendments to the Fair Labor Standards Act to extend the provisions relating to minimum wages and hours to retail and service establishments above a stated size. It must be kept in mind that in New York State, there is already considerable effective work in respect of minimum wage standards established by boards under the State's laws. I shall seek protection for employees in retail and service establishments as to standards of minimum wages and maximum hours but giving recognition to State laws where they maintain adequate standards using the test of the Federal wage and hour law.

I have joined in the sponsorship of S. 1067 which would extend the unemployment compensation program to Puerto Rico.

NIAGARA POWER AND NATURAL RESOURCES

At a cost approximating $600 million, the Niagara power project will be the largest project of its kind in the Nation. I have supported its development by the Power Authority under New York State law for the benefit primarily of rural and domestic consumers in the project's economic market area; with full protection to the field of cooperative and municipal systems and the use of existing transmission systems.

I joined in sponsoring S. 1144 to amend the Federal Highway Act so as to provide inclusion of parkways in federally aided highways and have favored billboard controls on Federal roads similar to those in effect in New York State.

In the interests of conservation as well as economy, I opposed authorization of construction of the Bruces Eddy Dam which measure passed the Senate. However, before the dam can be built it will still be necessary for Congress to appropriate the necessary funds.

There has been much protest from our citizens concerning the Kinzua Dam which would affect the Cornplanter and Alleghany Indian Reservations. The rights of the Seneca Indians should be given full weight in this controversy.

POST OFFICE AND CIVIL SERVICE

The public must be assured of a postal service commensurate with our power, dignity and national needs. It is the duty of Congress to see that the Post Office Department is operated at proper efficiency and minimum cost and that postal employees are justly dealt with. The 1956 postal deficit of $493,900,000—an increase of 27.9 percent from 1945—imposes serious problems. Legislation is presently being considered in the House of Representatives which would increase first-class mail rates for the first time in a generation; the Senate committee is undertaking a comprehensive study of the entire theory of Government postal operations, the need for this study having been dramatically pointed up by the recent crisis in post office funds which brought on temporarily serious curtailment of services. Any increase in postal rates must be given due effect as to all classes of mail and their capacity to pay their own way.

The pressures that the increased cost of living imposes upon both civil service and postal workers and retired employees who can look only to the Congress for relief is getting intolerable. Consequently I am working hard for legislation for adequate pension and pay for postal employees and for civil-service employees to be enacted without delay. I sponsored S. 1476 which would permit postal employees to enjoy at least one State holiday, such as Columbus Day, annually.

SMALL BUSINESS

In addition to appropriating $45 million in order that the Small Business Administration could continue its leading operations until the end of this fiscal year, June 30, 1957, Congress also increased by $80 million the business loan authorization of the SBA.

I joined in the sponsorship of legislation establishing the Small Business Administration as a permanent agency, and also S. 1563 which would permit many small businesses to take a straight 10-percent deduction on their income tax for routine deductible items, as is done on the personal income tax, thus saving the expense of enumerating the numerous individual items.

I voted against the Fulbright amendment, offered ostensibly as a small business tax-reduction rider for corporations only to the Tax Rate Extension Act which sought to maintain corporate tax rates at present levels as otherwise the law keeping them at that level would have expired. As the situation stood, it was a matter of hours in order to pass the measure and a controversial amendment would have delayed enactment with serious consequences to the country; also only about 12 percent of small businesses are incorporated—the remaining 88 percent would have been discriminated against. I fully expect to support tax relief for small business just as soon as we have established our right to it with some budget reduction.

Hearings are presently in progress on S. 11, amending the Robinson-Patman Act to provide that the so-called good-faith defense is not a substantive defense in some cases. Small business, for which this law was originally enacted, must continue to have consideration in any amendment, but consumers need to be protected as well. An essential element in maintaining our economy is the facility with which competition may be pursued.

VETERANS

I am supporting the measure to create a Veterans' Committee in the Senate which is presently pending before the Rules Committee of which I am a member.

As long as we have compulsory military service, the GI bill educational benefits should be extended to include those presently entering the Armed Forces. I joined in sponsoring S. 1088 to permit World War II and Korean war veterans to obtain national service life insurance if they had neglected to apply for it previously or if their policies had lapsed. The high cost of living impels a reappraisal of pensions and benefits for disabled veterans and their families. Such adjustment measures are now under active consideration in the Congress.

MATTERS OF ESPECIAL INTEREST TO NEW YORK STATE

The efforts in which I joined to continue the essential commuter services of the Hudson & Manhattan Railway were successful; unfortunately, similar efforts in behalf of the Ontario & Western Railroad could not be consummated due to the unsalvageable condition of that road's economic structure.

I continue my efforts on behalf of station WRGB and to preserve television service for the people of Schenectady and the surrounding area. I joined in the sponsorship of legislation for additional Federal judges to relieve the overcrowded court dockets in New York, to provide $165,000 for construction of a water-filtration plant at Highland Falls, and to provide for Federal sharing of relocation costs in the case of home occupants and small businesses displaced as a result of the Federal highway-construction program.

Many of our citizens have written me concerning the proposed Lincoln Square urban-renewal project in New York City. I continue my work for fair relocation practices for tenants and small business. The inclusion of a portion of Fordham University as a part of the proposed project is a matter presently pending in the courts and will be decided in accordance with judicial concepts of the appropriate constitutional and legal principles involved.

MISCELLANEOUS ISSUES

I have introduced legislation creating a United States Arts Foundation which would help foster the development of the performing arts in areas of the Nation where they are not now adequately available by giving some help to nonprofit groups—including colleges and universities—but engaging in no production on its own. The cultural resources of our Nation should be developed and encouraged at a time of our greatest prosperity and when the cost can be minimized.

As a member of the Senate Committee on the District of Columbia, my experience as New York State attorney general is proving of some help in bringing into being for the District of Columbia laws which have proven successful in our own State, such as controls to prevent charity rackets. Measures once enacted into law in the District of Columbia have in the past served as models for similar State statutes throughout the country.

CONCLUSION

I trust that you will continue to write me about your views and suggestions on matters of national interest. I shall endeavor to respond always, and as fully as time and staff permit.

The Litter Season

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, May 17, 1957

Mr. BEALL. Mr. President, it is rather infrequent that an issue comes before us which appeals with equal force to our mundane regard for economy and our esthetic appreciation of the wonders of nature. Such an issue was discussed in an editorial in today's Baltimore Sun, where it was pointed out that the persistent scattering of litter in the many scenic areas of America results in a combination of nationwide eyesores and costly cleanup operations. The editorial was extremely thought provoking, and I now ask unanimous consent that it be printed in the Appendix of today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LITTER SEASON

Not long ago some tourists went to visit one of Maryland's most beautiful sights, Cunningham Falls, near Thurmont. Through the ancient trees and the great falls of rock they climbed up to the top of the magnificent cascade. There, poised at the head of the falls, was a large carton filled with empty beer cans. The magic of the wild place was spoiled.

This is an isolated and dramatic instance of a general tendency which does much to spoil the remaining areas of forest and fine views left to us. Every State and national park has its quota of lazy, slovenly people who cannot be bothered to clear up behind them. A national authority estimates that last year it cost $50 million to clear up the mess Americans made of their own country. And as each year brings more and more people out onto the highways, the bill goes up.

This is the start of the picnicking and camping season, of vacations and weekend trips which will add another layer to the deposit of tin cans and paper and bottles defiling the parks and roadsides. Some people are apparently incorrigible; they live in a mess and they travel in a mess. But many who would not suffer a scrap of paper on their own lawns and yards toss it freely on other people's, and the Nation's, property. If this property-conscious majority can be brought to an understanding of what they are doing, some of the ugliness and destruction can be avoided.

The Day I Met Ike

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1957

Mr. LIPSCOMB. Mr. Speaker, I am submitting for inclusion in the RECORD an article entitled "The Day I Met Ike," written by 15-year-old Mark Falcoff who is a resident of California's 24th Congressional District. Mark's article was a prize winner in a writing contest sponsored by Boys' Life, a magazine published by the Boy Scouts of America. It appears in the May 1957 issue of that magazine.

In his prize-winning entry, Mark describes his big thrill in meeting President Eisenhower during the Republican National Convention in San Francisco last August which he attended as a reporter for the Junior Journal, a magazine published entirely by teen-agers and of which Mark is managing editor.

The Day I Met Ike is a very interesting and well-written article. It shows keen insight into the issues and problems of the day on the part of Mark and speaks very well for the abilities of the youth of the Nation.

The article follows:

THE DAY I MET IKE

(By Mark Falcoff)

Of all the weary reporters who trudged the streets of that convention city, San Francisco, in 1956, I was the weariest.

I had come all the way from Los Angeles to attend the Republican National Convention as a member of the junior press. I was the youngest journalist in a crowd of veterans of the fourth estate. They represented Time, Life, Scripps-Howard, Hearst, and the biggest daily and weekly publications in the world. I represented the Junior Journal, the only magazine by and for teenagers. Ours was the only junior publication granted full press credentials, because we are the only completely independent youth publication in the world. We were extremely proud to receive these credentials. But we were now too tired to care.

Editor Sue Berkland and I were resting in the pressroom of the St. Francis Hotel. We were really tired. Sure, our hometown, Los Angeles, is big. But it's level.

This was Thursday, the 23d of August 1956, the last day of the convention. This was the day President Eisenhower would make his acceptance speech.

We had been given an assignment before we left: Get an interview with the President. Well, any other publication would have deemed it impossible.

On the previous day Sue and I had waited at the airport to see the President in. I didn't get near him.

This morning our publisher, Margor Dayan, was having breakfast with James C. Hagerty, press secretary to the President. Mr. Hagerty, came downstairs with her, and we were introduced. Miss Dayan asked for an interview.

"I'm sorry," said by Hagerty. "If I let you, I'll have to let everyone."

They say that youth has optimism. Well, if they mean that we had no intention of taking Mr. Hagerty's "no" seriously, they were right.

We filed into the Italian Room of the St. Francis, for the first live TV Presidential press conference. At least, I thought, if I don't meet the President, I'll ask him a question.

The President acknowledged the applause of the members of the press, and then began answering questions. The conference was in regard to Harold Stassen's end of his "dump NIXON" campaign. Apparently someone forgot to ask the President why Mr. Stassen dropped his campaign, and I stood up. In a loud, clear voice I said, "Mr. President, did Mr. Stassen tell you exactly why he dropped his 'dump Nixon' campaign?"

The President smiled, and said, "I was wondering when someone would ask me that." All of a sudden he began to laugh, and everyone laughed with him, but he answered me.

Later I was informed that I was the first junior reporter ever to ask the President a question at an official press conference.

Apparently my question made an impression on the President. In any event, he told Press Secretary Hagerty he would receive us in the presidential suite at 4 o'clock.

At approximately 3:30 that afternoon, our publisher mysteriously disappeared. At 3:45 she reappeared in the general pressroom with Mr. Hagerty, telling us that she had been with the President. Mr. Hagerty told us that he would return for us shortly, and escorted Miss Dayan back to the presidential suite.

For the next 15 minutes, every man, woman, and child that entered that room looked like James C. Hagerty. We were so tired of waiting, that when Mr. Hagerty did enter, I was just about to doze off.

"The President will see you now," Mr. Hagerty was saying.

How my heart jumped as the elevator began its ascent. How anxious I had been.

As we stepped out of the elevator, the secret-service men took over and had us sign the official register. I noticed that Surgeon General Snyder had been with the President shortly before we had entered.

The President came out of his suite. We introduced ourselves. As the President took my hand, I think my heart skipped a beat.

We discussed a number of things. He told us about his boyhood in Abilene, Kans. And he told us that he thought juvenile delinquency was far too played up in the newspapers. We discussed our publication, and the President said to me: "Mark, what's your job on the paper?" I told him that I was director of public relations.

"Well, who's the political reporter?"

"Oh, well, I do most of that."

"Well, they tie in pretty close together," the President said.

As the interview continued, Mr. Hagerty, standing against the wall, subtly reminded the President that during the live TV press conference I asked him a question.

"I remember," said the President.

At the close of the interview, the President took my hand, and I said, "It has been an undreamed of honor, Mr. President." He replied, not as a politician, but as a sincere gentleman, "It's been a great honor for me, too."

We left the suite, and traveled down the elevator. I seemed to be on cloud number 9. I don't think I really came out of my trance until the secret-service man put his hand on my shoulder and said, "All out, son."

Looking at my watch, I discovered that we had been with the Chief Executive about 7 minutes. I'd been with JOE MARTIN nearly an hour. I'd been with Senator KNOWLAND 15 minutes. But it wasn't to be disputed that 7 minutes "presidential time" (as Mr. Hagerty refers to it) was an awful lot.

Miss Dayan returned from the President's suite and informed us that we were to ride at the rear of the President's procession, in the White House press bus.

As the President got into his limousine, and the procession pulled out of Union Square to the tune of Hail to the Chief, I knew that of all days, this day was not to be forgotten.

For this was the day that I had done something no one I had ever known had done. This was the day that I met President Eisenhower.

Facts and Figures on the Hells Canyon Issue

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HOSMER. Mr. Speaker, in another one of his penetrating reports Eugene F. Rinta, research director of the Council of State Chambers of Commerce, has come up with another clarifying report. This one is entitled "The Many-Lived Hells Canyon Bill," and, supported with cogent statistical material, reads as follows:

THE MANY-LIVED HELLS CANYON BILL

(By Eugene Rinta)

A measure to authorize construction of a Federal hydroelectric project at Hells Canyon in the Snake River has been introduced in every Congress since 1949. It has yet to reach floor action and a vote in the House. It did come up for a vote twice in the Senate. In 1950 it was tabled by a 2 to 1 vote. It came up again last July and was rejected 51 to 41. Now it is up for Senate action a third time as S. 555 which was introduced by the measure's perennial sponsor, Senator WAYNE MORSE of Oregon.

One good reason for rejection of the bill last year was the fact that it would have

posed a wholly unnecessary burden of
o-half billion dollars on the Nation's tax-
yers. This expenditure for a Federal proj-
t at Hells Canyon was unnecessary then
mply because the power potential of the
lls Canyon reach of the Snake River was
eady in process of development by the
daho Power Co. under a Federal license.
At the time the Senate vote was taken last
ly construction work on the company's
oject had been going on for 8 months and
veral million dollars had been expended
n it. As of the present, construction work
as been underway for 18 months and the
mpany reports that over $20 million of
nstruction has been completed. An addi-
onal $26 million for project construction
nd $10 million for transmission facilities
ill have been spent by the end of this
ear. Moreover, the first dam of the com-
any's three-dam project to be completed,
he Brownlee, will be ready to deliver power
n 1958.

In spite of the above facts, a majority of
he Senate Interior Committee voted April
0 to report S. 555 to the Senate which is
xpected to act on it next week. If the Fed-
ral Hells Canyon project should be author-
zed and started, the privately financed
roject would have to be abandoned. This
ould mean a loss of the millions of dollars
nd the 18 months construction work al-
eady invested in it. The financial loss
ould very likely have to be absorbed by
he taxpayers generally since the company is
roceeding under a duly authorized Federal
icense and would have a strong claim for
damages. The people of the Pacific North-
west would pay, too, because enactment of
S. 555 would cause a 7 to 8 year delay in their
getting the additional power they say they
urgently need.

Thus, there seems to be even less sense in
the Hells Canyon proposal now than there
was a year ago. Yet the Senate is about to
give it serious consideration again. For that
reason the chronological developments re-
lating to the Hells Canyon issue are worth
reviewing again. Here they are in brief.

CHRONOLOGY OF THE HELLS CANYON DISPUTE

1. In June 1947 the Idaho Power Co., an investor-owned public utility, filed a preliminary application with the Federal Power Commission for the purpose of developing the hydroelectric potential in the Snake River between Idaho and Oregon. Objections to private development were raised by public power groups who urged Federal development instead. They suggested construction of a large single dam at Hells Canyon.

2. The proposed Federal Hells Canyon project came up for a vote in the Senate in April 1950 and it was tabled by a 2 to 1 vote. Later that year the Idaho Power Co. filed a formal application with FPC for a license to construct the first of its proposed dams. The Interior Department protested this application as did several public power groups.

3. In 1952 the House Interior Committee held extensive hearings with respect to the Federal Hells Canyon project and thereafter voted unanimously to postpone indefinitely any further consideration of it.

4. In May 1953 Interior Secretary McKay withdrew the Department's objection to the Idaho Power Co.'s application. The company then submitted to FPC its complete proposal for development of Snake River power.

5. Staff engineers of FPC spent 44,000 man-hours in studying the company's three-dam proposal, and hearings were held over a period of 1 full year beginning July 7, 1953. Both the proponents and the opponents of the company proposal were given full opportunity to present their cases.

6. On August 4, 1955, the FPC issued a license to the company to construct three hydroprojects in the Snake River.

7. The National Hells Canyon Association and other advocates of the Federal project in November 1955 appealed the FPC licensing order to the United States Circuit Court of Appeals in the District of Columbia. The circuit court affirmed the FPC decision on October 9, 1956. In the meantime the Senate on July 19, 1956, rejected a bill—S. 1333—which would have authorized the Federal project. The vote was 51 to 41.

8. The proponents of the Federal project carried their appeal against the FPC decision to the Supreme Court February 14, 1957. On April 1, 1957, the Court, by an 8 to 1 vote, refused to review the circuit court's decision and thus left standing the FPC licensing order.

9. In the face of this history the Senate is about to debate and vote on a Hells Canyon bill for the third and presumably last time.

FPC FINDINGS ON THE PRIVATE PROJECT

Both the privately financed three-dam project and the taxpayer-financed single-dam project are basically hydroelectric projects, although other benefits are involved in each. And there is very little difference in their power-producing capacities. The dependable power capacity of the company dams will be 767,000 kilowatts as compared to 785,000 kilowatts for the Federal project. The latter, however would cost more than twice as much to construct as the three company dams.

In considering other benefits such as flood control, navigation and recreation, the FPC found that they "could be effectuated to about the same extent under either the private or Federal plan of development." The Commission took note, however, of the fact that under private development these benefits "will be realized without expense to the United States." The Commission concluded that the company's three-dam project is best adapted to a comprehensive plan for developing the water resources of the Hells Canyon reach of the Snake River.

THE HELLS CANYON PROPONENTS' LAST TRY

Since application was first made for private power development in the Snake River, the public power forces in the Pacific Northwest and elsewhere, too, have used every possible tactic to block it. And about all that can be said for their efforts is that they have delayed the production of power from this source.

They have also been trying in vain since 1949 to put through Congress a bill to authorize the Federal Hells Canyon project. They know this year will be their last chance since the first dam of the company's project will be ready to produce power in 1958. Therefore, they are going all out to get enactment of S. 555. Some measure of their success to date is shown in the fact that S. 555 was introduced not only by Senator MORSE but by 27 cosponsoring Senators. How many others will be persuaded to vote for the unnecessary half billion dollar Federal expenditure proposed in S. 555 remains to be seen.

WHAT THE FEDERAL PROJECT WOULD COST EACH STATE

So that the taxpayers of each of the States can see how much money will be taken unnecessarily out of their States to finance the Federal Hells Canyon project if it is authorized, the table on the next page allocates its cost to the States on the basis of their respective shares of the present Federal tax burden. The $509.7 million total cost consists of $353.7 million for project construction, $26.5 million for interest during construction, and $129.5 million for transmission facilities. These figures do not include the cost to the taxpayers for the Government's obligation to compensate the private company for the investment it has already made in its Snake River project which would have to be abandoned.

Cost to the States of the Federal Hells Canyon project

	Percent of Federal tax burden borne by the States	Cost of project to the States
Alabama	1.02	$5,198,940
Arizona	.47	2,395,590
Arkansas	.49	2,497,530
California	9.81	50,001,570
Colorado	.89	4,536,330
Connecticut	1.97	10,041,090
Delaware	.40	2,038,800
Florida	1.80	9,174,600
Georgia	1.34	6,829,980
Idaho	.25	1,274,250
Illinois	7.46	38,023,620
Indiana	2.62	13,354,140
Iowa	1.26	6,422,220
Kansas	1.06	5,402,820
Kentucky	1.09	5,555,730
Louisiana	1.16	5,912,520
Maine	.43	2,191,710
Maryland	1.93	9,837,210
Massachusetts	3.37	17,176,890
Michigan	5.63	28,696,110
Minnesota	1.68	8,562,960
Mississippi	.48	2,446,560
Missouri	2.50	12,742,500
Montana	.35	1,783,950
Nebraska	.66	3,364,020
Nevada	.20	1,019,400
New Hampshire	.31	1,580,070
New Jersey	4.22	21,509,340
New Mexico	.34	1,732,980
New York	12.65	64,477,050
North Carolina	1.42	7,237,740
North Dakota	.23	1,172,310
Ohio	6.48	33,028,560
Oklahoma	1.00	5,097,000
Oregon	.99	5,046,030
Pennsylvania	6.98	35,577,060
Rhode Island	.52	2,650,440
South Carolina	.66	3,364,020
South Dakota	.22	1,121,340

The Mississippi Valley Association's Expanded Program for 1957 and 1958

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. SMITH of Mississippi. Mr. Speaker, Wade W. Hollowell, president of the Mississippi Valley Association, delivered a very fine address before the annual Rivers and Harbors Congress on Friday, May 17, outlining the program of his organization for the months ahead. I am confident that under Mr. Hollowell's leadership the Mississippi Valley Association will be one of the more able forces in our country contributing to the sound conservation of our water resources. Mr. Hollowell's remarks about water pollution make it clear that pollution abatement is a problem not only for the Mississippi Valley but also for our entire country.

Under unanimous consent, I include Mr. Hollowell's speech as part of my remarks:

THE MISSISSIPPI VALLEY ASSOCIATION'S EXPANDED PROGRAM FOR 1957 AND 1958

(Remarks by Wade W. Hollowell, president, Mississippi Valley Association, before the annual convention, National Rivers and Harbors Congress, Washington, D. C., May 17, 1957)

Down through the years the programs of the National Rivers and Harbors Congress and the Mississippi Valley Association have been confined largely to the development of rivers and harbors, and, of course, these included programs for the development of navigation, flood control, and for the multiple uses of our water resources. It has been and it still is our great program.

We are all for the development of our waterways for navigation, the control of our waterways to prevent floods, the control of our waterways for domestic and industrial supply of water, and the control of our water resources for the production of food and fiber. Your great organization and ours have down through the years advocated this philosophy.

The Mississippi Valley Association, at its last annual convention, restated its broad general policies for the development and conservation of our water resources.

We also spelled out our endorsements of many specific projects in the midcontinent area of the United States. These broad policies and these endorsements of specific projects are not a new thing for our organization.

We have, however, launched two new programs based on the philosophy that America has dwelled on the conseravtion of and protection from our waters but has not properly emphasized proper end utilization of the water.

As a result we have launched a program of industrial development in the midcontinent area of the United States and a program to protect the waters of the area from pollution so that waters of the area can be used for industrial consumption.

The population growth in the great Mississippi Basin has been less than the growth of the entire United States. While the population of the United States has increased 10 percent, our overall increase in the midcontinent area has only been 3 percent. On the face of it, it appears the midcontinent area of the United States has been slipping in economic importance. The fact is that all of our loss in population has taken place in the areas within the midcontinent away from waterways.

The growth in population and the expansion of industry in the Mississippi Valley has been largely confined to the areas along our developed waterways. Ten billion dollars' worth of new industries have moved into the Ohio Basin since the close of the Second World War.

Billions of dollars in new industry have moved into the area along the Gulf Intracoastal Waterway and along the Mississippi River. The growth and development in the midcontinent area has not only been along our waterways, but that growth has been in direct proportion to the development on the waterway on which it is located. The lower Mississippi and the Ohio areas have been developed for a number of years and there we have made phenomenal progress. Ten major industrial and chemical firms have recently announced plans for new plants along a small stretch of the Mississippi River above Baton Rouge, with total expenditures of $800 million. Along the Missouri River, where we are just beginning to get the river under control, the industrial development has only started. On the Arkansas River, where until the last year practically nothing had been done to control and utilize the waters of that stream, practically no industrial development has as yet taken place. This is also true along the Red River, Ouachita, and others.

Anticipating the early completion of the development of the Missouri River and the expediting of the development of the Arkansas River, the Red, and the Ouachita and many other tributary rivers, we have decided that the Mississippi Valley Association has a very definite responsibility to help develop industrialization in areas where industry can thrive. Industry can thrive and will thrive only where there is an abundance of controlled water.

Many small communities along our inland waters find fewer and fewer benefits from agriculture what with acreage allotments, the soil bank, mechanization, and the trend toward larger-size commercial farming operations. In addition each year a smaller portion of the consumer dollar is captured by the farmer, in fact now only slightly above 20 percent.

The smaller community along our inland waterways has been concentrating on agriculture and flood control but with the lessening of the importance of agricultural income to the economy and the bettering of flood-control measures, community leaders must concentrate on getting a better share of the consumer dollar through manufacturing and industry and must begin to capitalize on their water, for both industrial usage and economic transportation.

We envision a clearinghouse for these communities in our basin to assist leadership in preparing for, presenting to, and acquiring new industry which can use the water facilities, be they local processing or manufacturing ventures or national concerns seeking water near growing consumer areas.

Water is needed not only as a means of transportation of heavy bulk commodities, but water, the Nation's most abundant mineral, is becoming costlier in hundreds of communities around the country and the competition for water has become so great that we believe that something is going to have to be done to prevent the waste of our water resources through unnecessary and uncontrolled pollution.

The per capita consumption of water in America today is around 1,200 gallons daily. Only 137 gallons of this total per capita daily consumption is devoted to domestic use, and I am sure that some of you wonder, while attending a national convention, how any one individual can use that much water in a day. I have seen several liquids other than H_2O consumed around these conventions, but water use even here dominates the scene, for everyone here bathes and that takes water as we will see.

It might be interesting to take a look at how we use water domestically. It takes 4 to 7 gallons of water to flush the toilet. Your shower runs about 25 gallons down the drain. A little better than 2 gallons of water are used for washing the dishes. An automatic dishwasher may take around 25 gallons. Bathing the children takes an average of 30 gallons each. If your home is air-conditioned, the probabilities are that you are using a considerable amount of water for that purpose. In Washington, D. C., air-conditioning plants are estimated to account for 15 to 20 percent of the water consumed.

With all of our domestic uses which average 137 gallons per capita daily, we have still got a long way to go to make up the difference between this amount and the 1,200 gallons that I said we were using, and here is where we get the big consumption of water.

Sixty-six thousand gallons or 270 tons of water are required to produce 1 ton of steel. It takes 70,000 gallons of water to wash away impurities and assist in the refining process to make a ton of high-grade paper. Ten gallons of water are required to produce a gallon of gasoline and 100 gallons of water are needed to produce a pound of synthetic rubber. Our meatpacking industry, in fact, every industry in America consumes large amounts of water and many of those industries pollute far more water than they consume.

We, of the Mississippi Valley Association, believe that unless industry unites behind a sane and effective program of water pollution abatement, American industry can expect some very drastic State and Federal legislation to prevent the pollution of the streams of America that are keeping America strong.

Industry has moved into these areas of controlled water and this industry has been most welcome. Water has been put under control in reservoirs and in stabilized streams for the use of industry, but not for pollution by industry.

A great steel giant at Gary, Ind., pumps 550 million gallons of water into their plant daily from Lake Michigan. This is enough to make a lake 10 feet deep measuring 15 city blocks in length and width. A steel company in West Virginia requires a pumping capacity of 265 million gallons a day to keep steel production going. The Eastman Kodak Co. at Rochester, N. Y., consumes enough water every day to satisfy a city of 300,000. The Union Stockyards Co. at Chicago will consume 5 million gallons a day while Armour & Co. plants in Chicago will use 10 million gallons of water daily. Paper mills use 250 tons of water for every ton of sulfite wood pulp with most good-size mills consuming more water in a day than would a city of 50,000.

Industrial and steam power use now accounts for around 45 percent of the total water use, compared with only 39 percent in 1946. By 1970 the figure is expected to rise to about 51 percent. Water supply now ranks with labor and transportation as a key factor in determining plant location. Many areas are being bypassed by industry because of water shortage and we believe that unless we find an equitable solution to the water-pollution problem, we are going to limit the industrial expansion we so vitally need in most parts of our country.

It is no coincidence that heavy water-consuming chemical plants have been locating along the Ohio and the Mississippi River Basins or that one-third of the Nation's total plant spending in the past 5 years has been concentrated in the Great Lakes area.

New industry is most welcome but some of the industries which have been locating along our waterways have not been good neighbors. They have dumped chemicals, inorganic or organic materials into our streams which have not only destroyed fish and wildlife, but they have greatly limited the supply of water for other industries and for agriculture.

We do not have all the answers to these problems of an adequate water supply and the maximum prevention of water pollution, but with the aid of industrial leaders and research organizations we hope to find at least a partial solution to this problem. The Mississippi Valley Association is investing a sizeable portion of its funds in a program of research and a program of organization that we hope will lead to a situation in which we can have the maximum industrial development of our controlled water by eliminating every possible source of pollution. Much of our water resource development program in America is financed by all of the people, that is, by the Federal Government. We do envision, however, a National Water Pollution (Abatement) Committee with participation on the committee by industry, municipalities, the States and the Federal Government, possibly at first a research and information clearinghouse, later leading to uniformity of laws and practices on both the local and Federal level.

We do not believe that it is fair, reasonable, or good business for any city or any industry to unnecessarily reduce the value of our water resources by not making every possible effort to eliminate water pollution.

So in addition to our traditional efforts to protect us from and conserve our water resources the Mississippi Valley Association is directing efforts to conserve and utilize our water. We invite your great Rivers and Harbors Congress to help us in building an even greater and more prosperous America.

Thank you.

Dulles' Revolving Door

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. MULTER. Mr. Speaker, from brink to brink and bungle to bungle is still the order of the day with Mr. Dulles. In this connection, I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of May 16, 1957:

DULLES' REVOLVING DOOR

If Mr. Dulles were a junior law clerk and drew up a brief using the same legal arguments he has just offered to justify his exclusion of American reporters from China, he would be chided for not doing his homework. Mr. Dulles' position is that the constitutional guarantee of freedom of the press relates only to publication and has nothing to do with the gathering of news. This is like an argument that the right to vote has nothing to do with the freedom to cast ballots.

In 2 of the 3 principal Supreme Court decisions he cites, the Secretary of State has taken language out of context and ignored the substance of the decisions. In the third he has turned a ruling affecting the business operations of the press so as to apply it to the gathering of news. The final case Mr. Dulles cites, a New York court of appeals decision having to do with secrecy of trials, has little direct bearing on the present discussion.

Let it be acknowledged that newspapers have sometimes been foolish in crying freedom of the press when their business activities were properly subjected to laws of general application. Mr. Dulles is being no less foolish, it seems to us, in contending that access to information is not a fundamental component of freedom of the press.

Actually, the Constitution specifies neither access to information nor right of uncensored publication in its stipulation that "Congress shall make no law * * * abridging the freedom of speech or of the press." In point of fact, however, the right of publication which Mr. Dulles himself construes from the first amendment can be rendered meaningless without the right to gather news, subject to particularized applications of law.

There is a vast difference between the refusal of the Government to release information, justified with respect to certain security matters, and the use of the power of Government to prevent the gathering of information from nonofficial and foreign sources. Yet this latter is essentially what Mr. Dulles is doing under what seems to us a thoroughly warped interpretation of the first amendment. In his recent letter to Arthur Hays Sulzberger, Mr. Dulles virtually acknowledged that he does not want American reporters to write from China as a matter of policy. Therefore he is using the arm of Government, through the denial of passports, to make such reporting a crime.

The important question, of course, is not whether the Secretary of State is legally empowered to do what he is doing, but whether he is wise. Here he has employed a dubious legal argument to becloud an issue that is essentially political. On the political side the explanations of why the American people are denied firsthand information about Communist China from American reporters have become more and more farfetched. They have served to isolate American policy more and more from reality and make more and more painful the inevitable retreat. Cannot Mr. Dulles, who so often displays a pragmatic bent, reverse himself before he becomes totally stuck in a dead end?

Cash Return Is the Question

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mr. GUBSER. Mr. Speaker, my district will be vitally affected by the proposed Trinity project. I submit herewith an editorial from the Hollister Free Home advocating Federal and private partnership in Trinity power development:

CASH RETURN IS THE QUESTION

Many opinions, both pro and con, have been expressed over the proposal of joint development rights on the Trinity River project.

The age-old question of public versus private power has been aired to the fullest extent and cries of Government subsidy for Pacific Gas and Electric have been heard.

We have our own idea on public and private power and contentd that a State-regulated utility has proven to be far more effective and cheaper in the long run than any public-power development.

But that doesn't appear to be the cardinal issue at hand. The question to be decided seems already to have been pointed in Congress with the determined efforts of both the House and Senate to slash away at President Eisenhower's budget. The issue seems to be money, or rather, economy. * * * Under which proposal will the State, the Nation and, most of all, the people, benefit?

We believe the question is answered by Robert H. Gerdes, executive vice president of Pacific Gas & Electric in his recent letter to Senator KUCHEL.

In the first place, the Government would save $56 million in project capital costs under the joint-development program. The Government also would stand to gain $165 million more net revenue to aid basic water purposes of the project than if it were to build the power facilities alone. Some $83 million in Federal tax revenue would be created and the California and local governments would receive $62 million in new taxes.

That's a lot of money in any man's language, and according to the Pacific Gas & Electric official, none of it would be forthcoming under total Federal construction.

Of course Pacific Gas & Electric is to receive more firm power for its transmission lines and for its consumers. But we all realize more power is needed now in this growing State of ours—and still more will be needed as the growth continues. Californians are paying now for Pacific Gas & Electric power. They will continue to pay in the future, but it will be at a rate set by the State—a firm rate that has been decided by the people themselves through their representatives in Sacramento.

We believe the dollars and cents return on the question of joint development of the Trinity project is the actual issue, and that Pacific Gas & Electric has presented a solid format of what it can and will do.

Decided on that merit, there should be no hesitation on the part of the public or our representatives to give Pacific Gas & Electric a wholehearted go-ahead.

Hells Canyon Dam Support

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. JOHNSON. Mr. Speaker, the board of directors of the world's largest electric power cooperative, the Dairyland Power Cooperative, in a meeting at La Crosse, Wis., April 18, considered the Hells Canyon situation and passed a resolution endorsing the Federal dam proposal. Within less than a week after the resolution had been passed the Federal Power Commission on April 24 granted the Idaho Power Co. permission to issue $40 million in short promissory notes to finance a series of private dams, and on April 25 the Office of Defense Mobilization issued accelerated amortization certificates which will enable the private power company to receive interest-free loans of $30.5 million which amounts to a subsidy over a 50-year period of $329 million. I would like to point out that the Dairyland Co-op serves the needs of 26 member distribution cooperatives in Minnesota, Wisconsin, Iowa, and Illinois, who in turn distribute electrical energy to more than 93,000 farm families and rural businesses. As American taxpayers who are familiar with the operation of public power principles, these directors have a special knowledge to apply to this problem. The resolution follows:

Whereas the Congress of the United States will act at its present session on authorizing legislation to construct a high dam at Hells Canyon on the Snake River; and

Whereas the proper legislative test to apply to any project like the proposed high Hells Canyon Dam is whether it will provide for the fullest proper use of natural resources and whether private interests are willing and able to do the job as well as can be done by Federal development; and

Whereas the Federal Power Commission has granted a license to Idaho Power Co. for construction of small, low dams as an alternative to a single high Federal dam despite the findings of its hearing examiner, after a year of hearings, that the best development in the public interest would be a single high dam such as proposed in the Hells Canyon legislation; and

Whereas we heartily concur with the examiner that a high dam providing 2,880,000 more acre-feet of storage for flood control, that would provide almost 40 percent more power; that would permit ultimate sale of the power at less than half the cost compared to projects authorized by the Federal Power Commission, is clearly a superior project in the public interest, particularly be-

cause it would be part of a long-term integrated development of the Snake River; and

Whereas the examiner's reason for recommending approval of a Federal Power Commission license for private development was only because he personally didn't think Congress would authorize promptly the Federal development; and

Whereas Wisconsin, Minnesota, Illinois, and Iowa farmers, as well as farmers in 11 other Midwestern States, would realize a saving of approximately $8.40 per ton in their purchase of plant food as a result of a major development of the phosphate resources of this area which would utilize the low-cost power from a Federal dam, but could not practically utilize higher cost power and lesser available capacity from private development; and

Whereas, in 1957, 16 farmer-owned cooperative organizations serving the plant-food needs of 2 million farmer patrons in 15 Midwestern States have already started development of the phosphate resources of this area but find the cost of concentrating superphosphates at the plant cost $2.10 per ton more for each additional mill in kilowatt-hour cost and the difference between cost of power available from Federal development averages 3 mills compared to 7 mills from private development; and

Whereas low-cost power would increase the percentage of estimated phosphate deposits feasible for development by more than 300 percent, and such differentials in both price and available supply may often determine whether or not a farmer can afford to follow good soil-conservation practices; and

Whereas Idaho Power Co. already has applications pending for rapid tax writeoffs on 2 of its proposed 3 small dams which at 6 percent over 50 years would yield a total subsidy at the expense of taxpayers of more than $325 million, or, roughly, the cost of the Federal high dam, with the further expectation that a similar subsidy will be applied for if it should build the third dam it proposes; and

Whereas the private development represents partial, piecemeal, and less-than-maximum integration of the potential of our great American water resources at ultimately much greater cost to the taxpayers of the Nation; and

Whereas this stretch of the Snake River represents the greatest remaining potential dam site in the Nation: Now, therefore, be it

Resolved, That we, the members of the board of directors of Dairyland Power Cooperative, which serves more than 90,000 rural families with their wholesale electric-power needs in the States of Wisconsin, Iowa, Minnesota, and Illinois, do hereby strongly urge that our representatives in the Senate of the United States Congress and our representatives in the House of Representatives in our United States Congress do actively support enabling and authorizing legislation to provide for the construction of the high Federal dam at Hells Canyon under auspices of the United States and that construction be authorized with the least possible delay.

How To Cut the Cost of the Trinity River Project

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HOSMER. Mr. Speaker, our colleague, Representative JAMES B. UTT, of California, recently reported in cogent words to his constituents just why the United States taxpayers would be better off by partnership in the Trinity River project. His words are of such force that I believe their benefit should be shared with all our colleagues by inclusion in this RECORD. His report follows:

WASHINGTON REPORT
(By Congressman JAMES B. UTT)

Last year Congress authorized the Trinity River project in California at a cost of $225 million. This project provided for the transmountain diversion of some 865,000 acre-feet from the Trinity River to the Sacramento River below the Shasta Dam. There is a total water drop of 1,500 feet. This would provide water power sufficient to generate 385,000 kilowatt-hours.

The act directed the Secretary of the Interior to proceed with negotiations for the sale of the falling water to a private utility and report the result of these negotiations with his recommendations. The negotiations could not come effective until approved by Congress. The Pacific Gas & Electric Co. was the only company which offered to negotiate such an agreement. They offered to construct the powerplants and operate them for a period of 50 years subject to renewal or recapture of the powerplants by the Government. They agreed to make an average annual payment to the United States of $4,617,000 for the privilege of having the water pass through their turbines without any consumptive use of the water.

This payment is equal to $5.33 per acre-foot, which figure is considerably higher than the farmer will pay per acre-foot for the full consumptive use thereof. They agreed to integrate their system with that of the Central Valley project. They further agreed to provide energy on an exchange basis from the company's system to operate project pumps including those in the proposed Feather River project in order to make more commercial power available for sale by the Government to its preferred customers. This would also allow the Federal Government to use the company's transmission facilities to serve Federal and preference customers for 50 years at a charge less than th cost to the Government if it owned the facilities required for this service.

On February 12, the Secretary of the Interior transmitted the proposed agreements to the Congress and recommended joint development of Trinity water resources. If his recommendations are accepted by Congress, it would save the Federal Government a capital outlay of $55½ million for the power plants, and provide in the 50-year period total additional revenue to the Federal, State, and local governments of $310 million or $85 million more than the proposed cost of the whole Trinity River project, and the Federal Government would still have $150 million worth of water to sell to the farmers over that same period of time.

If the Federal Government generates this power, it would first have to invest an additional $55½ million in generating equipment, plus the cost of a power distributing system and would then sell the power below its true market value under the preference clause to less than 5 percent of the people of California, or less than one-third of 1 percent of the people of the United States who actually would be financing the project.

This very small group of individuals, as a class, who receive this benefit, perform no special service whatever for the Government. The advocates of public power are always saying that these great natural resources belong to all of the people and yet come up with the inconsistent demand that a very few people in the immediate area should reap all of the benefits at the expense of the rest of the country. I feel that the American taxpayer who financed this project is entitled to recover the full return of his investment and to apply any profit therefrom to additional conservation projects.

If Congress does not approve this proposed contract and decides to genrate and sell the power, I shall propose an amendment that the rates to be charged shall be sufficiently high to permit the Government to pay an amount equal to what the company would have paid to State and local governments for the support of schools, churches, roads and other necessary services supplied the State of California and other local governments. This in itself would amount to over a million dollars a year.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Jefferson-Jackson Day Dinner Address by Hon. Wayne Morse, of Oregon

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. McNAMARA. Mr. President, I send to the desk a copy of the address delivered by the able and distinguished senior Senator from Oregon [Mr. MORSE] at a Jefferson-Jackson Day dinner in Detroit, Mich., on Saturday, May 18, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S JOIN THE ISSUES

(Remarks by Senator WAYNE MORSE to Jefferson-Jackson Day Dinner, Detroit, Mich., May 18, 1957)

Governor Williams, reverend clergy, Senator McNAMARA, Lieutenant Governor Hart, my congressional colleagues, all Democratic officials, and fellow Democrats, it is a high honor to be invited to speak to a Jefferson-Jackson Day dinner in Detroit, Mich., particularly at a time when the Democratic Party in this State is rising to a zenith of power and prestige that is almost unmatched elsewhere in this country. Your great Governor Williams has demonstrated an ability unusual in American politics, and that is a capacity not just to win an unprecedented number of terms in office for himself, but to lead his entire party to success in his State.

It is a great privilege to me to be at the meeting with my good friend PAT McNAMARA. He can close his ears for a minute while I talk about him. In 1954 I campaigned for PAT McNAMARA in Michigan. I knew I was campaigning for a true liberal, a fine man, and a great Democrat. His record in the Senate proves I was right. PAT is doing a wonderful job for Michigan and the Nation in the Senate of the United States. In my book of political qualifications for high office PAT McNAMARA rates with the best. He personifies courage. He inspires me with his honest independence of judgment. He has brains and please remember that there is no substitute for brains in public service.

PAT enjoys and deserves the esteem and respect of the Senate. Start reelecting him now because it is very important to Michigan and the country that he be kept in the Senate for many years to come.

It is not often that politicians do more than achieve their own success at the polls and in public affairs. It is rare, indeed, as American election statistics show, when the popularity of a candidate can be transferred to other candidates in sufficient numbers to help them win elections, and it is even more rare when a popular leader can sustain the gains of his party even when he is not on the ticket.

Governor Williams has been able to achieve that for the same reasons that a very few other State and National leaders have achieved it—because he has personified a program and policy of government that has served the general welfare of his State. He has brought vitality and liberalism to the Democratic Party in Michigan and made the party the true servant of the people. As a result its candidates have been elected to more State and local offices than Democrats have ever held in your State before.

I am proud to say that we have been making the same record in Oregon. Last fall we not only held the Senate and House seats we Democrats already had, but gained 2 more of Oregon's 3 Republican congressional seats; we captured the State house, the lower house of the State legislature, and gained a tie with Republicans in the State senate, so that Democrats in Oregon, too, now hold more State and local offices than ever before in history.

Much has been made of the strong showing by our party in the Pacific Northwest last fall in face of the Eisenhower vote. I want to talk to you about the reason for that success, which is the same, I think, as the reason underlying your great victories here in Michigan.

Our example to the party nationally is essentially that in neither State have we provided Eisenhower and his administration with their political clothes, nor have we permitted Eisenhower to pose as a liberal while he carries out the traditional Republican policies of economic royalism. In both States Democrats have drawn the issues clearly and have taken their stand on the side of the welfare of the people and against Eisenhower's Republican policies of economic favoritism and special privilege. Thus I selected as my subject Let's Join the Issues.

Michigan has an outstanding example from its own history of why a party gains popular support and another party loses it. In the 1840's and 1850's the two national parties reached a complete stalemate on the most searching issue of the age—human slavery. The result was indecision, compromise, and evasion by the parties of an issue that was choking to death the American experiment.

As party conventions met and party platforms were drafted, they avoided coming to grips with the great issue of whether the institution of chattel slavery should be extended into the free territories. They sought to evade, to straddle, and to compromise on what was then the most divisive and paralyzing paradox of American life.

The Whig Party did not even survive its failure to face up to that issue. As its leadership hedged and compromised, its rank and file and its voting strength drifted away into new political organizations.

The State of Michigan helped give birth to the strongest and clearest voice that emerged from that welter of the 1850's. I understand that Wisconsin and Michigan dispute the actual founding of the Republican Party, but there existed in both States the desire for a political party through which firm and uncompromising opposition to the expansion of slavery could be expressed. A few candidates ran under the Republican label in 1854; in 1856 it offered the major opposition to the Democrats for the Presidency; by 1860 it captured the White House from a shattered and disorganized Democratic Party that had wound up with two candidates and two platforms.

I need not come to Michigan to relate to you the history of your State, but I would point it out to you as a graphic reminder of the futility of compromise on the great issues of human freedom and progress by a political party and the necessity for positive and unequivocating party policies. As a footnote to history, let me add that it was a declaration by independent Democrats in 1854 that furnished the greatest impetus to the founding of the Republican Party here in the Midwest. "Demagogs may tell," they wrote, "that the Union can be maintained only by submitting to the demands of slavery. We tell you that the Union can only be maintained by the full recognition of the just claims of freedom and man. The Union was formed to establish justice and secure the blessings of liberty. When it fails to accomplish these ends, it will be worthless, and when it becomes worthless it cannot long endure."

The same might well be said of a party, and of the Democratic Party. One hundred years ago, a strong stand for the just claims of freedom and man brought the Republican Party to the heights of power within 6 years of its founding. The failure to take such a stand ruined the Democratic Party for a generation and nearly caused its destruction.

It is to the credit of our party that it survived those years of political cowardice and impotence, which terminated in a shameful defense of human slavery and disunion. We should be proud of the fact that our party was able to recapture the tradition of Jefferson and Jackson, and to become again the symbol and vehicle of human progress in America.

That was because the Democratic Party remained, basically, the party of the workingman, the farmer, and the small-business man and under Cleveland, Woodrow Wilson, Roosevelt, and Truman it emerged in its best tradition. Where we dodge or equivocate on the great economic and social issues of our day, when we fail to stand for the general welfare of the American people and for programs needed to push back the limitations on human freedom, when we give aid and comfort and political support to a morally corrupt Eisenhower administration, we fail the true, historic mission of the Democratic Party and do not earn or deserve the support and votes of the people.

When we stick by our basic principles of fighting for the interests and welfare of all the American people, we have won elective office. I think that is the great lesson the national Democratic Party can learn from Michigan and from the Northwest.

We have opposing us in Washington a typically reactionary Republican administration, despite the new labels that are pasted on it, all the way from dynamic conservatism to modern Republicanism. All of them boil down to synthetic idealism when it comes to an examination of what the administration is actually doing. On the great economic issues of today, on natural resources, interest rates, and on tax policies, the Eisenhower administration has proved over and over again that its purpose is to promote not the general welfare, but the welfare of the investor and profiteer. A study of American political history would show that the genuinely modern Republicans were Lincoln, Teddy Roosevelt, Gifford Pinchot, and George Norris; the Eisenhower administration's claim to being modern rests solely on chronology, and has no relationship whatever to development or historical progress.

I know of no more serious or far-reaching issue on which our party must draw the line against the Eisenhower administration and take forthright leadership than on that of conservation and preservation of our natural resources, of which water is among the most important.

Let us never forget that water is the greatest nourishment of the civilization of any nation. When I talk about conservation and full development of the natural resources of our great river basins—the Tennessee, the Missouri, the Columbia, and the rest, I am talking about the need for maintaining a high water table in order that we may maintain a high level of civilization. Without water, human and plant life is impossible. Lack of adequate water has doomed whole areas that once flourished. In the strife-torn Middle East, for example, there was four times the amount of land under cultivation in Roman times as there is today.

It is urgent that the dimensions of our water problem be recognized, for it takes years and decades to achieve the means of adequate multipurpose water development. I predict that as our population grows, and our industry becomes more extensive, we will find that the adequacy of our water systems will be the ultimate limitation upon our capacity to grow.

It is within man's power to waste water or use it to the full. The most fearful waste is that which permits the destruction of sources of water by failure to protect watersheds and the irresponsible pollution of our God-given streams. The Democratic Party should carry the fight to the Republican Party on the water resources issue, because the Eisenhower administration has already made a sorry record against the future generations of American boys and girls by its various proposals for underdevelopment in our Nation's river basins. Its phoney partnership plan, for example, selling out the people's heritage of their own water rights to private utilities, will result in the cheating of future generations out of a full enjoyment of the maximum economic potentials of our river basins.

There can be no compromise of the principles inherent in this issue. I hold no brief for any Democrat in the Congress of the United States who gives aid and comfort and support to the Eisenhower administration's underdevelopment proposals because it is only through comprehensive development that we can protect the water rights of future generations, and assure the greatest benefits to the greatest number of our people.

We will make progress on comprehensive development when there is adequate recognition of the public interest, and protection is given it without evasion or equivocation.

The project that best dramatizes the water resource issue is the great Hells Canyon dam issue. I am sure that none of you came to this meeting, expecting to go home without hearing me mention this issue. I do so with great political relish, because it is one of the many Achilles' heels of this Republican administration.

The Hells Canyon Dam symbolizes the great difference between the private utility-controlled Republican administration of President Eisenhower and the program for the future of forward-looking Democrats.

The power to be generated at site and which Hells Canyon would make possible downstream will make possible new private enterprise with new plants and the businesses which spring up to serve new industrial communities. What the supporters of high Hells Canyon Dam want is a transfusion of low-cost power for a more vigorous private enterprise economy. A more balanced local economy will be achieved as population, with new purchasing power, grows. There will be a larger market for regional farm products and the manufactured wares of the whole country. This new economic vitality will be good for the whole country.

The Nation's farmers needs the new low-cost phosphate fertilizer which low-cost Hells Canyon power alone can make possible to the fullest extent. Farmers from the west coast as far east as Ohio would benefit because cheap power from Hells Canyon Dam would make possible full use of the phospate deposits of Idaho and Utah, greater production of high concentrates of phosphate fertilizer, and reduced costs of fertilizers. Farm organizations owning phosphates beds in Idaho and Utah cannot now proceed with their plans for development because of the lack of an assured power supply at less than 4 mills per kilowatt-hour. Hells Canyon Dam site is uniquely situated within economic transmission distance of this great phosphate resource, and power from the dam can be made available at wholesale costs of approximately 3 mills, permitting full utilization of the phosphate beds.

Farm cooperatives through the West and Midwest expect to utilize Idaho-Utah phosphates, provided low enough power rates are available. Farmers in these regions could thereby save between $15 to $18 per ton for fertilizer. The combination of Hells Canyon power with the Idaho phosphate deposits has long been considered feasible, and as a result, the indirect benefits could be very large in the conservation of national phosphate and sulfur resources, encouragement of greater use of fertilizer, better soil conservation, and great yields per acre of food and fiber.

It does not take much foresight to know that in but a few decades our growing population will need a more abundant food supply. Expansion of agricultural capacity will require expansion of irrigation and reclamation. Even Interior Secretary Seaton has warned of that need.

That expansion cannot be accomplished economically without the historic aid of public power revenues for irrigation and reclamation projects. In Idaho and eastern Oregon especially, the future of irrigation and reclamation depends upon Hells Canyon as a Federal project. In 1953, when Secretary McKay withdrew former Secretary Chapman's opposition to the application for licenses by the Idaho Power Co., he mentioned that other possible dams might be pressed into service to provide power revenues for irrigation. Those alternatives are disappearing under the administration's resources policies. So-called partnership makes no provision for aid to irrigation.

These are the reasons why I am convinced that the Democratic Party has a great duty to oppose the political expediency of the Eisenhower administration in the field of natural resources, and to do it now by authorizing the Federal high Hells Canyon dam. What Congress does or fails to do, and what the administration does or fails to do will have long-range and permanent effects. The floods and power shortages of the future, the economic consequences of full development or underdevelopment cannot be undone once the pattern is set. An inadequate low private utility dam built by the Idaho Power Co. cannot be repealed. A gerrymandered river cannot be reclaimed.

The Democratic Party must draw this issue of water conservation and full development of river basins with the Republican Party in a fight to the finish. We are right, and the voters will so decree in 1958 and in 1960 if we give no quarter, and stop providing the Eisenhower administration with the votes that will give away the people's heritage in their own natural resources which include the Hells Canyon Dam site.

A second issue which the Democratic Party must carry to the people of the country is fiscal policy—the tight-money policy the Republicans put into effect just 9 days after they took office in 1953. I have a lot of first-hand knowledge of this subject because I was the first to raise my voice in protest. Yet despite all the opposition put up since then against rising interest rates, and despite the fact that time and experience have proved we were right to oppose it, the administration has done nothing to reverse it.

The exercise by the Eisenhower administration of its executive discretion in fixing interest rates has shown these results: first, small business, which finances expansion mostly by borrowing instead of from profits as big business does, must now pay so much more to borrow that half the small and medium-sized companies which had bank credit lines in March of 1955 had been cut off by March of 1956; second, the rate of business failures has risen from 29 per 10,000 enterprises in 1952 to 48 per 10,000 in 1956. The Cabinet member who said in 1953 that "Big business is back in the saddle" was absolutely right. The depressed condition of small business proves that he was right.

The high interest rate policy of the Eisenhower administration is a throw-back to Republicanism of old—of McKinley and Coolidge—regardless of what is done to peddle it under the name of "modern" Republicanism. It is a policy that lines the pockets of bankers, investors, and big-business men, and brings ruin to farmers and small businessmen. Already, the Pacific Northwest has shown the effects of this policy in declining employment, and so have other sections of the country.

To many, the terminology of this economic issue is not dramatic, and lacks political sex appeal, but in my judgment, it is one of the most critical of all economic issues because if the tight money policy continues unchecked, it can put the couuntry right back where the last Republican administration put it—in a first-class economic depression. The Treasury Secretary may very well be right when he says the country faces a depression that will curl our hair, but he cited the wrong reason. If one does occur, it will be as a esult of his own tight money policy, and his tax policy of favoritism for big business.

An old, old issue that plagues the Nation and therefore the Democratic Party, too, because of the very fact that we are a national party, is that involving civil rights. I am not one to stand up in Detroit, or in Chicago, or in Cleveland, or New York and point to the South and say that that region of the country is the one that must start assuring its racial minority of equal protection of law, and social and economic opportunity. But I do say that the Democratic Party must show the way, and to the extent that we fail to do so, we fail the people and do not deserve their support.

The day when an eligible voter can be intimidated, or otherwise denied the exercise of this basic right of participation in self-government, belongs to the historic past. It is abhorrent to every principle on which our Nation is founded, and is therefore equally abhorrent to the principles of our party. That practice must be attacked wherever it occurs, and the voting privilege protected vigorously by all three branches of the Government.

Equivocation on suffrage and on equal protection of the law is intolerable and inexcusable, and will lose for the Democratic Party the confidence of millions of Americans who have every right to expect strong leadership from us. If we fail them, they will be right to turn away from the Democratic Party.

There are many other issues on which we must demonstrate leadership founded on the great moral principle of the Constitution that the objectives of our Government are the establishment of justice, the securing of liberty, and promotion of the general welfare. It is not enough that we work for the specific legislative and administrative proposals for farmers, working people, and small-business men that we have championed over many decades. There are new and confusing challenges we must come to grips with, such as the revolution in industrial and employment patterns as a consequence of automation, and whether the

marvelous potential of power from atomic energy is to be put to its maximum use for all the people, or monopolized for private profit.

But above all, we must not compromise our party by compromising our principles. The examples of betrayal of the public trust by the Eisenhower administration in natural resources, in its domination by big business with continuing business interests, and its neglect of the people's need for help in the fields of education, civil rights, and social and employment security are already on record.

Let there be no equivocation or timidity in taking this record to the American people. When they know the facts about it, and when we have proved that we are the party of America's future, we will find that we have earned their votes on election day.

Father Adam Grill's Sermon at Senator McCarthy's Funeral

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. MUNDT. Mr. President, at the Appleton, Wis., funeral services of the late Senator Joseph McCarthy, Father Adam Grill, of St. Mary's Catholic Church—Joe's home church in Appleton—delivered a most moving and appropriate funeral sermon which so impressed the Senators and Representatives attending the services that he was asked to send us a copy to be incorporated in the CONGRESSIONAL RECORD.

I ask unanimous consent, accordingly, Mr. President, to have printed in the Appendix of the RECORD this fitting tribute to our late colleague by the priest who ministered to Joe throughout his all too abbreviated lifetime.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

SERMON OF FATHER ADAM GRILL AT FUNERAL SERVICES OF SENATOR JOE MCCARTHY, ST. MARY'S CATHOLIC CHURCH, APPLETON, WIS., MAY 7, 1957

Mrs. McCarthy, relatives of Senator McCarthy, distinguished visitors, friends of Senator McCarthy, first of all we wish to express to Mrs. McCarthy and relatives the sympathy and condolences of our Most Reverend Bishop Bona, and Bishop Greilinger, our auxiliary bishop, and many priests of our diocese. Bishop Bona called personally to be sure that we would express his regrets that he cannot be here for this occasion. He is celebrating the 25th anniversary of his consecration as a bishop in his cathedral in Green Bay today. The reverend assistant priests of St. Mary's, as well as myself, and Sisters of St. Mary's, and all the members of the parish join with our bishop in expressing our sympathy.

Before us we see the flag-draped casket of the junior Senator of Wisconsin. May Almighty God be good to him. If our God would allow him this morning to use his lifeless arms, Senator McCarthy would point out to all of us two objects in this church as an expression of his whole life. He would first point to the altar, and secondly to the flag that drapes his casket, and why would he do this? Because they contain the epitome of his life. Senator McCarthy was a dedicated man. I have known him during all of his public life. When he took upon himself a task he gave his whole heart and soul to a successful completion of his work. He loved his God, and he loved his country. To him the people of Wisconsin imposed the obligation of working for the good of the people of the United States of America, and for the people of the State of Wisconsin. He dedicated himself to this work.

We have many dedicated men in the branches of the Government. God's church is under the guidance of the Holy Spirit and is infallible through this direction. The guidance of our beloved land is under the guidance of human beings and as human beings we are all fallible. People expect that the honorable men directing our Government are infallible, which is far from the truth. Mistakes therefore can be made, and are made. Instead of criticizing them we should get down on our knees every day and pray God to direct them and to guide them. They need this help. Pray, don't condemn.

We have the most beautiful land in the world, the most blessed one. The hungry eyes of the dogs of envy, jealously, and hatred of our enemies are directed toward us. There are enemies from within and from without. In our humble opinion even more threatening than the atom and hydrogen bombs is the common enemy of all democracy and God-fearing people—communism. Of all the great men in our country, no one recognized this more completely than Senator McCarthy.

The hydrogen bombs and the atom bombs our Armed Forces can take care of. It is the boring from within that comes under the executive and legislative bodies' authority in our country. Senator McCarthy was like a man of old who saw this danger to his country, and, clothed in the shining armor of zeal and love, and holding within his hands the sword of truth, he went forward into the battle with the cry on his lips, "For God and for my country." His fight is now history, and history will evaluate it. But if the torch dropped by his dying hands is not plucked up and again held aloft, then God help our beloved land. Woe upon those who do not make our country safe for Tierney McCarthy and the million other children like her.

Senator McCarthy was indeed fortunate to continually have at his side in these last few years his devoted and capable wife and his loyal staff. We hope they will never let his memory die.

We are happy to have had personally a share in the shaping of the religious life of our beloved Senator. As a youth he came to St. Mary's to receive instructions in the doctrines and practices of his faith. We are proud of the fact that he was proud of his faith. I know this personally because he practiced his faith zealously and to the dying moments of his life. Mrs. McCarthy informs me that in the days that she worked in the office of Senator McCarthy frequently he would ask her to take a little walk, and as they walked along the streets of Washington they would pass a Catholic church. Senator McCarthy would go into the church and spend 10 minutes or so in silent prayer, and then would come out and they would proceed with their walk.

To be a Christian our Lord told us that we must practice the beautiful virtue of charity. Next to the love of God one must love his neighbor. Christianity without charity is void. Senator McCarthy loved his neighbors; he loved his country; he loved his State; he loved his native city of Appleton; he loved St. Mary's. One of his greatest loves was for the young, and for them he fought.

Our obligation before God is to love Him. Love is expressed perfectly by action. Greater love than this no man hath than to lay down his life for his friends. Senator McCarthy died not because of disease only, but principally because he exhausted himself physically for love of his fellow beings.

If you loved him, manifest this by remembering him in your prayers. No man is perfect. Senator McCarthy had faults, and I am sure he would be the first to admit this. Pray God to forgive him. Pray God daily that he has met a merciful divine judge. Pray for him. Pray for him as we have just done in the holy sacrifice of the Mass.

We are proud of the fact that the Senator wanted to come home to Appleton, to St. Mary's, for his last resting place. I am sure that his great spirit will like the resting place of his body, overlooking the beautiful Fox River. May we here in Appleton never forget him.

We will close with the words of St. Ambrose: "We have loved him in life; let us not forget him in death."

The Oil Lift to Europe

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. DIRKSEN. Mr. President, articles and statements have been printed in the RECORD with respect to the so-called oil lift to Europe. There appeared in the New York Times on May 10, 1957, an editorial which quoted rather extensively from the monthly letter of the National City Bank of New York on the subject. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OIL LIFT

The Monthly Letter of the First National City Bank carries a comprehensive review of the recent oil lift for Western Europe that brings the recent price increase into proper perspective. As the First National City Bank tells the story:

"In October, prior to stoppage of the canal, imports of Middle East oil to the United States and Eastern Canada amounted to 385,000 barrels daily. By December and January some 330,000 barrels daily were diverted to Europe. Shipments of Western Hemisphere oil practically doubled to almost 1.4 million barrels daily. About 30 percent of this increase was accounted for by higher shipments from Venezuela (output in March of 2.9 million barrels daily was 400,000 higher than in September) and the rest of the increase was met by expanding United States production and by drawing down United States inventories."

What about the 25 cents a barrel increase in the price of oil, over which anti-administration politicians have tried to make an issue? "The fact is," as the authors of this study put it, "that when the oil-exporting companies could no longer obtain sufficient crude for shipment to Europe from their own production and purchases, or from purchases at prevailing prices, they offered higher prices to draw out greater supplies.

"The higher oil prices induced suppliers to liquidate inventories—even after they got down below normal levels. With demand greatly increased, stocks on hand fell from 37 days' supply at the end of October to 29 days' supply at the end of March—the lowest point in the postwar period."

This is a brief sketch of the Oil Lift of 1956–57, which prevented immeasurable disruption of supply in the economy of Western Europe during the past winter. It is a summary story of an episode that has been hailed by the London Times, for example, as "a remarkable achievement, reflecting great credit on the oil industry," but of which the advisory council of the Democratic National Committee seems never to have heard, or which if it had heard of it, didn't regard it as worth mentioning.

Freight Car Shortage

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. MAGNUSON. Mr. President, for many years the Committee on Interstate and Foreign Commerce has held a succession of long, arduous hearings on the subject of the freight-car shortage. It looks like a shortage will occur again this year. Every Senator from every State in which the freight car shortage will occur is aware of what it will mean.

With the fruitful third quarter rapidly approaching, when the products of the land will need to be moved to the markets of the world, the New York Times has taken a good look at the problem. Its staff reporter, Robert E. Bedingfield, has written an article entitled "Freight Car Crisis Is Coming to a Head," which was published in the New York Times of May 5, 1957. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREIGHT-CAR CRISIS IS COMING TO A HEAD—WITH THE RAILROADS' FLEETS DIMINISHING, THE APPROACH OF HARVEST POINTS UP A PROBLEM OF NO EASY SOLUTION

(By Robert E. Bedingfield)

The fruitful third quarter of the year is 8 weeks away, and shippers and railroads alike already are beginning to dread the boxcar shortage that always accompany that time of bulk freight movement.

Since World War II while capital investment of all other kinds has risen by more than $200 billion, the railroads' total stocks of freight cars have declined 1,770,852 to 1,707,683.

Moreover, at the start of 1946 a third of all freight cars in service were more than 25 years old. Most of the rest were built in the upsurge of railroad-equipment buying in the late twenties. They constituted the rolling stock that helped win World War II.

Today the percentage of cars more than 25 years old has risen to nearly 40 percent. They are still late twenties cars—but they would hardly win a war today. They are having a hard time keeping up in peacetime.

Another factor that makes the freight-car shortage more worrisome than before is the shifting distribution of the car fleets. The rich are getting richer and the poor are getting hotboxes.

Just the other day the Southern Railroad, along whose lines several new coal-burning industrial plants establish themselves every day, ordered 2,750 new hopper cars. Any day now large orders for freight cars are expected to be placed by the Atchison, Topeka & Santa Fe and the Union Pacific Railroads which, like the Southern, are experiencing heavier and heavier traffic from large numbers of new plants.

But the Pennsylvania and the New York Central Railroads, which used to set standards for the world in maintenance of ample and varied fleets of freight cars, are now getting too few new cars to stay even. In fact, both roads have materially fewer cars today than at any time in their modern history.

Central, for example, on April 15 had only 117,744 freight cars. Five years earlier it owned 136,788. Pennsylvania, between 1950 and the end of 1956, cut its fleet from 196,781 to 170,061. In fact, 15 leading eastern roads at the end of 1956 had only 297,858 freight cars, or 8.3 percent fewer than on December 31, 1950, when the figure was 324,954.

However, the 11 roads that serve the South have raised their fleets from 254,267 to 265,558 since the 1950 year-end. In the central western region, which includes the territory of the Santa Fe, Rock Island, Southern Pacific, and Union Pacific, car fleets have grown from 279,875 in 1950 to 305,417 at the end of 1956, a gain of 9.1 percent.

TREND FOLLOWS INDUSTRY

The reason is plain. Manufacturing plants since World War II have moved south and west from the Northeast. There is little developing along the rights-of-way of the Pennsylvania, the Central, and their neighbors other than truck lines running on free highways, airplanes flying from one subsidized airport to another and groups of disgruntled commuters.

It shows up in the detailed financial statements issued by most carriers along with their more readable annual reports. Pennsylvania last year handled 53,427,956,000 ton-miles of freight, only 3 billion more than in 1950, despite the fact that there are some 18 million to 19 million more people living in this country than there were in 1950.

Central last year moved only 37,733,255,000 ton-miles of freight, which was about 1-300,000,000 less than in 1950. Down in the Southeast, however, the Seaboard during the same period has seen its traffic grow from 8,262,712,964 ton-miles to 9,826,172,000. Against this 20 percent jump in business, the carrier has increased its freight-car fleet by 21.6 percent to 26,263.

The Santa Fe's traffic has jumped to 33,-900,876,000 ton-miles from 29,816,323,000 in 1950, while the Rock Island has pushed ahead from 12,105,231,560 to 13,348,162,076.

This year, the problem of how to supply the shipper with enough cars to haul his goods to market, and still not divert all the railroad's earnings from the shareholder to the equipment manufacturer, has become more urgent than usual.

One reason is the fact that the Interstate Commerce Commission, heretofore a comparatively innocent bystander at the annual tug-of-war, shows signs of grabbing hold of the rope at the shipper's end.

Owen Clarke, new chairman of the ICC under its rotation policy, has made a number of statements in private conversations that add up something like this:

The railroads could haul more freight if they had the cars to move everything that was offered to them when it was offered. The carriers cannot expect to go on forever asking for rate increases to get an adequate income for an inadequate performance. The time will come when the Commission will say:

"We'll give you more money per bushel to move wheat from Garden City, Kans., to Galveston, Tex., when the cars are lined up at Garden City to haul the wheat after it is threshed."

And Congress will back the ICC, because the Congressman every harvesttime hears his constituents raising the roof because they can't get any cars.

Mr. Clarke's views have not gone unheeded. Three times in the last 5 weeks railroad presidents have gathered in Washington to ponder what can be done to stimulate freight-car purchases above retirement rates—roughly, 5,000 to 6,000 a month.

TWO PROGRAMS SUBMITTED

The industry has been listening to two plans. One, put forth by a Cleveland management-consultant firm, suggests that the rails create an equipment-financing agency of their own to lend money at favorable rates of interest to those roads unable to meet the rates of customary lenders.

The idea has not had wholehearted support. This is because funds of the equipment agency would be raised by assessing the roads on the basis of present car ownership. The eastern roads—among the biggest car owners—would be assessed the most.

These eastern roads have insisted that it is not that they don't want to help or that they don't need more cars, but they don't have enough money to buy more cars, either collectively or individually. Furthermore, they say they have been assured that Wall Street is not interested in helping them obtain more money in the new-capital market.

UNITED STATES AGENCY PROPOSED

So the eastern lines have a plan of their own. They are working hard to sell it to their southern and western neighbors—and to Congress. Their plan is that a new Government agency be formed. They suggest it be called the Railway Equipment Agency. It would be created with a capital of $500 million.

The REA would have the right to borrow up to four times its capital. This would be used to buy all the equipment the rails called for—not just freight cars but passenger cars and diesels, too. The roads would have the right to use this equipment under long-term lease. The leases would run for 20 years for freight cars, 15 for diesels, and 10 for passenger cars.

The rails would pay, not a per diem rental but a true-user charge. This would be a sum sufficient to cover all costs of the agency, its borrowing costs, and a sum sufficient to amortize the actual cost of the purchased equipment.

Tribute to Lawrence College

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. WILEY. Mr. President, I was delighted to note in the Tuesday, May 14, issue of the Christian Science Monitor a most excellent article describing an educational institution of which we in Wisconsin are very proud—Lawrence College in Appleton. My dear wife, May, and our four children graduated from Lawrence.

The article points out how a recent selection of the Nation's 10 best coeducational colleges included Lawrence College, which, despite its modest size, or perhaps because of its modest size, has well earned such recognition as one of the highest caliber liberal arts colleges in the Nation.

The article catches the flavor of Lawrence—the thinking of its distinguished president, Dr. Douglas Maitland Knight, the goals of its academic life, the high achievements of its faculty, the forward-looking philosophy of its entire existence.

I send to the desk the text of the article, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAWRENCE RATES HIGH IN NATION

(By Max K. Gilstrap)

APPLETON, WIS.—Eager, animated voices of youth echo across the rolling campus as students hurry underneath arching elms to the cluster of buildings comprising Lawrence College.

The vibrancy of spirit found here is typical of small American colleges with rapidly broadening horizons and an exciting story to tell that is an important part of America's expanding educational picture.

Headed by youthful, energetic Dr. Douglas Maitland Knight, former assistant professor of English literature at Yale, Lawrence College enjoys many distinctions as one of the Nation's most forward-looking colleges. Most recent was its selection by the Chicago Tribune as one of the Nation's 10 best coeducational colleges based on a countrywide survey of opinion in the educational world.

PROVING GROUND

Enthusiastic alumni say that Lawrence is a proving ground for college presidents. Its campus has furnished the Nation with 11 college presidents in the last 3 decades and 6 more may be added to that list from earlier times.

Looked upon with particular pride here was the appointment of Nathan Marsh Pusey, president of Harvard University, 10th president of Lawrence from 1944 to 1953. It was the first time the Harvard corporation had gone outside New England for its president.

Thoroughly able to uphold Lawrence's traditional reputation for capable leadership, engaging Dr. Knight sparks the faculty and student body with challenging ideas from his airy, gray-green office. Despite being the youngest college president in the Nation when he was chosen at the age of 32 in 1954, Dr. Knight has become a major influence in the fields of education and religion. He is a combination scholar, administrator, and churchman.

Although Dr. Knight is from the East, it is plain from his easy but stimulating conversation that he has caught the Midwest pride that comes from helping open this land to settlement. He is keenly aware of living closer to the land that still has a strong frontier flavor. He speaks with an understanding of the physical pioneering that has gone on since Amos A. Lawrence, a proper Bostonian, founded the college here in 1847. Then came the town of Appleton. After that came the State formed out of the Northwest Territory.

When privately founded Lawrence had finished its job of physical pioneering, it took on a new responsibility—that of being part of the conscience for the whole of higher education. This it could do easily because of its political immunity, and this it has continued to do vigorously and fearlessly. Foremost among the problems at Lawrence is whether to expand in the face of the crisis of increasing numbers that is coming as soon as 1960. The high birth rate during World War II will cause college enrollment to be 50 percent larger by 1970 than it is today.

PROBLEM WEIGHED

Lawrence has been weighing the problem of how best to serve this emergency. It has concluded that to retool a small private college into a mass-production machine would not be of service at all, but would destroy the end product—a personal and individual education.

Dr. Knight in voicing Lawrence College's philosophy of service for the future says: "A liberal arts college, if it is to justify itself in the next quarter century, must have an impact on our society out of all prortion to its size: Quality and distinction will make this impact possible, indeed, where a mere increase in size would be ineffective."

In outward manifestation Lawrence impels admiration with its 30 buildings of neoclassic and contemporary design clustered high on the banks of the Fox River, artery for exploration by French voyagers. In the next 5 years its face will be considerably altered by a $1,800,000 development program. Already a new dormitory has been occupied. A music-drama center is to be built. In the music-drama center three public auditoriums are planned—a theater, a recital hall, and an arena for drama work. And residence units for men will be added.

LAWRENCE BENEFITS

Happily Lawrence was the beneficiary of the idea that American private business had a responsibility to American private education long before the Ford Foundation distributed half a billion dollars among American colleges and hospitals to put a dramatic climax to this idea that has been gaining momentum. Since 1942 Lawrence has been the object of corporate giving by local paper industries. There are 20 paper-industry men on the Lawrence board of 38 trustees.

As Lawrence's structural outlines burgeon so does its progress in the realm of ideas. Ever alert to keep apace with the latest trends in education, the college leans heavily on time-reverenced liberal studies in the humanities, arts, social and physical sciences. Heaviest staffing is in English with psychology, economics, and the natural sciences.

Never hesitant to move with the times, Lawrence under Dr. Pusey, president, introduced a popular "freshman studies course," replacing freshman English. This unique course, often called "college-in-capsule," is an airplane view of what college is all about. Traditional freshman English was junked and in its place Lawrence students read great works in each of mankind's three great areas of thought—natural science, social science, and the humane letters.

MANY IN WHO'S WHO

Since alumni are the end product of any educational institution, Lawrence proudly refers to 173 persons in "Who's Who in America" who list this midwestern college in their background. But it is just as proud of those graduates who have gone into ordinary life in all 48 States and 39 countries and have left the imprint of their work. In an earlier period Lawrence was a continuing source for religionists and evangelists. In the past 25 years, 32 percent have been attracted to teaching. A more recent trend is toward management jobs.

COLLEGE IS PEOPLE

Far from expressing any isolationism such as is often attributed to the area in which Lawrence thrives, 42 percent of its teaching staff have studied overseas. Its faculty has produced 30 books, 24 plays, dozens of musical compositions, more than 400 articles, and hundreds of reviews. They have edited scholarly magazines, led archeological and geological expeditions, produced scientific illustrations and served as presidents of numerous organizations. In recent years, Lawrence professors have won 9 Ford Foundation awards, 8 Rockefeller grants, 2 Guggenheims, and 5 Fulbright fellowships.

Looking ahead, perhaps Lawrence's philosophy is best expressed by a young, thoughtful alumnus who said: "A college is not a campus, alone. And it is not the sum total of its financial assets, the number of times its name appears in learned journals, or in the daily newspapers. A college is not alone its accumulations of this many or that many volumes of books, and it is not the orderly list of available courses of study.

"A college is, in some degree, the sum of all these things and more. But more: mainly, fundamentally, a college is people."

Lawrence College agrees with him. A college is people—its alumni, its students, its faculty. Even more, as President Knight expresses it, "College at best is a place for the development of a coherent attitude toward the maximum of individual freedom and the maximum of responsibility for the ultimate good of the body politic."

Improper Activities in the Labor or Management Field

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 20, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter I received from the American Civil Liberties Union under date of May 15, 1957; a copy of my reply, dated May 18, 1957; and a news article which was published as a result of the letter I had received.

There being no objection, the correspondence and article were ordered to be printed in the RECORD, as follows:

AMERICAN CIVIL LIBERTIES UNION,
New York, N. Y., May 15, 1957.

The Honorable JOHN L. MCCLELLAN,
Chairman, Select Committee on Improper Activities in the Labor or Management Field, Washington, D. C.

DEAR SENATOR MCCLELLAN: Because of the American Civil Liberties Union's long-established concern about the abuses of democratic rights within labor unions, we have followed the proceedings of the Select Committee with great interest. Since 1942, when we prepared our first study on the subject, we have endeavored to have these abuses corrected. We believe that, as the labor movement has assumed a major position in our society, it is vital for it to assume the responsibility which comes with this status by safeguarding its members' intraunion rights of free speech, fair trial, and nondiscrimination.

So, when the select committee was appointed, we favored the investigation as leading possibly to an improved observance of democratic practices within the labor movement. We felt that this issue is a proper area of congressional investigation, as information is needed before Congress can consider whether remedial legislation is necessary. We have also been glad to note the AFL–CIO's firm action toward removal of unethical practices, and hope this will aid internal democracy too.

We present this background because we do not wish the following comments to be misconstrued as an attack on the committee's objectives, for we are in accord with its purpose. In fact, our concern is that the committee's occasional lapses from fair procedure may lessen its contribution in the important field of internal union democracy. Granting the committee's frustration over the refusal of some witnesses fully to disclose information pertinent to its inquiry, we are

sure you will agree that procedures violative of due process should not be used to achieve the desired objective.

We refer to two specific examples: the first concerns the recall of Dave Beck, president of the teamsters union, as a witness following his Federal indictment for income-tax evasion; and the second concerns your statement at a hearing, reported in the New York Times of March 28, following Beck's refusal to answer questions about misuse of union funds, "I don't know any word to describe it less than theft."

These examples, in our opinion, raise the disturbing question of the committee's functioning as a judicial body whose purpose is to convict, rather than a legislative body whose purpose is to gain information to assist in the framing of legislation. The decision as to guilt is a criminal matter to be determined in court, where all the judicial safeguards may apply in the course of a regular criminal trial. We do not believe it is within the purview of congressional committees to make findings of guilt or innocence. It is this blurring of the line between judicial and legislative functions that aroused public opposition to the probes of congressional bodies investigating communism in recent years. The problem is amplified in this instance when a witness is already under indictment and must stand trial in our courts.

We want to emphasize that we offer these comments not in defense of Mr. Beck or the teamsters union, but in defense of vital civil liberties principles which need constant affirmation, particularly when the power of Government is being exercised. To repeat our original statement, the good work and objectives of the committee can be jeopardized if procedures which invade constitutional guaranties are not fully observed. We respectfully urge that future hearings will not be marked by departures from the principles of due process.

Sincerely yours,

PATRICK MURPHY MALIN,
Executive Director.

MAY 18, 1957.

Mr. PATRICK MURPHY MALIN,
Executive Director, American Civil Liberties Union, New York, N. Y.

DEAR MR. MALIN: This acknowledges your letter of May 15.

The committee recalled Mr. Beck to testify for the purpose of giving him an opportunity to deny, refute, or explain the derogatory evidence the committee had received against him. Do you claim that is a violation of "civil liberties"? Had he not been recalled and given that opportunity, then no doubt you would have charged the committee was unfair and only willing to hear one side—the testimony against him—without giving him an opportunity to defend himself or explain his actions.

Regarding your other complain, may I say that the committee has not convicted Mr. Beck of any crime, although it is my belief that he has committed many criminal offenses. As an American citizen, as a Member of Congress, and as chairman of this Senate select committee, I reserve the right to express my views regarding testimony developed before the committee. That is a "civil liberty" I have not surrended and do not intend to relinquish.

Sincerely yours,

JOHN L. MCCLELLAN,
Chairman,

CIVIL LIBERTIES UNION RAPS ATTACK ON BECK

The American Civil Liberties Union today hit out at a remark by Senator JOHN MCCLELLAN, Democrat, of Arkansas, that Dave Beck's handling of Teamster Union funds was theft.

The union wrote to Senator MCCLELLAN that it approved the purpose of an investigation of Beck by a special Senate committee of which Senator MCCLELLAN is chairman. But it said the investigation has been marked by lapses of fair procedures.

Among these, the union said, was the Senator's comment, "I don't know any word to describe it but theft," in reference to Beck's use of teamster money. "The decision as to guilt is a criminal matter to be determined in court," the civil liberties group said.

The Mirage of Economy

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Mirage of Economy," which was published in the May 17, 1957, issue of the Wilmington, Del., Journal-Every Evening.

It would be well for every taxpayer interested in bona fide economy to read this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MIRAGE OF ECONOMY

How sincere is Congress in its present budget-cutting drive? Let's look at some facts.

Yesterday the lawmakers sent to the White House a big money bill providing nearly $3,900,000,000 to run the Treasury and Post Office Departments and the tax court. Majority Leader LYNDON JOHNSON of the Senate cheerfully proclaimed: "We have saved $80,363,000 for the taxpayers" in this appropriation. Whether they have or not depends on what actually happens later on; it may well be that Congress will have to restore some or all of the funds cut from the Post Office appropriation to maintain reasonably decent postal service.

But here's what Congress was doing with its left hand while its right hand was economizing.

Edwin L. Dale, Jr., in a dispatch to the New York Times, points out three legislative actions recently taken by Congress which will add hundreds of millions to the spending total if all of them finally become law.

Congress has voted, and the President has reluctantly signed, a bill setting up a deferred grazing plan for ranchers in drought areas. The cost—$30 million over the next 2 years.

The House passed this week a bill increasing the compensation of veterans for service-connected disabilities. The cost—$170 million a year.

The House has passed and a Senate subcommittee has approved legislation providing special assistance funds for housing. The cost—$550 million under the House bill, compared with an administration recommendation of $300 million and $900 million under the Senate committee's bill.

This doesn't complete the list by any means. But it is enough to indicate that Congress is sneaking in new spending through the back door all the while the lawmakers are orating about the evils of the big spending in the President's budget. It will be a miracle if Congress winds up with any real and substantial savings if the lawmakers continue to go at the job this way.

America's Crusade for Freemen's Rights

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay entitled "America's Crusade for Freemen's Rights," which was written by Steven Ball, a 16-year-old junior at North High School in Omaha, Nebr. This essay won for Steve a first prize of $15 in a contest sponsored annually by the D. Lewis Black Auxiliary of the Veterans of Foreign Wars. It reveals an understanding of our Nation's history which is certainly above average.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

AMERICA'S CRUSADE FOR FREEMEN'S RIGHTS

(By Steven Ball, Omaha, Nebr.)

America, our most cherished gift, established by the determination of our forefathers, has from its beginning been a sanctuary for those who place liberty and equality under the law above all that is tangible. The rights of free men is the heritage of every American. In truth, America's crusade for the rights of free men is her entire history. If we delve into history, we would find America's crusade not only to be one of physical conquest but, even more important, one of moral victories.

The discovery of America was the opening of a door which would one day close on the autocratic social system and set a precedent for the world to follow. The first English colonies were established to gain more self-government and religious freedom, a privilege so important that without it no man can claim he lives in liberty. This discovery and migration for freedom in itself was only a physical conquest; America's crusade had begun, but even religious freedom had not been achieved. In the various colonies ignorant minds twisted religious freedom to a state of intolerance for any other sect. Colonies passed laws restricting their religion to that of their leader; dissenters in their particular faith were executed, as well as those accused of witchcraft. Religious freedom was not attained until each citizen firmly believed others should have an equal right of worshipping as they deemed proper. So it was not until the 18th century when a mental conquest for those who believed in true freedom brought about this important privilege of all free men.

Religious freedom now established in America, we began to demand even more liberty. Our belief is economic freedom as well as the right to speak and think freely conflicted with the firm convictions of Count Metternich and all the aristocracy who were in command of Europe. There could be no compromise between such great extremes; war was inevitable. Although there were some who would surrender our principles for the lack of courage or fear of losing personal wealth, the majority stood fast and proved right is thrice armed when we defeated a nation more than five times our strength.

The United States, a more infant nation, was a prime example of democracy in 1811. Our economy and foreign trade were increasing at assuring rates, but these fruits of peace were not to last. Our resentment toward the British developed complications which caused a state of affairs that could lead only to war.

We would not endure British impressment of our own sailors. War came as a last resort, but its actual worth was a loss—the British had ended impressment before the war had ended. The War of 1812 may have been unnecessary, but it vividly illustrates America's readiness to protect the rights of free men, her own citizens.

"The Era of Good Feeling," a period of prosperity due to strong nationalistic feeling, met its doom as the industrial revolution surged through Europe and the northeastern United States. Cotton was "king" in the South while industry flourished in the North; the Nation was divided politically, economically, and socially. Under this condition no nation can stand united physically. Civil war, the most dishonorable mark on the history of any nation, was fought for the preservation of the Nation which one day would be the backbone of free men's rights. America met its major crisis when Lee surrendered and when "The Great Emancipator" freed fellow humans from tyranny of others who would not sacrifice wealth and economic gain even to admit the basic right that all men should be free. America's crusade still struggles to end the evils caused by petty prejudices.

The new century saw the development of world affairs into such a state of confusion that even a minor disagreement could kindle the fire of world war. Britain and France, fighting desperately to crush the autocratic power of Kaiser Wilhelm and the German "war machine," found themselves in need of a strong ally to aid them in establishing a democratic Europe. The United States could picture the dim perspective that democracy would attain if the Axis was triumphant, and we acted accordingly. Militarism, imperialism, nationalism, and all the potentials of World War I would not have been enough to enlist the aid of America had it not been that the Axis powers made it evident that the right of all free men were at stake. America again proved her valor in a struggle for free men's rights.

Ignorance, mishandling, and resentment eventually led to another major crisis, which in many ways was a continuation of World War I. The radical ideas of the Nazi Government to ensalve the world, putting an end to the very rights which determine freedom, were suppressed by the strength of a democratic America. Let no man deny the fact that we as Americans stand for the rights of every free man even if these rights must be purchased at the price of war. Peace is luxury, but liberty is a necessity.

Every man has the right to be free, and the rights of free men are those privileges which are jointly adopted by each individual. We have seen how America has established and protected the rights of free men; even now the strife to end prejudices, to halt Communist aggression, and to provide a home for thousands who are homeless, is a part of America's history, her unending crusade for the rights of free men.

Contacts With Poland—Ford Grant to Poland

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Contacts With Poland," from the New York Times of April 27, 1957; and an editorial entitled "Ford Grant to Poland," from the Washington Evening Star of April 29, 1957.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 27, 1957]

CONTACTS WITH POLAND

Anyone who has visited Poland during the past year, or who has followed the Polish press during this period, knows what a vast hunger for contact with the West exists in that country. Poland's historic, cultural, and religious ties with the West have been forged over the centuries. The forced break in those ties during the decade of Stalinist oppression could not and did not end the link, and in the atmosphere of the post-Stalin period the people who gave the world Chopin and Mme. Curie have been eager to resume old contacts.

Against this background, a constructive step has now been taken by the Ford Foundation. The $500,000 program it has set up will make it possible for Polish professors, scholars, and students to visit, study, and work in Western Europe and the United States, while their western opposite numbers will be able to visit Poland.

It required courage on the part of the Polish Government and of the Ford Foundation to make this program possible. Poland has neighbors who see a dangerous political maneuver in every step toward cooperation between Poland and the West. In this country there are groups and individuals who think of Poland only in terms of past stereotypes, forgeting the Polish people and their aspirations. Moreover, as the Ford Foundation's president, Henry T. Heald, said in announcing the program, "We recognize that there are many uncertainities in and around Poland." Yet the fact that despite these problems it has been possible to announce this program must be viewed as a useful development.

[From the Washington Evening Star of April 29, 1957]

FORD GRANT TO POLAND

The Ford Foundation has undertaken an important experimental project in establishing a fund of $500,000 to promote cultural, scientific, and technical exchanges between Communist Poland and the West. The grant is the first of its kind to a country behind the Iron Curtain in Europe, and it promises—though a number of "ifs" are involved—to yield good dividends in terms of encouraging mutually beneficial relations between our free society and the Polish people, who now enjoy a limited measure of independence from the Kremlin.

As explained by Dr. Henry T. Heald, the foundation's president, the project faces some challenging problems, and "reverses are possible"—particularly if Moscow brings pressure to bear against it by threatfully suggesting to Warsaw that such an exchange should not be allowed. But assuming the best, assuming that even the Soviet leaders are willing to give the undertaking a fair trial, the Ford grant can do much to lower barriers between the Poles and our world. More than that, in its own way, it can make a useful contribution to "peaceful coexistence" between East and West, about which Nikita Khrushchev and his colleagues speak with special fervor.

In any event, as Dr. Heald has said, the $500,000 grant is meant to enable Polish scholars and technical experts (philosophers, social scientists, economists, engineers, architects and the like) to "establish or renew contacts with Western colleagues to gain knowledge of Western thought, primarily by study in the United States and Western Europe." In addition, if all goes well, American and free European professors will do work in Poland's educational centers and there will be a two-way exchange of students, plus measures to supply the country's libraries with books and periodicals published in recent years in our part of the world.

Of course, this undertaking (a similar one is being considered by the Rockefeller Foundation) can accomplish no miracles, nor can it go forward without intergovernmental approval. Nevertheless, in Dr. Heald's words, it represents promising action in line with the fact that "in the development of international understanding there is a proper and vital role for private individuals and institutions, including private philanthropy." Looked at in that light, the project amounts to a commendable experiment meriting best wishes from both sides of the Iron Curtain.

Conservation of Fish and Wildlife

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. NEUBERGER. Mr. President, wildlife and birds and fisheries are among our most precious heritage. One of the challenging responsibilities to us in the Congress is to protect the environment of these creatures of river, meadow, tree bough and ocean reach.

I am pleased that I have been sponsoring legislation to safeguard marshes where our waterfowl gain sanctuary, to prevent pollution in the lakes and rivers where fish live and breed, to defend our national forests where so much of America's big game now feeds and forages.

Bill Hulen, wildlife editor of the Oregonian, of Portland, Oreg., contributed an excellent article to that paper's Sunday magazine section of April 28, 1957, describing six major species of trout which inhabit the cold mountain-nurtured waters of my State. These trout are rainbow, cutthroat, browns, eastern brook, mackinaw, and dolly varden. Mr. Hulen's description of them is vivid and pertinent. It should afford Members of the Senate some specific idea of the wildlife they are helping to perpetuate when they act favorably upon bills to forbid the polluting of streams, bills to encourage watershed protection in our national forests, bills to keep barriers and blockades off of rivers where fish pilgrimages must reach headwaters in order to spawn.

I ask unanimous consent that the full text of the article by Bill Hulen, wildlife editor of the Oregonian, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX KINDS OF TROUT

(By Bill Hulen)

Everyone of the 6 major species of trout can be found somewhere in Oregon. This, plus the fact that this State has countless hundreds of lakes and more than 15,000 miles of fishing streams makes the Oregon

trout angler one of the most fortunate in the United States.

In the general trout season, which opened Saturday, the 300,000 plus Oregon anglers are able to seek rainbow, cutthroat, and brown trout—the true trouts—and eastern brook, Mackinaw and Dolly Varden, members of the char family. Waters within national-forest boundaries in the Cascade Mountains will be opened to trout fishing May 25.

The chars, closely related to the trout family, have become synonymous with trout down through many, many years of angling, and so will be treated as such in this article.

These, then, are the Oregon trout which are awaiting the fly, the artificial lure, and the good old worm:

RAINBOW

Here is the great sport fish of Oregon and of the Pacific Northwest, a trout whose fighting qualities endear it to the hearts of anglers ranging from the dry fly purist to the still-fisherman with his can of garden tackle. One of the two true trouts native to the West, the rainbow, unlike some other species of trout, is no underwater scrapper. He's inclined to come rocketing from the water in repeated leaps when hooked, and has probably accounted for more broken leaders than all other trouts combined.

While the color of the rainbow varies with environment, it generally is bluish or olive color above the lateral line and silvery green on the sides. The dorsal fin and tail, as well as the sides, are profusely sprinkled with small black spots. Characteristic of the rainbow is the broad band of purplish red that extends along the sides from head to tail.

The brilliance of this fresh-water coloring fades when the rainbow comes into contact with salt water and becomes a steelhead, or seagoing rainbow. The dark spots become lighter, the bluish cast changes to a silvery sheen, and the purplish-red lateral band lightens or disappears completely. Upon its return to fresh water to spawn, the darker markings return.

In addition to the markings described, the rainbow can be distinguished by the zigzag rows of teeth on the roof of its mouth. It has no teeth on the back of the tongue, as does the cutthroat trout.

Food of the rainbow consists of flies, insects, worms, grasshoppers, minnows, crustaceans, salmon eggs and, in the case of large specimens, smaller fishes. It is both a surface and a bottom feeder, depending upon water conditions and time of the year; hence, can be caught on various lures and baits.

Rainbows in Oregon are widely distributed. They are found in small streams and large rivers, in mountain lakes, and lowland coastal lakes. Each year the State game commission plants millions of these fish, both in streams and in lakes, to augment native populations. Size of the rainbows caught by anglers run from 6 inches to about 2 feet, with occasional monsters going to 15 pounds taken from Klamath Lake.

CUTTHROAT

This is the other true trout native to the West, and second only to the rainbow in sport angling importance. At the end of a line, the cutthroat ordinarily doesn't go in for aerial acrobatics, preferring to carry on a sturdy subsurface conflict. On occasion, however, the cutthroat will break water in a manner comparable to the rainbow.

Several subspecies of cutthroat exist in Oregon, the most widely sought being the coastal variety. This is the fish which anglers are catching on all coast streams. These cutthroat are moving downstream to salt water, after having spawned high up in streams of the coast range. In July, August, and September they'll be coming back from the brackish bays and lagoons, fat and solid, and will be called bluebacks or harvest trout.

Distinguishing feature of the cutthroat is the red slash or streak on both sides of the lower jaw. On sea-run cutthroat just in from brackish water, these slashes will be very faint, and sometimes nonexistent. Along with these red streaks, the cutthroat has teeth on the back of the tongue. The rainbow has neither.

Environment plays an important part in the coloration of the cutthroat, but generally it is an olive green along the back and upper sides, shading into a yellow cast on the lower sides. Body and fins are profusely sprinkled with dots, sometimes large, sometimes small, sometimes golden, and sometimes black. At times the cutthroat has a pink or purple lateral band.

Natural foods of the cutthroat are similar to those of the rainbow—flies and insects of all kinds, shrimp, crawfish, and other crustaceans, worms, minnows, small fish, and salmon and trout eggs. Like the rainbow, the "cut" can be caught on flies, various baits, and artificial lures which simulate small fish.

Range of the cutthroat in Oregon includes virtually every coast stream for the seagoing variety, streams and lakes east of the Cascades, and, for the black-spotted subspecies, streams and lakes in the Wallowa Mountains. Native Oregon cutthroat will run from 6 inches to a dozen inches, while the sea-run fish will go to 20 inches and 4 pounds.

BROWN

Considered by most anglers the most cautious and wary of all trouts, the brown is a favorite of fly fishermen. It was introduced into the United States from Europe in the 1800's, and in Oregon has become well established in suitable environment. It takes the fly as savagely as the rainbow, though its subsequent battle won't be so enduring nor so spectacular.

Generally, the coloration of the brown tends to be golden brownish, with dark brown or black spots on the body and on the dorsal and adipose fins. Usually there are few, if any, spots on the tail fin. Many body spots, especially those below the lateral line, are edged with pink, red, or orange to form rings.

The brown prefers as food flies and insects, to the benefit of the fly fisherman, but will also feed on minnows, worms, snails, crawfish, and other crustaceans. Thus, he can be caught on natural bait.

Browns are not widely distributed in Oregon. They are found mainly in Wickiup Reservoir, East, Paulina, and Blue Lakes, the main Deschutes and Little Deschutes Rivers, Crescent Creek, and the upper sections of the North Umpqua River. Wickiup especially is famed for big browns, running upward of 10 pounds.

EASTERN BROOK

A native of the eastern seaboard, the brookie has been successfully introduced into Oregon much to the delight of fly fishermen and bait anglers alike. The sporting qualities of this fish are good, and as table fare it is surpassed only by the sea-run cutthroat.

Ordinarily, the brook is dark green above, with wormlike markings on the back and dorsal fin. Cream and red spots appear on the sides, with the red spots bordered in blue. Lower fins are reddish, the leading edges bordered with a white and black stripe. The tail is square, and the scales are so small they are hardly visible to the eye.

Small brooks prefer to eat flies, insects, worms and small custaceans, while larger brookies feed on small fish, crawfish, mollusks and even frogs. Their range in Oregon is confined to cold, mountainous streams and lakes, principally in the Cascades and eastward. Generally, weights in Oregon run up to 3 pounds.

LAKE

This trout, or Mackinaw as it sometimes is called, was introduced into Oregon from the Great Lakes region and is found in six lakes—Odell, Summit, Square and Big Lakes in the Cascades and Wallowa and Rock Lakes in the Wallowa Mountains. Odell produces the tackle-busters, with many fish reaching weights of 15 pounds or more.

The laker is gray to dark grayish-green in color, with light spots over much of its body, which is slender with a long head. The tail is deeply forked. The favored food of the lake trout, when in deep water, is smaller fish.

Anglers don't consider the lake trout as game a fighter as other species, although a real big fish, fighting its underwater battle, is by no means a pushover. Deep troll, with large plugs, is the method employed to capture the Odell lunkers.

DOLLY VARDEN

This char, native to the Pacific slope, is held in low esteem by the majority of anglers because it lacks the dash of other trout and because large specimens are voracious feeders on other fish.

Dollies are greenish to brownish on the back and sides, cream colored on the belly. Cream to yellow spots appear on the back and sides, and some spots along the sides may be deep orange or reddish. Adipose fin is usually large, and the tail is well forked.

Dolly Varden are not too numerous in Oregon, and are found mainly in Cascade mountain lakes and streams. Some of the fish that are caught weigh better than 20 pounds.

GOLDEN

The golden, a subspecies of the rainbow, is considered the most beautiful of all trout. Originally, it was found only in the high Sierras of California, but has been transplanted to many high areas throughout the West. Its range in Oregon is confined to Wood, Hobo, Swamp, Prospect, Razz, and Long Lakes in the Wallowa Mountains, which were stocked in 1953 with goldens hatched from eggs obtained from Wyoming on an exchange.

Anglers packing into these high lakes have been amply rewarded, for goldens up to 12 inches eagerly take just about any pattern of fly. The fight they stage, after being hooked, is spectacular.

The coloring of the golden is exotic. It is olive green on back, shading to golden yellow on sides with shades to yellowish white on belly. A broad rose-colored lateral line, marked by round dark olive-colored spots, runs along the sides from the cheeks to tail. Dorsal and caudal fins are sprinkled with black dots. A reddish stripe runs along the underside of the belly.

KOKANEE

This is not a trout, but a landlocked sockeye salmon, and is included here because anglers in several Oregon lakes catch these fish in great numbers while trolling large flashers and worms. The kokanee is an excellent scrapper, and the very finest eating.

A symmetrical, streamlined fish, the kokanee has a back of clear blue with only a few tiny black specks. The sides are silvery and the belly is white. The scales are comparatively large.

Odell and Davis Lakes produce kokanee up to 20 inches, and Suttle and Blue Lakes are good for fish to 15 inches. Wallowa Lake has a tremendous population of kokanee, which run about 8 to 9 inches.

The Cyprus Question

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article deal-

ing with the Cyprus question, written by C. L. Sulzberger, and published in a recent edition of the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 24, 1957]

A TEMPORARY SOLUTION FOR CYPRUS

(By C. L. Sulzberger)

PARIS, April 23.—Not much time remains to solve the Cyprus question which has already corroded NATO's eastern flank and threatens to destroy it. The British still own the stormy island. But they are forced to retain there nearly 20,000 troops in order to keep the lid on. Now London wishes to trim its defense budget and cut overseas garrisons. Clearly those units in Cyprus must be reduced.

To accomplish such reductions a settlement of the Cypriote problem is essential. None is in sight. British-Greek relationships remain at a low ebb. Greece and Turkey are on the verge of war. The Balkan Pact, which allies them with Yugoslavia, is dormant. And Athens even refused to participate in NATO's recent Aegean maneuvers.

There is no way of settling the Cyprus argument now on a basis satisfactory to everybody. Greece wants the Cypriotes under its sovereignty. Turkey wishes the island to remain in British hands. London desires a base there but is increasingly inclined to dump the rest of the problem.

There is talk of Solomonic compromise such as partition. The Turkish minority of 20 percent would be moved into one section of Cyprus and placed under Ankara. The Greek majority would be cleared out of that area and made subject to Athens. And the Akrotiri Peninsula, where most military facilities are located, would remain extraterritorial—under NATO or England.

A FATAL SOLUTION

This solution, even if it sounds logical, would be fatal. Turks and Greeks are intermixed all over Cyprus. Waves of violence between the two communities would explode. This could incite anti-Hellenic bloodshed in the cities of Istanbul and Izmir—plus expulsion of the anciet Greek Orthodox Patriarchate. The eventual result would be war between NATO's two eastern allies.

Previous partition experiments should provide warning that such methods ought to be avoided. Division of Palestine, when London relinquished its mandate, bequeathed nothing but trouble. The British wanted to give up the costly burden of maintaining peace between Jew and Arab after the region's strategic value exceeded the cost of holding it—as in the present case of Cyprus.

What happened? A bitter conflict erupted. U. N. efforts to draw a partition line never settled the dispute. A state of war still exists between Israel and the Arab lands. This revived actively last autumn. It remains on the brink of another round.

When nationalism in Indian evolved beyond Britain's capacity to restrain, London abandoned its sovereignty. Patchwork partition was elaborated. Millions on both sides of the new frontiers were slaughtered. In 1948 India and Pakistan fought a little war in Kashmir. Twice since new outbreaks threatened.

Partition is usually a cockeyed formula. It creates more problems than it settles. A division of Cyprus is one sure way of increasing rather than decreasing tension. The Greeks are hysterical now that Archbishop Makarios is in Athens. The Turks are savage with suspicion. The Cypriotes themselves remain in the deceptively calm center of a gathering storm.

Every time any neutral party has sought to intervene the move has come too late. The United States missed numerous opportunities to ease tension. NATO dodged the puzzle for years. When it finally decided to examine it, the time to act had passed.

A WAY OF EASING TENSION

There is no possible perfect solution. But there are ways of easing tension. One is clearly advisable. For, after all, each ally must admit that the emotionally unimportant must be sacrificed to the unemotional essential.

What is the essential? Cyprus is a bone of contention among three NATO powers. The majority of Cypriotes wish self-determination. But they do not ask for bloodshed and destruction. And, as an airbase, Cyprus is useful to all NATO. Therefore, the alliance must heal the wound upon its eastern flank. How can this be done?

Britain should agree to temporary independence for Cyprus under NATO's external protection. A local government then can be established with NATO-guaranteed Turkish minority rights.

Such a formula might stipulate that for a fixed period, say 10 years, Cyprus is forbidden to unite with Greece—like the insurances against Austro-German anchluss. For 5 years the subject should be specifically removed from discussion. After that term of cooling off perhaps it might be wise for Greece and Turkey to resume talks about permanent solution.

Such a temporary device could postpone settlements which might be disastrous. If all interested parties knew in advance that a 5-year freeze had been put on the Cyprus argument, it would be easier to find ultimate agreement. No such solution is possible in the present overheated atmosphere. And surely nobody in his right mind wants a hasty partition. This might introduce into the Mediterranean area troubles as violent and as vicious as those in Palestine and India. The world still lives with them.

Reduced Governmental Expenditure in the Interest of a More Stable World Economy

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, May 20, 1957

Mr. DIRKSEN. Mr. President, a rather interesting statement was issued recently by Lindesay Parrott, Director of the International Monetary Fund, on the general subject of budgets and spending. I think it is an extraordinary statement, and deserves a place in the RECORD. I, therefore ask for unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 18, 1957]

U. N. AIDE BIDS UNITED STATES REDUCE SPENDING—MONETARY FUND CHIEF SAYS INFLATED BUDGETS CONSTITUTE OBSTACLE TO WORLD ORDER

(By Lindesay Parrott)

UNITED NATIONS, N. Y., April 17.—The head of the International Monetary Fund proposed today that the United States cut its governmental expenditures in the interest of a more stable world economy.

Per Jacobson, managing director of the body, told the United Nations' Economic and Social Council that inflated international budgets today represented the greatest obstacle to monetary order.

Previously he expressed the opinion at an interview that it would be unfortunate if the United States foreign-aid program should be such as to stand in the way of possible budget reductions and tax cuts.

He said, however, that the current high volume of demand for goods and increasing private investment throughout most of the world had been of benefit to the United States, enabling it to maintain its export markets in the years after the Korean war.

BUSINESS IS HELD KEY

Noting the economic theory that governments should spend largely in times of shrinking private business and retrench correspondingly when private investment stands at a high level, the Swedish expert asserted:

"It now seems as if the authorities were quite willing to accept and apply the first part of this theory but that they show great hesitation and unwillingness to apply the necessary retrenchment in a period of boom.

"There are, however, some countries which recently have taken steps to cut down effectively the volume of their government expenditure; among them I would especially mention Belgium, the Netherlands, Great Britain and, as far as investment expenditure is concerned, Austria.

"Under the influence of the examples set by these countries, it is not excluded that a new fashion involving a curtailment of government expenditure will gain ground, instead of the practice of evermounting budgets followed in most countries during the postwar years. For such a fashion to be firmly established it is probably necessary, however, that some extra-European countries—and particularly the United States—should partake in the movement.

"For anyone who has had the occasion to examine the internal position of a number of countries in various parts of the world, it is difficult to avoid the conclusion that if only the budget deficit could be brought down to manageable proportions the greatest obstacle to monetary order would have been eliminated."

SEES NEED FOR COURAGE

Mr. Jacobsson conceded that cuts in Government spending would require "much political courage and determination." But he added that "fortunately people everywhere are tired of inflation and this should make it easier for the authorities to take without fear or hesitation the necessary measures, whether these are popular or not."

WORLD MARKET STRESSED

He went on: "It is, I think, advisable for most countries to remember that if they continue to allow their costs and prices to rise they may not be able in the future to count on an increase in the general level of world market prices but become exposed to the risk of getting into an unbalanced position, internally and externally."

Mr. Jacobsson outlined the measures taken by the International Monetary Fund to support the pound sterling during the Suez Canal crisis. There was a surprising unanimity of view regarding this course among almost 60 member nations, he said, and an amount equal to the United Kingdom's quota of $1,300,000,000 was made available.

"It was found to be not only in the interest of the United Kingdom but also in the general interest that support should be given to a currency with the worldwide importance of sterling, in which over one-half of the world's currency transactions are settled," he said.

The fund director noted that despite political stress over the last few months, no grave monetary disturbances had taken place and progress had been made in several na-

tions toward increased transferability of currencies.

He reported, however, a distinct feeling of uneasiness regarding increasing living costs in such countries as the United States and Britain, despite the pronounced increase of private business investments.

The Fifth Amendment

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, May 20, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent that an excellent article entitled "For Court Use Only," appearing in the Monday morning, May 20, 1957, issue of the Baltimore Sun, written by Mr. C. P. Ives, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR COURT USE ONLY
(By C. P. Ives)

Something was said here a week ago about a fictional character, the young matron who wanted to hire a babysitter. One of her applicants had taken the fifth amendment in a kidnaping investigation. The young matron was urged by her liberal friends to entrust her baby to the fifth amendment mute anyway.

The argument was the one the liberals employ in behalf of professors and such-like who have invoked the fifth amendment privilege against self-incrimination in the Communist investigations. To fire or to refuse to hire such people, the liberal argument runs, is to punish them for invoking a constitutional right, itself offensive to constitutionalism.

This argument, advanced with all solemnity by high-minded people, is merely typical of a more and more worrisome trend in our contemporary public life. This is the tendency to extend beyond the courts of criminal law, which is their only true domicile, the immunities enjoyed by defendants in those courts.

There has been, for instance, an implacable agitation to endow unfriendly witnesses before congressional committees with all the privileges of the accused in a trial for first-degree murder. The same pressure is exerted against the security agencies. And as the parable of the young matron indicates, the liberal insistence now is that private people in their own private concerns shall extend the protections enjoyed by the uncandid, the criminal, and the subversive in a court of law.

Now all of this is done on the most superficial of analogizing. The legal devices are invoked in a haze of sentimental rhetoric betraying total ignorance of their historical, legal, and philosophical backgrounds.

For what in fact were the beginnings of some of the more intricate defenses now enjoyed by the accused in courts of law? "These rules," wrote William Howard Taft, a few years before he became Chief Justice of the United States, "these rules [were] intended to make it as difficult as possible to convict a defendant [because] of the savage character of the common law crimes, when the defendant was not allowed counsel, and there were 160 capital offenses at common law. * * *

"The judges, of course, being men and having pity, sometimes seized the opportunity themselves to act as counsel for the defendant and introduced the rules which we have alluded to and maintained them in the interest of mercy. [Nowadays, however] they have been moderated [only] a very little, although the reason for them has long passed away."

Of course, the fact that the reasons for many of the ancient privileges still enjoyed by criminal defendants have long since passed away moves some of our best legal scholars to argue (without in all cases proving) that the protections themselves ought to be reduced. This applies, as was pointed out here last week, even to the immunity against self-incrimination.

That immunity rose first when it was customary to torture defendants in order to make them confess. Twenty years ago the Supreme Court itself said that in the absence of torture, justice would not suffer if the accused were required to tell the truth, even about his own crime.

But if there is eminent authority for restricting protections whose historic justification has long disappeared; if there is authority for restricting these protections in court, how much stronger is the argument against extending them to noncourt agencies. And how compelling the argument for excluding them from private life and private business.

For if the courts are still to countenance protections whose historical justification has disappeared, then the social welfare demands all the greater vigilance on the part of private persons. Conversely, an extension into private life of the court protections whose justification has disappeared would be to infect the whole society with the bias still maintained in court. And what is that bias?

"It makes the conviction of the criminal a game which is played out under certain rules, and the interests of society are lost sight of," wrote Taft, the future Chief Justice. "The liberty of the individual is, on the whole, of greater importance than the safety of the community from crime."

Now when the crime is subversion, and when the individual whose liberty is preferred is in fact that agent of a totalitarian military conspiracy against freedom everywhere, you can see why the Communists cheer the implacable liberal effort to extend the prodefendant court biases throughout the whole society—and why historically help and philosophically vigilant citizens push very hard the other way.

REA Anniversary

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. McGOVERN. Mr. Speaker, today is the 21st anniversary of the Rural Electrification program in the United States. Twenty-one years ago today, President Franklin Roosevelt signed the bill which brought REA into being.

I have always regarded the rural electrification movement as the finest possible example of grass roots democracy. It is an admirable example of what can be achieved in the public interest by intelligent cooperation between the Federal Government and the citizens of this country.

Rural electric cooperatives, assisted by Federal loans, have done what the private utility industry said could not be done; they have brought the blessings of electricity to the farms and rural communities of America. Now that the success of the program is apparent to all, there are those who would sabotage REA so that the private power utilities might exploit the field that they shunned for so long. I am pleased that last week the House turned back by an overwhelming vote a move to deny new loan funds for REA. The current effort to deny loan funds to REA in spite of the remarkable repayment record of the rural electric cooperatives, is designed to destroy the rural electric program and permit its seizure by the private power interests.

An editorial appearing in the Brookings (S. Dak.) Register summarizes effectively the accomplishments of REA. The editorial is included as follows:

REA ANNIVERSARY

Next Monday marks the 21st anniversary of the signing of the bill which brought rural electrification into being.

The history of the REA, as we have all come to call the industry, is a most interesting and surprising one—surprising because of its growth. Loans to the various associations have totaled $2.75 billions and of that amount $621.2 millions have already been repaid.

South Dakota's record is an excellent one. Thirty-four borrowers received a total of $92,524,862 in loans of which $10,846,629 on the principal and interest totaling $5,566,733 have been paid and there are no loans in arrears.

What this has all meant to the farmers and small-town users in the State is impossible to estimate. It has increased the productivity per man on our farms—that is sure, and has made life easier for the farmer in that it has saved him many hours of hard work. But possibly the greatest contribution has been through the convenience and comfort it has brought about. The farmer is no longer compelled to stumble about in dark farmyards and farm buildings. The accident hazard has been greatly reduced. And to the farm woman it has meant even more in these respects. Her work has been lightened tremendously. The conveniences she has at hand are innumerable and they are contantly increasing.

Perhaps the most surprising thing in connection with the entire REA development has been the amount of current used by each individual farmer. On the average, it is more than half greater than anyone estimated it would be—and it is still increasing. There are many smart men connected with private utility companies but they did not catch the vision of serving rural America. They did not believe it could be done successfully, but it has been demonstrated to them beyond all doubt.

First District Florida Tabulation—1957 Questionnaire

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. CRAMER. Mr. Speaker, again I have gone to the people of the four counties of the First District of Florida and have asked their opinion on the problems that face Congress today. Over

132,000 questionnaires were mailed and some 26,000 replies were received from my constituents, many of whom took the opportunity to reply at length to the problems presented. I would note at this time that the popularity of the President remains at a high level in the district and that particularly in foreign affairs are his policies supported. It is interesting to note that there is no noticeable change from 1956 in opposition to civil rights legislation or Federal aid for school construction. Again, as last year, the people have indicated their desire to lower the national debt even ahead of a tax reduction but it appears the general desire for budget cuts reflected in both these benefits to the taxpayer is strong. I can assure this Congress, Mr. Speaker, that I shall fully consider these recommendations from the folks at home and, for the information of my honorable colleagues, under unanimous consent, I include in the RECORD at this time the full report on results of this questionnaire.

1957 congressional questionnaire—Tabulation

	Percent	
	Yes	No
1. Should we risk Federal control of policy through Federal financing of school construction?	27	73
2. Do you approve President Eisenhower's general foreign policy?	60	40
3. Should present immigration laws—		
a. Have quotas increased?	17	83
b. Permit transfer of unused quotas to other nations?	52	48
c. Continue present quota limitations?	81	19
4. Do you favor reduced taxes for—		
a. Small business?	81	19
b. Individuals?	74	26
c. Everyone across the board?	37	63
d. No one at this time?	51	49
5. Should postal rates be raised to provide better service and facilities and to end the postal deficit?	59	41
6. Should we abolish the electoral college and elect the President by popular vote?	79	21
7. Should the United States join—		
a. Organization for Trade Cooperation?	71	29
b. International Atomic Energy Commission?	54	46
8. Should Congress enact the proposed broad civil-rights bill?	37	63
9. Should all congressional committee hearings be open to press and public?	68	32
10. Should the President meet and confer with heads of "unfriendly" nations?	65	35

The Supreme Court Marches On—To the Left

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, May 20, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Supreme Court Marches On—To the Left," written by Frederic Nelson and published in the Human Events of May 18, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUPREME COURT MARCHES ON—TO THE LEFT

(By Frederic Nelson)

"Rightwing extremists," as ordinary middle-class conservatives are know among our "liberal" political columnists, have been telling each other for years that the Supreme Court has gone over to the leftwing, even if it hasn't actually become a "running dog" of the Kremlin.

Personally, I hadn't taken this kind of talk very seriously until I began adding up the Court's recent accomplishments. When you stop to recall that the Court, in the Steve Nedson case, virtually knocked our efforts by the States to stamp out the Communist conspiracy; that it has thrown public education in the Southern States into a stew the like of which we haven't seen since the carpetbaggers; that it went out of its way to invalidate a New York City charter provision forbidding city employees to take a fifth amendment, and that, in *Pennsylvania* v. *City Trusts of Philadelphia*, the Court has cast doubt on the validity of hundreds of endowments, wills, and trusts—well, what is an ordinary citizen to think? You can't blame the uninformed plebeian for thinking what the Japanese, before they got religion, used to call dangerous thoughts.

The Girard College case, formally known as *Pennsylvania* v. *Board of City Trusts*, is the Supreme Court's latest wild pitch. It involves the terms of the will of Stephen Girard, who died in 1831, leaving about $6 million for the education of "poor white orphan boys." The city of Philadelphia set up a body known as the board of city trusts to administer the fund, which currently amounts to nearly $100 million. The assumption has been that the job of the board of city trusts was to administer the fund as Girard decreed in his will, just as the First Pennsylvania Banking & Trust Co. would be required to do if it had been given charge of the Girard bequest.

However, the Girard will has for years been under fire by Negro politicians who have made the point that the founder of the college had no right to make a will which provided for racial discrimination contrary to the terms of the 14th amendment of which Stephen Girard never heard tell. This argument got nowhere in Pennsylvania—at any rate in the State's law courts—for the Pennsylvania Supreme Court turned it down on what most people would describe as the reasonable ground that the late Mr. Girard had a right to will away his money as he chose, and that you couldn't safely go around upsetting wills simply because they didn't suit pressure groups which turned up a hundred years after the wills were made. That seemed to settle it to the satisfaction of all except a group of ambitious politicians.

These latter did not take their own State court's decision lying down. Apparently hoping that Chief Justice Warren was still curled up with the works of Gunnar Myrdal, the Swedish Socialist, they took Girard College into the Federal courts. It is painful to record that the mayor of Philadelphia and the Governor of Pennsylvania, far from resisting the effort to upset a will of which they were supposed to be trustees, actually joined the movement to set it aside.

The Supreme Court unanimously—and this is a tough one for lawyers to figure—decided in favor of the politicians and decreed that Stephen Girard's stipulation of "white orphan boys" had to be disregarded for the extraordinary reason "the board which operated Girard College is an agency of the State of Pennsylvania," and that the board's refusal to admit Negroes was "discrimination by the State," which is forbidden by the 14th amendment. The cited authority for this last statement is—no surprise—the Court's 1954 decision in the segregation case from North Carolina. No arguments were heard; no adequate opinion written.

Now we know that a State agency acting as a trustee may be compelled to betray its trust and violate the founder's express wishes whenever nine sociologists in black robes decide that the unenlightened founder should have founded with an eye to the views of future pressure groups. But that is not all we have learned from *Pennsylvania* v. *Board of City Trustees of Philadelphia*. I have in mind an old ladies' home established by will for "indigent female Jehovah's Witnesses" (that's the wrong sect, but why put the finger on anybody?) Also, there is Tuskegee Institute, founded in 1880, by Booker T. Washington for Negroes, not to mention Hampton Institute, founded in 1868 by the American Missionary Society for Negroes and Indians.

So far as I know, none of these institutions is operated by a State agency, although hundreds of privately endowed colleges, universities, charitable organizations, and foundations include public officials on their board of trustees, ex officio; many are wholly or partially exempt from taxation. Doesn't a home for aged and infirm Baptists ipso facto discriminate against aged and infirm Episcopalians, and on religious grounds to boot? Shouldn't a pre-Warren man, so unenlightened as to leave his money to the kind of people he liked and was used to, be rebuked, posthumously if necessary, for projecting into the century of the common man the low standards of a generation which lived and died without benefit of sociology?

To be sure, the Girard decision has nothing to say about trusts and endowments which are not operated by agencies of a State. Trusts administered by private trustees are presumably free to act more ethically than the Supreme Court permits an agency of the city of Philadelphia to act. Set up that way, a college can cater exclusively to Dukhobors or the Plymouth Brethren, or specify that anybody other than residents of Westchester County, N. Y., may matriculate. But how long will that go on? Surely the pressure groups can be relied on to point to the unfairness of permitting discrimination in a school whose funds are in the charge of the Chase Manhattan Bank, when such practices are forbidden to institutions operated by a State agency?

Nor will it be long before somebody will ask the question, "What is an agency of the State?" A trust company operates under a charter granted by the State. Doesn't that make the company an agency of the State and therefore subject to State control over the trusts and endowments it is supposed to administer? Surely also the great enlightenment will eventually include the terms of bequests to families and intimates. Is it in the public interest that a man who insists on hiring only blond Scandinavians as chauffeurs or valets should be permitted to inherit money from a father who was too reactionary to leave his dough to an integrated academy of the dance? If these illustrations seem fantastic, talk to any lawyer.

One particularly depressing feature of the Girard College affair is the cowardice of

politicians who, instead of explaining the importance of maintaining a decent regard for the legally expressed desires of those who make wills, succumbed to the pressure groups and went along with the false belief that the issue was race discrimination—"Jim Crow at Girard College," as the local Negro journal described it. Even the supposedly conservative Philadelphia Inquirer dismissed those who were urging a Supreme Court review of the case as the forces of bias.

Actually the issue is not integration, or bias, or human rights, unless the last-mentioned concept might include the human right to make a will in the expectation that it will be executed according to the testator's wishes. That was all there was to the Girard College case, as the Pennsylvania Supreme Court properly pointed out. But, when the United States Supreme Court got through with it, lawyers were talking to themselves and rich men were wondering whether it wouldn't be just as well to hand their money on to their sons and let them marry chorus girls in seriatim, instead of endowing a young ladies' seminary which a future Supreme Court may compel to admit young gentlemen on the ground that discrimination in favor of girls develops inferiority complexes in boys.

Since 1954, when it attempted to regulate the affairs of thousands of school districts all over the country, as the late John W. Davis put it in his brief for one of them, the Supreme Court has plunged deeper and deeper into activity which properly belongs to the legislative branch. It is all very well to favor integration in schools and other reformist proposals. I have no doubt that Girard College will welcome Negro boys since it is required to accept them. But when courts undertake to decide issues which ought to be decided by the people and their elected representatives, confusion and conflict are inevitable.

If it is necessary to imperil the whole institution of inheritance in order to accommodate perhaps 2 dozen Negro boys in a privately endowed school, why not let the State legislature do it? In such circumstances the citizens would at least have an opportunity to learn what the issue was. If they decided to go ahead with the wrecking anyway, nobody could say, as a good many people are beginning to say, that the present threat to our institutions is less from the Communists than from a Supreme Court so dedicated to sociology as to be startlingly indifferent to constitutional tradition.

Atoms in Our Future

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 20, 1957

Mr. KEFAUVER. Mr. President, I have just noted, in the first edition of a new magazine entitled The Western World, an excellent article entitled Atoms in Our Future, written by the Senator from New Mexico [Mr. ANDERSON]. The article deals in a very illuminating way with the use of atomic energy, and I know that all Members of Congress will enjoy reading it. Therefore, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATOMS IN OUR FUTURE

(By CLINTON P. ANDERSON)

(Senator ANDERSON was for 2 years chairman of the Joint Congressional Committee on Atomic Energy. Prior to his election to the Senate from New Mexico in 1948, he had served for 3 years under President Truman as Secretary of Agriculture. Born in North Dakota of Swedish immigrant parents, he has spent most of his life in the American Southwest, where he founded his own insurance company in the early 1920's.)

Many Americans, trying to make sense out of the Suez crisis, have found it difficult to understand why a narrow strip of water can so quickly divide the nations of the world, can put them, indeed, into what is virtually two armed camps, and can find them standing like small boys drawing lines in the sand and daring each other to start a first-rate war.

It is difficult for Americans generally to realize how dependent the people of Western Europe are upon Middle Eastern oil. It takes a crisis such as the Suez to bring home to America the enormous dependence of a nation like England on the tankers and pipelines that bring to it the essential sources of energy out of the Middle East. If enough ships are sunk in the channel of the Suez Canal, the headlines the next day proclaim the possibility of oil rationing in much of Europe.

The very dependeence of our traditional allies, England and France, upon the oil of the Middle East gives rise to the question as to what the future will be for atomic energy and how quickly the power of the atom may become the backbone of electric-energy generation in many parts of the world, and particularly in a country such as England. It also gives rise to speculation as to whether there may not be unusual and dramatic uses for which the atom may be harnessed—uses which could transform the whole industrial economy of vast areas of the earth now scourged by poverty and an unequal share of the world's energy resources and put into these areas unheralded wealth and unknown abundance. These would not be circumscribed by a temporary flow of oil, but instead a supply of power that would be virtually limitless and eternal might be found in the waters of the sea.

NO CEILING TO EUROPE'S ECONOMY

Atomic energy will not in a few years make the oil of the Middle East unnecessary to turn the wheels of European industry, yet it could, and I believe it will, remove the ceiling which oil now places upon the economy of Europe. Indeed, it could alter the power problem of a whole continent in his generation and of the whole world in the generations to come.

Let us start with this problem of the Middle East oil coming through the Suez Canal. Must it move that way? I think not. I say that because a field which seems to hold great promise for the future—and which also has immediate importance to all of us today because of the Suez Canal crisis—is that of nuclear ship propulsion.

As you probably know, the United States Navy, under Adm. Hyman G. Rickover, pioneered in this field. The U. S. S. *Nautilus* has been in operation, and very successful and remarkable operation at that, for many months now. Other nuclear-powered submarines are under construction, and the Navy in addition recently announced plans for its first large nuclear-powered surface ship. But this is only part—the military part—of the bright future ahead for nuclear ship propulsion. The era of the peacetime atomic-driven merchant ship is opening.

NUCLEAR TANKER

During its previous session, the Congress of the United States passed legislation authorizing the construction of the first nuclear-powered merchant ship. I was very much in favor of this idea, and as chairman of the Joint Committee on Atomic Energy, I submitted a statement to the Senate committee which was considering this bill. In the summary of this statement I said:

"It would appear, on the basis of the technical information furnished us to date, that our first step should be to design and construct a nuclear-powered oil tanker, and I hope that the Congress will provide the necessary authorizing legislation to proceed with this project."

When I submitted my recommendation a year ago in favor of an atomic oil tanker, I was acting on the basis of the best technical information I could obtain. The Joint Committee on Atomic Energy had spent many hours holding hearings on the subject of nuclear ship propulsion. We heard testimony from Admiral Rickover, from technical experts in the Atomic Energy Commission and the Maritime Administration, and from representatives of the private shipbuilding industry. On the basis of all this testimony, it seemed to me, as it seemed to others, that the oil tanker was the best bet because this was the type that would probably soonest be economically competitive, and which private industry would want to build.

To buttress this reasoning, I would like to refer to the report of the panel appointed by the joint committee to study the impact of the peaceful uses of atomic energy, known as the McKinney panel. This panel reached the following conclusion:

"Atomic propulsion should have the best chance of being competitive in the case of large, high-powered ships which carry heavy bulk cargoes in unlimited supply and spend the maximum amounts of time at sea. Ships with these characteristics could utilize the heavy investment in nuclear powerplants to the maximum advantage and could employ effectively the space saved by eliminating fuel supplies to increase the cargo payload. The Maritime Administration considers oil tankers and bulk ore carriers the best examples of these types of commercial vessels. A modern oil tanker, for example, has a very large cargo payload and spends up to 90 percent of its life at sea."

I believe that the McKinney panel reasoning is sound. If we have to put large capital investment in our engine plant—and we would have to, especially at first, in the case of atomic reactor propulsion plants—it makes only good sense to keep our ship underway a maximum amount of time in order to get our money's worth. Since oil tankers can be loaded and unloaded in a hurry, they can spend 90 percent or more of their time at sea, getting full use out of the nuclear engines. Oil tankers also hold promise, I believe, because of the possibility of using some of the oil cargo to act as a shield between the reactor and the operating crew.

Also, as pointed out by the McKinney panel report, a large portion of the United States merchant fleet will become obsolete and must be replaced during the period from 1960 to 1965.

And that leads to another point: The oil tanker field is a growing one and a good one in which the maritime nations may wish to invest. Smart investors and smart operators have been building larger and larger tankers and supertankers, with greater and greater capacities, to carry oil from the Middle East, from Venezuela, from the United States, and from other sources to the oil-hungry markets of the world.

Finally, there is the ugly specter of the Suez Canal crisis. As things look now, the countries which have been using it may no longer be absolutely sure of passage through the Suez Canal, and should plan other alternatives. A pipeline across Israel, the de-

velopment of the new Algerian field—these may help. But as an additional ace in the hole, I believe that we should have large supertankers—and preferably nuclear-powered tankers—able to bypass the Canal and still deliver to Europe the oil that it may need. Many believe that these larger nuclear-powered tankers could carry oil to Europe around the Cape of Good Hope as cheaply as the present smaller tankers can carry it through Suez.

CONVERSION OF SEA WATER

But that is a problem brought on by a current difficulty. There are other problems which the world has faced for generations and which today the rising tide of population is making more urgent and difficult of solution. The problem of food is one of them and the problem of providing ordinary domestic water for human consumption and industrial use is another. To me, both are involved in recent studies on the possibility of converting sea water into potable water, a process which would at the some time provide power that might be utilized in the irrigation of now almost useless lands.

Through the years we have heard stories that the French have a plan for digging a canal from the Mediterranean into Africa; creating a salt-water lake in the middle of Sahara and thereby changing the climate of the world's greatest desert. That in itself is the sort of ambitious planning which the world needs and which many parts of the world must have if humanity is to be freed from constant pressures on its bread supply because of population growth. Recent reports on oil and mineral finds in this area may make realization more urgent.

Suppose nuclear fission offered a way of making sea water into usable drinking water. Suppose that great lake in the center of the Sahara Desert (assuming the French built their canal) could be sweetened for irrigation. Would there not be a rush of people who might want to live in that enticing climate? The fastest growing areas of the United States, populationwise, are the so-called lands of sunshine—Nevada, California, Arizona, New Mexico, Texas, and Florida. These States grow because people like the sun. They like to live in climates which are warmed by it and where, thanks to air conditioning, they can endure the heat of summer and need not suffer the discomforts of severe winters.

How much of a job is it, this production of sweet water from sea water, or from brackish ground water? In the United States, these possibilities have not been completely overlooked, as evidenced by the energetic studies being made by many cities. In addition, modest studies have been conducted for a number of years by industry and more recently by the Government of the United States directed toward developing a means for distilling salt water for agricultural and industrial uses. But they have all been on a small scale and few of the procedures investigated to date hold much promise of economic operation. Most have serious drawbacks to counter their advantages and almost all involve high capital costs.

Among the ideas tested are simple distillation, which requires enormous quantities of heat energy; vapor compression, which involves the inefficient transfer of heat to mechanical energy for the compressors; and solar evaporation—direct use of the sun's heat—which is free energywise, but prohibitively expensive as far as equipment is concerned.

THE ION EXCHANGE PROCESS

Still another method under test, and a rather ingenious one at that, is known as the ion exchange process. In this process salt is extracted from the water by passing it through a stack of semipermeable membranes. A small amount of electricity is used to drive the solution through the system. Although there are a few technical problems to overcome in the use of this method for large volumes of water of high saline content, some experts feel that in the long run this process may have the best chance of economic operation. In fact, such units are already being sold daily for use in producing potable water in desert areas of the Middle East at a cost of 20 to 30 United States cents per 1,000 gallons, and at the rate of tens of thousands of gallons per day.

But, at best, we are only scratching the surface of a problem whose implications are ever more serious. And here, may I suggest, we call on our friend, the atom. Why not harness the atom to fulfill the age-old dream of producing fresh water from salt? Difficult? Yes. Expensive? Probably. But in terms of saving great areas of the world from economic ruin and creating new areas into which population-pressed nations may expand, even saving the lives of people in times of drought, is any job too difficult? Is any project to expensive? I think the answer is obviously "no."

My suggestion is based on more than an abstract idea or dream. Modest studies have been going on for some time in the United States Atomic Energy Commission and in the National Laboratories at Oak Ridge and Los Alamos on this very problem. In addition, a number of industrial organizations have expressed interest in the idea in connection with projected plans for multipurpose nuclear plants.

A NEW TYPE OF REACTOR

The question is—how are we going to apply the atom to this job? Scientists who have studied this problem at my request have concluded that nuclear heating does not make the supercritical distillation process more feasible, since this process would be uneconomical from the equipment standpoint even if heat were free.

However, they have looked at other processes and have come upon the idea of a new type of reactor. They have suggested that we go all the way and choose a process which, while very wasteful of heat, requires only the simplest equipment—simple distillation. They suggest we build a low-cost, low performance reactor producing lots of heat at low temperatures. They suggest we use all the difference in temperature available between the reactor and the salt water to drive in heat in a single effect, giving the lowest requirement for heat transfer surface. Then, to keep maintenance costs down, they suggest we evaporate only one-fourth or less of the sea water in the still, so that less scale will form and the salt will be returned to the source in the undistilled portion.

A brief preliminary study indicates that such a low-performance breeder reactor could, provided it were extremely large, conceivably be built at very low cost per kilowatt of thermal capacity. This is because very large reactors have so little surface for their volume that not much more fuel and other materials are required than for a small reactor, since there is almost no leakage of neutrons per unit volume. The reactor they suggest is itself an unusual type, using a boiling slurry of heavy water. The heavy water constitutes almost the entire cost of the reactor, which appears to be less than $10 per kilowatt of thermal capacity. Although the quantities of all materials required are available, this type of reactor has never actually been designed, certainly not operated, and costs per kilowatt of this order

These scientists are not timid men. They suggest that a project of this nature could be constructed at a cost from $600 million to $800 million and produce 1 billion gallons of fresh water per day, about 1 million acre-feet per year, at a cost, including amortization, replacement and maintenance, operation and fuel, of between 10 and 15 cents per 1,000 gallons.

One such plant operating at 100 million kilowatts would produce 3 percent of the total heat produced by man on the entire earth. The fuel consumption would be 40 tons per year of normal uranium, or the equivalent of 160 million tons of coal. Any attempt to build a smaller scale project would raise costs at once, since the reactor would cost almost the same at even one-tenth the capacity.

NOT A JOB FOR PRIVATE INDUSTRY

I suggest that here is a project worthy not only of dreams and imagination, but of serious consideration. This is a project too costly for an individual city, indeed, for anything less than a country. It is a perfect example, it seems to me, where one or more nations might and should step in. No municipality and no private utility company can afford to gamble $800 million on a project which when completed might not work. But governments which have gambled billions of dollars on atomic energy can afford to make one more gigantic test to see if a domestic, industrial, and irrigation water problem so vital to all parts of the earth can be solved by the distillation of salt or brackish water.

The United States does not now need nuclear reactors so urgently as do some other parts of the world. We are fortunate in having relatively abundant supplies of coal, oil, and natural gas as well as enormous resources of falling water. We could undoubtedly expand our economy for the next quarter century without having to look to the power of the atom.

But that cannot be said of lands such as England, to which I have previously alluded, where supplies of coal are limited and where the cost of mining it will grow progressively higher. Today the British nuclear program is in high gear. The plant at Calder Hall is "on the line" and other plants will follow in rapid succession. The first plant is a producer of plutonium, as well as electricity, and by assigning some arbitrary value to the plutonium output, the electrical current rate can be placed wherever the Government desires. Later plants will be solely for the generation of electricity but the costs at Calder Hall have thus far been so much cheaper than expected that there is every reason to believe that the succeeding plants will be economically feasible and produce electricity at a rate between 7 and 10 United States mills. This figure, while unattractive at present in most of the United States, is feasible and desirable in Great Britain and would be acceptable in many other parts of the earth where combinations of circumstances, both natural and man-made, have resulted in development of high power costs.

THE ATOM HAS SAVED LIVES

We seldom think of lives saved by the atomic bomb, yet they far outnumber the casualties.

We hear it said that atomic power is too costly, yet how often do we hear that atomic energy is saving millions of dollars every year?

We seldom think of strawberries when atomic energy is mentioned. Yet atomic energy has produced the world's ugliest strawberry—and some of its biggest dandelions.

Present discoveries promise health and wealth and an ease of living beyond calculation. They hint at a dazzling array of day-to-day advances, at days filled with play and very little work, travel out among the stars, pushbutton weather, and even eternal life.

Does this sound too good to be true?

It does until you think of that ugly strawberry. Then you are reminded of dozens of astonishing discoveries, each almost too good to be true. The United States has been amazingly fortunate, it seems to me, in the atomic work which it has already been able to do in the fields of medicine, biology, and

agriculture. Some persons say the atomic-energy medical potential is greatest of all.

In the words of Dr. Lee Edward Farr, chairman of the medical department at the Brookhaven National Laboratory, the potential for atomic energy in medicine is so great it amounts almost to frustration. "The opportunities," Dr. Farr says, "are so fruitful in almost any direction that we don't know which way to go." Even when a course is chosen, he relates, the sense of frustration tends to remain. "For every question we answer we uncover five questions we can't answer."

One outstanding job for atomic energy in medicine, Dr. Farr says, lies in "obtaining the necessary information for understanding the aging processes and for maintaining maximum health in the individual."

The studies have already led to remarkably successful treatments of certain diseases. One striking treatment that might be mentioned is one that has been developed for brain tumors. It can be accomplished without discomfort to the patient, although it involves literally billions of atomic explosions inside the patient's head.

Knowledge gained through atomic study in the medical field is being credited by those who keep track of such things with having saved more lives than the atomic bomb destroyed in the two attacks on Japan.

BETTER, CHEAPER FOOD

Recent atomic discoveries have also opened the door to better and cheaper food, greater variety, lower cost, and a steadier supply of seasonal varieties. These studies have been made possible at Brookhaven largely through radioisotopes, but much significant work has been done with irradiation by gamma rays, beta rays, and neutrons from very powerful sources. The radioisotope method provides tracer materials which permit scientists to peer into the life processes of plants and animals, and thus gain an accurate understanding of how these processes take place. The irradiation method produces profound changes in plant and animal tissues especially the genetic cells. Experiments based on the radioisotope tracer technique have produced much greater understanding of plant growth and the chemistry of plant nutrition. Scientists have learned similar things about animals. Using this knowledge they have perfected new fertilizers, vitamin and dietary programs, and have produced striking results.

Entirely new types of plants and fruits have been produced, on the other hand, through irradiation. By selecting the beneficial changes thus induced, the experiments have developed wheat resistant to black stem rust almost overnight, when older methods would have required almost 100 years to get the same result.

We have 2½ billion people in the world today and we will have more than 6 billion people in another century. These 3½ billion new mouths will present to us an enormous problem in the planting, gathering, harvesting, and processing of foodstuffs. They will create long lists of new requirements for homes, for schools, for transportation systems and for all the accompanying luxuries which civilization has sampled and decided that it likes. I refer to radios, television sets, air conditioning units, and a thousand and one new devices that we are building in our homes and installing in our office buildings. These are not to be solely the privilege of the rich, but seem destined to become the everyday utensils of people of all classes in all climates and all countries.

In the next century the world must produce the steel to build the factories that will make the television sets and the air conditioners. It must produce the cement and the building materials out of which hundreds of millions of new homes are to be constructed. It must fabricate the airplanes, the steamships, the trains that will haul food, fiber, and raw materials back and forth across the face of the earth. Nuclear power must be available universally to fill in the gaps that our fossil fuels cannot supply. It will be used in every type of propulsion vehicle with the possible exception of automobiles. It will propel our railroads, our steamships, our tankers, our giant airplanes, and the very heavy trucks that will cross continents without a single stop.

A FORCE FOR WORLD UNITY

If I may also be permitted a guess, it is that in the long run the use of atomic energy will bring the world closer together. We shall have so many problems on the international control of the atom that in self-defense we shall be required to begin working closer together in international organizations. We have the problem of sanitation, for example. If atomic wastes are to be haphazardly dumped into the ocean, there can be widespread destruction of the fish life in a short time. The world which may become short of food in another century could not look upon such destruction with indifference. Therefore, we must have international control of the disposition of atomic wastes.

Furthermore, we must be careful about the discharge of fissionable material into the atmosphere. Strontium 90 does not affect all parts of the earth equally. Its dangerous effects may depend to some degree on the amount of calcium in the soil of a country. If calcium is available to be drawn into the bones, well and good. But if it is largely absent from the soil, then strontium 90 may replace it in people's bone structure with horrible effects.

One type of control may lead to another and endow us eventually with agreements and understandings that will ease the load of the statesmen of the future.

Finally, if I were asked to list the single greatest thing the atom can do for you and me, I think I would say "world peace." I firmly believe that our advancing atomic technology already has made full-scale, global war impossible, simply because it will mean the destruction of civilization as we know it. Is there any man so mad that he deliberately will start such a cataclysm? Further advances in technology offer to remove some of the traditional causes for war.

Man's quest for power has been blamed for past wars. Yet it has been suggested in studies made at McGill University for the Canadian Government that even our minds, our psychology, can be influenced by biological factors. Thus we may see a world of abundance undivided by disputes between nationalities, a world without war or want.

Then atomic energy will have become what the men of science first intended—a new dimension for the human spirit.

One Essential Civil Right

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, May 20, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "One Essential Civil Right," written by George Todt, and published in the Valley Times of California.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE ESSENTIAL CIVIL RIGHT

(By George Todt)

"Two wrongs do not make a right."—English proverb.

There has been a great deal of pros and cons expressed on the controversial civil-rights bill now pending in Congress. Are there any pitfalls to be avoided here? Where are some weaknesses to be shown? Is it entirely above board and honest?

We would do well to analyze some of the more questionable aspects of the bill before we commit ourselves in this instance. In my own case I find at least three areas of dissension that causes me to mistrust somewhat the announced intentions of the creators of the measure. Let us review them briefly.

In the first place, the bill's authors have had the incredible effrontery to suggest that we do away with trial by jury in certain instances to be covered by this legislation. Certainly, trial by jury is an inalienable right given us in our Bill of Rights—and I fail completely to see how we can quite lucidly expect to gain one civil right at the expense of one already on the books. How arbitrary can we get?

Secondly, the bill's authors also went far overboard when they wrote into the bill a little-noticed provision which would enable volunteer organizations—amateur snoopers if you will—to come to the rescue of the Government with their dossiers and files compiled against people whom they might not like, or instances in which they had axes to grind. This, in short, could conceivably lay the groundwork for a gestapo-type persecution of our citizenry which would put to shame its Marxist counterpart in Germany or Russia.

Third, we may note that proponents of the bill have made a tremendous outcry in behalf of man's civil rights. They have pictured themselves as the defender of the weak and the champion of the downtrodden. Torrents of crocodile tears have been shed in an inspired attempt to prove to the American people that they had nothing but love and affection for Joe Doakes. Yet when a right-to-work amendment was offered in the civil-rights measure, the pseudo liberals folded up like a collapsed tent.

Do these civil-righters maintain that it is a civil right to be forced into an involuntary association against our wills—or we don't eat? Such a contention is dangerous in view of the fact that only one-fourth of America's 67 million workers are organized into unions.

No union propagandist has ever explained satisfactorily why they call the right to work law a right to wreck measure. Actually they cannot even explain why they have conjured up this snide term. The right to work merely says that no worker can be denied a job by virtue of having joined, or not having joined, a union. That's not union busting. In fact the right to join a union is guaranteed. And union membership has increased in every State—all 18 of them—which have already adopted right-to-work legislation.

The explanation for this is really very simple. When the union men have the opportunity to walk out on labor bosses who might have their hands in the till or pursue unwelcome, arbitrary, undemocratic, and tyrannical practices—practices of that kind cease without exception. The labor bosses are forced to run the union ethically and with due consideration for the workers instead of themselves. Good practices will have the end result of upping the membership.

A right-to-work law conceivably could wreck the selfish ambitions of a labor boss

unscrupulous in his desire for power. But it can never hurt the union men themselves—nor nonunion men. So here is a civil right of the first order.

What the southern Senators, like Senator McCLELLAN, of Arkansas, have perceived quite correctly is that this bona fide civil right will test the avowed sincerity of the liberal civil rights bloc. For the right to work is the most vital civil right in the business.

Competition and Compensation in the Postal Service

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have received from Mr. Van R. Peirson, president of Branch 61, National Association of Postal Supervisors, of Seattle. Mr. Peirson's letter makes an impressive documentation of the need for increased salaries for postal workers:

APRIL 24, 1957.

Hon. DON MAGNUSON,
Congressman, Washington State,
Washington, D. C.

DEAR SIR: Your sympathy and support for postal legislation in the past and your particular attention to the problems of the National Association of Postal Supervisors is greatly appreciated.

This year our association is presenting a four-point salary program. Other postal organizations, likewise, are contacting you relative to pay raises and other legislation.

We believe sincerely that our own program is conservative and justified, not alone by calling attention to prices and the cost of living in our area, but by serious conditions within the postal service itself.

Our program calls for:

1. A 15-percent increase in all salaries.

2. A 20-percent differential for night work instead of the present 10-percent differential for work between 6 p. m. and 6 a. m.

3. Time and one-half pay for Saturday and Sunday work.

4. Increase of longevity pay from:

Years of service	13	18	25	Total
Present	$100	$100	$100	$300
To	150	200	300	650

The necessity for a realistic appraisal of the needs, costs and revenues of the Postal Service and its employees has been strongly emphasized by the recent attempts of the Post Office Department to achieve a rate structure which is not outdated by years of obsolescent pricing for its services and the presentation of a commonsense budget. It is further emphasized by the current drastic curtailment orders of the Postmaster General. While this curtailment has been partially eliminated due to congressional restoration of funds, an identical situation will arise during the next fiscal year because of a similar budget cut.

Under present circumstances, we are not attracting the most desirable class of employee in sufficient numbers. We have canvassed various sources of employee material such as the high schools and training schools and invariably find that we can appeal only to those who do not fit in elsewhere, and the situation is getting worse.

It is a common experience for us to furnish employees to assist in giving civil-service examinations only to have them returned immediately because no one showed up to take the examination. Young people of the right caliber are not coming into the Service and older employees are not staying.

We believe the solution is to pay our substitute employees, our regular clerks and carriers and our supervisors on a more nearly competitive basis with other industries with which we must compete for employees, and that our program is a commonsense method of doing so.

COMPARISON WITH COMPETITION

While long compilations of figures are tedious to follow, we are including some comparisons which show why we do not meet ordinary salary competition.

We would like to call your attention particularly to comparisons which show that 40-hour weekly earnings before deductions in our Service range from $72.80 for an entering substitute clerk or carrier to $90.40 for a regular clerk or carrier with 25 years' service, against average weekly earnings of manufacturing workers in this State (regardless of service) of $91.67, as reported by the Seattle Times, and a 1956 average of $97.42 for various national industries.

Compare these figures with those shown for roughly comparable positions in the 1957 budget and salary ordinance of the city of Seattle, or such an industry as Boeing's and we believe it is obvious why we cannot compete.

This situation, and the figures stress clerical and carrier pay but are equally pertinent and applicable to the supervisory force.

The special committee set up to study the salaries of Federal employees in grade 7 and above (our foreman salary grade) and chairmanned by Ralph Cordiner, president of General Electric, recommended almost identical increases to those we propose, as did the retiring chairman of the Civil Service Commission.

The Wall Street Journal reported an annual salary of $6,200 as average for foremen in industry. This figure is certainly far above those of $5,330 and $5,760 annually, which our two grades of foreman reach only after 25 years of service.

The plight of the postal employee in his attempt to secure adequate salaries invariably is worsened by the so-called deficit—a deficit which is actually increased by failure to face the rate and salary questions.

We would like you to examine these questions in the postal service which to us are extremely serious, and are one of the major causes of excessive employee turnover and added expense.

SITUATION IN SEATTLE

The following specific examples can be duplicated in the entire Pacific coast area and throughout much of the country:

1. There has been a turnover in the Seattle letter carrier force of 263 employees in the past year. Of this number, only 25 were retired. This represents a turnover of 29 percent of the carrier force—an incredibly high figure and one primarily due to the pay situation. The clerical force is similarly affected.

2. During the last accounting period, the Seattle office hired 78 letter carriers—at the same time losing 77.

3. A typical office near Seattle started last year with 13 regular carriers for 11 regular routes, one combination route and one auxiliary route. During the year, 10 resigned. The brief chart below tells a sorry story of the resignations:

Employee	Years of service	Reason for resignation	Where they went
1	8	More pay	Hardware store.
1	3	do	Army.
1	7	do	Boeing's.
1	2	do	Construction work.
1	2	do	Tradewell Stores.
1	1	do	Trucking Co.
1	5	Get better job	School to prepare for better job.
1	2	More pay	L. B. M. Co.
1	2	do	Heating Co.
1	12		Transferred to clerk at another post office.

Of this group only one was retained by the post office, and the story is a straight loss of 32 years service. Unfortunately this is not the only loss. For each employee that left, at least two new employees had to be tried out because they in turn either resigned or were unsatisfactory. The hidden costs involved in training an ever increasing number of replacement employees is a subject of deep concern to every postal supervisor. Even under the most favorable conditions there is a direct loss in production during the training period and, contrary to much opinion, postal work cannot be learned overnight.

As public servants, interested both in our personal welfare and that of our service, we respectfully submit that our position is fully justified and warranted, and request your serious consideration of our proposals.

With best personal wishes,

VAN R. PEIRSON,
President, Branch 61, NAPS.

Position	Annual and hourly salary			Top 40-hour weekly earnings
	Starting	After 7 years	After 25 years	
1. Substitute clerk or carrier	$1.82			$72.80
2. Regular grade 4 clerk or carrier	$3,660.00 1.76	$4,410.00 2.12	$4,710.00 2.26	90.40
3. Grade 6 foremen	$4,190.00 2.01	5,030.00 2.42	5,330.00 2.56	102.40
4. Grade 7 foremen	$4,530.00 2.18	5,460.00 2.63	5,760.00 2.77	110.80

Average weekly earnings, State of Washington manufacturing workers (Seattle Times, February 19, 1957), $91.67.

Average weekly earnings in various industries, 1956 (AFL-CIO Bargaining Report):

Average weekly earnings in various industries, 1956 (AFL-CIO Bargaining Report):

Printing	$95.55
Coal and oil	107.33
Manufacturing	81.49
Steel	106.04
Automotive	99.06
Machinery	95.18
Average	97.42

COMPARISON OF HOURLY WAGES

Clerk-carrier substitutes, $1.82.

Seattle Transit Co. starting wage, $2.18.

Grade 4 clerks or carriers after 25 years, $2.26.

Grade 6 foremen after 25 years, $2.56.

Grade 7 foremen after 25 years, $2.77.

From U. S. News & World Report, April 19, 1957:

Bituminous coal miners, $2.78.

Steel workers, $2.56.

Brewery workers, $2.57.
Oil refinery workers, $2.58.
Building trades workers, $3.08.
Rubber tire workers, $2.49.
Auto workers, $2.35.

Our foremen, after 25 years, do not earn as much hourly as many average workers in industry.

Estimated Savings From the Two Hoover Commissions' Recommendations

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD a public letter to the Honorable CLARENCE CANNON, chairman, Committee on Appropriations, House of Representatives, from Clarence Francis, chairman, Citizens Committee for the Hoover Report, which gives the estimated savings which have already resulted from the adoption of various recommendations of the two Hoover Commissions for more efficient administration in the executive department of the Federal Government.

I am certain that all Members of the Congress and the general public will find the statistics of savings on Federal expenditures set out in this letter of great interest. I trust that it will be an encouragement to us to continue implementing the Hoover Commissions' recommendations not yet adopted. There are many hundreds of millions of dollars more to be saved. Savings resulting from increased efficiencies give us our cake while we eat it, too. It is here that we can reduce the Federal budget and yet have a stronger—not weaker—national defense:

TEXT OF LETTER TO THE HONORABLE CLARENCE CANNON, CHAIRMAN, COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES, FROM CLARENCE FRANCIS, CHAIRMAN, CITIZENS COMMITTEE FOR THE HOOVER REPORT, MAY 16, 1957

I am writing with reference to your remarks on the floor of the House on May 14, 1957. In your address you seriously questioned whether actual economies can result from the recommendations of the bipartisan Hoover Commission. The citizens committee has looked into this question with considerable care and would like to furnish you with the results of its study.

In this connection, our research department prepared the attached special research memorandum No. 11, entitled "Specific Examples of Savings, Capital Returns, and Increased Revenues Resulting From Reports and Recommendations of the Bipartisan First (1947–49) and Second (1953–55) Hoover Commissions." This study covers only a part of the total recommendations but it does document some $2.8 billion in savings. All of these figures are either taken directly from, or based upon, statements made by officials of the executive branch or by the Comptroller General of the United States.

With respect to the first Hoover Commission, the committee has looked into five specific areas of economy. The results of the survey indicated that economies in these five areas had resulted, as follows:

	Million
General Services Administration	$677.0
Veterans' Administration (cancellation of hospital beds)	545.0
Post Office Department (post and postal cards only)	72.0
Reconstruction Finance Corporation (abolition of)	474.4
Defense Department	569.5
Total	2,337.9

Additional results of the work of the first Hoover Commission would doubtless be found in other areas of Government but I think these figures are sufficient to make the point. Definite economies of substantial size are traceable to the first Hoover report through the statements of the agencies themselves.

With respect to the second Hoover Commission, the Citizens Committee has also made a study of some of the savings which so far can be attributed directly or indirectly to the Commission's findings. The results of this survey are as follows:

	Million
Treasury Department	$20.3
General Services Administration	131.7
Federal Housing Administration	.5
Interior Department	.6
Commerce Department	19.3
Veterans' Administration	13.6
Post Office Department	56.0
Health, Education, and Welfare Department	2.2
Defense Department (10 percent of total economies)	235.9
Total	$480.1

Here we would like to point out that only 39 percent of the 314 recommendations of this second Commission have been installed in whole or in part. Many of them have been installed rather recently, so that considerable time must pass before results can become evident. An example is the legislation providing a cost-accounting system for the Federal Government. Installation alone will take several years.

May I emphasize that these figures cover only a part of the total Federal operation and that they are meant simply to illustrate the fact that substantial savings have been certified by responsible governmental agencies. To study completely the budgets of all Departments and agencies over a span of 9 years would involve the task of compiling and comparing material on approximately 11,000 pages, with an average of at least 50 items per page, or more than 550,000 separate budget items. In our view, there are additional and very substantial savings which would be divulged by a more thorough study than that which we have been able to undertake.

In conclusion allow me to refer to the subject of appropriations on an annual accrued expenditure basis as provided in H. R. 2494 currently before the House. Varying estimates have been made as to the savings which might come to the taxpayer through this measure. We would like to point out that substantial economies might flow from a reduction in the so-called "carryover" funds—that is, unspent funds available from appropriations in previous years. These funds are today estimated to be in the neighborhood of $50 billion. As a most conservative estimate, a through scrutiny of such funds might lead to a reduction of only 1 percent—and this is a minimum. This alone would be $500 million per year. It is our feeling that the savings would be considerably more substantial.

Thank you very much for hearing our views on this matter.

SPECIAL RESEARCH MEMORANDUM NO. 11, CITIZENS COMMITTEE FOR THE HOOVER REPORT—SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) AND SECOND (1953–55) HOOVER COMMISSIONS

Much current controversy centers around the record peacetime Federal budget of $71.8 billion for fiscal 1958. There is general agreement on the need for economy but widespread debate over specific cost-cutting proposals.

The question then arises: "Are substantial savings available through adoption of the recommendations of the bipartisan Hoover Commission?"

In the following pages, the Research Department of the Citizens Committee lists some examples of concrete economies, capital returns, and increased revenues clearly attributable to the work of the bipartisan first (1947–49) and second (1953–56) Hoover Commissions.

Four points should be noted:

1. This list traces $2.3 billion in aggregate economies to recommendations of the first Hoover Commission and $480.1 million to the second—a total of some $2.8 billion for both to date.

2. This is a partial list, intended only to illustrate broadly the principle that specific economies are available through adoption of Hoover Commission recommendations.

3. These examples are based almost entirely on official reports of the Federal departments and agencies concerned.

4. Most of the examples are based directly on Hoover Commission recommendations, but some are by-products of the Commission's work, illustrating the ways in which a document like the Hoover report can stimulate economy-consciousness in governmental operations.

Five Congresses and two administrations have had a hand in the bipartisan effort through which some 72 percent of the proposals of the first Hoover Commission and, to date, 39 percent of the second have been adopted. The process of effectuation following adoption is often a long one and the results, when obscured by sudden developments such as the Korean action, are difficult to identify.

The fact remains that definite savings of a major nature, far greater than the totals shown by these examples, have been made. It may be reasonably concluded, therefore, that substantial additional economies remain available in the unenacted 61 percent of the second Commission's recommendations.

Attached are:

1. Appendix A (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan first (1947–49) Hoover Commission).

2. Appendix B (specific examples of savings, capital returns, and increased revenues resulting from the reports and recommendations of the bipartisan second (1953–55) Hoover Commission).

An examination of these two appendixes indicates the figures are almost entirely official statements of the Federal departments and agencies. In only two of the scores of specific figures here quoted has the Citizens Committee's Research Department posed its own estimate; and in these two cases, the estimates are premised upon official figures.

APPENDIX A

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN FIRST (1947–49) HOOVER COMMISSION

The first Commission on Organization of the executive branch of the Government was created by unanimous act of Congress on July 7, 1947. The Commission was empowered to "study and investigate the present organization and methods of operation of all departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the executive branch of the Government."

The Commission divided up its total project of studying the executive branch into a series of major-purpose activities and functional problems. Twenty-four task forces were created. Some of these dealt primarily with Cabinet Departments, while others centered on broader categories of interest. The task force reports were completed in the late summer and autumn of 1948; and the Commission reported to Congress during the first 6 months of 1949. Most of the reports had minority opinions and dissents, proving that the recommendations were not accepted without a good deal of examination.

In enumerating the savings, capital returns and increased revenues attributable to the first Hoover Commission, the Citizens Committee covers five major areas. They are: the General Services Administration, the Veterans' Administration, the Post Office Department, liquidation of the Reconstruction Finance Corporation, and the Department of Defense. These estimates are not all encompassing of the whole area of savings affected by the first Hoover Commission. They are chosen merely to illustrate some of the financial benefits which demonstrably have resulted from the recommendations of the Commission.

1. THE GENERAL SERVICES ADMINISTRATION

It should be remembered that there would be no General Services Administration had it not been for a specific recommendation of the first Hoover Commission. In February, 1949, the Commission recommended to Congress that responsibility for three internal service operations, Supply, Records Management, and the Operation and Maintenance of Public Buildings, be placed in an Office of General Services with a director appointed by the President (Report on Office of General Services—Supply Activities, Recommendation No. 1). The agency was created by the Federal Property and Administrative Services Act later in that year.

The agency's annual reports have stated economies, as follows:

Fiscal year and savings[1]

		Million
1951		$81.0
1952		127.3
1953		130.6
1954		147.6
1955:		
(a) Personal property	$168.7	
(b) Real property	14.6	
(c) Records	3.6	
(d) Administrative	3.6	
		190.5
Total		677.0

[1] Stated officially by Jess Larson and Edmund Mansure, the 1st 2 General Services Administration Administrators, and found in the GSA Annual Reports.

2. THE VETERANS' ADMINISTRATION

Cancellation of congressional authority to build 16,000 hospital beds for the Veterans' Administration was the biggest savings item in this field. (Report on Medical Activities, p. 6.) There are various methods by which nonrecurring or onetime savings like a hospital cancellation can be amortized. The Citizens' Committee used a 5-year basis in making its estimates, believing that the normal patient load accretions would cause such construction to be authorized again toward the end of such period. However, good economic conditions, important reductions in the incidence of tuberculosis, new drugs and medical techniques, and a number of other factors have mostly deferred this construction program, perhaps indefinitely. Hence, while the committee's 5-year amortization estimate seemed a reasonable basis when the estimate was made, it may have been too short for this particular case.

The aggregate saving of $545 million is shown as follows:

Fiscal year and savings[1]

	Million
1951	$67
1952	97
1953	127
1954	127
1955	[2] 127
Total	545

[1] Bed construction amortized without interest factor over a 5-year period; operation and maintenance costs carried on an annual basis, starting in 1952, at ½ of full annual figure of $60,113,000; and at full figure thereafter.

[2] Construction cutback was fully amortized according to Citizens' Committee basis by June 30, 1954, but annual operation and maintenance savings of $60,113,000 would continue thereafter.

3. THE POST OFFICE DEPARTMENT

The most notable achievement here was the increase in the price of penny post and postal cards from 1 cent to 2 cents. (Report on the Post Office, Recommendation No. 8.) Congressional action on this Hoover Commission proposal led to an average annual revenue increase of $7.4 million—$5 million in fiscal year 1952, and an aggregate total of $32 million thereafter on postal cards. The aggregate revenue thus added has been $37 million through fiscal 1956.

To this can be added revenues from increasing penny post cards from 1 to 2 cents, which are estimated by the Post Office Department to have returned another aggregate of $35 million. This is necessarily an estimate since the postal accounting system compounds these revenues into the normal sale of 1-cent stamps.

The total, thus, is $72 million.

The rate on postal cards and post cards had stood at 1 cent since May 13, 1873, except for a temporary 1-cent increase during World War I.

4. THE RECONSTRUCTION FINANCE CORPORATION

In its report to Congress on Federal business enterprises in March 1949, a task force of the first Hoover Commission recommended the liquidation of the Reconstruction Finance Corporation. The Commission itself recommended drastic cutbacks in lending, but did not recommend total liquidation. However, the combined efforts of these two groups resulted in its termination effective September 28, 1953.

For the most accurate description of the capital returns realized from the Reconstruction Finance Corporation in liquidation, a direct quotation is taken from the 1956 annual report of the Treasury Department:

"After giving effect to assets transferred to other Government agencies under the provisions of the RFC Liquidation Act and Reorganization Plan No. 2 of 1954, there remained for liquidation loans, securities, and commitments amounting to $592,200,000. By June 30, 1956, this portfolio had been reduced to $117,800,000. The total reduction of these assets was $474,400,000, of which $114,300,000 was accomplished during the year.

"The proceeds realized from liquidation of the Corporation's assets are returned to the Treasury. In the fiscal year 1956, there was paid into the Treasury from cash on hand and amounts realized during the year a total of $150 million." [1]

5. THE DEPARTMENT OF DEFENSE

The major segment of savings and budget reductions achieved from the original Hoover Commission fell within the Department of Defense, and these were most substantial. Some were annually recurring and some were nonrecurring, but, in the 1949–50 period, $569,675,000 of a total of over $1.5 billion saved in the Defense Department can be linked with Hoover Commission recommendations.

Due to the outbreak of hostilities in Korea, many of these Defense savings were immersed in the necessarily increased expenditures for war. Thus it is impossible to go beyond this point with regard to savings. Most savings effected by the Defense Department after the Korean war relate to the work of the second Hoover Commission and are dealt with later in appendix B of this memorandum.

The savings of $569,675,000 for 1949 and 1950 and stemming in whole or in part from the Commission and its task force are as follows:

	Savings[1] *(million)*
Lowered cost of recruiting program	$2.3
Lowered cost of printing and binding	2.3
Inactivation of administrative vehicles and substitution of civilian type vehicles for heavy military type vehicles	11.9
Inactivation of facilities surplus to peacetime needs	169.2
Lowered cost of petroleum reserves	.5
Lowered cost of classified project	2.1
Restrictions on civilian travel	.4
Bringing the rating structure of enlisted men into line with actual distribution and the structure plan for fiscal year 1951	9.9
Institution of the monetary maintenance allowance system in lieu of issue-in-kind	13.8
Curtailing and closely examining requirements for issuance of change of station travel orders	3.6
Lowered cost of quarters allowances for enlisted personnel resulting from adjustments in the rating structures	1.9
Early discharges, releases to CAD officers, and lower requirements for recruit outfits	9.5
Reduced requirement for operation of aircraft	5.0
Decrease in depot and base supply and maintenance	4.2
Lower fuel requirements from reduction in steaming hours of the active fleet and operation of a smaller fleet	2.6
Rescheduling and combining cargo shipments	7.9
Lowered operating expenses of ships other than fuel	3.0
Adjusting schedules for ship overhauls, reevaluation of scope of work required for individual ships, and accomplishment of increased self-maintenance by ships' crews	10.0
Decrease in the total communications requirements for the Department of Defense including those resulting from the operation of AFSA	6.6

[1] From Semiannual Report of the Secretary of Defense, July 1–December 31, 1949, pp. 53–55.

[1] Annual Report of the Secretary of the Treasury, for the fiscal year ended June 30, 1956, p. 136.

	Savings (million)
Reduced procurement of organizational clothing, motor transport spare parts, general supply items, signal supply items, and curtailment of repairs, upkeep, and improvements for Marine Corps	$1.0
Lower level of support for courts-martial, chaplain supplies, miscellaneous schools, etc	.7
Curtailment of major repairs and replacements and general maintenance of naval facilities	7.6
Savings through consolidation of Reserve training facilities, joint use of facilities and inactivation of some smaller training vessels while at the same time extending the training schedules of some of the larger vessels which will accommodate greater numbers of Reserve personnel for training	13.5
Reevaluation of research and development projects	17.2
Cancellation of the quinquennial overhauls of reserve fleet vessels and reduced preservation and maintenance of other war reserves	13.5
Curtailment of information and education activities	.3
Employment of better traffic policies and procedures in the operation of a central Military Land Traffic Office	1.6
Reduction of leased space after consolidation of activities	.07
Reduction and unification of military attaché office staffs	1.4
Lower cost of planned field exercises	.5
Savings in maintenance and operation of hospital facilities	5.3
General appropriation reprograming by deferred maintenance, personnel reductions or turn-over, lower level of operation in order to absorb wage board and other pay increases	156.5
Flying hours reduced	57.7
Reevaluation of industrial mobilization	25.9
Total	569.5

CONCLUSION

It will be noted that all the examples cited in appendix A, except those relating to the Veterans' Administration and the Post Office, are taken wholly from official reports and releases of executive branch departments and agencies, and, in those two cases, the estimates are based upon official figures.

These examples, to repeat, are simply intended to illustrate the point that concrete economies can be substantiated. They do not by any means represent the probable total of all such economies if all departments and agencies could have been included in this study.

The total of this partial list is itself impressive, however:

	Million
1. General Services Administration	$677.0
2. Veterans' Administration	545.0
3. Post Office Department	[1] 72.0
4. Reconstruction Finance Corporation	[2] 474.4
5. Department of Defense	569.5
Total	2,337.9

[1] Increased revenues.
[2] Capita returns.

APPENDIX B

SPECIFIC EXAMPLES OF SAVINGS, CAPITAL RETURNS, AND INCREASED REVENUES RESULTING FROM THE REPORTS AND RECOMMENDATIONS OF THE BIPARTISAN SECOND (1953–55) HOOVER COMMISSION

The second bipartisan Hoover Commission was created in cognizance of the need for continued study and improvement of Federal administration. The Brown-Ferguson Act (Public Law 108, 83d Cong. 1st ses.) provided for a second Commission on Organization of the Executive Branch of the Government. It was passed without a dissenting vote in either house. President Eisenhower signed the bill on July 10, 1953.

The new Hoover Commission was assigned the responsibility of recommending methods and procedures for: Reducing expenditures to the lowest amount consistent with efficient performance of activities; eliminating duplication of functions; consolidating services of a similar nature; abolishing those activities not necessary to efficient conduct of Government; eliminating those functions which compete unnecessarily with private enterprise; defining responsibilities of officials, and relocating independent agencies directly responsible to the President into departments or other agencies.

The major difference between the first Hoover Commission and the second lies in the fact that, while the first Commission was directed to concern itself with the procedural aspects of Federal administration, the second Commission was, in addition, instructed to go beyond this, to raise the substantive question of whether a given Federal activity should be continued or discontinued regardless of the efficiency or lack of efficiencies with which that activity was being administered.

The Citizens Committee estimates that $480.1 million has resulted in savings from the second Hoover Commission recommendations already put into effect. The figures listed in this appendix reflect those savings made during the year 1955 and thereafter, with a few from 1954.

The examples here cited are all taken from official reports. While most are directly attributable to the Commission's recommendations, some are byproducts, due in whole or in part to the stimulus of the Commission's proposals.

1. THE TREASURY DEPARTMENT

New management programs were installed as well as audit studies, evaluation of the revenue accounting system, operational cost reports, and workload statistics. These and other managerial information leading to savings resulted wholly or in part from the recommendations of the second Hoover Commission.

Total net space requirements were reduced. Programs were carried on to provide more suitable and efficient space and facilities. Related activities have been put under one roof to provide for more efficient operations. Much effort has been devoted to improving and modernizing accounting systems within the Department. In many Treasury activities new, modern equipment was installed.

The origin of these savings can be traced to the stimulus of Hoover Commission recommendations on central accounting and reporting, spread of workload, discontinuance of detailed appropriation and receipts accounts, and methods of recovery of capital sums to the Treasury. The savings for 1955 and 1956 are detailed as follows:

Fiscal year 1955 [1]

	Million
1. Savings in cartage costs	$0.1
2. Reductions in export control operations	.1
3. Procedural and organizational realignments in the Bureau of the Public Debt	.4
4. Conversion of disbursing accounts	.2
5. Closing of four regional accounting and disbursing offices	.2
6. Installation of mechanical equipment in the Division of Disbursement	.2

[1] Annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1955.

7. New system for correspondence control	$0.6
8. New form of index card maintenance	.2
9. Reduction in supervision by Internal Revenue storekeepers	.4
10. Discontinuance of coinage operations at two offices	.4
11. Disposal of excess properties by the Coast Guard	.9
12. Transfer of three Coast Guard supply depots to the Navy	.2
13. Decommissioning of 10 Coast Guard vessels	1.6
14. Better utilization of personnel	.2
15. Overall reduction due to improved methods and procedures	4.6
16. General management improvement program in the Bureau of Accounts	.6
17. Reorganization improvements in the Bureau of the Mint	.6
Total	11.5

Fiscal year 1956: Improved management actions saved a total of $8 million—Annual recurring savings—$6 million [1]

	Million
1. Revised procedures for the examination of printed products in the Bureau of Engraving and Printing	$0.3
2. Revisions in taxpayer-assistance programs in Internal Revenue	2.8
3. Extended use of mechanical and electrical equipment	.1
4. Transfer of Coast Guard supply facilities to the Navy	.2
5. Disposal of one supply base	1.0
6. Transfer of 46 parcels of property to General Services Administration for disposal	.4
7. Disposal of surplus vessels by the Coast Guard	.2
8. Space and equipment utilization survey in the Bureau of Customs released space valued at and declaration of surplus equipment	.5 .1
9. Customs Bureau reductions in manpower, space, and equipment	.8
10. Management improvement program in the Division of Disbursement	.6
11. Savings on an annual basis (recurring) from the Management Iment program	.6
12. Elimination of duplicate sets of records [2]	1.0
13. Reorganization of the Bureau of Accounts and the Savings Bond Division (recurring)	.2
Total	8.8

[1] Items 1 through 11 obtained from the annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1956.

[2] Accounting and Auditing Developments in the United States General Accounting Office—United States Government Printing Office, 1957.

2. THE GENERAL SERVICES ADMINISTRATION—FISCAL YEAR 1956

Many new savings factors have been introduced into the General Services Administration since the second Hoover Commission completed its work. An accrued cost system of accounts was established, and large reductions in paperwork resulted from the creation of a single fund for administrative operations. Expansion of electric accounting-machine operations brought about savings in several accounting processes throughout the administration. A performance-analysis system was installed to measure performance in terms of accomplishments and cost. Finally, the internal audit program was more clearly defined so as to emphasize the review of internal controls on an agencywide basis.

These improvements embrace the Hoover Commission recommendations for storage and distribution, paperwork management, procurement, property management, records management, stockpiling and warehousing, and surplus-property distribution within the General Services Administration. The record of savings for the General Services Administration in 1956 is listed below:

	Million
1. More efficient telecommunications service [1]	$1.0
2. Continued utilization of real property transfers	5.7
3. Records management surveys	4.3
4. Releasing of storage space	.7
5. Curtailed expenditures for new cabinets	2.3
6. Curtailed expenditures for transfer cases	.4
7. Transfer, instead of new procurement, of property	95.0
8. Repair and rehabilitation of equipment instead of new purchase	1.2
9. Improved audits and financial management	1.0
10. Reduction of motor vehicle fleet (recurring) [2]	20.0
11. Improved payroll procedures [3]	.1
Total	131.7

[1] Annual report of the Administrator of General Services for the year ending June 30, 1956 (items 1 through 9).
[2] GSA press release, February 17, 1956.
[3] 8th Annual Progress Report under the Joint Program To Improve Accounting in the Federal Government, 1956.

3. THE FEDERAL HOUSING ADMINISTRATION

The opportunity for administrative savings does not exist in as great a degree in the Federal Housing Administration as it does in other Departments or agencies.[1] However, management improvements for FHA in 1955 were responsible for savings of approximately $0.5 million.

It is as a result of recommendations of the first Hoover Commission that the Housing and Home Finance Agency embraces all Federal activities in the housing field except the Veterans' Administration and the Farmers Home Administration. The Federal Housing Administration naturally falls within the scope of the Agency. Recommendations of the second Hoover Commiswithin the scope of this Agency. Recomsion regarding the Federal Housing Administration are, for the most part, concerned with authority and studies of mortgage-loan insurance. These would be extremely hard to evaluate in terms of savings. General management improvements are most indicative of the savings made by the Federal Housing Administration and appear below.

Fiscal year 1955 [1]

	Million
1. Management improvements in Comptroller's Division—expected to effect annual savings in personal services of	$0.2
2. Records management economies	.2
3. Better use of space, and printing economies	.1
Total	.5

[1] Twenty-second annual report, Federal Housing Administrator, for year ending December 31, 1955.

4. DEPARTMENT OF THE INTERIOR

The Interior Department also participated in accounting reviews and cost-type budgeting. The Department also continued to examine internal functions in order to discontinue those activities which were in competition with private enterprise. This directly follows the recommendations of the second Hoover Commission. In addition, the Department proceeded to dispose of unneeded real property and to better organize field organizations. Much progress was made in records management and also in the area of general administration.

Evidence of the influence of Hoover Commission recommendations on business enterprises, paperwork management, and disposal of surplus property can be clearly seen in the savings shown here.

Fiscal year 1955 [1]

	Million
1. Decrease in volume of reclamation records	$0.1
2. Disposition of excess property, Bureau of Mines	.2
Total	.3

[1] 1955 Annual Report, Secretary of the Interior, Partnership in Resource Conservation and Development, for the fiscal year ended June 30, 1955.

Fiscal year 1956 [1]

	Million
1. Reduction in volume of stored records, releasing space and equipment worth approximately	$0.2
2. Transfer of surplus property to other agencies	.1
Total	.3

[1] 1956 Annual Report, Secretary of the Interior, The Conservation of Natural Resources, for fiscal year ended June 30, 1956.

5. THE DEPARTMENT OF COMMERCE

A modified accrual basis of accounting is also being used by the Commerce Department. The full benefit of this system is yet to be realized, but some economies have been made. The Department has also installed modern electronic machines which have greatly simplified paperwork management. Space transfers, reduction of inventories, new filing methods, consolidation of records space, and sale of surplus property have effected savings of more than $19.0 million. Again, these management improvements are in accord with recommendations of the second Hoover Commission. Those savings which can clearly be identified are set down as follows:

Fiscal year 1955

	Million
1. Transfer of space from Army to Panama Canal Company [1]	$0.8
2. Reduction of inventories of the Panama Canal Company [1]	3.0
3. Simplified methods and modern electronic aids in taking the 1954 business census [2]	4.0
4. Reorganization and clearance of filing systems [2]	.2
5. New cost control study by the Maritime [2]	
6. Elimination of paperwork in Bureau of Public Roads [2]	.5
7. Reduction of records storage space [2]	1.5
8. Sale of the Inland Waterways Corporation [2]	9.0
Total	19.3

[1] Annual Report of the Comptroller General of United States, 1955; 84th Congress, 2d sess., House Doc. No. 255.
[2] Commerce Department Release, April 8, 1956, G655.
[3] Contained in special Report to Congressional Committee.

6. THE VETERANS' ADMINISTRATION

Improvements in management and administration in the Veterans' Administration brought about significant results. Cost studies and new purchase practices were established, as well as control summaries and cost-type budget schedules. Procedural improvements in hospital administration were highly gratifying in light of the Hoover Commission recommendations. Progress was also made in the transfer and destruction of records and in the application of work simplification techniques.

The savings made by the Veterans' Administration clearly reflect the second Hoover Commission's recommendations applying to administrative procedure, medical supplies, storage operations, supply depots and distribution, and business-type services. The Veterans' Administration has adopted the Hoover Commission's principle that paperwork management places heavy proper emphasis on controlling the creation, maintenance, and use of records as well as storage and disposal. Achievements along these lines have been noteworthy, as may be seen by the savings figures:

Fiscal year 1955 [1]

	Million
1. Reduction in ratio of employees to patients in VA hospitals resulted in saving in salaries of approximately	$6.0
2. Cost studies in Department of Medicine and Surgery stimulated improved management at field stations	.7
3. Improved purchasing practices of items such as proprietary drugs and hearing aids	.4
4. More economical use of office space—release of excess space	.3
5. Redistribution of supplies	.2
6. Transfer of VA records to GSA Federal Records Center	.3
7. Disposal of unnecessary records	.2
8. Application of work simplification techniques	.2
9. Reduction of depot inventories within VA	.2
10. Transferring accounting functions of loan guaranty divisions to finance divisions in regional offices, resulting in elimination of approximately 65 positions	.4
11. Redistribution of excess personal property within the VA	2.1
Total	11.0

[1] Administrator of Veterans' Affairs—Annual Report, 1955.

Fiscal year 1956 [1]

	Million
Development of electric accounting procedures for loan accounting	$0.2
Procurement of Thorazine at one depot with direct delivery to each station	.2
Microfilming of records eliminated annual expenditures for microphotographic equipment	.2
Transfer of adjustment and refund functions	.2
Release of filing equipment for other VA departments	.1
Reorganization of regional offices and transfer of work	.9
Consolidation of divisions at 10 VA hospitals	.5
Disposition and transfer of records	.2
Improved procedures and controls in supplies and services	.1
Total	2.6

[1] Administrator of Veterans' Affairs, annual report for fiscal year ending June 30, 1956.

7. POST OFFICE DEPARTMENT

The first Hoover Commission recommended improved accounting and budgeting procedures, and a comprehensive cost-control system for the Post Office Department. The new Hoover Commission emphasized real-property management and maintenance along with general reorganization of the De-

[1] Also the FHA is essentially a self-supporting Federal agency.

partment. In following these recommendations the Postal Establishment has made substantial savings. Considerable progress has been made in modernization of controllership and management programs, conversion to punched card checks, the establishment of a reports management program, development of accurate measures of cost, improved classification of accounts, transportation procedures, and paperwork management. Savings stimulated in whole or in part by the Commission for the years 1955 and 1956 are as indicated.

Fiscal year 1955 [1]

	Million
1. Discontinuance of over 1,100 post offices	$1.5
2. Consolidation of 333 rural delivery routes with other rural routes	1.0
3. Change from advance authorization of space to "space used" agreements with railroads	10.0
4. Discontinuance of city distribution in 180 railway post offices	.4
5. Replacement of RPO service by closed pouch or star route service on 193 trains	4.0
6. Elimination of duplication in weighing magazines and newspapers	1.8
Total	18.7

[1] Annual Report of the Postmaster General, Fiscal Year Ending June 30, 1955.

Fiscal year 1956

	Million
1. Discontinuance of 813 post offices [1]	$1.1
2. Revised plant arrangement and mechanization of New York City West Side Terminal [1]	.8
3. Survey of all star routes in the Southeastern States [1]	.2
4. Special agreements with rail and highway carriers for moving mail equipment [1]	.7
5. Modernization of financial and accounting practices [2]	20.0
6. New procedure for controlling overages from the sale of stamped envelopes [2]	.2
7. Discontinuance of city distribution for 120 cities in 200 RPO's [2]	.5
8. Discontinuance of RPO and closed pouch service on 900 trains [2]	8.0
9. Improved practices in dispatching and loading [2]	.1
10. Authorization of multielement rates and mileage equalization and 13 trunkline carriers [2]	5.1
11. Centralization of money order audit operation [2]	.5
12. Reduced printing costs through adoption of punchcard certificate form [3]	.1
Total	37.3

8. THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

This Department, although relatively new, has made significant contributions in its measures of economy. Improvements have been made in accounting operations and general management procedures.

Fiscal years 1955 and 1956 (2-year totals) [1]

	Million
1. Freeing office equipment for reuse elsewhere in the Government	$0.7
2. Reduction in floorspace	.2
3. Reduction in motorized equipment	.2

[1] Contained in special report to congressional committee.

Fiscal years 1955 and 1956 (2-year totals)—Continued

	Million
4. Abolition of offices and divisions	$0.1
5. Management improvements in Bureau of Old-Age and Survivors' Insurance	1.0
Total	2.2

9. THE DEPARTMENT OF DEFENSE

Two-thirds of the second Hoover Commission's recommendations apply to the Department of Defense. Improvements were underway in the Department even before the Commission completed its report; and, during the period the Commission was working, many were developed in cooperation with the Commission's task forces. Others have resulted directly from the recommendations of the Commission.[2]

Economies shown here are taken from official Defense Department reports and also from reports on the joint accounting program by the Comptroller General. While not all the economies listed can be directly attributed to the Hoover Commission, a substantial portion directly flows from the recommendations of both the first and second Commissions. It is here estimated—and most conservatively—that 10 percent of the total economies reported in the following pages can reasonably be attributed to the Commission's work. In fact, a logical case could be made for a far higher percentage. The total reported by the Department was $2,359 million, 10 percent of that is $235.9 million.[4]

Fiscal year 1955

During the fiscal year 1955, major emphasis was placed on improvements in supply management. In the field of standardization of stocks the beneficial effects of a new cataloging program were immediately evident. Standardization actions eliminated many items from military supply systems and developed common standards and specifications for commercial and military components. The Department estimated that savings from standardization of stocks in 1955 were $29 million.[6]

Similar improvements were made in the management of excess stocks. Increased efficiency was also achieved in the use of storage space. The introduction of uniform reporting systems made possible more cross-servicing in storage activities and the transfer of facilities from one department to another. An annual saving of $30 million resulted from the closing of 17 Army supply depots. When 6 of these depots were transferred to the Air Force, $16 million was saved in lieu of new construction costs. Improved transportation rate negotiations saved approximately $48 million.[6]

[2] Action already taken on the second Commission's recommendations regarding food and clothing will eventually lead to substantial economy. This applies primarily to the "head count" on a service installation whereby the number of meals served is restricted to the number of personnel on that post. Food was ordered and meals prepared on the basis of an estimated total number of personnel. Because substantial percentages of the estimated total number were on leave, ill, or not present for a variety of reasons, this led to a great waste of food. The task force on food and clothing estimated that if this and other of its recommendations were fully implemented, a savings of $200 million a year would be possible.

[3] The use of the conservative 10 percent estimate also takes account of duplications (e. g.) as between reports of the Department and of the Comptroller General.

[4] Semi-annual report of the Secretary of Defense, January 1 to June 30, 1955, p. 42.

[5] Ibid., p. 43.

Work simplification is an integral part of the overall management improvement effort of the Army. The Defense Department estimated that a $13 million saving resulted from improvements installed by supervisors trained in this field.[8]

The Army financial management plan brought about many improvements in installation accounting and better use of stock inventories. Cutbacks in inventory levels have brought about the greatest monetary savings, according to Defense Department figures; $585 million in excess capital was relinquished in 1954 through reductions in stock, and $700 million in 1955.[7]

The Navy also contributed greatly to general economy and management improvements within the Department of Defense. Studies were made of the accounting features of cross-servicing and monetary accountability procedures. Audits of contractors' claims and other accounting and audit work brought about substantial savings. The Navy was able to save an estimated $123.5 million in the cost of materiel procurement.[8]

Air Force management underwent the same comprehensive study, and the Secretary of the Air Force estimated that $440 million was saved in contract costs resulting from improved audit procedures (this combines actual and potential reductions).[9]

Fiscal year 1956

The joint accounting improvement program carried on during the period January 1, 1956 to September 30, 1956, is illustrative of savings made in the Defense Department during that year. According to the Comptroller General of the United States, better management practices and financial improvements in the Department resulted in savings of $202 million.[10]

Improvements in inventory control resulted in the relocation of supplies and the saving of 250,000 square feet of space. It eliminated 187 different records for various financial inventory categories and brought about discontinuance of overlapping stocks of similar supply items. These measures reflected an estimated saving of approximately $133,000 per year. Method improvements based on a management study of in-transit warehouse procedures effected an estimated saving of $150,000. The indirect material inventory has been decreased by $381,000.[11]

Improved direct labor efficiency in the Department brought about a saving of $625,000.[12]

An internal review of inventory at the Long Beach Naval Shipyard resulted in a reduction of approximately $307,000 in shop stores insurance items. A ship stores inventory purification program at the San Francisco Naval Shipyard resulted in a reduction of approximately $386,000.[13]

At the Pearl Harbor Naval Shipyard, elimination of duplicate records and the abolition of 74 supply department positions through transfer of items saved $339,000.[14]

This joint program to improve accounting to which we refer, also highlights the internal audit program within the Department of Defense. It estimates that savings in the cost of Government procurement

[6] Ibid., p. 130.

[7] Ibid., p. 132.

[8] Ibid., p. 207.

[9] Ibid., p. 270.

[11] Ibid., p. 40.

[12] The Eighth Annual Progress Report Under the Joint Program To Improve Accounting in the Federal Government, 1956, by the Comptroller General of the United States, p. 41.

[13] Ibid., p. 45.

[14] Ibid., p. 45.

amounted to $166.4 million in fiscal year 1956.[15]

A navywide review of records, resulting in the elimination of duplicate records, saved an estimated $400,000. Reduction of stock-fund inventory at one naval activity amounted to $2.8 million as the result of an audit. At still another activity, disposition of excess stocks in the amount of $600,000 was instituted.[16]

CONCLUSION

As in dealing with the first Hoover Commission, it must be emphasized here that the departments and agencies used do not constitute the total areas of economies. While these figures are merely representative, they are perhaps the most illustrative ones obtainable.

Savings and financial returns are primarily limited to the years 1955 and 1956 because the second Hoover Commission's recommendations were mainly implemented in those years.

It is evident that savings in the Department of Defense constitute the greatest proportion of savings in the areas covered. This is valid because two-thirds of the second Hoover Commission's recommendations directly apply to the Defense Department.

The compilation of savings from recommendations of the second Hoover Commission and the corresponding departments and agencies is condensed as follows:

	Millions
Treasury	$20.3
General Services	131.7
Federal Housing	.5
Interior	.6
Commerce	19.3
Veterans	13.6
Post Office	56.0
Health, Education, and Welfare	2.2
Defense (at 10 percent)	235.9
Total	480.1

Proposed Juvenile Delinquency Legislation

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Hon. Hugh Carney, of Georgia, made today before the Subcommittee on Special Education of the House Committee on Education and Labor:

STATEMENT BY HUGH C. CARNEY, CHAIRMAN, STATE BOARD OF PARDONS AND PAROLES OF GEORGIA

Mr. Chairman, the work of this subcommittee may well be a necessary impetus for breaking through the barrier of crime in our country and may well result in the salvaging of many lives that, according to known statistics, would be destroyed by crime. Therefore, at the outset, let me express the appreciation of our board, as well as my own, for your invitation to appear before you. But I must hasten to say that I come not as a trained sociologist or psychologist and that my statements, therefore, would best be considered in the light of what I am: an administrator and a lawyer.
